I dare not presume upon another moment of your time, but must say, gentlemen, this is a clean matter—there is no set up, no drawbacks. It is simply the cry of an oppressed trade for relief, the plea of humble homes to be saved from ruin, and I am fully persuaded, in view of the facts so briefly presented for your consideration, and yet so conclusive because they are facts, you will do all and more than we ask, and thus secure the benedictions of a grateful people while you benefit a great empire touched by 20,000 miles of possible inland navigation, at the head of which the city of gas and coal is fortunately located.

Gentlemen, I thank you for this hearing.

JOHN F. DRAVO.

Mr. JACKSON. Mr. Chairman, the present Administration on coming into power found the national Treasury well supplied with money, and laws on the statute-book that have since brought in a revenue more than sufficient for ordinary expenses.

Yet with plenty of means provided by the Republican party when in power, this Democratic Administration has neglected to appropriate money for some of the most urgent and needed public matters.

Our seaboard and coast cities are left in a defenseless condition that actually invite attack.

We have no navy worthy of the name. Fortification bills have been treated by this House with neglect and contempt. If the country was suddenly threatened with war the lack of modern artillery and plants for producing it would be a great source of weakness. We have utterly abandoned the maxim that the time to prepare for war is in peace.

We need not flatter ourselves that complications with other nations will never arise. We know they are liable to arise at any time. We have found that we can do well without standing armies, for our brave, patriotic people can always be depended on to respond to the call of the country on the shortest notice. But men without arms, without modern cannon, without modern war vessels, are helpless, and these munitions can not be produced on short notice. If you were to commence the plant now it would require more than a year to produce a single steel gun of modern make. Our seaboard should have works to shelter the brave men who would rally to its defense, and these require long time for their construction. These things should not be done hastily. To prevent improvident expenditures they should proceed gradually year by year.

We must recollect that whilst we are a long distance from the great nations of the earth our country is surrounded on sea and land with naval and military establishments. Our situation in this respect is well set forth in the report of the Navy-Yard Commission of December 1, 1883, in these words:

Nor are we so completely isolated. On the contrary, we are environed by the naval stations of a country that but a few short years ago would have rejoiced to see the dismemberment of the Union. This has been repeatedly brought to the attention of Congress. Kingston, Canada, one of the strongest military posts of this continent, can, at the very commencement of hostilities, launch gunboats upon the upper lakes, where American citizens have property to be reckoned only by millions. Halifax, with ample resources for supplying a war fleet, is but thirty-six hours' steaming from Boston. Bermuda, with her fine dry-dock and arsenal, is but sixty hours from the capes of Virginia, commands the entrance to the Chesapeake, and, as a consequence, the navigable rivers of Maryland and Virginia.

Nassau would be a rendezvous for British cruisers, as it was a refuge for her blockade-runners during the late civil war. The magnificent harbor of Kingston, Jamaica, with its fine navy-yard at Port Royal, is but four and a half days' steaming from our Gulf ports; and San Francisco is within three days of the British naval station of Esquimalt. Not only this, but France has a navy-yard at Port of France, Martinique, and Spain holds Cuba. Havana is but eight hours from Key West, the key of the Florida Channel and the Gulf of Mexico, and only sixty hours from the rich and populous city of New Orleans. From these stations modern war ships, of which we have no representatives, could fall upon our coast, paralyze our commerce, penetrate our harbors, and destroy such navy-yards as we now possess.

To defend against such force we have scarcely anything to offer. We are in fact more helpless than many of the third and fourth rate powers of the world.

Mr. Chairman, in addition to the failure to make appropriations for new works, the Democratic party has most negligently managed public works in process of construction. Work as I am informed has been commenced on many improvements, and large sums expended, which is practically lost for want of appropriations to continue the work. We have in this way many half-built works going to premature decay, and furnishing abundant proof of the incompetency of the party that now has temporary charge of the Government.

I cheerfully favor the improvement of the Cumberland River, and do not wish to be considered as opposing it in any way. I oppose this resolution for other reasons. There should be general legislation on this subject. This particular work has no claim to be favored whilst many others are neglected. The gentleman from Tennessee seeks by this resolution to put himself right with his constituents and to satisfy the locality in the neighborhood of this improvement. But the odium that should attach to the neglect of his party, to the neglect of this Congress and the neglect of the Administration to make proper appropriations for needed public works can not be so readily disposed of. I am opposed to this resolution, because no good reason can be shown why this particular work should be selected for favoritism and this small locality alone relieved from the inconveniences imposed upon it by the neglect of the Democratic party in Congress and the Democratic Administration.

Telephone Litigation.

[Investigation of the Pan-Electric and Bell Companies.]

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 22, 1888.

The House being in Committee of the Whole for the consideration of the bill making appropriations for sundry civil expenses of the United States for the year ending June 30, 1889—

Mr. OATES said:

Mr. CHAIRMAN: I rise for the purpose of again urging the adoption of the amendment which I offered, to increase from $10,000 to $40,000 the appropriation to be used in the employment and compensation of special assistant attorneys to the district attorneys in very important cases to which the United States are a party.

In addition to the important cases I have heretofore mentioned, that against the Nevada Lumber Company, in San Francisco, and the telephone case before the Supreme Court, my friend from Illinois [Mr. SPRINGER] has read a long list of cases wherein the employment of able assistant counsel has been found to be necessary. When officers are charged with the duty of executing the law and invested with a discretion, the presumption is that they exercise that discretion wisely and well until the contrary is shown; and it is incumbent upon those who maintain the contrary to bring proof of their assertions.

The gentleman from Pennsylvania [Mr. SOWDEN] has complained and reiterated his complaint that too much money has been paid to the assistant counsel in the telephone suit. He complains that Mr. Lowrey has been paid a most exorbitant sum by the Solicitor-General, who acts as Attorney-General in that particular case.

The gentleman simply asserts that the sum paid was too large, that it was extravagant, but he has submitted no proof to the committee that such is the fact. Even if he had submitted it that amounts to nothing but a criticism of the conduct of the officer who so ably and well performs the duties of Attorney-General in respect to this particular case. A gentleman, too, from his own State and of his own party in politics, a gentleman whose integrity and ability are unquestioned, and one who, according to the showing made here, has exhibited a commendable economy.

I think my friend from Pennsylvania fails to take in the situation and fails to comprehend the magnitude of the litigation. If I were disposed to wager, I would stake any amount in reason that the corporation against which this suit was brought, the Bell Telephone Company, paid its counsel for the defense of the case four times as much as the United States paid the counsel employed by the Solicitor-General to bring and prosecute their suit.

If too much money was paid to Mr. Lowrey is that any reason why we should refuse to the Solicitor-General the amount necessary to carry

on and prosecute to a final termination the suit in which I believe the Government will be successful?

Mr. RANDALL. I am afraid that case has gone beyond remedy.

Mr. OATES. My friend from Pennsylvania does not profess to be a lawyer, and yet in reference to ordinary legal matters coming up here he seems to be as ready as any lawyer on the floor. But I think in this matter the gentleman is sadly mistaken. He does not comprehend the gravity and importance of the questions involved in that litigation. The decision which the Supreme Court recently made in the cases of Drawbaugh and others was in favor of the Bell company, but they were suits involving incidentally only the issues presented in the case of the United States against that company; and the decision was made by only a majority of the judges who sat in the argumentation of the case.

The suit of the United States which was heard in the circuit court of the district of Massachusetts, and dismissed on demurrer, and which is now before the Supreme Court on appeal, seeks the annulment and cancellation of Bell's patent mainly upon two grounds, that he was not the original inventor and that he obtained his patent by fraud. If either of these be true it is the duty of the Government of the United States in the interest of the people at large to compel the cancellation of the patent of this tremendous monopoly, a corporation whose stock is now capitalized at near $200,000,000. It is also claimed by that corporation and denied by the United States that the Bell patent covers the entire field of the transmission of speech by electric current, thus appropriating by patent one of the great forces of nature regardless of the instruments or inventions by which it may be applied or used. No Government, however strong or powerful, can rightfully appropriate or authorize any man or corporation to appropriate and monopolize to its own exclusive use the free gift of God to all His creatures. The decision of the Supreme Court on this question was in favor of the Bell Company, but with all due respect to the opinion of the late Chief-Justice and his associates who concurred with him, I am constrained by every sense of duty, conscientious conviction, and opinion of the law, to prefer the reasoning and conclusion of the judges who dissented therefrom, and I do not believe that the decision of the court will stand as the law, but that on a review of the question which will be before the court again in the Government suit, if the patent is sustained, it will be held not to cover so broad a field. The claim is contrary to natural justice, and can not be within the spirit of the Constitution which secures for a limited time to inventors and authors the exclusive right to their respective writings and discoveries.

The men who framed and adopted that bulwark of the liberties of the people of this country never intended that clause to be so abused as to confer any such right as is claimed by the Bell Telephone Company upon any man or set of men. I have great respect for the decisions of the Supreme Court generally, but I must confess that I have none at all for a decision which maintains such a conscienceless and monopolistic claim as this. Upon this very question a few years ago arose the conflict and controversies between the Bell company and the Pan-Electric and other telephone companies. The latter undertook the transmission of speech by electric current, but with different instruments for transmitting and receiving than those owned and used by the Bell company; whereupon that company, exhibiting the utmost greed of gain of soulless corporations, brought suits and enjoined the other companies on the ground of infringement of the Bell patent. The gentleman who is now at the head of the Department of Justice, with other gentlemen, some of whom were then in official life, became, in the year 1883, corporators or members of a joint stock company known as the Pan-Electric Telephone Company, which, when it began to do business, was, like others, enjoined by the Bell company.

In the summer of 1885, soon after the present Administration had been inaugurated, Mr. Van Bentheuysen, as president of the National Improved Telephone Company, made application to the Attorney-General to direct a suit to be brought in the name of the United States for the cancellation of the Bell patent. Mr. Garland, the Attorney-General, utterly declined the request, and refused to have anything to do with it—even to hold conversation on the subject—on the ground, which he stated at the time, that he was a stockholder in the Pan-Electric company, and hence disabled by interest from having anything to do with it. In September following, when he was absent on his summer's vacation and at his home in Arkansas, an application was made by Van Bentheuysen, Huntington, and several other gentlemen individually, but who were really interested in the National Improved Telephone Company, through McCorry, the United States attorney for the western district of Tennessee, to Hon. John Goode, Solicitor-General and then acting Attorney-General, for permission to bring a suit in the United States circuit court for Tennessee, in the name of the United States, to have annulled and canceled the patent of the Bell company. Goode granted the request, and also gave permission to Young, Gantt, and other attorneys to appear with the district attorney and prosecute the said suit, but without fees or compensation from the United States. These attorneys were interested in both the National Improved and Pan-Electric Telephone Companies, which accounts for the fact that although able lawyers they were willing to engage in the prosecution of the Government suit without fees or compensation from the United States.

This suit was commenced, and soon afterwards, upon the suggestion of one J. Hale Sypher, well known in Louisiana and Washington City, especially in political circles; a man named Hill, a carpet-bagger from Arkansas, and then a claim agent and jobber who occasionally wrote for the newspapers, a Republican in politics, who has figured conspicuously in several Congressional investigations of alleged uncleanliness, wrote an article, as he admitted, for sale to the newspapers, in which he charged that this Government suit was brought by the connivance or sanction of the Attorney-General to use the name, prestige, and money of the United States to break down and destroy the Bell company, by which means he hoped and believed that his stock in the Pan-Electric would be made so valuable that he would at once become a millionaire. This article was sold to Major Clark, the correspondent of the New York Tribune, which, with some change of phraseology and perhaps of substance to make it the more effective and sensational, was published in that paper. This was the beginning of the unparalleled newspaper war which was most relentlessly and unjustly waged against the Attorney-General and nearly every one else in official life who was in any wise connected with the Pan-Electric company. Encouraged by the success of his first article, Hill wrote another and more elaborate one, which he characterized as "The history of the Pan-Electric Telephone Company."

In this he extended his charge of a purpose to use the Government for private gain to a number of gentlemen, all of whom were citizens of the Southern States of the Union and members of the Democratic party. In this, as in the former, he made the Attorney-General the central figure, and so artfully grouped together the various circumstances detailed by him and his allegations of fact as to make his statement as a whole appear to be truthful throughout when it was not. This article, after many fruitless negotiations which he undertook with others, he finally sold to the correspondent of the New York World, and it was published in that paper. Before this last-named publication was made the matter came to the attention of the President, who directed the Solicitor-General to dismiss the suit because the preliminary formality of sending the application to the Interior Department for examination and advice had not been complied with. The suit was accordingly dismissed. The application was immediately thereafter renewed, when the Solicitor-General, again acting as Attorney-General in this matter on account of the disqualification from interest of that officer, referred the application and accompanying papers to the Secretary of the Interior, who thereupon gave notice to the Bell, the Pan-Electric, the National Improved, and all other telephone companies and persons interested, that he would hear evidence and argument touching the matters alleged against the Bell company. He associated with him the Assistant Secretaries, Muldrow and Jenks, and Judge Montgomery, the Commissioner of Patents, and heard at great length the evidence and arguments for and against the patent of the Bell company.

After the hearing the Assistant Secretaries and the Commissioner, without consultation or comparison, rendered opinions *seriatim*, each one of whom held that there was sufficient evidence to justify it and advised that a suit be brought to test the validity of Bell's patent. The then Secretary, now Justice, Lamar, of the Supreme Court, sent his opinion to Solicitor-General Goode, holding that while the evidence of the originality of Bell's invention and the alleged fraudulent obtainment of his patent was not conclusive beyond question, yet it was sufficiently strong and convincing to justify the bringing of a suit in the name of the United States to test the validity of the patent. And just here I wish to state as matter of well-settled law that while a rival telephone company could bring a suit against the Bell company, or the latter could sue the Pan-Electric or any other rival company for an infringement of its patent or trespass upon its patent rights, and might establish in that case beyond question that Bell's patent was a fraud, or that he was not the inventor, yet the decision of the court would be binding only between the parties to the litigation and their privies and would not annul the patent except in that case. The patent can not be annulled nor canceled except in a suit by the United States as grantor against the patentee. There is, therefore, in the case of a patent fraudulently or wrongfully obtained from the Patent Office, no way under existing law to protect the public from imposition by the use of such patent except a suit by the United States for its cancellation.

Solicitor-General Goode, upon receiving the opinions of the Secretary of the Interior and his assistants, as I have stated them, duly appreciating the magnitude and great responsibility of bringing and properly prosecuting a suit against such a rich and powerful corporation, with several of the ablest lawyers in the United States already retained as its counsel, employed as his assistants Mr. Lowrey, of New York; Messrs. Hunton & Chandler and Whitman, of Washington, and Judge Thurman, of Ohio, on as reasonable terms as he could obtain their services. I suppose that my friend from Pennsylvania thinks that so many lawyers should not have been employed; that one assistant to the district attorney at a fee of one or two thousand dollars would have been ample; but, sir, every lawyer at all acquainted with such litigation and capa-

ble of appreciating the weighty issues involved or the number and ability of the counsel engaged for the defense of that mammoth corporation will not regard the number employed as too great nor the fees charged by them as excessive, except perhaps in the case of Mr. Lowrey, the items of whose account in some instances remind me of a lawyer I once heard of, who stated as one of the items in his bill against his client, "For waking up in the night and thinking about your case, $50." His services in the further prosecution of the suit have been dispensed with.

I will state here, as I am giving a brief history of the entire matter, that the suit which was brought in Ohio on the hearing was dismissed for the want of jurisdiction of the court. It was renewed in Massachusetts, and was heard there and dismissed on demurrer, from which it has been appealed to the Supreme Court.

Now let me call attention to another part of the history of this telephone business. Early in the first session of the Forty-ninth Congress Mr. Hanback, a Republican Representative from the State of Kansas, introduced into the House resolutions reflecting upon the Administration and censuring the Attorney-General, and calling for an investigation of the alleged corruption and improper use of the name of the Government for the private gain of those interested in and connected with the Pan-Electric Telephone Company. The resolution was amended and adopted by the House and a special committee raised, consisting of five Democrats and four Republicans, who were instructed to make a thorough investigation of all the matters alleged against officers and employés of the United States. The committee sat for about four months and examined all the witnesses and record evidence which was supposed to throw any light upon the matters involved and every person and thing remotely connected therewith or incident thereto. A large volume of over 1,300 pages of closely-printed matter attests the work done by the committee. I am the only member of that committee who is now a member of this House, and I assert that an examination of that volume will bear me out in stating that that investigation was agitated, begun, and prosecuted by the Republicans for partisan purposes, and was an effort to make capital for their party against the present Administration; but all of their efforts proved a dismal failure. The examination of the testimony will prove conclusively the perfect integrity of Garland, Goode, Johnston, Atkins, Harris, and every official in any wise connected with the Pan-Electric company or the suits brought against the Bell company.

Mr. Goode testified substantially:

That he was appointed Solicitor-General on the 4th day of May, 1885. That on the 26th day of June he went to British Columbia to represent the Government in the extradition case of Isaac N. Hibbs. That he returned to Washington on the night of the 19th of August. That the Attorney-General left Washington on the night of the 27th of August on a visit to his home in Arkansas. That prior to the departure of the Attorney-General he gave no special instructions to the Solicitor-General about the business of the Department. That no conversation was held between them with regard to the Bell Telephone Company or the Pan-Electric Company, and that he (Mr. Goode) did not know that Mr. Garland had any interest in the Pan-Electric or any other telephone company until after the criticism upon him had been commenced in the newspapers. That under the law he became Attorney-General in the absence of Mr. Garland, and while acting in that capacity he received on the morning of the 2d of September, from H. W. McCorry, district attorney for the western district of Tennessee, an application to use the name of the United States in a suit against the Bell Telephone Company to test the validity of their patent. That this application was accompanied by a memorial signed by several citizens, and by various affidavits and exhibits. That it came to him in the regular way, and he treated it as a matter of routine business. That he took it up for examination, and spent the day and night until 11 o'clock in reading the papers submitted to him. That, after a careful examination of the law and the papers referred to, he became satisfied that the Government had the power to institute the suit, and that a *prima facie* case had been made out; and accordingly on the next day (the 3d of September) he wrote a letter to the district attorney granting the desired authority. That since the organization of the Department of Justice there have been not less than ten precedents for the institution of such a suit; and in giving direction for the suit in this instance he followed the usual practice, except that he did not refer the application to the Interior Department. That he did not make the reference in this case for the reason that the letter of the district attorney brought along with it the file wrapper and contents relating to the application of Mr. Bell, which furnished the information to be obtained at the Patent Office. That supposing he had all the information that the Patent Office could afford, he did not deem it necessary to consult the Interior Department about the questions of law involved.

Mr. Goode further testified that prior to the departure of Mr. Garland on the 27th of August no person whatever had spoken to him about any probable litigation respecting the Bell telephone patent, and until Senator HARRIS and Hon. Casey Young called upon him at the Department of Justice on the morning of the 2d of September he had never heard that such litigation was contemplated. As to this interview of Messrs. HARRIS and Young with Mr. Goode, attention is called to the testimony of the latter on pages 422, 427, and 428 of the record, as follows:

Q. Had any other person spoken to you prior to the departure of Mr. Garland about probable litigation, or in any way respecting probable litigation of the Bell Telephone Company with the Government?

A. None whatever. That matter came to me in the regular course of business. I will say here—I think it is proper to say it—in answer to your question that this communication of Mr. McCorry, the district attorney, reached me on the morning of the 2d of September. That morning, before I received it, Senator HARRIS, of Tennessee, and Mr. Casey Young came into my office, and I think Senator HARRIS held something in his hand, a letter or telegram, and asked me if a communication from the district attorney had been received from the western district of Tennessee in regard to a suit against the Bell Telephone Company. I replied that no such communication had been received. He then said that he had information that it had been forwarded. I rang the bell and sent a messenger to inquire from the clerk if there was any such communication there, and I received answer that there was none. Those gentlemen, I do not think, even took their seats. They said they were confident that such a communication had been sent, and then left the room. Not long after they left (they were there early in the morning, between 9 and 10 o'clock), I suppose about 11 o'clock, or perhaps earlier, the communication from the district attorney came to me with other mail, and I saw it then for the first time and proceeded to examine it.

Q. Had any person spoken to you with reference to the matter before this conversation with Senator HARRIS and Mr. Young?

A. No, sir.

Q. That was the first information you had?

A. Yes, sir; I never had heard of such a suit or contemplated suit. I did not really know about the existence at that time of these various telephone companies in the country. I never had heard of any controversy or anticipated controversy in regard to it. The first intimation I had of it was in this conversation that morning with Senator HARRIS and Mr. Young—the morning of the 2d of September.

Q. You say the application did come to you the same day?

A. It came to me in less than one-half hour after they had left the room.

Q. What did you do with it when it came to you?

A. I proceeded to examine it, as it was my duty to do under the law. I read the letter of the district attorney, in which he went on to state the reasons why the use of the name of the Government should be permitted in the suit; and he stated, among other things, that he had in his possession one of the Reis instruments; that he had personally experimented with it; knew personally that it could talk; and sent along with his letter a memorial signed by Watson Van Benthuysen, New Orleans, La.; C. P. Huntington, Mississippi; J. R. Beckwith, New Orleans, La., and George R. Gantt, Memphis, Tenn.

Q. Did you give this application preference over other business in your office?

A. No, sir; I think not. I do not remember everything that was done that day; but I treated it like ordinary routine business. I know I examined the papers pretty carefully, and worked upon them that night.

Q. Had you been requested by any person to make a speedy decision upon the application?

A. No, sir.

Q. I believe you have stated that you had no conversation with any one before that.

A. I had no conversation or intimation from any one that there was such a suit in contemplation, and no human being ever spoke to me about it until that morning, when Senator HARRIS and Mr. Casey Young came in and asked me if I had received such an application.

Q. Can you recall another visit from Senator HARRIS, a second visit?

A. Yes, sir.

Q. Will you state what occurred at that time?

A. On the next day, according to my recollection now—I am sure it was the next day, the morning of the 3d—Colonel Young came into the office first and asked me if I had received the application from the district attorney. I said "Yes," I had received it and acted upon it. He did not take a seat, but turned around and immediately left. Shortly after he went out Senator HARRIS came in and said "I have just met Colonel Young, who tells me that you have given directions to the district attorney to bring suit." I said "Yes." I got up and met him part of the way in the room and asked him to take a seat. He said "No, I will not sit down," and asked me if he could see a copy of the letter. I told him it was down stairs with the clerk, to be sent off in the regular mail, and he might go there and see it, but that I could tell him that it was simply a direction to the district attorney to institute suit.

How was this direct and positive testimony of Mr. Goode treated by the minority of the committee? Did they undertake to show that there was any conflict between his testimony and that of the others who have been examined upon the matters in issue? On the contrary, they knew that his testimony not only stood entirely uncontradicted, but that it was fully corroborated and sustained by Attorney-General Garland, Senator HARRIS, and Mr. Young, who testified about the same matters. If Mr. Goode is not to be believed, not only he, but the other gentlemen referred to, have deliberately stained their souls with the crime of perjury. Is there anything in the character or antecedents of any one of them which can justify or excuse such a suspicion for a moment? We have fallen upon evil times, indeed, if just and fair-minded men can be found who, at the bidding of a greedy monopoly, or for the supposed interests of party, will tolerate such an aspersion upon the good name and the fair fame of honorable gentlemen who have heretofore enjoyed to an unlimited extent the respect and confidence of their countrymen. The minority of the committee did not charge in terms that Mr. Goode is not worthy of belief, but they attempted to destsoy his testimony by artful innuendoes and adroit suggestions as to the accuracy of his recollection. They said:

There are a number of facts and circumstances, however, which leave it beyond doubt that Mr. Goode's recollection is so seriously at fault as to a large part of what took place that it can not safely be relied upon in any portion.

What are those facts and circumstances?

First. Mr. Goode testified that during the week intervening between the time of his return to Washington and Mr. Garland's departure they had no conversation about any business in the Department. The minority said in the most oracular manner "Mr. Goode must be mistaken about this." Why should he be mistaken? Was it a very remarkable circumstance? The testimony shows that at that time there was

an almost entire suspension of business in the Department. There was little or no current business to talk about; and as to matters which might arise during the absence of the Attorney-General the Solicitor-General was entirely independent. The Attorney-General, during his temporary absence, has no control whatever over the Solicitor-General. Mr. Garland himself said (page 653):

It was not worth while for me to talk with Mr. Goode, because he would have to act upon his own responsibility and upon his own sense of duty.

Secondly. The majority said in their report:

Mr. Goode's testimony is very explicit that he did not confer with the chief clerk or any one about the request of Mr. McCorry or the subject of it. It is not certain whether he is mistaken about this or not.

Why is it not certain? What is there to suggest a doubt about it? Mr. Goode said he did not confer with the chief clerk or any one about the request of Mr. McCorry or the subject of it. Does the chief clerk contradict him? Does any one else contradict him? If he had conferred with the chief clerk he would have learned what he knew before, that under section 347 of the Revised Statutes—

In case of a vacancy in the office of the Attorney-General, or of his absence or disability, the Solicitor-General shall have power to exercise all the duties of that office.

He would have learned that there was an established practice in such matters, and that such established practice was in strict accord with his own action in the premises. He would have learned that since the organization of the Department of Justice it has been the uniform practice for the Attorney-General, in proper cases, to direct the institution of suits to test the validity of patents issued by the Government, and that the records of the Department show that many suits of that character have been brought by the authority and with the sanction of the Attorney-General. He would have learned, what he knew before, that while such applications had been usually referred to the Interior Department for report, it had not been the invariable practice to do so, and that there were instances in which such suits had been ordered without a reference. He would have learned probably that it was unnecessary to refer this application to the Interior Department for the purpose of obtaining information which had already been furnished under the hand and seal of the Commissioner of Patents, and that it was not usual for the Law Department of the Government to send questions of law to any other Department for solution.

Thirdly. The minority said in their report:

It is evident also that his examination was not so careful as he now says it was.

To sustain this allegation reference was made to the memorandum of authorities cited by Mr. McCorry in his application. An examination of those authorities will show that they have been misapprehended by the minority and not by Mr. Goode. Let us see.

In the case of United States *vs.* Gunning *et al.* (18 Fed. Rep., 511) Judge Wallace, of the circuit court for the southern district of New York, decided that the Government has the right to vacate patents for inventions when obtained through fraud, and that the proper remedy is by a bill in equity on behalf of the United States. In Mowry *vs.* Whitney (14 Wall., 434) Mr. Justice Miller, speaking for the court, says:

We are of opinion that no one but the Government, either in its own name or the name of its proper officer, or by some form of proceeding which gives official assurance of the sanction of the proper authority, can institute judicial proceedings for the purpose of vacating or rescinding a patent which the Government has issued to an individual, except in the cases provided for in section 16 of the act of July 4, 1836.

In United States *vs.* Stone (2 Wall., 525) the Supreme Court declared—

That the United States may properly proceed by a bill in equity to have a judicial decree of nullity and an order of cancellation of a patent issued by itself ignorantly or in mistake for lands reserved from sale by law and a grant of which by patent was therefore void.

In Rubber Company *vs.* Goodyear (9 Wall., 788) it was decided that, as regards the point here under consideration, there is no distinction between a patent for lands and one for an invention or discovery. As to the case of United States *vs.* Frazier (22 Fed. Rep., 106) it will be seen from an examination of the facts in that case that it was not such as authorized the institution of a suit in the name of the United States. The decision is placed expressly upon the ground that the suit was really in the interest of private parties, who had given bond to indemnify the Government from the costs of the suit. It was a contest between private individuals, in which the Government and the public generally had no interest whatever. It is a fact worthy of note in this connection that while the learned judge (Blodgett) seems to argue against the power of the Government to institute suits of this character, he has not so decided. On the contrary, he says, in the conclusion of his opinion:

I do not intend to be understood as holding that a bill in chancery will not lie in any case to annul a patent obtained by fraud, but only that this bill does not, in my opinion, make such a case as requires or authorizes the United States to allow the use of its name to fight out a contest between these individuals.

The other case referred to, that of the Attorney-General *vs.* Rumford Chemical Works (2 Bann. & Ard., 299), does not decide the question as to the power of the United States to institute such a suit, but it decides that the Attorney-General has no power to do so. Judge Shepley, in his opinion, expressly defers the decision of that question until the time when such a case shall arise.

Besides the cases mentioned, and which were referred to by Mr. McCorry in his memorandum accompanying his application, it appears from the testimony that Mr. Goode examined other authorities before reaching a conclusion as to the power of the Government to institute such a suit.

Fourthly. The minority said in their report:

He testifies that he never heard that there had been any litigation about it (the validity of the patent). The Adams compilation, before him among the other papers, disclosed the prior litigation.

In reply to this statement it is sufficient to say that there is no evidence in the record to show that the "Adams compilation" was ever seen by Mr. Goode. On the contrary, he said distinctly, in reply to a question by Mr. Ranney, that he did not remember that document as among the papers which he examined. But it is unnecessary to pursue the matter further. The foregoing extracts have been taken at random from the report of the minority as specimen bricks in the superstructure which they have reared, and as examples not only of the *suppressio veri*, but of the *suggestio falsi*.

In view of the testimony adduced before the committee, I affirm that the minority exhibited an utter disregard of every principle of justice when they declared that—

The conduct of the Solicitor-General is most easily accounted for on the assumption that he understood the matter in advance, and had predetermined upon his course of action.

There is nothing in the record or in his character and antecedents to justify or excuse such a grave imputation. He had no motive for any sin of omission or commission in the matter under investigation. He had no stock in any telephone company. He had no interest of any kind to be affected by the suit. He had no knowledge of Mr. Garland's connection with the Pan-Electric company, or of any previous application for the institution of the suit. He directed the institution of the suit because after a careful examination of the law and the papers presented to him he believed that he had the power to do so, and that it was his duty to exercise it. Upon both propositions he has been sustained by Secretary Lamar and his Assistants after a thorough investigation and exhaustive argument by able and distinguished counsel. I submit that Mr. Goode did nothing in this matter which should have subjected him to censure in the estimation of any just or fair-minded man.

Attorney-General Garland's testimony was in perfect harmony with that of Solicitor-General Goode. He testified that he never at any time before the bringing of the suit had any conversation or correspondence with Goode touching any telephone matter whatever, and that he never gave any sanction, intimation, nor expression of desire, directly nor by innuendo, to Goode that he desired any suit brought of the kind or character ordered by Goode.

The hypothesis upon which the Republican members of the committee based their minority report was that both these gentlemen, Goode and Garland, swore falsely, and that there was an understanding between them that the former should order the suit brought in the name of the United States for the benefit of the latter and his associates in the Pan-Electric Telephone Company; and that, in pursuance of the understanding, Mr. Garland absented himself from Washington until the thing could be accomplished. Is there an honest man in the United States who believes that either of these well-known and highly honorable gentlemen would prevaricate in the least about anything? If there is anything in the maintenance for half a century of the most unblemished character for integrity, no one can doubt their testimony. Yet such was the desire to bring something out of that elaborate investigation for partisan use that the minority of the committee had the temerity to assume that the denial of all combination was false, and presented a garbled and unfair statement of the circumstances to prove it.

Before any consultation of the full committee was ordered—even before the testimony had entirely closed—Mr. Ranney had proposed the report of the minority, and at the consultation of the full committee he announced that the Democrats could take such action as they saw proper; that he and his Republican colleagues had already signed the report he had prepared, and which they intended to present to the House, and they did present it. It was cut and dried; fully prepared and signed by or before the close of the testimony taken by the committee. The Democrats constituting a majority of the committee, after duly considering at several consultations every phase of the evidence and all the circumstances, differing somewhat among themselves as to the form of a report, finally agreed upon a resolution and reported it to the House in the following language:

Resolved, That a full, fair, and exhaustive investigation has failed to adduce any evidence which tends to show that Attorney-General Garland, Solicitor-General Goode, Secretary Lamar, Indian Commissioner Atkins, Railroad Commissioner Johnston, or Senator HARRIS (they being the officers named in the Pan-Electric publications of the newspaper press which gave rise to this investigation) did any act, officially or otherwise, connected with the matters investigated which was dishonest, dishonorable, or censurable.

The publication of the reports and this resolution, although never reached on the Calendar for discussion and action by the House, effectually silenced the pen and tongue of slander and satisfied the public of the innocence of the gentlemen who had been so persistently and unjustly assailed.

Forfeiture of Railroad Land Grants.

SPEECH

OF

HON. BINGER HERMANN,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 5, 1888,

On the bill (S. 1430) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes.

Mr. HERMANN said:

Mr. SPEAKER: The people of my State are largely interested in the pending measure. Several land grants are located there. The main line of the Northern Pacific Railroad Company is on the north side of the Columbia River, and for about 214 miles claims each alternate section for 40 miles on the south or Oregon side, embracing in round numbers a total of 4,000,000 acres. This area is coterminous for the larger part with the uncompleted portion of the Northern Pacific Railroad. No part of the main line from Wallula to Portland has ever been completed. Its construction has not even been commenced within these terminal points. No excuse, legal or equitable, is now or has ever been offered in defense of the company. No assurance, sir, is given even at this late day that construction will be entered upon. Much valued land is embraced in this portion of the grant. Settlers have entered upon them. Valuable improvements have been made in their settlements. For years these people have insisted upon a restoration of this unearned grant. Their titles have been held in abeyance, their homes are involved in the issue, and patiently they have waited and watched for some definite action in their behalf on the part of Congress. The general public are also interested, inasmuch as the doubtful status of these lands retards the settlement of the country, discourages immigration within this belt of 214 miles, withholds the power and means of obtaining revenue for the building of roads and bridges, the support of schools, and the erection of necessary public buildings for the public use. Widespread discontent prevails. Political conventions have pledged the political parties of my State to a forfeiture of this unearned grant with others, and the Legislature has also memorialized Congress to the same end. I can no better express these sentiments than by submitting as a part of my remarks the memorial presented to Congress by my own State, as follows:

To the honorable Senators and Representatives of the United States in Congress assembled:

We, your memorialists, the Legislative Assembly of the State of Oregon, respectfully represent:

That the land grant to the Northern Pacific Railroad, coterminous with and adjacent to the Cascade branch of the Northern Pacific Railroad, extends over and covers a large area of valuable and fertile lands in the northeastern portion of the State of Oregon;

That the land grant coterminous with and adjacent to the proposed Columbia River branch of said Northern Pacific Railroad, extending from Wallula in Washington Territory to Portland, Oregon, extends over and occupies an immense tract of valuable lands in the northern portion of the State;

That in many cases so-called "railroad land," that is, land claimed by the Northern Pacific Railroad Company and held from claim or settlement under the acts of Congress, extend 50 or 60 miles or more from the line where said road or either branch thereof has been located;

That the said Northern Pacific Railroad Company has never built a road or branch thereof between Wallula and Portland, or any part thereof; that said route is occupied and used by a railroad built without a grant of land; and that there is no prospect nor necessity of the building of said road between Wallula and Portland by the said Northern Pacific Railroad Company;

That under the act of Congress by which said lands were granted to said company they were long since forfeitable, and as a matter of simple justice to the people should have been long since forfeited;

That poor settlers, who in poverty and in a strange land seek to obtain title under the laws to 160 acres or at most 320 acres of Government land, are held to a strict observance of the law, and required to perform fully all its conditions upon penalty of losing both their claims and their rights; but this railroad corporation, having been given an immense domain of the people's heritage, has been permitted to retain its hold upon large portions thereof for years, without a shadow of right or title, in violation of their charter and the terms of the grant, and to the great detriment and annoyance and injury of settlers and private citizens;

That in consequence of this illegal and unjust claim, or pretended claim, of said company to said lands or a large portion thereof, settlers already upon tracts thereof are in a state of great doubt and uneasiness as to the final disposition of said lands, and are thereby hindered and prevented from making improvements and building such homes or living in such peace and security as they might and would do if this question were set at rest; they are constantly annoyed by conflicting reports, and harassed and plundered by unscrupulous attorneys and real estate agents; besides, settlement and development of the country is greatly retarded, and large quantities of land that ought before this to have been in cultivation and occupied by prosperous farmers is lying unoccupied or held in large tracts in consequence of contracts or agreements with said company, and is not subject to taxation; that in many cases partial payments for tracts of said land have been made to said company by persons who are continually annoyed by the doubt whether such payments are necessary or valid; that, in short, the condition of people occupied and adjacent to these lands is one of incessant vexation and distress;

Wherefore we, your aforesaid memorialists, most respectfully and earnestly ask:

First. That all unearned lands heretofore granted to railroad corporations, and especially to the Northern Pacific Railroad Company, be declared forfeited.

Second. That especially the lands of said company coterminous with and adjacent to the proposed Columbia River branch of said road, namely, between Wallula, Wash., and Portland, Oregon, be declared forfeited without delay.

Third. That the forfeiture of said last-mentioned portion of said grant be not made conditional upon the forfeiture of other portions between Bismarck, Dak., and Wallula, Wash.; but that in case Congress can not agree upon the forfeiture of all unearned lands west of Bismarck, they shall nevertheless declare forfeited said lands coterminous with and adjacent to said proposed line between Wallula, Wash., and Portland, Oregon.

Fourth. That in case speedy forfeiture of said lands is not possible, such legislation will be had as will require the location and public announcement to settlers of a definite boundary line of said grant, so that lands beyond legal and proper bounds can no longer be kept from entry and sale in consequence of the present undefined claims of said company.

Adopted by the senate January 21, 1887.

J. C. CARSON,
President of the Senate.

Concurred in by the house January 21, 1887.

J. T. GREGG,
Speaker of the House.

Our people, and by these I mean most especially those honest, industrious, and persevering settlers who have sought homes and embarked their all on the lands involved—they more than all not only ask, as they have been doing for years, but they demand, as they have the right to do, that this great fraud upon their privileges shall be eliminated and swept from the statutes of the nation and they be guarantied a confirmation of title to their humble firesides. They insist on practical esults. Theories may do for others and long speeches may console, but this period has gone by with these people, and they now demand such remedial and practical legislation as shall place in their possession the prize so long sought, a home for themselves and their posterity. The same may be said as to other grants. For several sessions of Congress practical legislation has failed, and only because of the zealous, stubborn, and yet hopeless effort to secure greater results than were possible to obtain. It was then truthfully predicted by the most earnest friends of a radical forfeiture that such was the temper and such the judgment of the co-ordinate branch of the Congress that the measure recommended by the majority of this House could not and would not be realized. To successfully legislate both branches of Congress must concur. Repeated failures to accomplish what has been insisted upon by this House in this respect are of record and before us. Corporations reaped the benefit. In the mean while the settlers, the most interested of all, have looked on in anguish and despair.

Now, what shall we do? What course, in view of our past experience and of the continued situation of affairs as to the sentiments of both branches of Congress, is now feasible? Which of the pending measures before us will produce positive, immediate, practical, and beneficial results? For one I favor a restoration of every acre of the public domain now claimed by corporations and not earned by them. They have no greater claim or right to that which they have not earned than the humblest citizen in the private walks of life could have. There is no distinction as a matter of principle. All stand equal before the law. The question, however, now before us is one as to practical results. It is not as to how much land we are entitled to forfeit, but how much we can agree, as between the two Houses of Congress, to forfeit. Restore what we can now, and then look to the future with equal earnestness, patience, and zeal for such further restoration as may be then practical, and as to that which now or hereafter remains subject to forfeiture. This view appeals to me, as a business man, as a practical man, and as the friend and representative of the settler and the landless, as the wisest and best course at present to pursue.

I am especially invited to adopt this course because in addition to what I have observed in its favor it also protects the rights of settlers and bona fide purchasers, and it saves and protects the rights of the Government, whatever may remain, as to any unearned lands still remaining. The language of the bill in this latter respect is:

That nothing in this act shall be construed to waive or release in any way any right of the United States to have any other lands granted by them, as recited in the first section, forfeited for any failure, past or present, to comply with the conditions of the grant.

This course is also in consonance with the propositions submitted through the Legislature of my State, which enunciate the public wish that the forfeiture of the Northern Pacific grant between Wallula and Portland—

Be not made conditional upon the forfeiture of other portions between Bismarck and Wallula.

Believing that Congress can not agree in this session any more than was done in the Forty-ninth Congress upon the forfeiture of all unearned lands west of Bismarck, I should prove recreant to the best interests of my State and should act in violation of my own judgment, should I now oppose what I conceive to be the most practical remedy at present possible. The unchanged sentiment on the question of land-grant forfeitures between the two Houses forbid any hope at this time of consummating greater results than such as are contemplated in the bill before us. The last days of this session are nearing a close. It is vain to expect any measure more satisfactory from some arbitrament through conferences. These require time. Much controversy and further deliberation will necessarily follow and in the end we shall be no nearer the accomplishment of forfeiture, great or small.

We shall only repeat the idle ceremony of the last session. Great losses occurred to the Government and the people by reason of that inaction. This I am unwilling to repeat, but shall aid to secure what I can now,

and hope at another time to further effect what may be found practicable, just, and right. Should, however, the less radical measure be voted down, I shall then vote as a last resort for the passage of the committee bill, hoping that in a deliberate and consciencious regard of the public interests the House and the Senate in conference may in the end arrive at such determination of the conflicting propositions as shall insure at this session the enactment of some measure restoring to the people a portion, if not all, of the public domain now wrongfully held by corporations to which they are not entitled.

The Tariff.

SPEECH

OF

HON. JAMES B. WHITE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. WHITE, of Indiana, said:

Mr. SPEAKER: The tariff question now before us, and which is taking up so much of our time, is not a new question; neither have all the discussions that have been presented given us any new light on the subject, and if it goes on for a year there can be nothing further evolved from it in the way of newly-discovered information. Nations from time immemorial have adopted it, some in one form, some in another, but all with one and the main object in view, namely to build up their own industries and protect their people as against their neighbors. A glance at the world of to-day will convince the thinking mind that no such thing as absolute free trade prevails in any country, and yet that is, or should be, the primary condition of mankind as well as nations, freedom in everything, in commerce and in politics, in religion, and on this theory I believe a man ought to have the right to load his wagon or his ship with such goods as he pleases and drive or sail to the uttermost parts of the earth with them and sell them as he pleases, without let or hindrance from any man or nation; but no such freedom exists, never has, and is not likely to.

Then the next best thing for a nation to do is to adopt a policy that will bring the most comfort and prosperity to its own people by encouraging all the industries and pursuits it can profitably create in its midst, thereby reaping the benefit of that commercial exchange which otherwise would go to foreign nations. Commerce, remember, is not a field of love or friendship either among nations or individuals; it is a keen, watchful, earnest struggle for the mastery, and often kept up in a terrific war of extermination. This you will find in the ordinary retail trade of this or any other country; you will also find it in the great manufacturing interests, and also in the wholesale merchants' trade and jobbers' trade. No department of trade is free from it, and it also extends on the same principle as nation against nation; although in all cases the hand of friendship is extended, yet underneath all this the kind of planning and scheming for the masterly prevails, and the war of secret extermination goes on surely and generally silently yet none the less certain. So that it ends often as Darwin states it, in the survival of the fittest. If this is not true, then how do you account for the vicissitudes in trade, the breaking up and destruction of immense accumulated fortunes. If all a person had to do was to freight a shipload or goods or consign a great consignment to a house or foreign market and make a profit, or establish a manufactory of some kind or other either in iron or wood or cotton or woolen and make a profit, or open a retail store in dry goods, boots or shoes, or groceries and make a profit, then things would go on swimmingly, there would be no breaking up, all would prosper. But this is not the case, and it is just here where the keen hand of competition comes in, and it enters all the fields spoken of, and no one is safe against it, and while it is the life of trade, yet is often the death of the competitors.

Therefore, it stands to reason if we open our markets to European manufacturers, they with their cheap labor will compel our manufacturers here, in order to compete with them, to either cut down the wages of our workman or go out of business. There is no alternative, and this brings us face to face with the question, are we ready to adopt that kind of a system? If we are, then free trade is the thing; if not, then protection is what we want to stick to. Now, we often hear of Great Britain being prosperous, and that she is a free-trade nation. Now, the fact is if you will look into and examine her condition she is neither free trade nor protection; and all that she is in the line of free trade is purely and simply adopted from her selfish commercial ideas and not one particle of it from the laudable notion of aiding other nations or of benefiting them. In the first place, let us examine into her character as a commercial people. It does not go back many centuries, and her prominence as a political as well as a commercial power dates from the union of the crowns of Scotland and England. Previous to that there was no free trade, even with Scotland and England. Not even a mechanic could go from one country to the other to find employment. So strict were both sides in protecting their interests that even intermarriage was at times forbidden and in fact prohibited, and the parties punished. So that their tariff was much more exacting than ours. Theirs was prohibitory, ours is not.

And this to a great extent was the condition of all countries at that period—after their union. Scotland and England they had free trade amongst each other, both external and internal, but did they extend that blessing which they talk about to others? For the proof of that look into the history of Ireland? No, she was kept under the heel of oppression, her manufactures legislated against and so cramped by the acts of Parliament that they were in a manner suppressed, and her people forced to a great extent to live by tilling the soil and exchanging their product for goods manufactured in Great Britain. This was the blessing extended to Ireland, and it was just the same in the colonies. All they were expected to do was to till the soil, raise tobacco, wheat, cotton, rosin, turpentine, and such products, and exchange them with the mother country for her manufactured goods, and, in fact, this was the system adopted and practiced. Establishing of manufacturing industries were forbidden and not permitted. True a different state of facts exists now with the Canadian colony; but that was brought about simply because Great Britain was afraid of losing her; afraid Canada would join the United States or set up for themselves; hence a liberal policy is pursued with them, but that is not out of love for Canada, but in fear of her.

So now the policy of Great Britain's pretended free trade is all from pure selfish motives, brought about by several surrounding circumstances and causes; and one of the main causes was the fact that since the discovery of the steam-engine Great Britain made a great and rapid advance of all others nations. The inventions that followed the application of steam were so great and valuable that she shot way ahead of all competitors; and then when she found she could beat all countries in the world manufacturing, she generously makes it known, and says, "Now, since we know we can beat you all, we want to be liberal and enter into a more generous relation with our fellow man. We now offer to you to let you ship your products free to us and you permit us to ship our manufactured goods free to you." Now, this is simply a master-stroke of generous selfishness; for every one knows that the manufactured products outvalue the raw materials four or five to one. And no nation at that time could ship her manufactured goods, for the reason she was way ahead of them in invention and steam application. This is not so much the case now, for other nations in the last thirty years have adopted the same plan as Great Britain and became manufacturers themselves and made rapid strides in invention, also in application of steam. And at this time many of the European nations are well up with Great Britain in that respect and are now—for instance, Germany is—competing with her for a great deal of foreign trade and also is now invading Great Britain with her manufactured wares. So much so is this the case that our British brethren are now crying out against it and talking fair trade in place of free trade. Even her monopoly in iron-ship building no longer prevails. The French and Italians now build almost all their own vessels, and also furnish them their own steam-engines. Great Britain used to have most of this under her control. And it is just so in our country. The rapid development of steam and machinery has placed us in the front rank of manufacturing nations; and with our improved machinery and great natural resources we could really live without any European trade. But that is not desirable. We want to foster trade with our fellow men, but not to our own injury; and protection is the safe policy in that line, for then our domestic manufactures are protected, and those few who want the European goods can have them; and in this way we encourage trade as well as raise the revenue, and that revenue comes from a class who can stand it, namely, the rich; for it is they alone who purchase the bulk of the imported goods.

But this now brings us to the President's position in his message. He says: "The objections to the revenue or tariff is that it advances the price of the imported goods the amount of the tariff, and at the same time advances the price of the home-made goods an equal amount to the tariff, and this extra amount goes into the pockets of our manufacturers." Well, if this was true, then the tariff ought to come off, every cent of it; but our worthy President has not well considered this question; if he had he never would have made such a statement. Let us, for instance, take calico; there is a duty on that of 3 cents a yard. Now, you can go to the factory at Lowell, Mass., or Rhode Island and purchase calico at 2½ cents a yard. Consequently, if these manufacturers kept up with the President's ideas they would add the tariff of 3 cents to the price, and that would make it 5½ cents a yard you would have to pay for it. Well, you may ask how is this? Well. it is simply this: the keen, cutting competition of the home manufacturers for the trade is so great that they sell the goods even lower than the amount assessed as a tariff. So it is clear from the above illustration that the President is wrong in his conclusions, and it is just so with any other class of goods—for instance, all wool cassimere; the tariff on that is 50 per cent. So that on a piece of all-wool goods costing in Europe $1 a yard, a tariff of 50 cents more is added.

Well, any one knows you can purchase the very best of home-made, all-wool cassimers for $1 yer yard. And if the President is correct, then our woolen manufacturers would have added the duty of 50 cents a yard, and the people at home would have had to pay this 50 cents into the pockets of the manufacturers. Now, this is clearly the President's theory, for he plainly says so, which is a great mistake. Yet you can not blame him; he has had no commercial experience, and simply went off on this line like thousands of others, believing that was the true system without giving it due investigation; and, in fact, all people are apt to be caught that very way unless they examine into it, for certainly on first thought it looks as if the manufacturers here would add the amount of the tariff or nearly so to the price of his goods; and so they would, if they did not have competition. They are selfish enough to do it, you need not fear that; but the other competitors are all equally anxious for the trade, hence the fierce competition sets in and goods are at times sold lower than they are in Europe without the tariff.

In order to verify that, a few years ago our Eastern manufacturers shipped millions of dollars' worth of calico to Manchester and Glasgow. No doubt they lost money on them, but they also lost money at home. Certainly, had our manufacturers a monopoly—that is, no one else permitted to go into the business—then the tariff would be a boon to them for they could regulate the price and charge well up to the tariff. But no such state of affairs exists, and can not exist in merchandise. The only thing it can exist in is a patent, and that would be only for fourteen years; but in no free industry could such a thing be possible, for whenever profits are good in any line of trade others will rush into it and reduce them. And that is the very reason why the tariff has not advanced the price of goods. Yes, but you will say some of these goods you speak of, calico and woolen goods, are shipped here and pay the duty and our people buy them. Then you say they must be better goods than our home made goods. No, not at all; you pay 15 cents for an imported cigar; I pay 10 cents and get a better article—a home-made cigar. It does not follow because a thing is imported and pays a duty that it is better than the domestic.

But you see in this country as in all others we have a class of people who are rich and well-to-do and they want something in their mind different from other people, and they are willing to pay for it; and why not let them do it? In this way we collect of them a good revenue which we could not otherwise get, because their wealth is generally in securities or stocks or bonds, and the tax-collector never finds them, but our revenue officers find the goods at the custom-house, hence it is no hardship to let them pay this extra as long as they are bound to buy the foreign goods; and it is just so in their silks, satins, jewelry, feathers, laces, and bric-a-brac, also foreign wines and liquors. Let them have them; we make better and purer wines in California than in Europe and is sold much less, yet these well-to-do people want the European; then why not let them have it? This revenue we need, every dollar of it, to distribute amongst the soldiers in paying them pensions, for it was the sacrifices they made to save the country that made it possible for these people to accumulate their immense wealth, for had not the Union arms succeeded our great wealth of Government bonds that are now worth $1.28 on the dollar would have been to-day selling like the Confederate bonds at so much a bushel.

So it is best they should not begrudge the soldiers their little pensions of $8 per month which they are claiming; it is all they ask and is a small matter to this great Government, and should no longer be withheld. Yet, strange to say, it is these well-to-do or wealthy people who are the most strenously opposed to it and fighting it off. All the great papers of the country are against it; the President is against it. And who is for it? I will tell you the yeomanry of this great land is for it; the working classes are for it, and all of them would freely vote for it if that would determine it. But that will not do it. This Congress has to do it. The Forty-ninth Congress, to their credit, passed a liberal pension bill. It was not all that was wanted, yet it was much better than the state of affairs that exists now. In that bill all dependent soldiers were to have pensions, no matter how their disability came about. This would have taken care of a great many of the soldiers who can not, under the existing laws, procure a pension because they can not trace their disability to the service. Hence they have to go without, even if they served three or four long years, and always fit for duty, never sick, and this is against them; for in consequence of always being on duty they were never in a hospital, hence have no hospital record, so that now it is a misfortune to them to know that they were good soldiers and always fit for duty. The man who enlisted and served three months, two months, may have been in the hospital, got discharged for disability, has no trouble in securing his pension, draws it regularly, while his unfortunate brother who served three years can not get a cent. This may be fair play, but it does not strike the soldiers that way.

Now, no one has a word against those who were so unfortunate as to have to go to the hospital and were discharged and are now drawing pensions; on the contrary, it is well they are getting their pensions and it is hoped they will receive more if they need it. But why not call attention to this loose, unfair system of not recognizing the veterans who did the hard marching, stood the hard fare, slept in the mud and rain, and did the fighting, never complaining; that now the Government says to them, Well, boys, you are in a bad fix; we know that, but you see it is all owing to yourselves; you do not take care of your money; you are to blame for being poor, also for being sick; you had no sickness when you were discharged; so you must shift for yourselves. True we remember and know that you that were well did the fighting and put down the rebellion; still you were paid for that; you know we paid you $13 a month and the money was then worth 60 to 70 cents on the dollar; and besides, the war is over and a new generation is coming along, and they do not feel as if they owe the soldiers anything; of course if you get so sick you can not work, you see we have erected a nice home for you at Dayton and other places; there you can go and end your days and be buried in a pauper's grave, if you choose to."

This is indeed the experience a great many of our comrades are having meted out to them. They do not clamor for a fortune, but this little $8 a month would be a great boon to thousands who now have much trouble in making ends meet. Every Congressman has just such soldiers in his district who have served through the war, been never in the hospital, are poor, deserving men, working at $1 and $1.25 a day as laboring men, often out of work, and have great difficulty in earning a decent living. Eight dollars a month will not make them millionaires, so give it to them before this Congress adjourns. This will empty the Treasury and will be so distributed that not a Congressional district but what will have a share of it. Even the South will get a portion; but even if she does not get as much as the North, she has no right to complain and ought to stand in with the North and vote the measure, for she receives the benefits of the Mexican pension bill; it goes mostly to the South. Then surely, when the nation could pension the Mexican soldiers, which is proper enough, yet why, then, not pension the Union soldiers? In this the President committed another great error; for if it was proper for him to have vetoed the Union soldiers' bill, then consistency ought to have told him to veto the Mexican soldier bill. He either ought to have approved both or rejected both, and he has no excuse for not knowing, for both bills were in his hands at the same identical time.

But now I will get back to the tariff. I merely mention this to show to those who are clamorous for a reduction of the revenue in consequence of our overflowing Treasury that we have not a dollar more revenue than we need. All we want to do is to apply the revenue and not hoard it up by vetoing public bills that Congress has passed for the expenditure of the revenue. And yet the President says Congress is to blame for the surplus, because they will not cut down the tariff, when in truth and in fact the President is solely at fault, because he held back the surplus by his vetoing the bills Congress passed for its distribution, but he is bound to force his free-trade theory on the ground that it taxes our poor people on the necessaries of life. He does not define any one article, only says our people pay the enhanced price the tariff puts on foreign goods. Now I will give him another illustration which will come nearer home to him. Suppose he had the power to put a tariff on boots and shoes coming into the District of Columbia, say of $2 per pair, and he proclaimed that the law should go into effect at once, according to his theory, the goods would cost our people that $2 extra.

Well, I propose showing him they would not cost our people one cent extra. How so? Just in this way: The moment the tariff would go into effect the Boston manufacturers would be here with their machinery and workmen, and in less than thirty days the competition would be so keen amongst them that the prices of boots and shoes would not be any higher; the only party who would suffer would be Boston, and we here in the District would build up a home industry in boots and shoes, a thing we do not have now; and this would benefit our home people, of course at the expense of Boston. And this is just what protection is in everything the whole country over. We are building up our home industries at the expense of Great Britain, France, and Germany by making and manufacturing our own goods, just as the District of Columbia would its own boots and shoes; and it is just that system that has made calico, woolen goods, silk goods, shawls, blankets, and everything we make cheaper than if the tariff had never been put on.

Then you ask, if that is so then, what use is the tariff? Why, it is, as already stated, to raise a revenue from those people who will not use our home-made goods. They are so nice in all things that nothing but the European markets will suit them; therefore let them pay for them. Why, there are some of them so nice that they will not even eat our Western Reserve cheese or New York factory cheese; they must have that old green musty Stilton cheese that our ordinary people would throw out. Then why not let them pay the tariff on it? Certainly if you reduce it they would get it so much cheaper, but then the Government would get that much less revenue. And it runs this way though all the tariff goods. No necessary is tariffed against that the people purchase. Just so with Mr. MILLS'S wool blankets that he speaks of being taxed or tariffed against $5 a pair—a great hardship on the poor man. Why, the poor man does not touch the imported blankets any more than he does the imported cheese. He can get American-made blankets for less than the tariff price. I sell them now, good all-wool blankets, at $4.50 and $5 a pair, so that if the manufacturer in this

country added the tariff to his price I would have to sell them at $9.50 and $10 a pair. Then, truly, the tariff would be a tax on the poor man, and whenever such a state of affairs would be possible I would be one of the foremost in advocating the abolition of the whole tariff—for any part of it would be an injury to the poor; but as it is now it protects the poor by controlling the home market for ourselves. But now we come to the only weak spot in protection, and it is the club that the opponents to it wield with the most severity. It is this: Well, how about protecting the laborer? You do not do that; you let the emigrant come in here and take away the job from a native American, and also you permit your factories, furnaces, and corporations to cut down the wages so that now the workingman in this land is no better paid than the pauper-paid labor in Europe; and to some extent this is true. Yet if you have free trade will that put a stop to such evils? Certainly not; it will only aggravate them.

Therefore we had better endeavor to remedy the evils we have than fly to those that will clearly be worse, for if free trade is adopted it stands to reason our markets would be deluged by foreign goods, and it would follow by a closing up of our factories, a shutting down of our furnaces, and thousands of men and women thrown out of employment; therefore our only safety is to stand in for protecting our industries just as we are doing, and then look around and adopt some other measure that will remedy the evil complained of and which all will admit exists—that is, low wages. We do not need to look far to find the injustice and cruelty practiced in this form, and unless legislation steps in and regulates the evil it will continue to exist, for capitalists will not, and in fact they can not, remedy it, for one over-reaching capitalist or manufacturer will make another hundred well-meaning men act as cruel as he does himself and cuts wages down when they do not want to, and would much rather not have done so, but in sheer self preservation they are compelled to. If we glance at the nations of the world we find free-trade Great Britain, protective France and Germany, protective Turkey, Russia, Austria, Spain, and other nations.

Has free trade lifted up the laborer in Great Britain to comfort and plenty? Not a bit of it. True, there are some employments there reasonably well paid, and the people fare tolerably well, but the great bulk of them is doomed to a life of penury and destitution. The wages in most of the manufacturing industries are so low and meager that the poor creatures scarcely have enough of the bare necessaries of life and often go hungry to bed. Yes, and this not amongst bad, evil-minded or evil-acting people, but pure, moral, righteous, religious, and well-meaning, respectable people. Thousands of them scarcely know from a day in advance how they will get their daily bread. And yet we are told to imitate this people and follow their commercial methods. I hope not. Then Germany, France, and these other countries. Do we want to follow them? True, we do in the protection plan, but we make a different application of it, and we want to make a better application yet; for it is true if protection was the only panacea required to make a people prosperous, happy, and contented, then these nations would be, for they have adopted it and worked it into their political system most thoroughly, so much so that you can not take a valise across the line into either of these countries without having it searched, and if a few extra cigars or a bottle of wine is found it is sure to be confiscated. And the same law is in Great Britain. Just try and land your valise in Liverpool or Glasgow with a little lot of American tobacco in it and you will see how quick it is seized. And yet she is termed a free-trade country.

So on tea and coffee. The tariff on that in Great Britain is over 100 per cent. So it is clearly to be seen that neither free trade nor protection protects and keeps up the price of labor. Yet protection is the plan and system that labor can be fully protected on; with free trade it can not, and the remedy is legislation, for without legislation on labor the workmen of this country will in the end go the way of all the other nations, and that is, be ground down between the upper and nether mill-stones, no matter which he adopts. But in this country he is safe if he will only exercise his prerogative, and this is the ballot. With this weapon he can accomplish anything in this country he has a mind to, and it is fair to say he wants nothing wrong, but he wants fair play, fair work, and fair wages. If these are provided him he is contented. No people are more easily managed than the working classes. All their aim and hope in this world is to earn an honest living, and all they ask is a chance to do it with fair wages to support their wives and little ones. Give them this and there will be no trouble with the working classes, and this much they are entitled to and ought to have, and legislation must step in and see that they get it. Well, then, how can you remedy that? Well, the plan is this: Let Congress enact a law fixing a minimum price for wages all over this land, from one corner to the other, north, south, east, and west, for men, women, and boys and girls. This being done it will be forever a beacon light to all working people that thus far they can go but no farther. I am safe from being cut below this point. This would be a great blessing to our working classes, and the only measure that will ever give them safety from the oppression of the avaricious manufacturers or capitalists. The great error this generation and all others seem to have, and have had, is that they consider labor is merchandise, and should be treated like any other commodity, when it is plenty it will be cheap and when scarce it will be dear. This view is altogether wrong and never should have existed; yet it is the maxim of all theorists on political economy, and is a dangerous and sad delusion. Labor is not merchandise; it is something higher, nobler, and purer; it is flesh and blood, and as such deserves the full protection of the State; and if the State adopts this plan in its own affairs, why should it not extend it to the nation? It can be done if we only apply ourselves to it. To illustrate: Take the Government employés here in the city of Washington, only one Department, if you please, and that will apply to all the other Departments—say the Treasury Department, for instance; in it they employ over two thousand employés, some receiving ten hundred, some twelve hundred, some fifteen hundred, and others two thousand up to thirty-five hundred a year.

Now, if it is true that labor is merchandise and ebbs and flows with supply and demand, how does it come that if you go to the Secretary of the Treasury and inform him that you will contract to furnish him two thousand employés who will take the places of those he now has, all competent, respectable citizens, and will do the work for just half what he is now paying; that labor is plenty, and that at this price your people are glad to take the job, what would the Secretary of the Treasury say. Do you think he would accept your offer and say, Bring along your men and women, they shall have the places? No indeed, he would not; yet he would be under obligations to do so if there was any reason in the theory that it is every one's duty to employ labor where he can get it the cheapest and that labor is merchandise, for the Government, like all other individuals advertising for merchandise advertises for it and takes it where it gets the lowest and best offer; but in place of this, the Treasurer would say to you: My dear sir, I can not listen to your proposition; if you brought men and women here to take the places of my work-people and do the work for nothing it would make no difference; I can not discharge the workmen on any such a proposition; their wages are fixed by law, by legislation, not by competition, and do not fluctuate with the dull times or the abundance or plentifulness of labor; that we have nothing to do with; that we recognize in purchasing stationery or supplies for the Army or Navy or other Departments, but in no case do we apply it to labor or to those who are employed; if we did, we would never know when or where to stop, for the competition would be so keen to get the places that there would be no telling where it would end, and the Government will not be a party to breaking down wages. Our wages are fixed by law.

Now on this head rests all the labor problem, I mean the competitive part of it, where it is treated on the theory of merchandise, and that the employer has the right to hire as cheap as he can. Well, in answer to that, if that theory is right, then our Government is wrong. I claim if it is right for the Government to adopt this system in the protection of its employés, the same system should be extended all over the land, and a minimum price fixed for labor, that no cruel, overreaching, hard-hearted task-master could overreach; not that all wages should be fixed, but that those who can not protect themselves should be established on a minimum basis. Then let them pay as much as they please over and above this, and while this would be a protection to the working people it would bring no hardship to the employer or those who hire labor, for all would be on an equal footing just the same as work by the day—a day constituting or meaning ten hours' work, and it would be a guaranty to the honest, industrious workman that he would for all time hereafter have a fair wage for his day's labor. Such a movement will of course be bound to meet with severe opposition, but more for a lack of examining into it than from any evil it will entail, for, on the contrary, it will work great good and not in the least disturb any class in the land. It merely is to be a help to that great portion who can not help themselves, and are a continuous prey to the overreaching, who take advantage of their helpless condition, and by this means break the price of labor down to a point that it is almost starvation to accept it, yet they have to do it, accept it or starve, and this is all practiced under the vile system that prevails that labor is merchandise. The well-meaning merchant or business man needs no law to persuade him to do right by his employés, and to their credit there are thousands of them who deeply regret to cut wages and often hesitate long before they do it. But you take one mean, cold-hearted employer in a line of trade where a hundred other employers are and he will compel that hundred to follow him by his commencing the cutting of wages. This is where the evil comes in, and this is where the law would protect the workman and do no injustice to the employer, and would in fact benefit in place of injuring all society. For instance, if by such some plan the wages of the working classes could be advanced, say, on average only 25 cents a day, just think what a ponderous amount of purchasing power that would make—for the working people spend all they make. There is on average something over six million working people who work for wages in the United States. Now, at 25 cents a day extra would make one million and a half a day to go into active circulation for dry goods, groceries, and all the necessaries of life, equal to an increase of five hundred millions of dollars a year, an amount more than the total value of the whole wheat crop of the country.

Just think of this immense sum being expended. It would soon use

up the surplus of merchandise in the country. It would soon empty all your overstocked warehouses, and the great consumption and increased demand from goods would set the whole manufacturing industries in motion—yes, and keep them in motion for all time afterwards—because the work-people would always be assured of having the purchasing power to buy with, and this cutting of wages cripples that power, and the more it is crippled the duller and more stagnant trade will become; and from this comes what is termed over-production, when in fact it is simply under-consumption—a depriving the people by low wages of the power to purchase. And if European governments would adopt such a system they would not need to hunt our markets so anxiously for their manufactures, for then their own people would have some money to buy their own goods with; but as it is, they have not; they simply receive wages enough to purchase the bare necessaries of life, and have little or no money to spend for what is termed the comforts of life, either in food, wearing apparel, or household goods; hence their manufacturers have little trade at home in consequence of the poverty of the people, and therefore seek our markets all the more assiduously; hence it is all the more necessary we should keep up protection by high tariffs, either to limit their consignments or shut them out altogether.

And in order to sustain protection amongst the people we must protect the laborer as well as protect the product of his labor. When we do this, then we will have a firm rock to stand on; and unless we do, that the adversary can continuously point to the fallacies of protection. As to protecting the workman, in some cases it does, but in the majority it does not, and this we want to remedy. And it will also benefit the farmer, an advance in wages, for then these people, who now get a scant living, from their increased income, would be the more able to purchase more of the necessaries of life, such as the farm products of chickens, butter, cheese, milk, and vegetables. In this way the farmers would in turn receive more for their products, could repurchase more of the merchants of his dry goods, groceries, hats, boots, crockery, etc. An increase of this kind would stimulate all the avenues of trade. I do not mention a higher price for wheat, corn, oats, and pork, for supply and demand do not regulate them. They would not be affected either way. Gambling in them is the ruination of the prices, and until that is checked or stopped the farmers' property in these respects will be at their mercy, and the farmer kept in a state of almost dependence on moneyed men in consequence of low prices being fixed on their produce by the gamblers in Chicago.

This also Congress can remedy, and there is a bill now before the House for that purpose, and it is to be hoped will soon become a law, eradicating this evil and establishing the minimum price of labor, say, at $1.50 for men, $1 for women, and 75 cents for boys and girls; this would change and greatly benefit the distressed portion of the people, give a uniform standard of wages, and result in giving better prices for farm produce all over the land and at the same time elevate the whole social fabric of society by giving a spirit of contentedness to all classes in consequence of a betterment of their condition in life by having and being placed in a position where they would have better wages, better prices, and more money to spend in purchasing their necessary comforts; and in support of the necessity of such a law being enacted please let me read an extract from the Washington Republican, February 9, 1888, in relation to the condition of the Lehigh coal miners and their wages, which average them $1 per day:

FRIENDS TO THE MINERS—INDORSING THEIR COURSE AND GIVING THEM FINANCIAL AID.

The meeting called for Grand Army Hall last evening to allow a committee from the strikers in the mining regions of Pennsylvania to present their side of the case was very fairly attended, but was not what one would expect in a city containing over ten thousand Knights of Labor and Trades Unionists. Inquiry developed the fact that the trouble between the Knights of Labor and the Federation of Labor was the cause of the lack of interest. The meeting of last night was under the charge of the professional labor leaders in the Federation, and the Knights generally remained away and expressed their sympathies with the strikers through the medium of their order.

Paul T. Bowen called the meeting to order, announced its object, and, without waiting for the action of the meeting, appointed M. D. Rosenburg and J. M. Boice secretaries and E. W. Oyster, Jesse Lawson, W. H. Stickel, John Suter, and J. J. Foley a committee on resolutions.

Hugh McGarvey, one of the striking Lehigh miners, was the first speaker, and he entertained the audience with a most thorough and concise statement of the many wrongs done to the anthracite miners from 1867 until the present. In nine years the wages of these people suffered a reduction of 40 per cent., and when they remonstrated they were locked out. In fact, they were nothing but slaves. They had repeatedly sent committees to their employers asking for arbitration and offering to allow them to appoint both the arbitrators and referee, but all their offers were ignored and the strike was the result. "In fact," said the gentleman, "we look upon their action as simply being a part of a huge conspiracy to starve us into submission. There are no other anthracite fields, and we can not go elsewhere to look for work. But we are fighting for a principle, and do not intend to give in."

Daniel Duffy, representing the Schuylkill miners, was the next speaker, and bore similar testimony as that of Mr. McGarvey. "They are trying to starve us into submission," said he, "and our condition has for the last ten years been but a little above that point. The average wages of the anthracite coal miners, according to statistics, is $360 per annum, and they are determined to reduce it. The coal operators state that there is no money in that business. It is false. In 1886 the value of the anthracite coal mined was $120,000,000, and they paid wages amounting to $33,000,000. Look at those figures and judge for yourself."

Joseph P. McLeer and J. H. Gleason, in behalf of the Reading Railroad strikers, then told how they were brought into the strike, after which Representatives BRUMM and BOUND, in whose Congressional districts nearly all of the striking miners live, made short addresses approving the cause of the strikers and pledging their assistance.

Resolutions denunciatory of the wrongs done the strikers, urging them to hold out, and pledging moral and financial support were then adopted. The hat was passed for subscriptions, and on motion the chair was authorized to appoint a committee to call upon the business men for contributions.

Also let me read an extract from the Irish World on the same subject, which places the wages of sewing women in New York at $2.50 to $5 per week.

THE LABOR FIELD—WHERE PHILANTHROPY FAILS.

The truth of the patriot's charge,

"Who would be free themselves must strike the blow,"

finds many an illustration outside of wars and revolutions. It is seen in every condition of life and field of effort where any one element of society is dependent upon another for the means of subsistence or the determining of its rights. The good-natured interference of philanthropists may direct a temporary attention to the existence of a wrong, but unless the sufferers by that wrong themselves assume an attitude of resistance and protest against the injustice done them they need expect but little benefit from the sympathy of the disinterested. The world is too engrossed in its conflicting selfish interests to pause to examine conditions where the machinery does not creak and where no complaint is heard. It is only where there is evidence of friction endangering other interests, when resistance is made so positive as to interfere with the public convenience, that the people are roused sufficiently to investigate and regulate the wrong.

The gradual reduction of the hours of labor, the increase of wages in well-organized industries, the recognition by employers of rules submitted by their associated employés, all those gradual modifications of the methods governing our industrial system are the result of organized and preconcerted efforts of the wage-workers in those industries in which the great body of the employés act as a disciplined organization and press their cause upon public attention with intelligence and persistency. The contrast between the conditions prevailing in those industries which are thus organized and in those in which competition is allowed full sway amongst the wage-workers without any restraint of common interest is so glaring as to leave no room for doubt as to the advantages of organization.

There are upwards of forty thousand saleswomen in New York City whose hours of labor average from ten to fifteen per day, whose compensation is from $2.50 a week and upwards, and who are, as a class, subjected to humiliating and oppressive rules and fines which to many make life a burden, but who are fearful of making their grievances known lest their discharge would immediately follow. They have no organization. There is apparently an inexhaustible army of competitors anxious to take their places if they were to attempt any resistance. Their immediate needs are so pressing, and their wretched wages leaving no margin upon which to subsist if deprived of employment, that they find themselves practically helpless under the stress of existing circumstances, and feel that they have no alternative but to accept such terms as unthinking, heartless, or avaricious competitors employing them may see fit to offer. Thus it is that the average pay of the saleswomen who must support themselves in the great metropolis is about $5 a week and for thousands of them only half that figure.

The philanthropist shudders at the contemplation of the great wrong done this oppressed class and the awful moral dangers necessarily attending such conditions. But of what avail is the pity? The employers claim that they are forced by competiton to reduce the wages and that at those figures an abundance of labor is begging to be employed. The public are searching for the cheapest product regardless of the fact that the needlewoman or saleswoman may be hungry. And so the cry of the sentimental reformer is forgotten and the girls must for 40 cents a day stand ten hours behind the counter selling shirts for which the needlewoman has been paid less than 2 cents for stitching.

It is obvious that something more than tears of sympathetic observers are required for the solution of a problem such as this. It calls for an active public agitation of the questions involved in these grievous conditions. It is encouraging to note that recently a workingmen's organization has been founded and a beginning made in the work of practical self-help by the sufferers themselves, and the Irish World extends to the organizers of the movement its congratulations and assurances of cordial support in all well-directed efforts to bring to their relief the support of an organized and powerful agitation.

It furnishes an opportunity for the various organizations of workingmen, and especially for the management of District Assembly 49 of the Knights of Labor, with its powerful machinery of agitation, to render a service to the labor movement and to the public. The actual facts could be ascertained without making necessary the identification of the workwomen making them known, and a vigorous discussion in the public press could be forced by the organizations and a public sentiment aroused which would compel a readjustment of conditions and a recognition of the rights of those female wage-workers who are now practically helpless in the most abject conditions.

The machinery necessary for arousing such an agitation and making it practically effective is already possessed by the workingmen's organizations, provided they have only the co-operation of the workingwomen. The Irish World would be pleased to see such an honorable and praiseworthy movement undertaken with a will, and were the suggestion acted upon it would not be a mere spectator, but would lend the agitation its cordial support.

Also, please let me read an extract on American pauper labor, so called, from the Washington Post, April 2, 1888, showing the urgent necessity of protecting labor; and if not done, we will soon be as bad here as in Europe:

AMERICAN PAUPER LABOR—MRS. MARGUERITE MOORE'S COMPARISON OF IRELAND AND AMERICA.

The Anti-Poverty Society held an open meeting last night in Grand Army Hall. The room was packed and the applause was loud and long. Mrs. Marguerite Moore was the first speaker. After reviewing briefly the struggles and sufferings of the Irish peasantry against hard and merciless landlords, she paused and said: "Don't look at Ireland; look to your land theories at home. The land robbery of Ireland is growing rapidly in America to-day. Labor in America is being crushed by landlordism just as it is in Ireland. Sewing women in New York are making underwear at 75 cents and less a dozen, and American-made underwear is being sold to such an extent in London and throughout England that the press over there are talking about shutting out the products of American pauper labor."

Miss Hulda B. Loud, a small, nervous, typical Yankee schoolmarm, with a sweet, engaging face, followed in a talk which she described as a "butterfly ramble." It was more of a bee's busy flight, for wherever her thoughts carried her her tongue picked out a kernel of truth. "I have no particular pride in Massachusetts," said she. "I am proud when she does anything worthy of pride, but I fear she is lagging hopelessly in the rear of economic reform. I believe in Henry George's plan of taxing land values, not because I believe it to be a cure-all, but because I regard it as the first necessary step. I am not afraid of a name. I am an anarchist in so far as I believe in the individual and in individual action. I am a socialist in so far as I believe that man must help his brother and is dependent on his brother."

Also, I desire to read an extract from the Washington Republican,

February 24, 1888, giving an account of how the miners in the coal regions live and their wretched condition:

HOW THE MINERS LIVE—ONE OF THEM TELLS OF THEIR WRETCHED CONDITION UNDER COMPANY RULES.

HAZELTON, PA., *February* 23.

D. M. Evans, a practical miner, was examined by the Congressional investigating committee this morning. He referred to the strike in the Lehigh regions and the demands made in August, the refusal to arbitrate, which resulted in a strike. He related the pitiable condition of the miners, saying they were obliged to trade at the stores of the company, and some never saw a dollar in cash. They were unable to get sufficient to eat, and could scarcely buy a calico dress for their wives. The average earnings of the miners would not exceed $30 per month, and out of this the miners took $1.95 annually for taxes. The men were charged $2.10 per ton for coal, and were obliged to pay for a certain quantity whether they used it or not. Married men were taxed $9 and single men $6 per year for the company's doctor. Rents were from $5 25 to $7.50 per month for houses worth not more than $250 or $300. When there was a birth in a family $7 or $8 in addition to the regular tax was deducted for the physician.

He then discussed the company-store business, saying the miners were charged 10 to 15 per cent. more for articles than at individual stores. There was no compulsion to purchase at the company's stores, no threats of discharge if they did not, but there were other methods of coercion. A miner, for instance, when his breast of coal was worked out would find no more work for him and would be compelled to return to the grade of an inside laborer. Of late, however, the men were getting out of that serfdom, and the evil of the store system did not extend as universally as theretofore. Evictions were not unusual. Accounts were submitted showing that after working for months for the company the men were still in debt to the operators. On cross-examination he said that $1.30 would be more rather than less what it would cost to mine a ton of coal. The cost of transportation was $1.80. He then spoke of the great exodus of miners from the region. The next witness was James Broderick, whose evidence was substantially on the same line.

I also desire to read you an extract from a New York paper, to show the contrast of living in this our land of boasted equal rights.

COACHES IN PARADE—SEVEN IN LINE IN PROCESSION THROUGH THE PARK.

The New York Coaching Club had its annual parade yesterday, making the start at 5.10 p. m. in the central drive at Central Park. Hugo Fritsch, formerly Austrian consul, was the first to arrive, with his bay and roan leaders and brown and bay wheelers in front of a yellow-bodied carriage. On the coach with him were Mrs. Fritsch, Mr. and Mrs. Elliott Roosevelt, Hamilton Carey, and Miss Gibert. E. M. Padelford and his "stag" party, including T. H. Howard, F. O. Beach, A. T. French, Center Hitchcock, and E. C. Porter, were the next ones to pass into the park through the Eighth avenue entrance. The other coaches were: Col. William Jay, on which were the Colonel and Mrs. Jay, A. Thorndike Rice, and Mrs. Burke-Roche; Prescott Lawrence's, carrying Mr. and Mrs. Lawrence, Woodbury Kane, Miss May Brady, Frank Griswold, and Miss Florence Griswold; Fairman Rogers's, which bore on top Mr. and Mrs. Rogers, and Mr. and Mrs. Evans R. Dick, of Philadelphia, Walter R. Furness, and Mrs. Nicholas Fish; Dr. W. Seward Webb's, on which were Dr. and Mrs. Webb, Louis Webb, Miss Hall, and Mr. and Mrs. D. S. Sloane; and Secretary Frederic Bronson's coach, bearing Mr. and Mrs. Bronson, Mr. and Mrs. Gerald L. Hoyt, W. P. Wetmore, and Miss H. Beckwith.

The drags were drawn up in line about a length apart, in this order: President Jay, Dr. Webb, Mr. Lawrence, Mr. Rogers, Mr. Fritsch, Mr. Padelford, and Mr. Bronson. They stood still long enough for two photographers to flash their cameras at them, and then started. The string of four-in-hands went up the central drive to the Webster statue, when they turned into the west drive and tooled it to the north end of the park, back along the east drive, and separated at the lower end of the mall. About forty covers were laid in the big dining room of the Brunswick at the club's annual banquet in the evening.

Also, please let me read an extract from a New York paper, February 25, 1888, on "Sons of Rich Men."

SONS OF RICH MEN.

We have hundreds of men in this city whose fathers idiotically provide them with spending money galore.

What do they do with it?

Well, as a rule they spend their time sucking alternately the end of a cigar and the knob of a cane. They wander vapidly about the streets, looking in at this theater or that, play billiard in cafés, and drink themselves into early graves. Suggest to these New York dudes a life of athleticism. They are too retired. Open up to them the enjoyment possible to a genuine club life. Let them see what genuine hospitality means. Show them how much better it is to spend an evening with intelligent men discussing matters of interest, new discoveries, new appliances, new forces, than it is to spend it with a first-rate hoyden on a third-class spree.

Do you think they would understand you?—*New York Graphic.*

Now, Mr. Speaker, while there is no law and never can well be a law to regulate man's industry or his right to accumulate means as he pleases so long as he does no injury to his fellow-man, yet, such being the case, where such glaring contrast is possible in the midst of this glorious Republic, where all are considered free and equal, is it not all the more demanding of us as the people's representatives that some means should be adopted and a law enacted that, while it will not remedy or regulate all the evils of society in the wage system, will at least be a protection to that great and well-meaning class who can not help themselves? On this question, Mr. Speaker, I look with more anxiety and concern than all the other public questions put together, and I have taken the liberty of introducing a bill to endeavor to meet this great question, and all I hope is its defects will be pointed out and remedied by those who are wiser on the subject than I am and the proper method laid out and adopted that will meet the end for which the bill is desired. Certainly something ought to be done that will bring peace, plenty, and contentment not only to the working people of this great land but the world over; and in place of our attempting to compete with the world in reducing wages in order to control the trade of the world, let them on the other side strive rather to follow us in adopting such wise measures as we may enact in the elevating of their own people and raising their standard of wages by following us up in place of us following them down. In this rests all the tariff question.

The Tariff.

SPEECH

OF

HON. JONAS G. HOWARD,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

June, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. HOWARD said:

Mr. SPEAKER: The vast area of our country, its rich soil, its variety of climate, its inimitable mineral and other resources, its paucity of population, for so extensive a territory, and the wonderful improvement and utilization of machinery in the last twenty-five years in all the industrial enterprises of the country, render our ability to produce largely in excess of our capacity to consume. With the aid of machinery one million men can now produce as much as five millions could without such aid a few years ago. Hence the manufacturers and farmers are able to produce enough to supply the demands of the home market with one-fifth the number of laborers it required in former years. This results in cheapening the production but lessens the demand for labor. All the work now done in the United States could be performed with one-third, perhaps with one-half, less laborers than we now have, if constantly employed. All the labor troubles that have afflicted the business community from time to time, during the last fifteen years, are traceable, in the main, to the fact that the supply of labor is largely in excess of the demand for its services, and this excess of supply over the demand is constantly increasing, notwithstanding we have been living for the last twenty-seven years under a high protective tariff. We would have no trouble with labor if there were plenty of work at good living wages to keep all employed.

Every instinct of humanity and self-preservation demands that whatever can should be done to ameliorate the condition of labor in this country. Labor produces all the wealth, supports the Government in time of peace, and fights its battles in time of war, and the voice of the laboring class is more potential at the polls than all others. Hence the greater the necessity that the laborer be kept as near as possible upon the plane of independent citizenship, for as is the spirit of our people so will be that of our Government. Hence it is to the interest of all that the laborers be furnished with steady employment at good living prices. The last fifteen years have demonstrated beyond peradventure our inability to give steady employment to all our labor so long as our industries limit their productions to the demand of the home market, which they can supply and remain idle half the time. If our home market was what our Republican friends claim for it this condition of things would not exist. What, therefore, is needed most is a market for everything and all that we can produce in this country.

If we had such market we could keep constantly employed every man in the country. But such a market can only be had by increasing our foreign trade; and our foreign trade can not well be increased without a very material modification in the tariff. In suggesting a remedy for the then existing condition of things, President Arthur, in his last message to Congress, said: "One of the greatest of the problems which appeal to the wisdom of Congress for solution is the ascertainment of the most effective means for increasing our foreign trade, and thus relieving our industries from the depression under which they are now languishing." And Hon. Hugh McColloch, Republican Secretary of the Treasury, in his last report to Congress, in December, 1884, said: "The time has now come when the manufacturing industries of the United States are in dire distress from a plethora of manufactured goods; that the existing iron, cotton, and woolen mills, if employed at heir full capacity, could meet in six months, perhaps in a shorter time, the home demand for a year. It is certain, therefore, unless markets now practically closed against us are opened, unless we can share in the trade which is now monopolized by European nations, the depression now so sorely felt will continue, and may become more disastrous. The question, how shall our foreign trade be increased? is the question which now comes to the front and demands prompt and careful consideration."

If the duties on raw material are an obstruction, those duties should be removed. If the duties on other articles are an obstruction they should be modified. Whatever may be required to increase our foreign trade, whether it be a repeal or a modification of existing duties, should be demanded in the interest of the manufacturers themselves. This vigorous assault by a Republican administration upon a tariff system which has practically destroyed our foreign trade and stands as an impassable barrier to its restoration, has caused increased effort on the part of the protectionists in defense of their favorite policy. This is manifest by the organization of "Home Market Clubs" in certain districts, and composed in the main by the owners of protected industries. Boston has a "Home Market Club," but no "Home Market Club" will be found in the great West among the farmers who have to sell

their corn at from 12 to 18 cents per bushel and their wheat from 40 to 60 cents per bushel. The principal mission of the "Home Market Club" is to magnify the importance of our home market, and to try to convince the people of the impracticability of increasing our foreign trade.

The protectionists know that an increase of foreign trade means a modification of the tariff. They know that the present high-protective tariff and a remunerative and profitable foreign trade can not exist together. Hence the Home Market Club's hostility to any measure looking to an interference with the tariff, or a repeal or modification of any of its provisions. In February last Senator SHERMAN addressed the Boston Home Market Club, and in the course of his remarks said that the annual value of our agricultural productions is over $8,000,000,000, and that less than 7 per cent. of the same found a market abroad. Though doubtless through inadvertence, these statements of the Senators are incorrect and calculated to mislead. The annual value of our agricultural products is less than $3,500,000,000, instead of $8,000,000,000 as the Senator stated, and at least 26 per cent. of the farmers' surplus has to find a market in foreign countries or rot in the bins.

About two-fifths of the farmers' productions in this country are consumed by themselves. They and their families comprise about 30,000,000 or one-half our population. The other three-fifths, which is $2,100,000,000, constitute the surplus the farmers have to put upon the market, of which they sold in foreign markets in 1887 $522,000,000, and in the home market $1,577,000,000, which latter amount is only three times greater than the amount sold in the foreign market. I invite the attention of the farmers and manufacturers to a careful consideration of the foregoing statements, and call upon them to answer whether they are willing to be restricted in a market for their productions to 60,000,000 people, or will they demand the right to go with their productions into the markets of the world, in which there are 1,400,000,000 people, and to whose homes and habitations great free natural highways have been provided for our commerce?

Under our tariff system in force for more than twenty-five years last past England has monopolized the trade of the American continent outside of the United States. She annually sells to Mexico of her productions more than $750,000,000, while the United States sell less than $12,000,000, sixty times less than England, whose trade with Mexico alone is almost as large as that of the United States with all foreign nations. This condition of things is now existing, and has for a long time past, while the products of our farmers have been rotting in the bins, and many of our manufacturing establishments are and have been running on half time for want of a market for their productions. Is there a farmer who desires a continuance of this policy which has reduced him to a hewer of wood and drawer of water in the interest of the favored few? Hence it is to the interest of both the farmer and manufacturer that the tariff should be so modified and readjusted as to encourage the increase of our foreign trade, and that the industries and labor of the country be relieved from the depression under which they are now languishing.

Forfeiture of Railroad Land Grants.

SPEECH

OF

HON. JOHN H. ROGERS,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 6, 1888,

On the bill (S. 1430) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes.

Mr. ROGERS said:

Mr. SPEAKER: I voted yesterday, as the RECORD shows, against the passage of the substitute of the majority of the Committee on Public Lands for the Senate bill forfeiting certain land grants. The roll-call disclosed the fact that no quorum was present, and the House adjourned. To accommodate my friend from Florida, who favored the bill, I paired with him, and therefore did not vote on the passage of the substitute this morning. Had I voted I should have voted in the negative to-day.

On yesterday I voted for the Payson amendment, which forfeited all land not coterminous with constructed roads. That amendment I believe, after careful examination, to be the law upon the subject of forfeitures. My views are fortified by the decision of the Supreme Court of the United States in Schulenberg *vs.* Harriman (21 Wallace), by the opinions of two Attorneys-General of the United States, by the repeated action of both Houses of Congress, and by the uniform action of the Executive Departments of the Government, including the present Administration, notably in the case of the Backbone Railroad in Louisiana, determined when Mr. Justice Lamar was Secretary of the Interior. No one expects the Senate bill as amended by the House to pass the Senate or to become law, and I am not willing, in view of these facts and where important interests of the people are involved, to surrender my convictions upon a matter of principle unless better reasons can be given than have been assigned.

If this Senate bill, as amended by the House, should become law, it will, in my opinion, be an unfortunate piece of legislation. In my humble judgment it can only result in endless litigation, widespread disturbance of titles long since settled, the retarding of the future development of many sections of the country, where settlements have begun on the basis of the law as settled by the courts and the Executive Departments of the United States, and the repeated action of Congress, to the great annoyance of many people, and that no good can come of it not obtainable through the Payson amendment, which avoided all these objections and accomplished all that the United States can now accomplish by forfeitures or otherwise in regard to these grants. I have never voted to give a railroad company one acre of land. I have always been opposed to that policy. I am ready now, as the Payson amendment proposes, to forfeit every acre of "unearned lands heretofore improvidently granted to railroad corporations by the action of the Republican party," as provided in the platform of the Democratic party in 1884, and steadily adhered to by it ever since.

I regard it as unwise that we should defeat the forfeiture of the unearned lands, as contemplated by the Payson amendment, which we all agree can be done and should be done, by a fruitless effort to do what we can not do, and never have done in a single instance in the history of this land-forfeiture legislation. If these unearned lands be not forfeited by this Congress, another Congress will find many of these roads constructed, and the lands now forfeitable will have become non-forfeitable, and the people's rights forever gone. These being my convictions, my duty as a legislator impels me to vote against the substitute offered by the Committee on Public Lands for the Senate bill, and to express the hope that when this bill goes into conference its conferees will recede, and thereby secure the immediate forfeiture of all the forfeitable lands now, while we may, and before the power to do so shall be lost by the construction of the roads.

My duty is made doubly clear, because the third section of the Payson amendment reserves the right to forfeit hereafter the lands which are coterminous with the constructed roads. If that can be done at all it can be done hereafter, and hence there is no sound legislative or business reason for not adopting the Payson amendment now and dealing with the other question, if it shall be decided that we can do so, hereafter, when we shall run no risk of losing the lands covered by the Payson amendment.

Forfeiture of Lands Granted to Railroads.

REMARKS

OF

HON. OSCAR L. JACKSON,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 5, 1888,

On the bill (S. 1430) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes.

Mr. JACKSON said:

Mr. SPEAKER: There is without doubt need of legislation on the subject of forfeiting grants of public lands that have at different times heretofore been made by Congress to aid in the construction of railroads.

Having served in the Forty-ninth Congress and also in the present Congress on the Committee on Public Lands, it is a subject to which I have given some considerable study.

I was present when the committee considered and discussed the present bill, but was unavoidably absent when the reports were made. Whilst I favor legislation on the subject the proposed bill of the majority is not satisfactory to me. The bill offered by the minority, Mr. PAYSON and others, is a better measure although not perfect, and I will vote for it as the matter is now presented. I wish to say that no matter which bill may be adopted by this House, on final passage I will vote for it. Not because I think the bill proposed by the majority of the committee is what it should be, but in order that the subject may go to a conference committee.

If the matter goes to a conference committee I would expect a more satisfactory measure, and in any event we would have opportunity to vote upon it again.

Some of the land grants were improvidently made, and have been the cause of large bodies of public lands passing into the hands of a few parties. They have not tended to an occupancy of the lands by actual settlers. They were all severally made on condition that certain public works should be made and completed. In all cases where there has been no substantial compliance with the conditions we should now avail ourselves of the provisions in the granting acts and reclaim the lands for the Government.

Some of the companies have done little or nothing toward the works

in aid of which the lands were given. In such clear cases we should at once forfeit all. Others have partly built their lines and we can readily make a division of the grants. I am opposed to the proposition, even if we have the power, to forfeit lands where the roads are now actually completed as required by the granting acts, even if partly completed out of time.

But, as I understand the decisions of the United States courts, Congress has now no power to forfeit grants where the roads have been completed, even out of time, and inspected and accepted by the Government. For this reason I can see no use of discussing extreme measures, such as have been proposed.

There are rights of third parties in all these causes that should be carefully guarded. The railroad companies have sold lands to innocent purchasers who have settled upon them and improved them, believing the company could make good title. I can see no justice or policy in forfeiting such lands; especially as the Government would allow 160 acres to be taken free as homesteads as soon as it would recover the land.

In all such cases the rights of actual settlers should be carefully guarded, and I am satisfied there are many cases of purchasers in good faith who are not settlers who deserve consideration. I consider this only in line with the policy of preserving our public lands for actual settlers and treating with the greatest liberality all citizens who improve them for homes.

In our desire to recover lands for the people we should always bear in mind that it is best policy to deal justly with all, and I would apply this alike to the companies to which the grants were made as well as innocent purchasers and actual settlers. One thing more: I consider it important that we should pass some bill this session. Delay loses the power of Congress to forfeit lands. A moderate, reasonable bill, such as should have been passed in the Forty-ninth Congress, would have saved several millions of acres of land to the Government that are to-day beyond our reach. Next session we will have less power than now.

The Tariff.

SPEECH

OF

HON. JONAS G. HOWARD,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 7, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. HOWARD said:

Mr. SPEAKER: If our Constitution grants the power to lay and collect taxes on imports for the sole and direct purpose of aiding and encouraging private and individual enterprise, and such power is only limited by legislative discretion, as is claimed by our Republican friends, then indeed does it fail to protect the people from the most dangerous power that ever tempted human ambition. But we deny the existence of any such power. The first clause of the eighth section of the Constitution declares that the Congress shall have the power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States. It has never been claimed that the power in question existed or could be exercised under this clause, inasmuch as the Constitution is one of limited and enumerated powers, and none of them can be rightfully exercised beyond the scope of the objects specified in those powers. But our Republican friends maintain that Congress have constitutional authority to regulate commerce for the purpose of aiding and encouraging private and individual enterprise.

Now, does any one believe that if the framers of the Constitution had intended that Congress should exercise such power, they would have withheld an express grant of such power, when in the convention an attempt was made to introduce into the Constitution a power to encourage manufactures? And is it reasonable to presume that the framers of the Constitution, after withholding an express grant of such power, could have intended that such power existed by construction, or implication, in that clause of the Constitution which authorizes Congress to regulate commerce with foreign nations and among the States, a subject so remote from and foreign to that of regulating manufactures? The truth is, power to tax the whole community for the private benefit of a few has no warrant in the Constitution, and it has no other foundation for its exercise than that dangerous plea of necessity, a plea which recognizes necessity as the measure of the power of the Constitution, and those who exercise the power as the judges of the necessity—a principle antagonistic to free government and the rights and privileges of the people; a principle that through all the ages has made the government the master and the people the subjects.

The tendency of power has ever been to overleap the limitation placed upon it and intrench upon the reserved rights of the people. Our Government was formed by the people. They are the creators; the Government is the creature. All governmental power is derived from the people, and is held in trust for the sole use and benefit of the people; and so long as their public servants, in the execution of this public trust, obey the limitations placed upon power, so long will the liberties of the people be secure and no longer. It is to the abuse of power that the downfall of every free government is traceable. It is in the main by the aid of legislation that about five thousand men have heaped up wealth in their own hands amounting to $20,000,000,000, half the entire wealth of a nation of 60,000,000 people. This vast wealth could not have been thus massed into the hands of so few without governmental aids; yet in the name of labor, much of this wealth is still clamoring for governmental protection and aid in their individual enterprises, which can only be given at the expense of the great body of the people. The old maxim that "eternal vigilance is the price of liberty" should admonish the people that they are the guardians and custodians of their own liberties, and that nothing more seriously menaces those liberties than the permission and exercise of unwarranted power which alone their vigilance can avert.

Irrigation of the Arid Region of the United States.

SPEECH

OF

HON. JOSEPH K. TOOLE,

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 21, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 10340) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes—

Mr. TOOLE said:

Mr. CHAIRMAN: The statesmen of this day and generation, with commendable zeal and variability, are engaged in the solution of the important problem of how to prevent an accumulation of a surplus in the Treasury beyond the amount necessary for an economical administration of the Government without impairing our home industries and without injuriously affecting American labor. The proper solution of the problem is of the highest concern to this Republic. There is a wide divergence between the two great political parties upon this question, with no possibility of an agreement before another election.

Holding this view and desiring to mitigate in some degree an existing evil, as well as to promote and encourage a well-considered scheme, I venture to bring to the attention of the House a meritorious and altogether feasible plan of disposing of a considerable amount of the money already accumulated in the Treasury, and by which new life and prosperity will be infused into a section of our common country hitherto largely neglected. I refer to a system of governmental irrigation in the Territories of the United States by means of dams and reservoirs, whereby the 1,000,000 square miles of land now absolutely sterile and worthless and which needs only water to be rendered productive will be reclaimed for the use of the citizen. Many of you, indeed I may say all of you, with a few exceptions, come from localities where the rainfall is sufficient to secure the growth of crops without irrigation, and I think for this reason I may fairly infer that the subject is not a familiar one to you. The amendment proposed by me and just sent to the Clerk's desk, is intended to give to the Director of the Geological Survey a comparatively small amount of money with which to initiate the enterprise, and is as follows:

For the purpose of investigating the extent to which the arid region of the United States can be redeemed by irrigation, and the segregation of the irrigable lands in such arid region, and for the selection of sites for reservoirs and other hydraulic works necessary for the storage and utilization of water for irrigation, and to make the necessary maps, including the pay of employés in field and in office, the cost of all instruments, apparatus, and materials, and all other necessary expenses connected therewith, the work to be performed by the Geological Survey, under the direction of the Secretary of the Interior, the sum of $250,000.

I beg the indulgence of the House while I read an extract from an interesting pamphlet published by Mr. Charles D. Parton, late commissioner of the United States in Asia, upon the subject we are now considering. What he says of California, Arizona, and Mexico is true of a large part of Montana, Wyoming, Idaho, Utah, and Dakota.

Irrigation existed in Egypt before the pyramids were erected. It has fed the millions of Asia since the creation of the world. It nurtured Rome into existence, and was practiced in America before Columbus discovered the New World, and yet the people of the United States east of the Mississippi River know but little about it and care less.

The Moors introduced irrigation into Spain, and the Spaniards imported an imperfect system of irrigation into Mexico, Texas, California, etc. The Valley of the Nile has yielded its fruitful abundance from irrigated lands for countless ages, and Cato wrote learnedly advocating its introduction into Italy; but the greatest achievement of modern times has been the improvement of the system of irrigation in the East Indies by the British Government of India. Irrigation in the East Indies antedates all history; the Great Mogul gave it a grand impetus during the magnificence of his reign.

When the British Government (after the Sepoy mutiny) took over the control

of more than two hundred and fifty millions of subjects in India, the first duty of statesmanship was to provide labor and food for the people, and this has been accomplished by the extension of a system of irrigating canals unequaled in the world. Famine in India is rendered impossible, as long as the Himalayas give their melted snows to fructify the Indian valleys. The Ganges Canal, with its branches, is 3,500 miles long.

Among other duties in the service of the Government of the United States, it was a pleasure, nearly twenty years ago, to investigate and report upon the system of irrigation throughout Asia; and in this service I learned much in Japan, China, India, Persia, Arabia, and Egypt; and subsequently observed much on the subject in Italy and Spain. In California, as early as 1850, it gratified a youthful curiosity to follow the irrigating ditches which those primitive people had made, and subsequently the grand irrigating canals in Arizona and Northern Mexico excited a lively interest in a lost and perished race, who have left little or no other evidence of their existence upon earth.

It was my fortune, or misfortune, to traverse the Rio Grande nearly a third of a century ago, where I found a thriftless, lazy class of people basking in the opulence of eternal sunshine, and deriving their meager subsistence from the richest soil in the world by the most primitive methods of agriculture, and when I left the Rio Grande in May last there was scarcely a perceptible improvement in agriculture. The people are too lazy to turn over in bed; and with a soil that will produce onions, emitting no more smell than a turnip, I will solemnly swear they were importing onions from Spain.

While the people of California have built an empire on the Pacific which is the admiration of the world, and the great West goes marching on, the people on the Rio Grande plow with a stick, dig fuel with a hoe, and cut hay with an ax. They irrigate nothing but their throats. In fact, since enterprising people have built railroads to their doors, they have ceased producing anything and import everything. The advance in real estate enables them to occupy a fundamental position—waiting for strangers to come along and buy lots. The grapes of the Rio Grande are of a different quality and flavor from those grown elsewhere, and what little wine they make is consumed with avidity in the valley. They have ceased to grow wheat, and import flour. (They used to sell flour to the Government at 12½ cents per pound.)

WATER, WATER, EVERYWHERE! AND NOT A DROP TO IRRIGATE.

The greatest prerequisite to success in agriculture, fruit raising, etc., in the Western States and Territories is water. A constant and abundant supply of water is the true key to Western progress and development. In nearly all of that country the rainfall is totally insufficient, and not to be relied upon; hence Western people have been forced to study the problem of irrigation. Having been forced to look into this question, we naturally try to trace up its origin and history.

The system found in California and in this country has been bequeathed to us by Mexico, and was inherited by them from Spain. Looking further back, we find that it was one among the many good gifts which the Moors gave to Spain when they overran that country in the eighth century. Whether the Moors obtained it direct from the Arabs, or took it from the Egyptians, we are unable to determine at this late day. But in inquiring after its still more ancient origin and source, we must not stop this side of the valleys of the Euphrates and Tigris. If we start here, in the dim and shadowy ages of antiquity, beyond which even tradition becomes unintelligible, we will find that, with few exceptions, the highest types of civilization and the brightest examples of progress and prosperity have been located, sustained, and nurtured by systems of irrigation.

ANCIENT IRRIGATION.

The glory, grandeur, and wealth of royal Babylon, of Nineveh, Thebes, Bagdad, Cairo, and Memphis, around which, as common centers, the civilization of great periods of time hung and radiated, were all attributable to and dependent upon the agricultural perfection surrounding them, and made possible by irrigation. We might go further and say that it has been the support and sustenance of the civilized world long after the cessation of Roman sway. For none will fail to recognize that the Nile country alone supported what was known as the Roman world, and that Egypt was also regarded as the granary of the empire. The Egyptian people were overthrown and vanished, but their system of irrigation survived and gave sustenance to civilization, and remained intact throughout all the vicissitudes and changes. If anything, irrigation was better in the days of Semiramis than in the days of Boabdil, although, like the other concomitants of the beautiful Alhambra, orchards, vineyards, and meadows, as then seen along the banks of the Guadalquiver, speak of a splendid development, both material and intellectual. The Moors obtained from their Arab progenitors a taste for astronomy and some inclination towards practical mathematics, and to some extent we find applied mathematics in its crude state assisting in making large portions of their country bloom and blossom as the rose by the ingenious devices which the Moors had of supplying water to the gardens, orchards, vineyards, and beautiful meadows which dotted old Hispania during their occupancy.

It is a fact which can not be controverted that after the reconquest of Spain and the expulsion of the Moriscoes Spain began to decline. The splendid schools of Granada and the numerous manufactories of Valencia and other places gradually faded away and left Spain without any support save that which she gathered by the sword, for she had neglected almost entirely her irrigation system; and the apology for one which we have, and which was found in California when that State was acquired, is the system handed down by the successors of those Spaniards who vanquished and expelled the Moriscoes from Spain.

PROGRESS REQUIRED.

It is my purpose now to show the inadequacy of this system, and the present results of it, as compared with the capabilities and possibilities of a new system which the progressive American demands and will have. We have touched but very briefly upon its antiquity, for the reason that four-fifths, we might even say nine-tenths, of English-speaking people are practically unacquainted with this system. Their civilization, comparatively speaking, is in its infancy; it is still jejune, and has grown up in a climate of moisture and regular rainfall, and operating upon what might be termed virgin soil, and until recently the people of the United States had no necessity of irrigation. But times are changing and the time will come when four-fifths of the population of America may be dependent upon irrigation in their agricultural pursuits. Then, we say, we will do well to look into this question, and when the American idea once takes hold of it systems new and prolific will evolve wonderful results.

Having brought the reader down to the consideration of this point, we make the broad statement that the results of irrigation in California, Colorado, Arizona, and New Mexico show, in a large majority of instances, an increase of 100 per cent. over results dependent upon rainfall alone in the Eastern and Middle States. The history of the West proves this statement to be correct. This once admitted, then in the valley of the Rio Grande the soil, the climate, and the water must cause the reader to stop and investigate with renewed and eager interest the conditions and statements which are placed before them.

THE AMERICAN NILE.

Our Rio Grande is the American Nile. The similarity is complete—the analogy remarkable. The Nile has its source in the interior of Africa, in the lakes of Herodotus, of Livingston, and of Stanley, the Alps of Abyssinia, many of which are covered in their winter-time by heavy masses of snow. The lower portions of the great plateau are visited during April by perfect deluges of rain, such as only tropical countries can produce. The accumulation of these torrential rains and the melting of the Alpine snows cause the river to rise with almost clock-like regularity between the 1st and 5th days of May, and by the end of that month it is booming and bank full. The turbid floods go tearing their way through rough defiles and deep cañons that fissure a volcanic country, the formation of which, travelers tell us, is very much like that of Colorado, with limestone, granite, and occasional vast trachyte formations predominating. The waters become thoroughly charged with a combination of mineral ingredients, which contain in themselves all the elements of fertility. When the turbid floods reach the great valley of Nubia and Egypt they are of a slimy consistence, and about the beginning of June, just before the annual planting time begins in that country, they commence to overflow their banks and spread over the valley lands, which have been in a state of cultivation ever since Abraham's time and probably long before. Whatever the crops of the preceding year may have abstracted from the soil is more than restored by the abundant deposit of fertile mud which the river leaves behind when its period of boom is over. The lands are found covered with a crust of stiff slime, containing lime, potash, chlorides, ammonia, and various other valuable ingredients. Into this rich slime the Egyptian fellah casts his seed, and in an incredibly short time, with scarcely any cultivation, and only such subsequent and additional irrigation as the reservoirs filled during the river's rise will allow, he reaps more than a hundred-fold. No manure is ever applied, but the soil is constantly getting richer, and bears at the present day, after a thousand years of neglect and mismanagement, better crops than in the days of the Pharaohs and Ptolemies.

THE RIO GRANDE.

High up on the interior plateau of Southern Colorado, in the legendary country of San Juan, among wild crags and heaven-aspiring battlements covered with eternal snow, rises the Rio Grande, or as the Spaniards, who must have seen it first some time in May or June, 1538, called it the Brave River of the North. It rises in the great porphyritic formation of the San Juan, near Ouray and Lake City, and is fed by the immense snow masses that almost constantly cover that inhospitable country. It tears its way out like a young giant, grinding the rocks to pieces as it goes along, and becomes surcharged with their mineral constituents, identically the same that the waters of the Nile contain, and only adding an immense quantity of aluminoid detritus, which makes it muddier even than the Missouri itself.

The similarity of the chemical constituents of the two kinds of water has often been noted by scientific travelers and experts. Both, after being allowed to settle, show a liquid of limpid purity, and of remarkably pleasant taste and wholesome character. But in their native turbulency both are equally muddy, and leave the same thick sediment of slimy mud behind after their waters recede from an overflow. This takes place with our Rio Grande usually in May and June, when the immense snow masses of the San Juan country begin to melt. Then the river plays some fantastic pranks, occasionally overflowing its banks from foot-hill to foot-hill.

These amiable eccentricities will have to be curbed when the population of the valley becomes denser and more Americanized. Judicious rip-rapping at exposed angles, and a general planting of the banks with willows and Bermuda grass, and the building of the great canal, will prevent overflows except by means of the irrigating channels.

This annual rise of our Rio Grande begins at the very time when irrigation becomes necessary—immediately when ready for the plow and the seed. It continues during June and July, and usually lasts long enough to tie on to the rainy season of July and August.

The system of ditches is at present badly planned and very inadequate for the purpose intended. The acequia madre which supplies Paso del Norte with water, is about as good a specimen of an irrigating ditch, planned and executed by Mexican labor only, as we can find in the valley. There is at present scarcely any systematic attempt along the whole course of the river, from the northern boundary of New Mexico down to where the cañon country below the mouth of the Concho River commences to construct suitable dams below the points where it is intended to take out acequias, and thus obtain a full head and a constant supply of water at a comparatively trifling expense. All these points will come to be better understood and executed after awhile, when a pushing and energetic American population occupies the valley and converts its fertile but now unused lands into vineyards and orchards.

The construction of a great irrigating canal, such as is in contemplation at the present time, demands naturally a large outlay of labor and material. To repay this outlay, all the waters so taken out must be used to advantage, and large tracts of land must thus become dependent upon the one great canal. No single farmer, and no single neighborhood, can undertake such a task.

Much has been written of great value upon the subject of irrigation, which I would like to present but which I reserve for a future occasion when it shall be discussed as an independent proposition, but enough has been shown to demonstrate the absolute certainty of prolific crops aided by the proposed system of irrigation. They are not dependent upon nor subject to the vicissitudes of rainfall. The fear of droughts does not alarm the farmer nor lessen his faith in the quantity or quality of his crops.

The water used for irrigation is living water, coming from the mountains and plateaus freighted with the richest fertilizing materials derived from decaying vegetation and the soils of the upper region, which are spread by the water used in irrigation over the cultivated lands. Observation and experience has demonstrated in the Western States and Territories that all lands upon which water can be supplied by artificial means are capable of being reduced to the highest state of cultivation, so far as the cereals are concerned, and as before suggested, enjoy complete immunity from the vicissitudes of scant or excessive rainfall. The opinion is fast gaining ground that too much attention has heretofore been paid to the chemical composition of soils, and too little to those physical conditions by which moisture and air are supplied to the roots of vegetation.

While the West has contributed largely in building up the enormous surplus now in the Treasury and has received very slight corresponding benefits in the way of public expenditures, I do not wish to be understood as invoking Governmental aid on that account or as a bounty or gratuity. It is not the section but the subject to be fostered and encouraged. Agriculture lies at the foundation of our national prosperity and is justly entitled to a fair share of the fostering care of the Government. Other industries are fostered and encouraged. Agriculture should be stimulated and promoted.

After all your golden dreams
Of golden fountains and golden streams,
The sweat of patient labor seems
The true Pactolian water.

But, Mr. Chairman, above and beyond these considerations is the important fact that the system proposed will return in the years to come, when a surplus may be needed, a large revenue to the Government by the increased value of lands now non-productive and worthless and still a part of the public domain, and without which the citizens and the Government are alike the sufferers. It is estimated by Mr. Powell, of the Geological Survey, that the extent of the region in which agriculture depends on irrigation is about 1,300,000 square miles. We are informed by him that the general survey, topographic and geologic, to serve as a basis for the classification of the public lands, is being made by the Geological Survey with such rate of progress as appropriations permit; but that gentleman insists that for the proper discrimination of irrigable from pasturage lands requires such careful consideration of details that special local surveys are needed for this purpose.

Perhaps there is no person in this country so well fitted by education and special training to speak upon this question and its inestimable benefits to this country as Professor Powell. I quote what he has recently said in a report made by him on the 3d of May last to the Secretary of the Interior, with a firm conviction that he has underestimated rather than overestimated the results to follow from a system of governmental irrigations by the means proposed:

As estimated above, the area of the arid region is about 1,300,000 square miles. Of this, about one-fifth is too rugged or too elevated to admit of cultivation under any condition of agriculture likely to arise for a century to come. A smaller fraction consists of playas, or drainless desert plains, so flat that it is impossible to wash the salts from their soils. There remain about 1,000,000 square miles of land which need only water to be rendered productive. At the minimum price of public land, $1.25 per acre, a price greater than its value for pasturage, this land has a valuation of $800,000,000; at $30 per acre, a moderate estimate of its value when irrigated, it would be worth $19,200,000,000. For the irrigation of this area we have the annual precipitation upon 1,300,000 square miles of mountain, valley, and plain. This ranges from 5 inches or less on the driest plains to 30 inches on the mountains, and even 75 to 100 inches on the highest peaks, and the average for the whole region is not far from 15 inches. If all this could be applied to the land suited by configuration for cultivation, it would afford about 20 inches of water annually for the whole area, or nearly double the amount which need be applied to crops during the growing season. The water which falls in the arid region would therefore fully meet the agricultural needs if only it could be stored until the proper season and then conveyed to the proper land. Unfortunately, many causes conspire to render impossible the full realization of so desirable a result.

Of the precipitation, which has the form of snow, a large fraction is returned to the air by evaporation without going through the process of melting. Of that which falls as rain, a large part is received by the soil and evaporated from it without gathering in streams, and the only portion of such unconcentrated rainfall serviceable for agriculture is that which falls on the farming land during the growing season. Of the water from rain and melted snow which gathers in channels and forms streams, only a portion has such relation to arable land that it can be utilized; the remainder flows too low or at such distance from the land as to be beyond the economic limits of conveyance. Moreover, a comparatively small portion of the stream water is furnished during the farming season, and that which must be stored in reservoirs in order to utilize it necessarily suffers material loss by evaporation.

Under such adverse conditions it is manifest that only a small portion of the rainfall of the region can be made to serve the farmer, and that there is no solid foundation for the opinion sometimes expressed that the greater part of our arid West will ultimately be reclaimed. In 1880 less than 1 per cent. of its arable portion had been supplied with irrigation water, and it is not believed that with the most elaborate irrigation works this can be increased to more than 20 per cent. On the other hand, an estimate based on such data as are available leads to the anticipation that when all the larger streams have been brought under control, and the storage of water has been carried as far as it may be economically, there will be redeemed about 15 per cent. of the region, or 150,000 square miles, the whole comprehending an area which exceeds one-half of the land now cultivated in the United States. At $30 per acre this will add $2,880,000,000 to the wealth of the nation.

The establishment of a general system of irrigation on a comprehensive plan is of immediate importance, because the agriculture of the arid region, now in its infancy, is rapidly developing, and its development without suitable regulation constantly involves the use of temporary plans which interfere with and obstruct the adoption of those necessary to the fullest utilization of resources. The most important cases of interference are those in which a large stream traversing the center of a valley receives small affluents from the lateral slopes. It is matter of experience that when irrigation is commenced without regulation, the small streams, being most readily controlled, are first utilized, and their water is conveyed to low-lying land adjacent to the stream. In a comprehensive system this land is served by the water of the large stream, and the water of the small streams is used on higher-lying land, to which that of the large can not economically be conveyed. But the utilization of the small streams in connection with the low lands creates vested rights which stand in the way of subsequent regulation in the interest of the entire district.

In view of the magnitude of the interests involved, and of the great loss entailed by delay, the surveys necessary as a basis for the establishment of a comprehensive system of irrigation should be pushed with all the rapidity consistent with economy in their conduct. The Geological Survey is prepared by its organization and equipment, and by the special training of many of its engineers, to begin this work efficiently on a limited scale; but if the scale were made too great for the first year due economy could not be secured.

But there is another view of this proposed new departure which I am not now prepared to discuss, but which deserves a passing notice. It has been confidently asserted and plausibly maintained that the judicious construction of reservoirs or a system of reservoirs in the Northwestern States and Territories in the deep cañons, while serving to irrigate and reclaim the arid regions of those sections would prevent the great overflows in the Mississippi Valley, which annually call for millions of dollars from the public Treasury. It is the vast country drained by the Missouri River that contributes to the destruction and disaster consequent upon these overflows. They occur just at the season of the year when the waters thus drawn off into reservoirs are most needed for agriculture. I have examined the question enough to have some faith in it, and regard it with sufficient favor to advocate a fair appropriation for its thorough investigation by competent authority.

From the observations hastily presented I think it is apparent—

First. That agriculture can be promoted and made certain on what are now sterile lands and thereby add 50 per cent. to the area of agricultural lands of the United States.

Second. That the irrigation and reclamation of this vast domain is beyond the possibility of private enterprise and a proper subject for governmental control.

Third. That the increase in the value of the arid lands, thus reclaimed and now worthless, will more than justify the expenditure involved.

The Tariff.

SPEECH

OF

HON. JOSEPH D. TAYLOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 10, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. JOSEPH D. TAYLOR said:

Mr. CHAIRMAN: I simply desire to enter my protest against any reduction on the duty on starch. In the first place there is no demand for any such reduction. It is merely the whim of the committee. Starch was never so cheap as it is now, and I do not know why any reduction should be made at this time. The average sale of starch at the factories during the past year was not more than 4 cents per pound. Whatever was paid beyond this by the consumer was paid to the men who handled the starch, and was not received by the manufacturer. As a bushel of corn will not yield more than 28 pounds of starch, it is readily seen that there can be little or no profit in manufacturing starch. The price of corn alone will usually make the starch cost 2 cents per pound, as corn is usually worth at the place where starch is made as much as 56 cents per bushel; and at this price there can be but a small profit to the manufacturer, as the plant is expensive and insurance rates very high.

If imported starch were made of corn or were as good as the starch made in this country, a reduction of the tariff would not be so important, but imported starch comes from Germany and is made from potatoes, and although it is an inferior starch, it comes in competition with starch made of corn and is used as a substitute for it. Its use is deceptive and will be followed by a loss to innocent parties who will not know whether starch made of corn or starch made of potatoes has been used.

There is no business in this country in which the competition has been sharper or the prices lower, but if potato-starch is to be admitted at 1 cent per pound, as is proposed in this bill, potato-starch will be used in sugars, candies, and in the other manufactures in which starch made of corn is now used, and if you prefer to eat German potatoes rather than American corn, vote for this bill. I do not know whether rotten potatoes are used in potato-starch or not, but I do know that only good, pure corn can be used in making corn-starch.

The German papers show that potato-starch is worth in Berlin and Hamburg less than 2 cents per pound, and I learn that it can be carried to New York for 12 cents per hundred, so that potato-starch can be laid down in New York, Philadelphia, and in Baltimore at about $2 per hundred, and if it is only to pay a duty of 1 cent per pound it can be sold in this country at a very little over 3 cents per pound, and it will undersell our starch made of corn and will reduce the American product and destroy at least some of the American factories. The extent of this industry shows that it is worthy of all the protection it now has, and if the German potato-starch is to take the place of American corn-starch the result will be that the value of a great deal of property will be destroyed.

There is now invested in twenty-four starch factories in the United States $10,000,000; and the men who invested this money did so when starch had a duty on it of 2 cents per pound; and as they did so with this understanding and with this protection, is it fair to them to depreciate the value of this plant or to destroy this business? Is it fair to destroy an industry that furnishes to the farmers a market of 40,000 bushels of corn per day? Is it fair to the farmer to destroy a yearly market for his corn of 12,480,000 bushels? Is it fair to break down an industry consuming the yield of corn which can be grown on 480,000 acres of land, at 26 bushels per acre?

Is it fair to the farmers to take away from them the employment of 14,400 men, counting 3 men for every 100 acres of corn? Is it fair to cripple an industry that adds to American production 361,920,000 pounds of starch of the value of $12,476,800? Is it wise to destroy an industry that furnishes the farm employment for 14,400 farmers, and in the factory 3,500 employés? Is it a commendable thing just now, when so many persons are out of employment, to destroy an industry

that pays out annually to its employés $1,638,500? Is it wise to destroy an industry that pays to its employés $1.50 per day, and give the employment to German factories where but 60 cents per day are paid?

This is what is proposed in this bill, and these are the results which will most certainly follow. If we are to import starch instead of manufacturing it, $12,000,000 and more will go out of the country every year, and its value in starch will come in, and we will be made this much poorer each year. This much money will be permanently withdrawn from the channels of trade and from the business of the country.

If you make this reduction of 1 cent per pound, as is now proposed, and if it reduces the price of starch 1 cent per pound, as is claimed in the President's message and by the other side of this House, not a pound of starch can be, or will be, made in the United States after this change. I happen to know that starch manufacturers are not making money now, but have been losing money during the past year. And if the price goes down the industry itself will go down. And when the industry has been destroyed the price will go up. This is experience and history, and I warn you against the change now proposed.

The Public Domain.

REMARKS

OF

HON. WILLIAM McADOO,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 5, 1888.

The House having under consideration the bill (S. 1430) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes, and amendments thereto—

Mr. McADOO said:

Mr. SPEAKER: I sincerely trust there will be no vote cast on this side of the House against the majority report made by the gentleman from Indiana [Mr. HOLMAN]. Up to June 8, 1880, the following land grants had been made to transcontinental roads alone. The other grants are numerous and princely in extent:

	Acres.
Northern Pacific Company	57, 920, 000
Union Central route	41, 458, 904
Atlantic and Pacific	51, 840, 000
Southern Pacific	11, 967, 488
Texas Pacific	18, 000, 000
Total	181 186 412

At that date these companies had constructed sufficient railroad to have actually earned under the terms of the grant only 52,246,357 acres. The rest was either forfeitable or rapidly approaching that condition. A prompt and vigorous policy in Congress would at that time have reclaimed over 100,000,000 acres of the land of the people of the United States from these corporations. These lands at that date, and they have of course been increasing in value ever since, were on the average valued at $4.25 per acre. At the above date the sale of a comparatively small portion of these lands, namely, 8,563,627 acres, netted them the sum of $36,383,765; and yet people wonder how a few men should revel in the possession of imperial fortunes. In Europe and America the main beneficiaries of this grant and loan system to railroads excite the wonder and envy of mankind. The impoverished, idle, debauched, and utterly ignoble so called nobility of the Old World craves entrance into this golden circle. In our own land their magnificent establishments rival those of the old feudal system. They receive with open arms the hungry landlords of Europe as land purchasers in America, regardless of the effect on the future of the country at whose expense they have enriched themselves. It would be humiliating to speak of their influence on our politics. They have intrenched themselves or their followers on the high places of the land and debarred a wronged people for successive Congresses from getting back at least a portion of their lands or money.

Look at the effect of this exercise of wealth in public affairs. Boldly it pushes its way against independent poverty through conventions and polling booths up to legislative halls and executive chambers. The union of politics and business has brought about the union of wealth and politics for profit or honor. Under such a system the great mass of the poor and thrifty are excluded from participating in government. One hundred and eighty-one million acres of land and over given to corporations. Giving to each homestead one hundred and sixty acres, 1,131,790 families of landless people are thus, as it were, disinherited. To realize what this means to us, both in an economic and political way, go down to the entrance to the great harbor of New York on one of these summer days and see the long procession of huge foreign transatlantic steamers coming up that magnificent bay swarming with immigrants to these shores.

Where is the outlet for these discontented people? Go in the teeming overcrowded precincts of our great cities on these hot summer days, where unwholesome, painful surroundings threaten body and soul alike, and realize what nearly 200,000,000 of acres of free land mean to these toiling, struggling, suffering, landless, and partially homeless multitudes—what to them and to their children born or unborn. Then say, if you can, that this question of the public lands is not one of the most important now before the country and is not worthy of the best efforts of honest, patriotic men who love their kind and are anxious for their country. "Oh, but it is," as Shylock says, "written in the bond"! I can hear this day, torrid in its temperature, the cry of pained labor crying out against the iniquitous compact that tears from its worn, wearied and oppressed body with remorseless, cruel talons this pound of flesh.

I can see little children pale, emaciated, drooping like tender flowers in the alleys and slums of the great cities, whose cheeks would bloom and whose dulled eyes would sparkle in the breezy health-giving prairie of this public domain. I can see the father coming back to his wretched quarters in the crowded, sickening tenement after a vain quest for employment, sick at heart, when his strong arm on those free acres might have made him free, happy, and independent. I see the sewing-women, who only see a small patch of God's great sky from their dingy, deathly, unwholesome, squalid rooms in the towering, awful tenements, where they toil, sewing away their lives in the never-ending seams of the garments of wealth for such a pittance as makes vice almost allowable, and I think of these 200,000,000 acres covered with blossoms and aromatic shrubs and waving grass, and surrounded by the wonders of God and the beauty of nature; and as I think of these things my heart grows sick, and my wonder increases of how blind men can be under popular government to the misdoings of those who should be their servants and faithful guardians.

I look to Europe and see men, women, and children in Ireland, England, Scotland, Germany, France, Russia, and in all Eastern countries fighting famine, nakedness, and oppression and heroically struggling for a patch of soil to live. Give us land! cry men and women; Give us land! wail the children, for land is life. The multitudes, the starving, soon to be exiled multitudes, are beating in vain against the cruel walls of the game preserves and princely domains. The deer and the pheasants, and the rabbits, and even the sheep must be preserved, but man must die or emigrate. I see the hard, cold, indifferent, selfish, heartless landocracy of these lands, irritated by this tumult, coming here to our free land, and, under our too indulgent laws, getting enormous estates, the future homes of American who will be tenants and not freeholders, which means in truth freemen. Add to these principal grants the other great railroad grants. Consider also how this great domain was acquired.

It is to the everlasting glory of the great Democratic party of which I am an humble member that while by the foresight and patriotism of Jefferson and his successors, it acquired most of this great heritage, it never gave an acre directly by grant to these corporations. In the Forty-seventh Congress the Republican party refused to take back a rood from the railroad, while in the Forty-eighth and Forty-ninth Congresses, so far as the House, being Democratic, was concerned, they declared forfeited 50, 482, 240 acres, and under committee amendment to pending bill add to this 54, 323, 996 acres. These figures and facts make the issue clear and unequivocal. I append to this statement the well digested tables of that faithful friend of the people, the honored chairman of the Committee on Public Lands, Mr. HOLMAN, of Indiana.

		Acres.
Ceded to the United States by Virginia and other States east of the Mississippi		259, 171, 787
Acquired under Democratic administrations:		
The Louisiana purchase, April 30, 1803	756, 961, 280	
East and West Florida, February 22, 1819	37, 931, 520	
By treaty from Mexico, February 2, 1848	334, 443, 520	
By treaty from Mexico, December 30, 1853	29, 142, 400	
Total under Democratic administrations		1, 158, 478, 720
Under Whig administration:		
By purchase from Texas, November 25, 1850		61, 892, 480
Under Republican administration:		
Alaska, March 30, 1867		369, 529, 600
Grand total		1, 849, 072, 587

But, Mr. Speaker, what an extraordinary result followed! Within nine years afterward grants of public lands to an extent unexampled in the history of any country were made to corporations by the same Congress. How does the account stand? I have before me a statement from the General Land Office. The grants prior to March 4, 1861, are as follows. Let us see the result by comparison.

All grants made up to this time for military service and education are as follows:

	Acres.
Military services, Revolutionary war	2, 165, 060
Military services, war of 1812	4, 930, 192
Military services, war with Mexico, act of 1855	61, 028, 430
Total for military services	68, 123, 622
Granted to States and reserved for Territories for school purposes	67, 893, 919
Universities	1, 165, 520
Agricultural colleges, act of July 2, 1862	9, 600, 000
Total for education	136, 783, 061
Grants made to States prior to March 4, 1861, to aid in constructing railroads and wagon-roads	29, 824, 032
	165, 607, 093

GRANTS AFTER MARCH 4, 1861.

	Acres.
To States to aid in the construction of railroads	19,240,883
To corporations	163,643,944
For wagon-roads	2,781,733
Grand total since March 4, 1861	185,666,733

It appears, therefore, that while it was not thought proper on February 22, 1862, to grant bounty lands to the soldiers of the Union Army on account of its tendency to land monopoly, yet beginning with July 2, 1862, with a grant of 28,000,400 acres to the Union Pacific Railroad corporations, Congress within ten years gave directly to corporations and to States for corporations 185,666,560 acres of land, a territory eight times greater than the State of Indiana. All this in ten years! While from the year 1787 down to this day all the grants made by Congress for common schools, the foundation of the grandest system of education the world has ever seen, including the sixteenth section of every township of the public domain down to the formation of the Territory of Oregon, and the sixteenth and thirty-sixth sections in every township of every State and Territory organized since, including also all grants for universities and colleges, and all grants for military services in all the wars from the Revolution down to the war with Mexico, aggregate 136,783,061 acres. Add to this all grants to States for railroads and military wagon-roads (none were made to corporations) prior to March 4, 1861, namely, 29,824,032 acres, and the entire aggregate is 165,607,093. This aggregate of 165,607,093 for education. Military internal improvements covers the grants of our entire history, except the period covered since the Republican party came into power, and in ten years only that party gave to corporations and States for corporations 185,666,560.

As to grants prior to March 4, 1861, and subsequent to that date under all parties, Democratic, Whig and Republican, to aid in the construction of railroads and military wagon-roads, I submit the following table, prepared at the General Land Office. A glance will show the extraordinary contrast between the policy of the Democratic party and the Whig party and all other parties on the one hand and the Republican party on the other in relation to the public land, the most valuable wealth a nation can possess.

Statement showing land grants made by Congress to aid in the construction of railroads and wagon-roads prior and subsequent to March 4, 1861.

[Compiled from the official records of the General Land Office.]

I appeal to this side of the Chamber. With this glorious record before you, no gentleman on this side of this aisle at least can or will falter. We are the party of the whole people and they look to us to save them from corporate rapacity. As men and Democrats let us stand by the banner of popular rights here and now. Honest men on both sides of the House will unite and this bill will pass.

These railroad companies were granted lands for the purpose of building roads into an unknown or desert country. After an extension of the time in which they were to build their roads, they have waited until the population would have justified any company in building the roads without one acre of subsidy. Not only, therefore, have they forfeited their legal right, but they have not a scintilla of equity in their behalf. I do trust, therefore, as I have said, that this side of the House will be practically unanimous in favor of the majority report. [Applause.]

The Tariff.

SPEECH

OF

HON. JAMES T. JOHNSTON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 10, 1888.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. JOHNSTON, of Indiana, said:

Mr. CHAIRMAN: I do not propose to confine my discussion to the amendment now pending before the committee. There has been a very general discussion of this bill, and much valuable time devoted to it. I therefore beg the indulgence of the committee for a short time while I give some of the reasons why I shall oppose the passage of this measure. First, I want to announce that I am in favor of the protection of American labor, believing, as I do, that it brings happiness and prosperity to the laboring classes of this country. I have been greatly amused at the course of this debate.

We find men upon the other side of this chamber advocating the passage of this bill and assigning very different reasons for voting for and supporting the same provisions thereof. To illustrate, Mr. MILLS, the chairman of the committee, justifies his course in putting wool upon the free list by boldly asserting that it is enriching the manufacturer at the expense of the people and doing the farmer no good, and that it is adding an extra cost to the goods worn by the laboring man.

The gentleman from Massachusetts [Mr. RUSSELL] justifies his support of that provision of the bill by boldly asserting that it, the tariff, is an injury to the manufacturers of woolen goods, and is absolutely forcing establishments of that kind into bankruptcy, and both asserting that it will increase the price of wool.

Now I can not conceive how both of these gentlemen can be right. If further notice that the men from the Southern States, who at the beginning of this Congress claimed to be protectionists and gave us every assurance that they would vote against any measure that attempted to destroy the protective system of this country, suddenly become enthusiastic supporters of the Mills bill, and persistently vote against any attempt to amend it. Now this may appear strange to one who has not investigated the facts and arrived at the true reasons thereof. Upon an examination of the bill, it will be seen that the sugar schedule has been changed very materially since the bill was originally introduced, leaving the present tariff on sugar at 68 per cent., ad valorem.

This, as a matter of course, satisfies the sugar-planter of Louisiana and other Southern States. And if he can get his particular interest protected he loses interest in every other industry in the country; and *that* he calls protection. We further find, by the provisions of this bill, that rice and other necessaries of life that are grown in the South are left upon the list at a high rate of duty, and the language of the schedule is so changed as to leave a greater duty upon rice than existed under the tariff of 1883. This satisfies the gentlemen from South Carolina and Georgia and other Southern States, who are interested in the growth of rice, and they suddenly forget their professions of protection and become enthusiastic supporters of this measure.

It is a very notable fact that when we reach these items in the bill, and amendments are offered reducing the tariff one-half, that these men, with all the rest of the Democratic members, vote solidly against the amendments, and we are left to draw but one conclusion, that they have formed an alliance, offensive and defensive, with the absolute free-traders, and that their interests are to be protected if they will assist in crippling the industries of the North.

I shall not charge that this is done for sectional purposes or sectional reasons, as that is very offensive to some of the gentlemen composing the Committee on Ways and Means. But I must confess that it is very hard to account for this condition of affairs upon any other theory.

I have been an attentive listener to this debate, and I make the assertion now that if the gentlemen favoring the passage of this bill are honest in their assertions they are absolute free-traders. I make this assertion because each and every man who has attacked protection asserts that a tariff levied upon an article that is manufactured in this country puts an amount equal to the tariff into the pocket of the manufacturer, and increases the price of the manufactured article to that amount, and does not increase the wages of the laboring man 1 cent.

Now, if this be true, there is but one true way to support the Government, and that is by levying a revenue tariff upon articles that we do not manufacture, or by collecting our revenues by direct taxation on the people, and that is free-trade, pure and simple.

I shall not take up the time of the committee in refuting the charge that a protective tariff does not, by means of internal competition, reduce the price of every article we consume that can be successfully manufactured in this country, because every intelligent man in the land knows to the contrary. Nor shall I quote statistics to prove that the laboring men in this country—particularly in the Northern States—are better paid, better clothed, and live better than the laborers of any other nation in the world. To prove the proposition that they are better paid, you have but to refer to the thousands of men who have left the Old World and come here to make their homes with us. They know, and the laboring men generally know, that the assertion that their wages are not higher by reason of tariff is not true.

Now perhaps it is not charitable to accuse the Democratic party of being in favor of free-trade, inasmuch as their speakers out of Congress, in protective districts, assert that they are not. But I will submit a few facts, and leave the people to draw their own conclusions. In the Forty-eighth Congress, where the Democratic party had a large majority, the opposing candidates for Speaker before the Democratic caucus were the Hon. SAMUEL J. RANDALL, of Pennsylvania, a protectionist, and Mr. CARLISLE, of Kentucky, an avowed free-trader. Mr. CARLISLE was elected and Mr. RANDALL defeated. In the Forty-ninth Congress, Mr. CARLISLE was again elected, although Mr. RANDALL, an experienced parliamentarian, was a member of that House. In the present Congress the same state of facts exist.

I will now submit a proposition that in itself may appear sectional, but if it does the fault lies with the leaders of the Democratic party and not with us. As is well known, the Committee on Ways and Means is considered the leading committee of the House. They have the sole power of drafting revenue bills to raise the money upon which the Government is to be supported. The chairman of that committee, by reason of his position, is assigned to the leadership of

the majority. We can well suppose the Speaker selected that committee for the purpose of having a revenue bill drafted, voicing the sentiment of the Democratic party, as he understands it. That committee is made up as follows:

Democrats—ROGER Q. MILLS, of Texas; BENTON MCMILLAN, of Tennessee; CLIFTON R. BRECKINRIDGE, of Arkansas; W. C. P. BRECKINRIDGE, of Kentucky; HENRY G. TURNER, of Georgia; W. L. WILSON, of West Virginia; W. L. SCOTT, of Pennsylvania; WILLIAM D. BYNUM, of Indiana.

Republicans—WILLIAM D. KELLEY, of Pennsylvania; THOMAS M. BROWNE, of Indiana; THOMAS B. REED, of Maine; WILLIAM MCKINLEY, Jr., of Ohio; JULIUS C. BURROWS, of Michigan.

Eight Democrats and five Republicans. It will be observed that six of the Democrats are from Southern States, having no particular interest in the manufactures of the country.

They come from a section where its politicians were schooled under the teachings of John C. Calhoun with his free-trade and nullification doctrines. Mr. MILLS, the leader of the House and chairman of this committee, is on record as follows:

> God grant that the day may soon come when American ships, freighted with American commerce, shall again go to sea under the shadow and protection of our own flag. But if that day is to come, it must be preceded by a reversal of the policy of commercial restriction.
>
> We must remove, both by legislation and diplomacy, every hindering cause that prevents the free exchange of the products of our labor with all the markets of the world. We must unfetter every arm and let every muscle strike for the highest remuneration for its toil. We must let wealth—the creation of labor—grow up in all the homes of our people. Then every industry will spring forward at a bound, and wealth, prosperity, and power will bless the land that is dedicated to free men, free labor, and free-trade.

This is a quotation from a speech made by that gentleman in the Forty-eighth Congress. Again he says:

> Our policy should be to take the smallest amount of tax that we can, by customs; and we should gradually decrease the amount until our custom taxes come alone from non-competing articles entering our custom-houses.

These quotations will surely convince any candid man that Mr. Mills is a free-trader. Now let us see how far we can convict the other members of that committee of being in favor of free-trade. In the constitution of the so-called Confederate States you will find this provision:

> No bounties shall be granted from the treasury, nor shall any duties or taxes on importations from foreign nations be laid, to promote or foster any branch of industry.

This provision of the Confederate constitution becomes important when you consider the fact that a majority of the Democrats upon this committee were in the Confederate service. I do not make this quotation or allusion for the purpose of stirring up sectional feeling or sectional strife; I hope that is buried forever. But I am simple enough to believe that if a man will voluntarily enter an army and risk his life, and fight to maintain and establish a proposition, that he is certainly in earnest and believes he is right. And I further believe that should he ever be placed in power he will naturally seek to enforce his views by legislation. And inasmuch as none of these gentlemen have ever confessed that they were wrong in fighting to establish the Confederacy, with the constitutional provision above quoted, I have the right to infer that they are free-traders to-day; and no man can read the speeches they have made upon this bill without being convinced that I am justified in making the assertion. And we certainly have the right to infer, from the character of this bill, that they are seeking to carry out their views. I have before referred to the fact that for the purpose of getting votes they have protected the interests of the farmers of their own section. What do they seek to do with the farmer of the North? They put his wool upon the free list and bring him in direct competition with the cheap wools of foreign countries, and urge as a reason therefor that it is raw material. While doing that they protect the iron ore of this country—pig-iron and coal—which is also raw material.

This, I boldly charge, is not because they are in favor of it, but because it became necessary to appease the Pennsylvania Democrats and get their support of this measure. I deny the proposition that iron-ore or coal is raw material after it has been mined. The moment the miner applies his labor to the mining of these articles they become as much a manufactured article as steel rails and are entitled to equal protection. The proposition is equally true when the farmer applies his labor to the raising of his flock, and through the long and tedious summer, by his daily toil, prepares the food that is to sustain them during the cold and bleak winter. Day after day he feeds them, sheltering them from the cold and bleak winds, and by his watchful care protecting them from the ravages of their inveterate enemy, the dog. Then, when the spring day comes, and he shears the wool and prepares it for the masket, it is as much a manufactured article, and an article for protection, as the sugar and rice raised by the planters of the South.

Now as an offset for this, they give the farmer, as they say, free lumber and free salt. So far as the free lumber is concerned, the tax is but light and it does not affect the farmers of my district, and is no compensation for the loss of their tariff on wool. Besides, we have abundant forests of our own. As to the question of free salt, it is an absolute insult to an honest farmer to say to him that *that* is a compensation for his losses. I was amused at the speech made by the honorable gentleman from New York [Mr. COX], in favor of free salt. He actually grew poetical in pleading for the poor down-trodden dairymen, that he should have free salt to put in his butter. And I must confess that he so played upon my sympathies that I was inclined to think that he was right.

But when I got out from under the influence of the gentleman's oratory I proceeded to make a calculation to see where the great injustice was done the dairyman, and I arrived at this result: It takes 1 pound of salt to salt 16 pounds of butter; say the butter is worth 25 cents per pound before it is salted. After the salt goes in we have 17 pounds of marketable article. That 17 pounds is still worth 25 cents per pound. The salt used cost the dairyman half a cent, or to be liberal, say 1 cent; he sells his butter for 25 cents per pound, and has an absolute profit of 24 cents upon the pound of salt. I say to my friend that it will take a great while to bankrupt the dairymen in that way.

Mr. DUNN. Why not make it all salt, then?

Mr. JOHNSTON. Nevertheless, they still want to put salt upon the free list. Let us see how that will appeal to the farmer, whom you have robbed of his protection on wool, and how it will compensate him for his losses. I am informed by the gentleman from Michigan [Mr. TARSNEY] that he will to-day sell salt at 30 cents per barrel, barrel and all.

Mr. TARSNEY. No; 30 cents for 280 pounds; 9 pounds and 4 ounces for 1 cent.

Mr. JOHNSTON. Nine pounds and 4 ounces for 1 cent. It would actually cost 1½ or 2 cents to buy all the salt that a man wanted for his personal use in a whole year. Out of consideration to the farmer, it certainly looks like salt should be placed upon the free list. [Laughter and applause on the Republican side.]

If you think the average farmer is going to be satisfied with this you are presuming a great deal upon his ignorance; and I say to you now, that when you encounter him in the North you will find him an intelligent, reading, thinking man; and when he realizes the fact, which he knows to be true, that under the free-trade doctrines of the Democratic party in former years he paid $2.80 for the same amount of salt that he now purchases for 30 cents will he not truly say you are offering him valuable inducements to surrender the protection he now has, that induces him year in and year out to look after and care for his flocks?

What further inducements do you offer to the farmer? President Cleveland in his message virtually admits that his policy, and the policy adopted by this bill, will, to some extent, reduce the wages of the laboring man, and attempts to console him by assurances that he will have a compensation for that loss in a corresponding reduction in the cost of his living. It needs no argument to convince the average man that the principal cost to the laboring man for the support of himself and family is his bread and meat, the marketing the farmer raises, and his groceries.

Now, if his cost of living is to be reduced, if you think you can convince the farmer that it won't cause a corresponding reduction in the price of his wheat, his corn, his beef and mutton, in fact everything he raises on his farm to sell, you greatly underestimate his intelligence. Some one is to be fooled by this argument. But, you say that the farmer must ship his surplus wheat abroad and there come in competition with the wheat raised by the poorly paid labor of the Old World. That is true, and this proposition is also true, and the farmer knows it well, that the more manufactories that are established in this country the more laborers we will employ in carrying them on, the more of his produce will be consumed at home, and the less will have to be shipped abroad; and as supply and demand controls the price he will thereby get a better price for what he ships.

The farmers of my district know well that they have as good agricultural land as is in the world. They also know that the farmers of the East make more money off inferior land than we do in the West. The reason is that the farmer of the East has the manufacturing establishments in his midst. He sells his products to support the laborers, while the farmer of the West must pay the transportation to the East on the surplus he raises. Knowing this they are in favor of encouraging manufactories, bringing them to the West, and thus save this cost of transportation.

We have heard a great deal in this debate about trusts, and the charge is made and reiterated that the profits made by a tariff for protection go into the pockets of the manufacturer and the trust, and not to the laboring man. I for one believe that the man who invests his money in manufacturing interests should have a reasonable profit in return, and that we should protect him in his manufactures, so he may be able to pay his employés liberally. It is better for us all. I have no fear but that by means of the labor organizations of this country the laborer will be able to protect himself against the oppression of the manufacturer, if he is disposed to oppress him. And to that end I would encourage these organizations by means of all necessary legislation.

I would legislate against trusts, and then if the operator is not willing to do what is right by the laboring man, I would by necessary laws, rigidly enforced, compel him to do justice by the men who must make every dollar that is produced in this country by honest toil. It is a well known fact—admitted by the candid men representing the South—that their laborers are not so well paid as in the North. And as an excuse for that, they say their labor is not so intelligent, and consequently worth less. This explanation would be entirely

satisfactory were it not for the fact that they resist every effort to educate and enlighten their laborers, so they may demand and receive better wages.

When we propose to pass a bill establishing schools in which the poor may be educated, under the rules of this House, adopted by the majority, the Speaker exercises his one man power and appoints a committee that utterly refuses to report to this House the "Blair educational bill," that is in the interest of all laboring men who are unable to school their children. Then when we take the further declarations made by these men—or some of them—that they of the South would be able to live under a tariff that would starve the labor of the North to death, we can but conclude that they are satisfied with their own labor and want to keep it in the condition it now is. They are willing to force a measure through this House, the tendency of which will be to reduce the labor of the North to an equality with their own.

The difference between the propositions is this: We upon this side of the Chamber are in favor of a leveling-up process, while the men who prepared and are pressing the Mills bill to a final vote are in favor of a leveling-down process; for the tendency of their measure would certainly be to reduce the labor of the North to an equality with the poorly-paid labor of the Old World and the negro labor of the South to-day. I for one want to see the day come, and that speedily, when every man in this broad land, from lake to gulf, and from sea to sea, can get honest wages for honest labor. I believe our present protective system will bring this about, and I believe the Mills bill tends in the opposite direction, and I shall therefore oppose its passage.

There is one other feature of this debate that is exceedingly amusing and sometimes reaches the point that almost excites the contempt of a man who is in favor of honest legislation and fair dealing. The President in his message—and I mention him first because he opened the debate—says, "it is a condition that confronts us and not a theory," and devotes his entire message to a revision of the tariff, basing it upon the ground that it is producing a surplus in the Treasury. Now, I understand there can be no surplus in the Treasury so long as the Government owes honest debts. I understand that a man can have no surplus so long as he owes his neighbor as many or more dollars than he has in his pocket. And I very much fear that the President has so acted as to create an apparent surplus for the sole purpose of forcing his free-trade notions upon the country.

In the first place his administration refused to pay the outstanding indebtedness of his Government until his own party leaders in this House thought it necessary to bring forward a resolution compelling him to do his duty. All this time he was hoarding the money that should have gone to pay honest debts. There was passed through the Senate a bill granting liberal compensation to the disabled and dependent soldiers of the country. It passed this House by at least a two-thirds vote. The President, unwilling that this surplus should be reduced in that way, saw fit to veto the bill, and returned it with his emphatic disapproval.

This was in the Forty-ninth Congress.

We attempted to pass the bill over his veto. Then it was that the free-traders of that House came to his rescue, and we were unable to command the two-thirds majority required by the Constitution for the passage of the bill. The President, again fearful that that surplus might be somewhat reduced, has vetoed bill after bill granting pensions to disabled soldiers and to the widows and orphans of such as are dead, in order to maintain this surplus. When he has thus acted, and refused to let a former Congress apply this surplus in the payment of pensions to our soldiers, has he now any right to use that surplus as an argument to force free-trade legislation, and curtly say that "it is a condition that confronts us," when by his unkind acts toward these unfortunate people he has assisted in producing that condition?

Let us examine further. What condition confronts us to-day?

You may turn to the Calendar of this House and you will find upon its pages one thousand bills reported from its different committees, asking the Government to pay the honest debts she owes to the citizens in whose behalf these bills have been introduced. Go, if you please, to the records of the Committee on War Claims, and there you find in the neighborhood of seven thousand bills introduced by members of this House, to pay the debts due our citizens for damages done to and property taken during the war, many of them in behalf of poor soldiers or their heirs for services honestly rendered. You may go to the Committee on Claims, and there you will find upon their files thousands of bills introduced in behalf of men who have just claims against the Government.

Many of these men have been knocking at the doors of the Treasury for twenty years asking that their claims be adjusted. And Congress after Congress your committees have reported that the debts were honestly due, but we have assiduously avoided passing the bills for their relief. And still the men upon the other side of the Chamber, who are in favor of this free-trade measure, continually put it upon the ground that there is a surplus in the Treasury, when the majority of this House, by its own acts has created this surplus by refusing to pay the honest debts of the Government and are now using it as a pretext to attack our industries. Nor is this all. If you gentlemen have the time, and want to inform yourselves as to the true "condition," go to the Committee on Invalid Pensions of this House.

Examine its records and you will find that there has been introduced and referred to that committee three thousand five hundred and fifty-five private bills to grant pensions to soldiers who are unable to make their proof before the Department. If you will prosecute your investigation further you will find that there has been one thousand and eighty bills of a similar character introduced into the Senate, making a grand total of four thousand six hundred and thirty-five such bills introduced in this Congress, asking the Government to pay a debt that we honestly owe. Now turn to the last report of the Commissioner of Pensions and you will find that there is about one hundred and fifty thousand pensioners to-day, who are drawing less than $8 per month from this Government; and that after they have proved that they have received injuries and contracted disabilities in the service of their country.

There was a bill introduced into the Forty-ninth Congress by myself, and I re-introduced it into this Congress, which, if passed, would have placed all of these men on the pension-roll at $8 per month. It provided that all men drawing pensions less than that amount should be advanced to $8 per month. Can any conscientious man say that a soldier who has received wounds in the service, and contracted disease and disability therein, should be compelled to take less than $8 per month for a pension. And still you men stand in the position of denying them this just form of legislation while you claim there is a sufficient surplus in the Treasury to justify you in your unwarranted course in attempting to pass this bill.

There has also been introduced into this Congress and referred to that committee one hundred and ninety general pension bills, seeking to do justice to our soldiers, and you refuse to consider them, fearing, I suppose, that it may somewhat reduce the surplus, for it would be unjust to insinuate that you are unfriendly to the soldier while you make such loud professions of friendship.

On the 8th day of March last a bill passed the Senate with this title: "An act granting pensions to ex-soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to relatives of deceased soldiers and sailors." That bill was reported to this House, and still remains upon our Calendar unacted upon.

It is assumed by the gentlemen who should know what they are talking about, that this bill will place upon the pension-rolls one hundred thousand soldiers, many of whose claims are now pending in the Department. It would take every soldier out of the poor-houses of the country and place them in a position where they would no longer feel that they were paupers.

You deny them this right, and still claim there is a surplus in the Treasury. Members of this House have introduced eighteen different bills providing for the payment of the arrearages of pensions, and on the 14th day of May last the Committee on Invalid Pensions reported House bill 9961 as a substitute for all such bills providing for the payment of arrearages of pensions to all soldiers who filed their claims prior to the 1st day of July, 1888.

The introduction of these bills is conclusive evidence that there is a widespread feeling among the soldiers that this debt is justly due them, and the introduction of the substitute by your committee, and their report recommending its passage, is evidence that upon mature deliberation they are satisfied that this act of justice should be passed. Your committee say in their report that it will take $250,000,000 to pay this honest, just claim, and that it should be paid; and they represent a majority of this House. This bill went onto the House Calendar, an there it remains. The friends of the soldier have been more than anxious that this bill should be put upon its passage, and have insisted that this bill, with other measures for the relief of the soldier, should be considered before the bill under discussion was brought to a vote. For you can readily see that if these bills are to be passed there is no surplus in the Treasury and no necessity for the passage of the Mills bill. On the 21st day of May last I offered the following preamble and resolution:

Whereas the Committee on Invalid Pensions of this House has reported House bill No. 9961, by Report No. 2120, entitled "A bill relating to the arrears of pensions," with recommendation that it do pass; and

Whereas said committee in said report estimate that said bill, if passed, will cause the expenditure of $250,000,000; and

Whereas all political parties profess to be in favor of granting to the Union soldiers of 1861 to 1865 liberal pensions for service rendered; and

Whereas on the 9th day January last, House bill No. 3345, granting a pension to all such soldiers, was referred to said committee; and

Whereas it is important that said several propositions should be disposed of before any bill is passed materially reducing the revenues of the country: Therefore,

Resolved, That the Committee on Invalid Pensions be discharged from the further consideration of said House bill No. 3345, and that said bill, and said bill No. 9961, reported by said committee, be made a special order for Friday, the 25th day of May, and that the consideration thereof shall continue from day to day until they are disposed of.

This resolution, asking that these bills should be considered, was, by the ruling of the Speaker, sent to the Committee on Rules, and, strange to say, since the introduction of that resolution there has never been a report from that committee, although Mr. CANNON, of Illinois, representing the minority of the committee, stated publicly upon this floor that the Republicans composing the minority had gone to the Speaker, who is ex-officio chairman thereof, and requested

that the committee be called together for the purpose of taking action thereon, and further stating that there had been no meeting of the committee.

Fearing that the Speaker, in the multiplicity of duties that are crowding upon him, had overlooked the matter, I again, on the 9th day of June, offered the following resolution—

Resolved, That Wednesday, the 13th day of June, after the morning hour, be set apart for the consideration of House bill No. 9961, granting arrears of pensions and providing for the payment thereof; and that the consideration thereof shall be continued from day to day until the same is disposed of—

which also went to the Committee on Rules, and which has suffered the like fate of its predecessor.

Now, the friends of the Mills bill place themselves in this attitude of resisting the consideration of these bills, and they can be prompted by but one of two motives. That is, that they are not the friends of the soldier, or they propose to deny him his rights until after they have placed the Treasury of the country in such a condition that it will be impossible to do him justice unless we levy additional taxes and thereby ultimately defeat all legislation looking to the giving him his rights. You can take whichever horn of the dilemma that suits you best.

In the Forty-ninth Congress there was a proposition introduced and reported from the Committee on Rules, providing that whenever a bill was introduced granting pensions to soldiers, that it should be in order to offer an amendment providing how the revenue should be raised to pay the pensions. When that measure was under discussion, on the 26th of June 1886, the following took place between my colleague from Indiana [Mr. MATSON] and myself. My colleague had the floor in support of the measure and the following appears from the record of that date:

Mr. JOHNSTON, of Indiana. Would it not be just to the soldier to pass the pension bills first, to get him on the pension-roll, and then pass the tax bill to raise the money?

Mr. MATSON. I think, on the other hand, the Republican Senate, for not carrying out the party pledge and passing the arrears act, has only one excuse, and that is, that the House has not raised the money. The prudent, honest thing is to always be able to pay before you promise.

We are now able to pay, and the present tariff will raise the revenues to discharge this honest obligation of the Government. Still I find my colleague working assiduously with these men to reduce the revenues so this debt can not be paid, thereby seeking to do by indirection, what he failed to accomplish two years ago by direct legislation.

During the war, in order to raise money for its successful prosecution, there was a law passed levying a direct tax on the different States. Under that law the people of the States that remained loyal paid some $20,000,000. This included some small amounts collected from some States that had been in rebellion. At this session of Congress the Senate passed a bill to refund this money back to the States and the people who had paid it. It came over to this House. Upon its passage it was resisted by the members from the seceding States by every means known in parliamentary tactics, producing thereby the famous deadlock of this Congress.

Under this bill Indiana would have gotten nearly $1,000,000 as her proportion. Still the friends of the Mills bill, by a party caucus, postponed the further consideration of the measure, as we have a right to infer, for the sole purpose of keeping this money in the Treasury that they might use it as an argument for their unjust attack upon our present protective system.

With all of these just demands outstanding against the Government, the men who are pressing this measure bar the doors of the Treasury, and are continually harping about the surplus.

Mr. Chairman, there is one other consideration that causes me to look with alarm upon the final passage of this bill. We have a class of men in this country who forsook their homes, wives, families, and friends and went to war to save the life of this nation from the attacks of some men who are now attempting to force the passage of this measure. It was a contest in which the life of a nation hung in a balance. These men, with bleeding breasts and shattered constitutions, went down into the very jaws of death and hell itself, to save this nation.

They made it possible for us to have a Government to-day with a Treasury; by their bravery they maintained the policy that has put this pretended surplus in the Treasury. It is theirs; they won it by their valor. And they now ask that they be treated as well as the soldier of the Revolution was; as well as the soldier of the war of 1812 was; and as well as we have treated the Mexican soldier. If the Mexican soldier who fought one year is to go on the pension-roll at sixty-two years of age, why should not the Union soldier who fought for three years go on the pension-roll now?

These brave men at the end of the war agreed that the Confederate soldier should be re-invested with all of his political rights. They by their consent made it possible that many men now occupying seats on the other side of this Chamber could do so. We expect but little from the men from the North who are favoring and pressing the passage of this bill. But we have a right to expect and demand of every Confederate soldier, as a partial return for the favor and leniency the Union soldier had shown you, that you will stand with us and insist that he shall have absolute justice done him before this bill passes. Help us do him justice while the Government is able to pay.

Now, sir, I stand here for one, willing at all times to vote for a reduction of the tariff when it can be done without injury to the industries of my country. But there are two things I am not willing to do. The one is, to degrade the man who by his honest toil makes a living for himself and family. I am not willing by my vote to transfer the surplus of this country to the laborers and manufacturers of the Old World.

Secondly. I am not willing, by my vote, to put it out of the power of the Government to pay the men who, by their bravery and endurance, made it possible for us to have a Government, and a surplus, if such we have. And I say now, and challenge successful contradiction, that the man who by his vote seeks to dispose of this surplus without considering the payment of the honest obligations we owe to our country's defenders is no true friend of the soldier. If every dollar of this surplus was paid out in the shape of pensions that we admit we honestly owe it would not leave the nation one dollar poorer. It would every dollar enter into circulation, and would be much more just and more patriotic than the course that has been proposed by this administration, that of placing this surplus in the national banks and the moneyed corporations of the country to be loaned to the people at a high rate of interest, the Government exacting no interest from the holders of the fund.

Upon this proposition I am willing to appeal to my constituents. I know they are just. I know them to be honest.

In conclusion, allow me to say that by no vote of mine will I stab the industries of this nation or do my comrades the injustice that would follow by the passage of this bill.

Forfeiture of Railroad Land Grants.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 5, 1888.

The House having under consideration the bill (S. 1430) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes—

Mr. STOCKDALE said:

Mr. SPEAKER: The bill under consideration, and which passed the Senate a few days ago, provides for the forfeiture to the United States of all lands heretofore granted to any State or corporation to aid in the construction of a railroad lying opposite to and coterminous with the portion of any such road not now completed and in operation, for the construction or benefit of which lands have been heretofore granted.

The effect of this bill, if the House concur in it and it becomes law, will be to forfeit to the Government and restore to the public domain such portions of said grants through which no railroad has been constructed at the date of the passage of the bill.

The bill reported by the majority of the Committee on Public Lands as a substitute for the Senate bill under consideration provides for the forfeiture to the Government of all lands heretofore granted by Congress to any State or any corporation to aid in the construction of a railroad, or a railroad and telegraph line, opposite to and coterminous with the portions of any such railroad not constructed and completed within the time specified in the act making the grant for the construction and completion of the whole of such railroad. And if this substitute shall become a law it will have the effect to forfeit and restore to the public domain that portion of the grants through which no road was constructed until after the period fixed in the granting act for the completion of the said railroad.

The proposition reported and advocated by the minority of the committee is in effect the same as the Senate bill and would have the effect to forfeit lands only where no road has been constructed and completed.

The amendment proposed to the substitute of the majority of the committee by the gentleman from Missouri [Mr. STONE] and the gentleman from Arkansas [Mr. MCRAE] will have the effect, if concurred in, to so change the substitute that if it shall become a law so amended to forfeit all the lands granted to States or corporations for railroads where the company failed to complete the whole road within the time fixed in the granting act for its completion.

There certainly can be no objection to the Senate bill so far as it goes, but the large majority of this House, as I have reason to believe, think the Senate bill does not go far enough. That was the opinion of the majority of the committee, and therefore this substitute was reported. The two members of the committee, the gentleman from Missouri [Mr. STONE] and the gentleman from Arkansas [Mr. MCRAE], think that neither the Senate bill nor the substitute goes far enough, and they therefore submit their amendment. The minority of the committee

think that the forfeiture of lands opposite unconstructed portions of the roads is all we can get, and they in effect adhere to the Senate bill.

The House has these three propositions before it, and it may adopt any one of them or reject all of them.

Each of these propositions saves, as it should, to bona fide settlers and innocent purchasers their lands, and the right of way to the railroads and side tracks and depots to the companies.

Mr. Speaker, it will be admitted that the Government of a great nation, nor any branch of it, can not afford to perform any act that would savor of bad faith or that would warrant a suspicion well-founded of bad faith with its citizens, but should and must always occupy the high ground that an honorable man will assume, where, if he must be the arbiter between himself and another, would rather yield a doubtful point than incur the suspicion of having awarded to himself that to which his title was not clear.

No matter that the Government may have the power, no matter that by the strict rules of the common law it may recover, if by any means it has become so involved that in equity and good conscience it ought not to proceed, or if it is in doubt as to whether it can take hold with clean hands, then it should neither handle nor touch the article.

The American Congress, in every bill that it has passed forfeiting lands, has acted on this principle and declined to disturb bona fide settlers and innocent purchasers. The complete and absolute good faith of the Government must remain untarnished. When this character of legislation commenced the construction of a railroad was an arduous enterprise, requiring much time and energy, and was always encouraged by the people.

Then the public domain was immense and the leading American idea was to have it settled and extend civilization and government as rapidly as possible. It was supposed that a settler would prefer to have half the amount of land for a homestead with a railroad at his door than the full amount without transportation, and the scheme of granting half the lands and raising the balance to double price within near distance of a line to States in aid of railroad building in order to extend means of transportation among frontier settlements, and thus accomplish the policy of the Government without loss to the Government or injury to the settler.

In some localities not on the frontier there were areas of land not fertile and far from transportation and that would not likely be occupied for half a century, and to entice railroads through such regions for the benefit of the few inhabitants already there and to induce others to go and settle there such grants were made.

From 1850, commencing with the Illinois Central Railroad, to 1857 grants were made to thirteen States for the construction of about forty-seven railroads, and if my colleague on the committee [Mr. STONE, of Missouri] will allow me I will use his formulated table of those grants which he used in his speech to the House on this subject this morning. I will thereby economize time and space rather than set them out *in extenso* by referring to each act. I thank the gentleman from Missouri for this table. It is as follows:

Statement showing land grants made by Congress to aid in the construction of railroads and wagon-roads prior and subsequent to March 4, 1861.

[Compiled from the official records of the General Land Office.]

* The figures of this column are approximately correct, being based on the estimate of the annual report of the Commissioner of the General Land Office of 1875.

The grant was made to the State of Mississippi to aid in the construction of a railroad from Brandon, Miss., to the Gulf of Mexico, August 11, 1856, to be known as the Gulf and Ship Island Railroad. Alternate sections for six sections on each side of the line, and when the line should be definitely fixed the State would be entitled to indemnity lands for 15 miles on either side; and the lands unsold were to revert to the United States if the road should not be completed in ten years.

On account of the disasters of war and subsequent years, which I have not the time nor inclination to enumerate here, the State was unable to complete the road within the time, nor even to commence it. Since that time a railroad has been constructed from New Orleans, La., to the city of Meridian, in the State of Mississippi, known as the New Orleans and Northeastern Railroad, and crosses the proposed line of the Gulf and Ship Island Railroad about 75 miles north of its southern terminus on the Mississippi Sound.

The Gulf and Ship Island road has been graded most of the way from the Gulf to this point where it intersects the New Orleans and Northeastern Railroad, at Hattiesburgh, a beautiful and thriving town built within a few years, with fine schools and churches and a cultured population. The iron has been laid and the road put in operation for 20 miles or more from the Gulf northward toward Hattiesburgh, and it can be completed to that point by January 1, 1889. That will put the town of Hattiesburgh and a large surrounding country in direct communication with the far-famed Mississippi Gulf coast, one of the most healthful and pleasant summer resorts, and perhaps the most attractive winter resort in the United States. It puts them in communication with deep water at the Great Ship Island Harbor.

The State of Mississippi has had this enterprise in contemplation for many years. Her convicts are now employed upon it, and to wipe out the enterprise now with the year half advanced and throw these convicts out of employment will force the result of keeping them in idleness or putting them in competition with honest labor.

I am asked if building railroads is not honest labor. I know of nothing dishonest about it, but the country through which this road runs is an agricultural and timber country; there is no floating population there, and agricultural people and people engaged in logging do not leave their employment to excavate railroad beds, and that employment takes the convicts practically out of competition with the honest labor of the country there.

And gentlemen who, as well as myself, desire to prevent convict labor from coming in competition with honest labor should support this amendment. I do not ask any departure from principle. I am not urging you to vote to take this road out of the forfeiture bill and thereby make a break that will be disastrous to the passage of the bill, as the chairman of the committee seems to apprehend. I am simply asking that the bill be made not to apply to the Gulf and Ship Island road until January 1, 1889, and that whatever portion of it shall be built by the 1st day of January, 1889, be exempted from forfeiture, which will enable them to connect with the New Orleans and Northeastern road at Hattiesburg.

You gentlemen who come from States and districts where your people have had the benefits of these grants can with propriety relent to that extent without compromising any principle or making an inconsistent record on this subject. I am in favor of forfeiting land grants. My constituents are in favor of it wherever it is proper and right that it should be done. I voted in the committee for this bill now under consideration as a substitute for the Senate bill and joined in the report of the majority. I will vote for its passage in the House, as I believe with their approval; but while I can safely say that my constituents favor forfeiture of land grants when it is right and proper to be done, I can as safely say that when it is not right and proper to be done they would not favor it.

They would not soil their own hands by doing an inequitable thing, and would not have their representative favor nor their Government perform an act of questionable honesty or that would inflict unmerited hardship on innocent people, and I therefore voted for in the committee and will support here the provisos in the bill, excepting from forfeiture the right of way, depot grounds, side-tracks, turn-tables, etc., of any railroad company heretofore granted, even through the remainder of the route, and exempting from forfeiture lands held by bona fide settlers and purchasers for a valuable consideration and in good faith, and confirming such titles to said purchasers, notwithstanding that they may have purchased from the State or corporation to which the grant was made long after the time for completing the road had expired and up to January 1, 1888.

Now, the States and corporations to which these grants were made have in law no better title to the right of way and depot grounds and grounds for machine-shops than they have to all the other lands, and if they had no legal title the purchasers from them got none by their purchases. They could get no better title than their vendors had. We declare by this bill, that from the day the time specified in the granting act for the completion of these roads expired and the roads not completed, the States and corporations to which the grants were made forfeited all right to said lands so granted; and if that is not correct then we are wrongdoers in taking from these States and companies lands upon which they have some claim, and doing it without due process of law or compensation.

If it be true that these States and corporations did forfeit all right and claim to said lands when the time prescribed for the completion of the roads expired, the roads not being completed, then they could not confer title on anybody.

Why, then, it may be properly asked, do we in this bill not only except from forfeiture the right of way and depot and machine-shop grounds to the States and railroad companies, but go further and by affirmative act confirm to purchasers from these corporations titles to lands purchased after the right of the corporations to sell had expired?

The answer is easy and is now in every man's mind: purely because it would be a hardship on the settlers and purchasers who had gone on these lands in good faith and performed labor there or paid their money, an act that a government will always decline to perpetrate upon its citizens. I would be ashamed to go home to my constituents with the record preceding me, showing that I had voted for this bill without such provisos and restrictions in it. For that would be to dispossess people who have gone upon these lands in good faith, supposing their title was good, although they were mistaken; dispossess them not only of their lands but of the improvements that cost years of labor, and at the same time provide a way by which land-jumpers and jayhawkers could avail themselves of that land and that labor. The people in some portions of the district I represent despise a man who will enter a home from under the man who has improved it as heartily as the Irish do an informer.

Now, these people went to work in good faith to build the Gulf and Ship Island Railroad. They commenced at the Gulf and worked northward. They have 20 miles or more of the road completed; the grading three-quarters done to the town of Hattiesburgh, on the New Orleans and Northeastern Railroad. If they get there they can utilize what they have done. If they do not get there they will lose all they have done. I am informed that the iron is partly on the ground and partly on the way to finish the road to Hattiesburgh.

Farmers all along the route have changed and are changing their business. People are going in there and have made investments with a view of engaging in business that will be worthless without the railroad, particularly fruit and vegetable culture. And all these enterprises can be accomplished and set on foot by exempting this road as to what can be built by January, or they can all be wiped out by defeating this amendment. I put it on the high and equitable and just ground of hardship that the Government ought not to inflict on her own citizens.

It will do you no good, it will do the country no good; the lands along that part of the road, the southern part of it particularly, will not be settled without the road, and it would not be gratifying to any one to see that work decay and the enterprising settlers compelled to move out. In reply to the suggestion that these people had notice, constructive notice, by the law that the time had expired, I answer that all these settlers and purchasers from railroad companies had the same notice, and yet we not only exempt from this forfeiture the lands purchased by them in the face of the same notice but confirm their titles, and which I heartily approve, because it is right; but their case is no stronger than the case I make here, and I have but to state the facts to convict every gentleman who votes against it of inconsistency.

That the land-grant system has been shamefully abused and that in some instances legislation in that line has been disgraceful needs no evidence to establish. It stares the country and the people in the face. The statute-books furnish the bold confession and honesty blushes at the frauds perpetrated under the guise of law. But those stupendous and shameless transactions by which Government and the people were defrauded of their inheritance and that vast and magnificent domain in the great Northwest went into the possession and ownership of corporations can not be corrected nor atoned for by inflicting a hardship and a wrong on this 75 miles of poor country from Hattiesburgh to Gulf Port, and upon people along the route.

This amendment ought to pass. It will not delay the action of the House on the pending bill, which I believe so amended will pass the House by a very large majority within the hour.

Forfeiture of Railroad Land Grants.

SPEECH

OF

HON. LEWIS E. PAYSON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 5, 1888.

The House having under consideration the bill (S. 1430) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes—

Mr. PAYSON said:

Mr. SPEAKER: I hope to make myself understood in at most thirty minutes in this discussion, and will be under obligation to the Chair if I am notified at the expiration of that period.

I had assumed, sir, that the object of a discussion on any bill was to enlighten those who were to be called upon to vote on it as to its merits or demerits; in other words, that the object of discussion was explanation; and without indulging in any criticism not warranted by what has been said, I would be entirely accurate in asserting that there is not a member of this House who has sat here for the past two hours and who is not familiar with the details of this bill by reason of his own investigation and study who has received from this debate the first idea of the details of the bill of the majority or why it should be supported.

I regret that the chairman of the committee, the distinguished gen-

tleman from Indiana [Mr. HOLMAN], felt it his duty in presenting the bill of the committee to the House to entirely disregard in the debate its provisions, and entertain the House with a political discussion and lengthy suggestions as to the policies of the two political parties of this country with reference to general land legislation in the past.

Mr. Speaker, politics have nothing to do to-day, nor have they ever had anything to do, with reference to this question; and I do not propose at this time to go into this subject, although at some later stage in the session it will be my pleasure to do so and to refer somewhat in detail to the general question of land legislation, and who has been responsible, where responsibilities have attached, or who is entitled to credit where any credit shall have obtained for what has been done in the past thirty-five years in connection with land legislation in this country. Whether the Democratic party or the Republican party is entitled to the credit that grew out of the introduction of the homestead law is a matter of no importance here. Whether or not Democrats have divided with Republicans upon this question in times past is a matter that has no possible importance in connection with the subject now pending before this House.

The question is, what action shall the House take with reference to certain lands formerly granted by Congress to aid in the construction of railroads, which roads were not completed within the time required by law, and some of them not wholly completed now?

That is the question, and the only one; and I submit that it is of no possible concern what the position of parties or individuals has been on the question of policy as to the grants themselves.

Action here ought to be intelligent, the result of consideration of facts and the law of the land; and I repeat, sir, that I regret that so far in this debate there has been scarcely a reference to a fact involved in the bill before us.

I trust that a brief statement of the situation will be of assistance to gentlemen who have not made a study of the details of this question.

Beginning in a general way in 1856 the policy was adopted by the General Government of aiding the construction of railroads in the newly settled parts of the country by grants of public lands.

These grants were made in the early history of the policy to the different States for that purpose, and later on to the corporations direct.

All these statutes provided for inspection by sections, usually of 20 miles, of the several roads by the State officials or commissioners appointed by the President, as the grants were to the States or direct to the companies, and if found to be constructed in the manner required, then for the approval and acceptance of the road, and the confirmation to the company of the lands earned by the construction of such section. In some cases patents were provided for to be issued on approval by the commissioners; in others a certification by the Secretary of the Interior, and in some cases the matter rested purely on the conveyance made by the law itself.

All the granting acts contained provisions as to the time within which the several roads should be completed, and with all of them this time has now expired.

I call attention to the table presented in my report which shows at a glance the condition of these roads as to construction, which, with some explanatory statements I shall make later, will make the matter, I trust, intelligible.

This table shows the name of all the other companies not fully complying with the law; the length in miles of the road; the number of miles built within time; the number of miles unbuilt at the date of the expiration of the time limited; the number of miles built since, and accepted by the Government; and the number of miles not now constructed, if any, as to the several roads:

No.	Name of road.	Length.	Built in time.	Unbuilt at expiration of grant.	Built since.	Not now built.	Remarks.
		Miles.	*Miles.*	*Miles.*	*Miles.*	*Miles.*	
1	Florida, Atlanta and Gulf Central	370	189	181	181	None.	
2	Atlantic, Gulf and West India Transit	237.65	85	152.65	132.65	20	
3	Tennessee and Coosa	36.5	None.	36.5	None.	36.5	Gadsden to Guntersville.
4	Coosa and Chattooga	37.5	None.	37.5	None.	37.5	Gadsden to Georgia State line.
5	Mobile and Girard	223.6	54	169.6	30	139.6	Troy to Mobile.
6	Alabama and Tennessee River	167.35	100	67.35	43.93	23.42	Jacksonville to Gadsden.
7	Marquette and Ontonagon	96	52	46	None.	46	L'Anse to Ontonagon.
8	Ontonagon and Brulé River	75	None.	75	20	55	Rockland to Wisconsin State line.
9	Jackson, Lansing and Saginaw, and Amboy, Lansing and Traverse Bay.	341.37	188.10	153.27	133.27	20	Jonesville to Amboy.
10	Port Huron and Milwaukee	90.5	30.5	60	60	None.	
11	La Crosse and Milwaukee	39	None.	39	39	None.	
12	St. Croix and Lake Superior	243.9	None.	243.9	243.9	None.	North Wisconsin, now Chicago, St. Paul, Minneapolis, and Omaha.
13	Vicksburg, Shreveport and Texas	190	94	96	96	None.	
14	Gulf and Ship Island	170	None.	170	None.	170	
15	Minnesota and Pacific	445.8	208.19	237.61	232.24	5.37	Now St. Paul, Minneapolis, Manitoba, and St. Vincent extension and Brainard Branch St. Paul and Pacific.
16	Southern Minnesota and Minnesota Valley	215	190	25	None.	25	Now St. Paul and Sioux City. St. Anthony to Shakopee not built.
17	Southern Minnesota (act March 3, 1857)	76.5	18	58.5	None.	58.5	Houston to Rochester. But 22.5 miles of this is built by Southern Minnesota under act July 4, 1866.
18	Portage and Winnebago	341	248	93	9	84	Now Wisconsin Central.
19	Sioux City and St. Paul	83.16	56.25	26.91	None.	26.91	Sioux City to Lemars.
20	Northern Pacific	2,262.81	530.5	1,732.81	1,507.31	225	Portland to Wallula.
21	Southern Minnesota (act July 4, 1866)	279.51	149.35	130.02	130.02	None.	
22	Hastings, Minnesota and Red River of the North	202.1	74	128.1	128.1	None.	Hastings and Dakota Railroad.
23	Oregon and California	360	197	163	163	None.	
24	California and Oregon	304	152	152	152	None.	
25	Southern Pacific of California	556	232	324	240	84	Mileage, San José to Needles. San José to Tres Pinos, 50 miles, and Huron to Mohave, 182 miles, in time. Mohave to Needles, 240 miles, after time.
	Total	7,445.61	2,847.89	4,598.22	3,541.42	1,056.8	

When the time expired within which all these roads should have been completed thirty-seven aided roads were not completed as required by law.

Of these, indeed, no part has been built of nine of them, leaving twenty-eight that have been built in part, or all "out of time."

Of these grants, twelve have been declared forfeited, leaving twenty-five to be acted on, as shown by the table I have referred to.

Of these twenty-five roads, nine have been constructed, examined, and accepted by the President and executive officers, though partly "out of time;" leaving sixteen partly constructed, a portion unbuilt, and the constructed portions, with but a single exception of a 20-mile section, as I am advised, likewise accepted by the proper officers.

The unconstructed portions of the sixteen roads cover 1,056.8 miles, and involve some 7,000,000 acres of land.

The length of road built "out of time" and accepted is 3,541.42 miles.

Now, the bill of the committee proposes to forfeit the title to all lands opposite roads constructed "out of time," as to all roads protecting bona fide purchasers, etc., with other provisions I do not deem it necessary to notice here.

The substitute which I offer proposes to forfeit the title to all lands lying opposite the line of unbuilt road, saving the right of settlers, and reserving to the Government all rights to declare other and further forfeiture for any failure of the company, past or future, to comply with its contract.

This is the substitute:

A bill to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby forfeited to the United States, and the United States hereby resumes the title thereto, all lands heretofore granted to any State or to any corporation to aid in the construction of a railroad opposite to and coterminous with the portion of any such railroad not now completed and in operation, for the construction or benefit of which lands have heretofore been granted; and all such lands are declared to be a part of the public domain: *Provided*, That this act shall not be construed as forfeiting the right of way or depot grounds of any railroad company heretofore granted, or lands included in any city, town, or village site.

SEC. 2. That all persons who, at the date of the passage of this act, are actual settlers in good faith on any of the lands hereby forfeited and are otherwise qualified, on making due claim on said lands under the homestead law, within six months after the passage of this act, shall be entitled to a preference right to enter the same under the provisions of the homestead law, and this act, and shall be regarded as such actual settlers from the date of actual settlement or

occupation; and any person who has not herteofore had the benefit of the homestead or pre-emption law, or who has failed from any cause to perfect the title to a tract of land heretofore entered by him under either of said laws, may make a second homestead entry under the provisions of this act.

The Secretary of the Interior will make such rules as will secure to such actual settlers these rights.

SEC. 3. That nothing in this act shall be construed to waive or release in any way any right of the United States to have any other lands granted by them, as recited in the first section, forfeited for any failure, past or future, to comply with the conditions of the grant.

Resuming now, Mr. Speaker, the history of the matter, until the expiration of the time for construction there was little difficulty in the administration of the affairs of these grants; but when the time expired, and roads were not completed, then the question arose as to what were the rights of the companies in the land thereafter, if any.

What the condition of the title was then and there; whether, the time having expired, the road had the right to go on and construct, have the road accepted, and receive patents from the General Government—that was the question presented. It presented this question of technical real-estate law: What the condition as to time was in the act of Congress making the grant to the railroad company; whether it was a condition-precedent, as known in the law, or a condition-subsequent. If it was a condition-precedent, then all lawyers agreed that before the railroad would be entitled to an acre of land there must be full performance within the time limited in the act. If it was a condition-subsequent, then it was equally clear that the title passed when Congress passed the act, and by the act; that the railroad company was vested with a present interest in and title to the land subject to the condition; and that that interest and title—and I use the term in as strong a sense as it can be used—which was then in the railroad company could not be divested except by an affirmative act of Congress or by a judicial proceeding authorized by act of Congress.

The first case presented that went to the Supreme Court of the United States, where that question was decided, was the case of Schulenberg *vs.* Harriman, reported in 21 Wallace. The opinion is found on page 63. The case begins on page 44.

I pause here to notice the statement made by the distinguished gentleman from Indiana [Mr. HOLMAN], the chairman of the committee, in which he asserted, as I understood him, and I think the RECORD will bear me out, that no court had decided that, where the provision in the grant as that unless the road should be completed within a given time no further sale should be made and the lands unsold should revert to the United States, there was any permission to sell after that. I stated in interrupting him that the Supreme Court decided exactly the reverse; and I state now in my own time that not only had the Supreme Court decided exactly the reverse of the doctrine stated by the chairman of the Committee on Public Lands, and to which I will refer presently, but that decision of the Supreme Court has never been reversed. It has never been modified. Three opinions of the Attorney-General of the United States have been given in consonance with that doctrine, and it has been the settled law of the Government of the United States from 1879 down to to-day in the Executive Departments of this Government. It was so held by the Hayes administration. It was so held in the Garfield and Arthur administrations, and is the settled doctrine of this Administration to-day. It has never been disputed in Executive circles. The President of the United States, within the past few days, has appointed commissioners to examine a section of the Northern Pacific Railroad, with a view of giving patents for the railroad constructed within the last year, long since "out of time." The Supreme Court of the United States in passing upon this question as a matter of technical law, and in speaking of this very state of case to which I have referred, after referring to the act, and deciding that the grant was one conveying title *in presenti*, and that the condition was "subsequent," say:

The prohibition in this section against further sales, if the road be not completed within the period prescribed, adds nothing to the force of the provision. A cessation of sales in that event is implied in the condition that the land shall then revert. If the condition be not enforced the power to sell continues as before the breach, limited only by the objects of the grant—

Namely, the building of the railroad—

and the manner of sale prescribed in the act.

That is the language of the Supreme Court in the case of Schulenberg *vs.* Harriman. I do not debate whether the Supreme Court was right or wrong, but quote from the opinion of the court, and it will be seen that the gentleman from Indiana [Mr. HOLMAN] is entirely in error as to the decided law.

At this point, in reply to an inquiry made quietly of me by the gentleman from Alabama [Mr. COBB], as to whether there is any difference between the grants which were made to the States and the grants which were made directly to corporations, I say that there is no difference whatever. There never has been an instance known where the State has done other than to convey the land to the railway company, and the cases all go—and I will take pleasure in showing the gentleman a half-dozen of them at my leisure—the cases all go to the extent of holding that, in the grants to the States, the State is simply the trustee for whatever beneficiary it may choose to give the land to later on. This has never been questioned to my knowledge. In some of the acts of Congress the corporation was named, in some the corporation was not named, but the grant was made direct to the State, and the State has always been held to be a trustee to convey the lands to the railway company as the different sections of construction progressed.

Mr. COBB. Is the language similar in both cases?

Mr. PAYSON. Exactly the same in all cases. There is, however, a difference in the reservation of the right of forfeiture. In some the reservation applies to unsold lands, in others to unpatented lands, in others to lands that have not have been certified; but the general proposition of conveyance is identical in all these grants.

Now, Mr. Speaker, to resume: When the time expired within which these roads should have been constructed and they were not constructed, the question was presented to the Interior Department as to what course it should take with reference to them. The first case presented was that of the Southern Minnesota Railroad. At that time Attorney-General Devens delivered an elaborate opinion, which I hold in my hand but will not now take the time to read. That was followed by an opinion by Attorney-General Brewster. There have been in all four different opinions upon the question, all of them of the same purport and all holding that as to every one of these grants without exception, until Congress shall have affirmatively interfered by asserting a forfeiture of the grant or authorizing a judicial proceeding to work a forfeiture, the railway company has the right to go on and construct the road "out of time," and if the road so constructed was accepted by the General Government then the company was entitled to the land for constructed road. I can not make it any more explicit than that, and I assert here—referring to these two opinions of the Attorneys-General cited in the minority report which I make—I assert here that there can not be found any authority in the executive department anywhere that is, even in the most shadowy way, against that proposition.

That the House may be fully advised, I quote from the opinion of Mr. Attorney-General Devens, to which I have referred. After citing the Schulenberg case, and reasoning the matter, he says:

In direct answer to your inquiry upon this point I therefore reply that the Department is authorized by law to issue patents to the State of Minnesota for lands opposite that portion of the road constructed in sections of 10 consecutive miles since February 26, 1877, the date at which, according to the fourth section of the act of July 4, 1866, it was provided, in the event the road was not completed, the lands not patented should revert to the United States, and this for the reason above stated, that no act, legislative or judicial, has been taken to revest the title of the United States.

And in the A. and P. case, page 576, volume 18, Opinions Attorney-General:

I am therefore of opinion that the grant to the railroad has not been forfeited by its failure to build its road within the time named in the act, no action by reason of the failure to perform the conditions having been taken by authority of Congress.

It having then a present grant, even if it be treated as one liable to forfeiture, it still has a right to proceed to construct the road, and until, in some form, advantage shall be taken of the breach of the conditions, it would be the duty of the Executive Department to give it the benefit of the grant.

As I have said, sir, this has been the settled law of the executive department of the Government, acquiesced in by Presidents Hayes, Garfield, Arthur, and Cleveland, and now being administered by the latter, and all of the Secretaries of the Interior and Attorneys-General during the different administrations named.

Mr. Speaker, I cite these authorities, not to indorse them, but to show that opinions adverse to those I have entertained and expressed with such force as I could command have been entertained by those whose opinions are entitled to respect and who have opposed in the House and in the Senate forfeiture bills based on the principle of the committee's bill.

I have always taken, as the House knows, broad grounds on the question of power on the part of Congress to declare these forfeitures, and I stand by what I have said on these questions as to individual cases of railroads on the question of power. In all our investigations of statutes, principles, and decided cases I have always, as I do now, given the Government the benefit of the broadest construction possible, but in none of the decided cases in the Supreme Court was the status of lands lying opposite constructed road in express terms defined and fixed, nor in any United States circuit court decision until the recent case of Denny *vs.* Dobson in the Oregon circuit, recently decided by Justice Field.

I premise what I am about to read by the statement that this is a case in which the opinion was delivered by Mr. Justice Field holding a circuit court in Oregon, and the precise question was presented as to what was the status of land lying opposiste road which was constructed, but constructed out of time, as between the railroad company and a party claiming it under the town-site law.

And I desire to say further that until this opinion was promulgated there had never been an opinion by the Supreme Court which covered in precise terms that exact question, and in this case, without stopping to read the entire opinion, I state to the House the substance of what it decides. The decision is, in effect, that when the railroad is constructed, although out of time, if it is accepted by the Government, then the title to the land becomes absolute in the railroad company, and the power of declaring a forfeiture on the part of Congress is absolutely

gone. This case has been before the Committee on the Public Lands, and the members of that committee are familiar with it. It settles the law of the question, provided it shall be affirmed by the Supreme Court of the United States. The party in interest claiming under the general land law and against the railroad company did not appeal from that decision, and so it remains a decision of the United States circuit court as to the law of the case, but I am authorized to say (the information coming to me from gentlemen high in authority) that before this opinion was promulgated by Judge Field it was submitted informally to the other members of the Supreme Court, and concurred in informally by them. So much of the opinion as I think important in connection with this question I add here.

The case is reported in volume 32, Federal Reporter, page 889.

In that, the court holds that the grant was *in præsenti*; that the title to the land passed by the grant, under condition; that—

"While a legal title to the sections described, as distinguished from a merely equitable or inchoate interest, passed to the railroad company by the act, it was not a title that could be disposed of by the company without the consent of Congress, except as each 25-mile section of the road was completed and accepted by the President, so as to cut off the right of the United States to compel the application of the lands to the purpose for which they were granted, or to prevent their forfeiture in case of the company's failure to perform the conditions of the grant."

Speaking of the construction, acceptance by the President (and issue of patent where the statute provides for patent, but which, all the committee agree, does not make additional title), the court says:

"They would identify the lands which are coterminous with completed road; they would be evidence that the grantee, in the construction of that portion of the road, had fully complied with the conditions of the grant, and to that extent the grant was relieved of the possibility of forfeiture for breach of its conditions.

"The lands were granted to aid in the construction of the road.

"The road opposite the premises in controversy having been completed and accepted, the title however imperfect, whilst incumbered, if it may be so termed, by the uses to which the lands were to be applied, has become perfect and indefeasible; and the costs of surveying, selecting, and conveying the lands having been paid, the only remaining obstacle to their sale, or other disposition, has been removed."

This opinion is directly in point and against the committee's bill; but I do not base my action here upon that, or upon the direct question of power at all.

As this question is presented, it is not necessary to discuss the question of the power of Congress to declare the broad forfeitures proposed, but one of practicable legislation as I hope to show.

I am in favor of our substitute because it is practical, because it forfeits every acre of land about which there is no contest or dispute as to power, because these lands lying opposite unconstructed road can be, by the concurrent action of the House and Senate, restored to settlement as public lands, and without any discussion of disputed questions of power, and I present it solely on the ground now of policy.

The Senate has for years, with almost entire unanimity, adopted the view of the law as to power that the Executive and the Department has held; it has repeatedly and almost, if not absolutely, unanimously refused, time after time this session, as well as past, to forfeit any lands lying opposite constructed road; and therefore I am for this substitute, because we can pass it; and, as I verily believe, it is all we can pass, and therefore it ought to pass. Especially as no right of the Government is lost; all its rights are preserved as to the balance of the lands.

Let this be remembered: every right to declare further forfeitures is expressly reserved, and by no possibility can the Government lose a right or advantage by the passage of our substitute.

On the other hand, if the House pass the committee's bill the Senate will as certainly reject it; and if both Houses stand by its action, nothing will be accomplished.

The railroads go on constructing; the Administration accepts the road; the title is clouded by the accepted claim of the company, to say the least, and if the Department rule shall be ultimately held to be the law, then the land which could be saved is lost, and we give away what we could save simply to tender an issue to the Senate. I am not for that; and base my action here solely on the ground of policy, and what I believe I know is for the best interest of the Government, the saving of several millions of acres of land beyond the possibility of loss, and without yielding a principle, nor, indeed, having the necessity of discussing the principle.

I trust I make myself fully understood in this. There is not a gentleman here, no matter how radical his views may be, but that can vote for this substitute, for it yields nothing and takes all that is not debatable.

I desire practical legislation that can be accomplished without a sacrifice of principle. And I do not forget, and I beg gentlemen to remember, that in all the forfeitures made since this agitation began, aggregating over 50,000,000 acres, there has never been an acre forfeited lying opposite constructed roads, because the Senate has adopted and insisted on the view taken by the Attorneys-General and adopted by the Presidents, respectively.

Mr. McRAE. Will the gentleman permit a question?

Mr. PAYSON. Yes, sir.

Mr. McRAE. If the gentleman's position is correct, why make the reservation of the right to make the forfeiture?

Mr. PAYSON. For the reason that the House of Representatives can then act with reference to those grants which it thinks ought to be forfeited, and leave the responsibility with the other end of the Capitol, as we did last year; and we have bills as to individual roads pending now in the House presenting that very question.

Mr. McRAE. Why not do it now?

Mr. PAYSON. Is the gentleman serious in that question? The gentleman has asked me a question and I have answered; let him answer me one in all seriousness. Will the gentleman say to this House that he harbors the thought that the amendment which he reports will ever be passed at the other end of the Capitol, or in this House, even?

Mr. McRAE. I think it will if this House sends the bill there by a strong vote.

Mr. PAYSON. Does the gentleman say that in good faith?

Mr. McRAE. I do.

Mr. PAYSON. That is all. The gentleman asserts to this House that as a member of the House he believes that a bill declaring a forfeiture of the entire railroad land grant made by Congress in cases where part but not all the road was completed within the time prescribed would pass the Senate of the United States. When the gentleman says that I leave the matter with him.

Mr. McRAE. Do you mean to say that a Republican Senate will not do it?

Mr. PAYSON. I do not say "Republican Senate" or "Democratic Senate," but I do not think any Senate or any House will pass such a measure. I do not think this House will, or ought to. Why is it that the gentleman always wants to bring politics into this question? This bill which has passed the Senate passed there without a division.

Mr. McRAE. But the Senate is Republican.

Mr. PAYSON. There was no division in the Senate on this bill, and there was never any suggestion there on the Democratic side in favor of the proposition that the gentleman asserts and supports here; there has never been such a suggestion made there to my knowledge, and the gentleman knows that there is no question of politics made on the measure there or here.

Mr. McRAE. I think the gentleman is mistaken about that.

Mr. PAYSON. I know I am not in error as to that. But that is neither here nor there. We do know, as a matter of practical business, that this bill of ours, the minority bill, which will forfeit between seven and eight million acres—gentlemen over there say about 5,000,000 acres, but that is a mistake—can be passed. There is no question about it either as to power or policy. If we pass this bill we get that amount of land back. If we fail to adopt this measure and pass the bill of the majority of the committee, if that should meet the approval of the House (though I do not believe it will), what is the effect? The measure dies for this Congress. What will be done then? These railroad companies will go on constructing their roads under the decisions of the executive department, under the appointment of commissioners made by the President of the United States, and earning the lands section by section, as held by the Executive, so that two years from now, when the question shall come up again, a large portion of this land, which is now free and clear, which nobody is claiming, which we can forfeit as easily as we can turn our hand over, is either clouded by a claim on the part of the railroad company or the title has absolutely passed to them by decisions of the courts.

I am opposed to the committee's bill. I do not believe in passing on these questions where there are disputes and differences in an omnibus bill.

Involved in every case of partly constructed road there are always two questions, one the question of power, the other of policy, and each case should stand on its own merits and be determined by itself.

For instance, I have always insisted as a matter of policy, as a matter of countervailing equity, no matter what the technical rule of law might be, that whenever a railroad was constructed and accepted under the rule held by the Government, and especially before any hostile legislation was reported against it, Congress ought not to interfere. I have held this in numerous cases, and stand to it to-day.

Again, I have favored entire forfeiture of grants where a part of the road had been constructed and accepted, especially where I believed that the construction was only colorable, as in the case of the Ontonagon and Brulé River road in Michigan.

And in this committee bill, which deals *en masse* with all defaulting roads, treating all alike, and because, as I shall presently attempt to show, many of them ought not to be interfered with in the showing made, I am opposed to it.

I have always so insisted——

Mr. TOWNSHEND. Will my colleague allow me a question?

Mr. PAYSON. Yes, sir.

Mr. TOWNSHEND. In the Forty-seventh Congress, when my colleague and I were both members of the Judiciary Committee, did he not join in signing a report in relation to the forfeiture of the grant to the Northern Pacific Railroad——

Mr. PAYSON. Oh, yes; and my colleague ought to remember——

Mr. TOWNSHEND. Allow me to finish my question. Did not the gentleman sign a report declaring that it was within the power of the

Government to forfeit every acre of the land granted to that company which was not earned before the 4th day of July, 1879; that we had the right to do so?

Mr. PAYSON. Of course; and I say so now. If the gentleman will come over here and sit "under the droppings of the sanctuary," I will try to give him an idea or two with reference to this question. I take the same position now, and shall adhere to it until driven from it by judicial decision. But can not the gentleman understand the difference between power and policy? If we have the power to take, is it therefore the policy always to do so?

Mr. TOWNSHEND. But my colleague——

Mr. PAYSON. I will meet the question the gentleman has asked. I have asserted that Congress has the power to do many things that it ought not to do. I am not referring now particularly to the Northern Pacific Railroad grant. I will come to that.

Mr. TOWNSHEND. My colleague will allow me to correct him. He then declared not only that Congress had the right to make that forfeiture, but that it was the duty of Congress to forfeit all lands not earned by that company prior to the 4th of July, 1879.

Mr. PAYSON. I will repeat what I said; and I hope that during the remainder of my time my colleague will not interrupt me again. I repeat that wherever a road has been constructed in the absence of hostile legislation, that road ought not to be interfered with. In the case of the Northern Pacific Railroad a bill looking to forfeiture has been pending ever since I have been in public life. Do I make myself understood by my colleague? There is a difference between that case and many others. I will refer to one. I do not see the gentleman from Florida [Mr. DOUGHERTY] in his seat now, who gives me the information; perhaps his colleague [Mr. DAVIDSON] will verify what I am about to say as to the case. This majority bill declares a forfeiture of the road leading from Jacksonville to Pensacola, calling it the Florida, Atlantic and Gulf Central Railroad, which, when this official report of the Land Office which I hold in my hand was written was divided into two sections—one portion being the Florida, Atlantic and Gulf Central, the other, the Pensacola and Atlantic. The grant was made to the State of Florida, was divided and conferred on the two roads. All of the eastern division from Jacksonville to Quincy, and 130 miles in addition to the west, were built within the time named by the act, and accepted by the General Government. The prosecution of the building of that road, as appears in the official records, was interfered with by the late war. The Confederate government took possession of that line of road as well as the one leading south, tore up the rails and carried them off to be used for military operations in other portions of the Confederacy.

No further steps were taken with reference to the building of that line of road until after the war, when some capitalists took hold of it under an assurance from the Interior Department that they should be recognized if they built the road. The balance, 181 miles, was built and accepted. There was never any measure of hostile legislation proposed in reference to that until long after its completion. It has been carrying the mails at the reduced rates of compensation fixed in our appropriation bills for years as a land-grant road, ever since its acceptance. Yet, under the doctrine of the gentleman from Arkansas [Mr. MCRAE], that entire grant would be forfeited, and under the bill reported by the chairman of the committee those 181 miles would be declared forfeited.

Does the gentleman from Illinois, my colleague [Mr. TOWNSHEND], see any difference on a question of policy between such a case and the other? And would his vote and action be the same in both cases, if the rule of law was even the same when applied to both? And would he say he would forfeit the entire grant? I would not. I have always stood by that policy. So has every administration since this agitation began.

An instance of similar character was the case of the New Orleans Pacific in the Forty-eighth Congress. That road was built entirely "out of time," and there being a question raised as to the validity of the title to its lands, because of this Mr. Secretary Lamar specially called attention to it in his annual report to Congress and recommended the passage of a bill prepared in the Department to confirm expressly the title to the lands. The bill passed and President Cleveland approved it, and it became a law, because it was the proper thing to do.

Mr. OATES, of Alabama. Will the gentleman permit me to make a statement.

Mr. PAYSON. With pleasure.

Mr. OATES. On a divided report from the Public Lands Committee as to the forfeiture of the grant to the Louisiana Backbone road, the New Orleans Pacific properly, the legal question was referred to the Judiciary Committee, and a report was made through its able chairman, thirteen members agreeing that Congress had no right to forfeit that grant under the circumstances of the case, two members only dissenting. Afterwards, upon full debate in this Houte, the proposition to forfeit was voted down, and yet under the bill reported by the majority all of that grant would be forfeited.

Mr. PAYSON. The chairman of the committee to whom the gentleman has referred was the distinguished gentleman from Virginia, John Randolph Tucker.

The SPEAKER *pro tempore*. The gentleman from Illinois has now occupied twenty minutes of his time.

Mr. PAYSON. I will occupy a few minutes more, because I am on a subject upon which I desire to complete my statement.

I am opposed to the committee bill, because of the proposed action as to the Port Huron and Milwaukee grant. It proposes a forfeiture of 60 miles of grant for road built "out of time," when Congress, by the act of March 3, 1879 (20 Stat., page 490), has expressly relinquished to the State of Michigan all the interest the General Government has or had in the lands for the benefit of the road, all the lands that remained.

Take the St. Croix and Lake Superior, now the Chicago, St. Paul, Minneapolis, and Omaha, 243 miles in length. The grant was to the State; it was finally made to this company; not a rod of road was built in the time named in the act, but it was all built, and "out of time," and accepted by the President, and is doing the public service at the reduced rate, and no hostile legislation has been proposed as against it till very recently and long after all was done, and yet the committee propose to forfeit its entire grant, validating sales as a favor.

So with the Hastings and Dakota; 74 miles were built in time; the State extended the time, and within that extension the road was completed, accepted by the Government, and burdened with the obligation of a "land-grant road," which it is still performing; 128 miles are "out of time" and never attacked till this year, though all the above was years before this.

Again, the Southern Pacific, from Mojave to the Needles, on the Colorado River, was authorized to meet the Atlantic and Pacific Railroad there for a route from that point to San Francisco. Its route from the latter city to Yuma, where it was to meet the Texas Pacific, was constructed to Yuma in time, but the Atlantic and Pacific was badly behind in reaching the Needles; and, although the Southern Pacific was nearly a year in advance of the Atlantic and Pacific at the meeting point, and no business to be done till the latter company did reach there, as the Southern Pacific route was, for the 240 miles over the Mojave Desert, then and still a desert in its broadest sense.

It was constructed and accepted before any business could possibly come to it, and this would be forfeited by the committee substitute.

Again, take the case of the Minnesota and Pacific, now the St. Paul, Minneapolis and Manitoba Railroad; 208 miles was built in time, and 232 "out of time," all constructed and accepted in 1879, and since then carrying the burdens of a land-grant road, and its right never questioned till now to my knowledge. Yet the entire grant is proposed to be forfeited by the amendment of the gentleman from Missouri, and the 232 miles by the committee bill. I am opposed to this.

These are only samples. You may run all these bill through, and I will not take the time of the House to refer to them all, and there are sixteen of them in that condition where the roads have been constructed; and all the obligations of land-grant roads have been imposed upon them and borne by them; and yet this majority bill proposes to forfeit these grants. That bill can never pass the Senate. We all agree to that. No one has ventured to assert a belief that it can pass the Senate. People differ as to this question, and differ honestly, basing their judgment on the cases and opinions I have cited. Gentlemen are as sincere in their opinions in this matter as I am in mine. We entertain opposite views as to the question of power. But I am not speaking of or discussing the question of power at all, for it is not necessary on the substitute I present. In it I am presenting a practical proposition by which we can reclaim beyond question somewhere between 7,000,000 and 9,000,000 acres of public lands which are clearly subject to forfeiture, and all agree can and should be forfeited, and this will relieve the situation of all lands about which there is no dispute, leaving the other question as to broader forfeitures, and about which, both as to power and policy, there is dispute, to further action by Congress.

It is a practical, practicable proposition and should have the approval of this House. If this bill should fail, and the Northern Pacific road should go on and construct that line of road down the Columbia River valley, it is evident that under the recent decisions of the court that railroad company would be legally entitled to the benefit of the provisions of the act and get that land—some four or five millions of acres.

Mr. HERMANN. Let me suggest to the gentleman from Illinois that 2,000,000 acres of the public lands have been already lost by reason of similar neglect.

Mr. PAYSON. Certainly; and I am very glad the gentleman from Oregon has called my attention to the fact. We attempted during the last Congress to pursue the course in reference to legislation as far as the Northern Pacific road was concerned, in the line of the committee's bill, which failed. I was one of the conferees appointed to meet the Senate conferees with reference to that bill. The gentleman from Indiana [Mr. COBB] and myself were two, and I have forgotten the other, though perhaps it was Mr. STONE, of Missouri; no, it was the gentleman from Minnesota, Mr. Strait. We insisted in that conference com-

mittee that we would not yield from the principle of the committee's bill.

They proposed to declare substantially as they do now, an act for the forfeiture of the land along and opposite the unconstructed portions of the road. There was an unconstructed branch across the Cascade Mountain range, I think 114 miles in distance, involving near 3,000,000 of acres; and the Public Lands Committee and the House of Representatives stood by the House bill for the broad forfeiture which failed, and the result has been, sir, that since the last Congress the Northern Pacific Company has constructed this road across there, and the question as to the title to these 3,000,000 acres of land is, to say the least of it, clouded and probably lost to the Government.

Mr. PETERS. Will the gentleman allow me a question?

Mr. PAYSON. Certainly.

Mr. PETERS. Will the forfeiture of the land proposed in your bill at all prejudice action upon the remainder of the lands not included in it?

Mr. PAYSON. Not at all. I have stated before and called the attention of the House to the fact that this does not abridge or interfere with in any manner the right of Congress to declare a further forfeiture to the extent of the unearned lands in regard to any individual roads. And more than that, we have reported from the Committee on the Public Lands various declarations of forfeiture in individual roads, which are in the hands of the individual members of the committee to be reported for action singly at the proper time, and on the principle of the committee's bill.

Mr. CANNON. Will the gentleman allow me a question? If I understand him properly, he claims that the majority of the committee insist upon doing that which they can not accomplish. Or, at any rate, they seek to accomplish that which prevents them from doing what it is admitted they have the right to do and the power to accomplish; and in so failing, are they not in fact fighting the battle of the railroads as against the interests of the people, to whom these public lands belong?

Mr. PAYSON. That is a matter of inference which each must settle for himself.

Mr. Speaker, there is another factor in this case which is of great importance.

For many years past, since the expiration of the time fixed for the completion of the roads named, and they were not completed, settlers have been going upon these lands, in some cases by permission of the land officers, and in others on advice by attorneys, all in the belief that they could make title sooner or later under the homestead law, but who are prevented from so doing by the technical condition of the title and the failure of Congress to act.

Notably this is so in the Ontonagon grant in Michigan. Hundreds of settlers are upon these lands there, all asking for action by Congress, that they may make their proofs and perfect their entries.

The Senate bill or any substitute is favored by them all. I have received numerous letters from their representatives asking for early action, which will be effective, and can pass.

It should be remembered that a bill to forfeit this grant for the benefit of settlers was the very first bill of that kind reported to Congress; it came from the Judiciary Committee in the Forty-seventh Congress, and was reported by Mr. E. B. TAYLOR, of Ohio.

Year after year—and later mainly because the bill attempted forfeiture of land opposite constructed road—it has failed of passage, and the settlers are to-day where they were eight years ago, without substantial aid, still hoping for some action.

Now, why should not the other side of the House join with us and pass this substitute, which will pass the Senate, and relieve these settlers and save this land for them?

Understand me, Mr. Speaker, I am in favor, if I can secure it, of a total forfeiture of that grant, and will do the best I can to secure it, but I do not believe it can be. I know this partial forfeiture can be had if gentlemen on the other side will aid, and so these settlers be saved.

A large number of settlers on the Gulf and Ship Island are in like condition, and I warn gentlemen, if this substitute is defeated and the committee's bill adopted, and a conference fails, the railroads go on building, and the President accepting, these lands go to the railroads, and the settlers must buy from them.

I divest myself of all responsibility as to that by my action here to-day, and insist that it is our duty to restore what we can and take such action as to disputed questions as we shall be advised is best later on.

I am anxious to avoid the experiences in the past with the Senate where disputes over questionable House legislation has caused failure of all results.

I do not question the sincerity of members of the other body. I speak only of the situation, and as the adoption of the substitute I offer involves no yielding of principle on the part of any member here, as it will give relief to a vast number of settlers whose rights are now only shadowy under the law, and as it reserves all rights asserted by the committee's bill, to be exercised hereafter as we shall determine, I trust the substitute will be adopted.

Forfeiture of Railroad Land Grants.

SPEECH

OF

HON. JUDSON C. CLEMENTS,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 5, 1888.

The House having under consideration the bill (S. 1430) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes—

Mr. CLEMENTS said:

Mr. SPEAKER: I do not believe the conduct and management of the subsidized land-grant railroads towards the Government has been such as to demand any consideration of sympathy beyond their strict legal right. Therefore the limit of the power of Congress to forfeit the lands granted is the only limit which I would consider in my vote. There is no more pressing obligation upon Congress to the people of this country than to pass this bill; and in view of the situation I myself will vote for the largest forfeiture and leave the railroads to secure their rights in the courts, if there be any doubt about the power of Congress.

I will do so the more readily because in each of the propositions pending before the House ample provision is made for the complete protection of all innocent holders and purchasers of any part of these lands. Bad as the policy has been of squandering in the interest of rich, oppressive, and powerful corporations and monopolies this magnificent property of the people, it would not be right now to disturb the bona fide settlers and innocent purchasers who prior to any proceedings to forfeit the grants have invested in, and in many cases built and improved, homes thereon. With all questions of this sort eliminated as they are in all the propositions pending, there remains the single naked question between the Government, the people, on the one hand and these corporations on the other, and between them alone.

Is any principle of law, equity, or good conscience infringed by declaring the proposed forfeitures? In order to justly and intelligently judge of this question it is proper to state the separate propositions upon which we are called now to act and the theory upon which each stands. This I hope to do briefly. I will not, in referring to amounts of land in this connection, speak with exact accuracy as to the number of acres, but will use round numbers approaching accuracy. The legislation from which comes this controversy is found in the acts of former Congresses granting to certain railroad companies, whose lines were to be constructed through certain of the States and Territories comprising public lands, certain definite portions of these lands, upon conditions in each case that the roads should be completed to certain points within specified times named in the grants.

No one of the three propositions now before the House proposes the forfeiture of an acre of such land where this condition was performed within the time named in the conditional grant. All of them propose to deal only with cases where the condition was not performed in time. The Senate bill proposes a forfeiture of about five and a half millions of acres, being a withdrawal only from these grants of that part not yet claimed by the companies, where the lines have not yet been extended to the points designated in the grants, although the time for doing so has long since confessedly expired. To call this a forfeiture is a misnomer. It is simply a withdrawal of a supposed right of these companies to earn these lands by extending their lines, but which I deny is their right now.

The substitute which a majority of the House Committee on Public Lands proposes provides for a forfeiture of about 54,000,000 acres. This includes all of the lands embraced in the Senate bill, and in addition thereto all contiguous to that portion of the roads built out of time, or after the time limited in the grant. The amendment offered by the minority of the committee declares a forfeiture of the entire grant in each case where the road was not completed to the point named in the grant within the time specified in the same. This proposition if adopted would forfeit and restore to the public domain about 74,000,000 acres.

Choosing between these three propositions and looking to the public interest as well as justice to all, I shall unhesitatingly vote for the latter. Then, if that fails, for the substitute offered by the committee. But I will not vote for the Senate bill in any event, for while it withdraws from any claimed right of the companies to yet earn the five and a half millions of acres covered by it, the effect of it is to confirm in these companies the disputed title to the remaining sixty-eight and a half millions. Thus by this wholesale confirmation of title in the railroad companies to lands in dispute, and to which I believe they have neither a just nor equitable claim, the Senate bill would carry more evil than good.

I believe that one of the most unwise and improvident policies of

past legislation has been the wholesale granting of the public lands as subsidies to corporations to hire them to build their own roads for their own profits. I do not believe it was wise or right for Congress to dispose of the public property in this way. But those who justify it upon grounds of public policy and urge that it has benefited the whole country by opening up the great West to settlement and civilization, and say that this was the object of it, must in harmony with this argument admit that in view of that object time was of the greatest importance in complying with the conditions of the grants, which I believe should, in justice to the public, be construed strictly.

If the grants were justifiable upon the ground of such public policy and purpose, it does not follow that the companies had a right to build their lines only at their pleasure and as fast only as they could profit by the ordinary traffic and business, regardless of such public purpose and regardless of time, except so far as time developed the success and gave assurance of the profitableness of their investments in a large degree without reference to the grants, and at the same time hold the Government bound. I do not believe the ordinary rule of law requiring the grantor to enter in order to terminate the conditional grant after a failure on the part of the grantee to perform the conditions can be properly invoked in this case.

The grant carried on its face the plain condition. The Government could not as an individual enter, and it is claimed could only do so by virtue of legislative action. Such action has been too long deferred, but I do not believe the rights of the parties to the grant have been changed by the delay. Be this as it is, able legal minds have reached the conclusion that we have the power to forfeit all the lands where the conditions were not performed within the time required by the grants, but a contention has arisen as to the justice and propriety of such action. Believing it to be just and right to do so, I will so vote. It is interesting to go back into the history of the acquirement and disposition of the public domain. I am indebted to the gentleman from Indiana [Mr. HOLMAN], chairman of the Committee on Public Lands, for the following table, showing when and how the public domain was acquired, and how and by whom it has been disposed of.

		Acres.
Ceded to the United States by Virginia and other States east of the Mississippi		259,171,787
Acquired under Democratic administrations:		
The Louisiana purchase, April 30, 1803	756,961,280	
East and West Florida, February 22, 1819	37,931,520	
By treaty from Mexico, February 2, 1848	334,443,520	
By treaty from Mexico, December 30, 1853	29,142,400	
Total under Democratic administrations		1,158,478,720
Under Whig administration:		
By purchase from Texas, November 25, 1850		61,892,480
Under Republican administration:		
Alaska, March 30, 1867		369,529,600
Grand total		1,849,072,587

The following shows all grants and their objects up to this time:

	Acres.
Military services, Revolutionary war	2,165,000
Military services, war of 1812	4,930,192
Military services, war with Mexico, act of 1855	61,028,430
Total for military services	68,123,622
Granted to States and reserved for Territories for school purposes	67,893,919
Universities	1,165,520
Agricultural colleges, act of July 2, 1862	9,600,000
Total for education	136,783,061
Grants made to States prior to March 4, 1861, to aid in constructing railroad and wagon-roads	29,824,032
	165,607,093
GRANTS AFTER MARCH 4, 1861.	
To States to aid in the construction of railroads	19,240,883
o corporations	163,643,944
For wagon-roads	2,781,733
Grand total since March 4, 1861	185,666,733

It will be seen that of this magnificent public property nearly all of it, not including Alaska, was acquired under Democratic administration, and by far the greatest part of it, including Alaska. It will be further seen that prior to March 4, 1861, when Republican rule began, the entire amount granted to States to aid in constructing railroads and wagon-roads was less than 30,000,000 acres, whereas since that date there has been granted under Republican administrations for the construction of railroads and wagon-roads over 185,000,000 acres.

It will be further seen that the total grants for military services have been about 68,000,000 acres. Thus, while the grasping corporations found favor with the Republican Congresses of the past, and secured at their hands these great bounties from the property of the people, the veterans of the Mexican and other wars by whose services the same was largely acquired and the power and glory of the American Government was sustained, were long ignored in poverty and want in many cases, while corporate wealth has reveled in the fruits of their sacrifices. A direct and great evil consequent upon these profligate grants is the acquirement of large bodies of them by foreign individuals and syndicates. Already over 20,000,000 acres have passed in this manner into foreign ownership. It has been bought as an investment and for speculation.

It is against the true interests of the American people and the American Government for the public lands to pass in large bodies into the hands of a few individuals or syndicates, foreign or domestic, but especially foreign. Every citizen should be free in our country in an equal race under equal laws to earn a living, acquire property, and pursue happiness, and in all he should have complete protection of law. But a public policy which tends to the aggregation of the lands of the country into the hands of a few tends also to the establishment of a dependent and homeless class—a condition of things repugnant to the interests and happiness of the people of democratic-republican America.

The public domain is a sacred heritage of the people. The hand of the despoiler should be removed from it. It should be closely guarded and disposed of only in small bodies to actual settlers for actual use, and not to speculators, foreign or domestic. The more unmortgaged and happy homes are owned by the people, the poor as well as the rich, though they may be humble ones, and the fewer homeless tenants we have, the happier, the more prosperous and patriotic will be the whole people, and the greater and stronger will be the Government.

Forfeiture of Railroad Land Grants.

SPEECH

OF

HON. RICHARD W. TOWNSHEND,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 5, 1888.

The House having under consideration the bill (S. 1430) to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes—

Mr. TOWNSHEND said:

Mr. SPEAKER: I ask the attention of my colleague from Illinois [Mr. PAYSON], through no unkindness to him whatever, but simply to call attention to the fact that in 1886 his position upon this question was diametrically opposed to that which he now occupies, as I understand it. In 1886, when the Northern Pacific land-grant forfeiture bill was under consideration in the House, the gentleman made certain remarks which are published in the RECORD, and which I ask the Clerk now to read, which show that he declared that Congress had the power to forfeit the grant, and that it was its duty to do so, and that the policy was right.

Mr. PAYSON. Permit me to state to my colleague that he will find a much stronger statement of my views upon that same question in the report that I had the honor to submit.

Mr. TOWNSHEND. The statement here is that it was the duty of Congress to declare the forfeiture.

Mr. PAYSON. Certainly, I have always said so, and see no reason to change the opinion.

Mr. TOWNSHEND. I understood you to state in reference to the lands since sold by the road, but not earned, at the expiration of the grants that you are willing to confirm their title.

Mr. PAYSON. I have never said so.

Mr. TOWNSHEND. Then I entirely misunderstood my colleague. The gentleman's statement is sufficient without asking the Clerk to read that portion of his former remarks I intended to have read.

Mr. Speaker, I understand the question now before the House to be this: The Senate has passed a bill which only forfeits or restores to the people 5,627,430 acres of the lands which have been granted without compensation to railroad corporations. The bill reported by the gentleman from Indiana [Mr. HOLMAN], from the Committee on Public Lands, is offered as a substitute for the Senate bill, and it, if adopted, will restore 54,323,996 acres of the lands taken from them by unjust legislation. In other words, the House bill proposes to forfeit and restore to the public domain nearly ten times as much land as the Senate bill.

Sir, I am in favor of the House bill, and sincerely hope it will be adopted. It is a wise and just measure. It restores to the public domain an area of land as large as two such States as Ohio. These lands will provide many homes for those who are now homeless and need them. The Democratic House initiated the measures and have succeeded in forcing their passage in the past two Congresses, which have forfeited and restored to the public domain over 50,000,000 acres. If this bill is finally adopted we will have succeeded in rescuing from the corporations and given back to the people for actual settlement and homes nearly 105,000,000 acres of land, or an area large enough to make four such States as that of Ohio, which, together with what has been restored and recommended for restoration by the General Land Office under Cleveland's administration, will aggregate more than 145,000,000 acres, or an area as large as four such States as Illinois.

As vast as this area is, yet it is but a tithe of the immense domain which was acquired by the wisdom and patriotism of Democratic administrations.

When the Democratic party went out of power in 1861 it left a grand patrimony to the people; homes enough for all the people, the poorest as well as the wealthiest. But, oh, how shamefully, wrongfully, were they despoiled of most of the best portion of that grand patrimony by Republican Congresses under Republican administrations. That party when in power donated 52,000,000 acres to the Atlantic and Pacific Railroad. Thanks to a Democratic House which came in power afterwards we forfeited and restored to the people most of that grant in the last Congress. And now, if we are not thwarted by the Republican Senate, the Democratic President will sign this bill, which will restore nearly 37,000,000 of the nearly 47,000,000 acres donated by Republican Congresses to the Northern Pacific Railroad Company alone. Sir, it is meet that the Democratic party and its policy should recover the lost homes of the people which had been originally acquired for them by Democratic administrations.

As Democrats we can point with pride to the record of the Democratic party in regard to the public lands. The people will ever be grateful to that party for giving them their homes, and they will detest the Republican party for seizing so many millions of acres and bestowing them as a gratuity upon the Pacific railroads. Not only did the Democratic party when in power give the people their homes, but since its return to power under Cleveland it is patriotically restoring the vast areas lost by the people when the country had passed from under its guardianship.

What is the history of our public domain? Outside of the land embraced in the original thirteen colonies and in Alaska, all the public domain was acquired by Democratic administrations.

The whole of the area of the public domain, including the original thirteen States, at the end of the Revolutionary war amounted to 531,200,000 acres. Since then, by purchases under Jefferson and Monroe and by treaties with Mexico under subsequent Democratic administrations, 1,158,478,720 acres were acquired, which is vastly more than twice as much as all the public domain previously owned, including the thirteen original States. Out of these lands, which were the magnificent gift of the Democratic party to the nation, fourteen great States and ten Territories have been carved.

My friend from Indiana [Mr. HOLMAN] has in his excellent speech on this bill accurately stated facts in this connection, which I will quote as follows:

I do not wish to enter into a political discussion over this matter of the public lands, but gentlemen in a recent debate here talked as though the Democratic party had no special reason for championing measures for the annulment of these grants. I think the Democratic party have a special interest in the subject; that party can look back with great satisfaction to the record of its representative men on the land question. When, by the patriotic act of Virginia and other States, the public domain was placed under the control of Congress, it extended from the original thirteen States westward to the Mississippi River. Its whole area, including the original States, was only 531,200,000 acres; while an empire of land extending from the mouth of the Mississippi to the Columbia River and Pacific Ocean, a region of country larger than the whole original thirteen States and their possessions by more than 200,000,000 acres, commanding the Mississippi River and covering our entire Western frontier, was held by a foreign power.

Mr. Jefferson's foresight in acquiring that vast territory was one of the grandest acts of statesmanship in the history of our race. With that territory in the possession of Great Britain, or of any other great power, the peace, progress, and security of the United States would have been continually imperiled; standing armies, as in Europe, would have patroled the borders of hostile states. By the purchase of that magnificent region of country under the administration of Mr. Jefferson the future security and greatness of the United States were absolutely assured. An outlet to the Gulf and a grand frontage on the Pacific Ocean was ours.

During the negotiations of Mr. Monroe, our then minister to France, with Napoleon, he said that whatever nation controlled the Mississippi River and the Gulf would be the greatest nation on the globe.

This being accomplished, it was only a question of time when the Floridas would become a part of the United States, and this was accomplished under Mr. Monroe's administration. By treaties and honest purchase under the administrations of Mr. Polk and Mr. Pierce we established the present boundary between the United States and Mexico, securing a vast extent of country, an enlarged frontage on the Pacific coast, and its magnificent Bay of San Francisco, one of the grandest harbors of the globe. These territorial acquisitions, now divided into fourteen States and eight great Territories, and the Indian Territory of 41,000,000 acres, were acquired under the policy of the party which is now asking that these land grants be declared forfeited and the lands restored to the people. Under the auspices of that party the great State of Texas was added to the Union.

Certainly, sir, a party so related to the public domain would feel an earnest interest in whatever concerns the public domain.

The following table shows the auspices under which the public domain has been acquired (land controlled by the United States):

		Acres.
Ceded to the United States by Virginia and other States east of the Mississippi		259,171,787
Acquired under Democratic administrations:		
The Louisiana purchase, April 30, 1803	756,961,280	
East and West Florida, February 22, 1819	37,931,520	
By treaty from Mexico, February 2, 1848	334,443,520	
By treaty from Mexico, December 30, 1853	29,142,400	
Total under Democratic administrations		1,158,478,720
Under Whig administration:		
By purchase from Texas, November 25, 1850		61,892,480
Under Republican administration:		
Alaska, March 30, 1867		369,529,600
Grand total		1,849,072,587

This vast public domain, with the original thirteen States and Vermont, Kentucky, Tennessee, and Maine, never a part of the public domain proper, constitute the territory of the United States.

This public domain of virgin lands has been the pride and glory of the United States, and the source of their unexampled progress and greatness. It was guarded with vigilance by our fathers and by all of the old political parties into which the country had been divided for the future freeholds of the ever-growing population. Under the auspices of Jefferson, as expressed in the famous ordinance of 1787, the old feudal tenures, entailments, and rights of primogeniture, which had fostered great landed estates and a nation of vassals in Europe, were swept away, and the public domain was dedicated forever to independent freehold estates. Land monopoly, the curse of the Old World, was abhorred. Never in all our former history, even when our fathers were sorely pressed for money to meet demands incident to the Revolution, were lands ever sold in large bodies, except in two instances—one to the Ohio Company, in 1785, of 822,000 acres, and the other to John Cleves Symmes, of 248,540 acres, in 1787. This policy of our fathers of hoarding the public lands for freeholds of the people substantially controlled the land system under all political parties down to the year 1862.

I also ask leave to quote further from the speech of the gentleman from Indiana in relation to the forfeiture of the Northern Pacific land grant, as follows:

The House proposition covers all of the remaining grants. It would have the effect in the case of the Northern Pacific road and all the others to restore to the people a large body of land, an aggregate of lands double the area of the great State of Ohio, subject, however, to bona fide sales. Is there an absence of power in Congress to do this? Is it inequitable? This House has decided more than once that it was within its power to declare these forfeitures. The most important of these grants, that of the Northern Pacific Railroad, has been under the consideration of Congress before. The House has heretofore passed a bill declaring that the lands not earned within the time prescribed by law should be forfeited and restored to the public domain. Why not? Take the case of the Northern Pacific.

What is in brief the history of that road? I shall refer to it, although it will be more elaborately discussed hereafter. That grant, involving 42,500,000 acres of land, a large portion of it land of great value, with vast coal fields and magnificent forests, the very heart of that fertile region of country stretching westward from Lake Superior to the Pacific Ocean, 2,400 miles in length, was made on the 2d of July, 1864. The grant is 12,800 acres per mile in the States of Wisconsin and Minnesota; 25,600 acres per mile in Dakota, Montana, Idaho, and Washington Territories. That road, according to the terms of the law, was to be completed entire on the 4th of July, 1876. In 1866 you extended the time two years for the commencement of the work. In 1868 you extended the time two years for commencement, when not a shovel of earth had been moved. The law extending the time, on the 1st of July, 1868, four years after the original grant, is as follows:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That section 8 of an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Lake Superior to Puget Sound, on the Pacific coast,' is hereby so amended as to read as follows: 'That each and every grant, right, and privilege herein are so made and given to, and accepted by, said Northern and Pacific Railroad Company upon and subject to the following conditions, namely: That the said company shall commence the work on said road within two years from and after the 2d day of July, 1868, and shall complete not less than 100 miles per year after the second year thereafter, and shall construct, equip, furnish and complete the whole road by the 4th day of July, A. D. 1877.'"

By construction of the several statutes by the Secretary of the Interior the time was extended until the 4th of July, 1879. Yet after these successive extensions of time, a definite location of that railroad or any part of it was not even made until November 21, 1871; and when the time finally elapsed, after all these extensions, this extraordinary favoritism and forbearance on the part of Congress, on the 4th of July, 1879, when the whole railroad was to be completed by the terms of the law making the grant, but 530½ of 2,400 miles had been completed. Can any person say it is unjust to restore those lands to the public domain, subject, of course, to the equities that might arise on behalf of the purchasers of land opposite to completed railroad?

I speak of it as a naked question between that corporation and the people. Is there any possible injustice in declaring the land unearned under the law forfeited? Gentlemen say there is an estoppel here, because the Government did not interpose at once when the time expired. There can be no estoppel where the parties stand upon exactly the same footing and are equally informed of the facts. The laches of the Federal officers can not operate injuriously to the Government. The grantees of this imperial grant were fully informed of the nature of the grant and the conditions on which it was made. Time was expressly made as of the essence of the grant; that it was made on the idea of opening up the country; yet in defiance of the Government and in utter disregard of its obligations, apparently relying on its power to control Congress, it permitted the period to expire within which, by express terms of the law, the whole railroad should be completed.

How then does the case stand? This corporation applied time after time for an extension of its grant before a spadeful of earth had been thrown. Congress, unmindful of public interests, granted the extension from year to year. And yet, acting as if this imperial grant was its own private estate to enrich its stockholders, to be disposed of for its own private benefit, that corporation postponed even commencing its railroad until the country was swarming with a hardy and enterprising people; until a railroad starting from Portland, Oregon, had been constructed eastward 225 miles without a dollar of aid from the Government; until railroads running west from the Mississippi River were opening that magnificent country and industry was on every hand invading that region.

The country was teeming with people and the great land grant increasing in value under their enterprise and labor before this railroad corporation thought proper to even take the first step toward completing in good faith its part of the engagement, to construct this railroad. The facts were known to the corporation as to the nature of their grant and the object for which it was made, as well as to Congress or to the officers of the Government. No laches of Congress or of the Government officers can impair the rights of the people. They have a right to demand that the contract be carried out in good faith or declared void. I think the right and duty of Congress to declare this forfeiture is clear beyond question upon every consideration of law and justice, and I am confident it is sound upon the high consideration of public policy, for the grant was made without justification, to build up private fortunes, and not for the public good.

Indeed, sir, that grant can not be defended. Can any just man defend any of these grants?

* * * * * * *

While your people were watching with patriotic solicitude the movements of your armies, while these the most interested of all men in the public domain were rushing into the ranks of your armies to steady and uphold the tottering pillars of the Union, at that very time ex-governors of States, ex-members of Congress, men of high social and political standing, were here upon this floor lobbying for these grants and securing by the favor of Congress vast portions of your national wealth, your public lands, of especial and inestimable value to the men, the laboring men of the country, who were then imperiling their

lives in the national defense. In that unpatriotic and mercenary spirit these grants were obtained by which the people were robbed of their rights and imperial fortunes were secured.

Congress was engaged in the work of parceling out among mercenary capitalists your public domain when the clash of arms could almost be heard in this Hall!

Are great grants of land obtained under such circumstances to be carefully guarded by Congress and the courts of justice? Will Congress refuse to declare their forfeiture when a just ground for forfeiture is presented? You have a right to declare the forfeiture of these millions of the public land wrongfully granted, and justice demands that it shall be done.

The gentleman from Indiana is right. It is clearly within the power of Congress to forfeit every acre of land granted to the Northern Pacific Railroad which was not earned by it under the terms of the grant prior to the 4th day of July, 1879, and it was the duty of Congress to do so long ago. During 1882, in the Forty-seventh Congress, when this House was under the control of the Republican party, over two years after the unearned lands granted to the Northern Pacific Railroad were liable to forfeiture, bills were introduced and referred to the Committee on the Judiciary, of which I and my colleague [Mr. PAYSON] were members. But the majority of that committee decided against the equity and the power to forfeit, and insisted that the road was entitled not only to the lands on the 530 miles constructed, but also on the 1,870 miles unconstructed on the 4th day of July, 1879, when the grant lapsed.

Every Republican member of the committee, except my colleague from Illinois, so held. Only one Democratic member concurred with the majority. When the minority of the committee sought to present a minority report dissenting from the conclusions of the majority, and insisted upon the right and duty of Congress to make the forfeiture, and presented a joint resolution for that purpose, we were, by the ruling of Speaker Kiefer, denied that privilege; but the report of the majority had previously been received and laid on the table in such a legislative position, as held by the Speaker, as to place it where no substitute could be offered to it or any other action whatever could be had upon it. This was just what the friends of the railroad desired, as will be seen by the following proceedings of July 24, 1882, pages 6416, etc., of CONGRESSIONAL RECORD, Forty-seventh Congress.

Mr. KNOTT. I wish to ask if that report should not be upon the Calendar?

The SPEAKER. What the gentlemen from Illinois and from Kentucky now present are the views of the minority.

Mr. KNOTT. Accompanied with a joint resolution which I think this House would like to consider and discuss. I therefore ask it shall have the opportunity to do so, and that it may go upon the Calendar for that purpose.

Mr. TOWNSHEND, of Illinois. Let the joint resolution be read.

The joint resolution was read, as follows:

"*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That all the lands granted to the Northern Pacific Railroad Company under an act of Congress entitled 'An act granting lands to aid in the construction of a railroad and telegraph line from Lake Superior to Puget Sound, on the Pacific coast, by the northern route,' approved July 2, 1864, which had not been patented to said company on the 1st day of July, 1882, be, and they are hereby, declared forfeited to the United States by reason of a breach of the conditions upon which said grant was made, and that said lands are hereby restored to the public domain and made subject to sale and settlement under existing law."

* * * * * * * *

Mr. TOWNSHEND, of Illinois. My point of order is this: That it is the right of the committee, or a member of the committee, to move that this joint resolution be placed upon the Calendar; and I make that motion.

* * * * * * *

Mr. KNOTT. There were sundry bills referred to the Committee on the Judiciary touching these land grants. That committee made a report to the House in which it recommends no action at all. A minority of the committee—seven out of fifteen members—dissent from the legal views of the majority and present certain facts showing the necessity of action by this Congress. The question now comes up, when the committee has made a report to the House, whether the House is in such condition that it can not consider that report or consider any counter-proposition that may be made by the minority of the committee? In a word, can a committee of this House, by giving its report a peculiar shape, preclude the possibility of the House considering the subject at all?

The minority of the Committee on the Judiciary, dissenting from the views of the majority, which recommend simply total non-action, present a substantive proposition for action of the House. Now, I think it is due to the House, I think it is due to the people of this country who are interested equally with this railroad company in this land grant, that this House should have an opportunity to consider the question and dispose of it, and that it should not be precluded at all by any peculiarity in the report of the majority of the committee.

It does seem to me to be due to the members of this House that the question of this grant should go upon the Calendar, to be reached and discussed in order as other propositions there pending.

* * * * * * *

Mr. BLACKBURN. When this House by unanimous consent conferred the privilege in the matter of a report on the minority of the committee, it conferred equal privilege in the matter of reporting a bill or joint resolution, and the minority have a perfect right now to make the motion which my colleague has made, and I know no rule, and I know of no dictum in any author on parliamentary law which will warrant its exclusion.

* * * * * * *

Mr. TOWNSHEND, of Illinois. Only one point further. I wish to say, Mr. Speaker, the point I make is this, and I wish the Speaker to keep that in mind, that it is competent for the gentleman from Kentucky under the circumstances to present his motion, and it is the duty of the Speaker to submit that motion to the House, and it is in the power of the House to determine by a majority of the vote whether the resolution should go to the Calendar or not.

* * * * * * *

Notwithstanding the strenuous efforts of Democratic members to have the report and resolution of forfeiture placed on the Calendar where it might have consideration and action, yet their efforts were resisted by leading Republican members and the Speaker was inexorable, and by his remarkable and unprecedented ruling denied the representatives of the people the privilege of discussing or voting upon a proposition to forfeit the Northern Pacific land grant. This ruling prevented any action whatever upon that subject in that Congress.

Mr. COX, from New York, appealed from that decision. Mr. REED, of Maine, moved to lay the appeal on the table.

I quote further from the proceedings:

Mr. COX, of New York. I make my appeal from the ruling of the Chair, which I understand to be this, that the Chair rules out of order the motion made by the gentleman from Kentucky to refer this joint resolution to the Calendar. From that decision of the Chair I respectfully appeal.

The SPEAKER. And the gentleman from Maine moves that the appeal be laid on the table.

Mr. HOLMAN. I call for the yeas and nays.

Mr. CANNON. I wish to know whether the majority resolution accompanying the report of the committee is now on the Calendar?

The SPEAKER. It is not.

Mr. HAMMOND, of Georgia. That is the trouble; we want to get something on the Calendar.

Mr. COX. of New York. And that is what they are dodging.

The Republican majority sustained by their votes their Speaker, and thereby prevented any action whatever in that Congress. At the next election the people sent a Democratic majority to this House. One of the first acts of that House was the adoption of a resolution demanding the forfeiture of all grants which had not become vested by the terms of the grant, and straightway did the work of recovering the public domain by forfeiture commence and has continued ever since. We have already in that way secured the recovery of fifty million acres. If the people desire the work to continue to the finish, they must not commit the folly of sending a Republican majority in the next House, as they did in the Forty-seventh Congress, or enslaving themselves again to the corporations by defeating Cleveland and Thurman.

These proceedings demonstrate the fact that the only hope for relief from the power of corporations and for a maintenance of the rights of the people lies in a Democratic majority. Republican candidates for Congress often make loud professions of loyalty to the interest of the people when seeking election, but soon forget their pledges when here, and blindly follow the leadership of the friends of monopoly.

The history of the two great parties in Congress in their disposition of the public domain clearly demonstrates that the Democratic is now, as it has ever been, the true friend of the people, and that the Republican is now, as it has ever been, the friend of the corporated monopolies which it has created and fostered.

I introduced several years ago a bill granting a bounty land-warrant of 160 acres of land to all the Union soldiers of the late war, placing them upon the same footing with the soldiers of the previous wars of the Republic. My bill is still pending before the committee, and I trust it will receive favorable action before this Congress adjourns.

In 1862 the gentleman from Indiana [Mr. HOLMAN] made the first effort of that kind when the homestead law was then under consideration. I will quote from his speech on this bill a statement of that gentleman relative to his effort and views upon the subject of grants of bounty land to soldiers, which shows how unavailing his efforts were at a time when we had an abundance of land to have given a home to every Union soldier. It demonstrates that the railroad corporations had more power in a Republican Congress than the brave men who were offering up their lives in behalf of the Union. I quote as follows from Judge HOLMAN'S speech:

While the bill was pending in the House on the 22d of February, 1862, I submitted a proposition that the act of 1855, which had secured allotments of public land to the soldiers of every successive war prior to that which was then waging, should be extended to the soldiers of the then existing war for the Union. That proposition was made in view of the uniform policy of our Government in all former wars. The argument against it was that its tendency would be to monopolize the public lands; that bounty-land warrants assignable would certainly produce that result. That was the only argument that could be urged against it; but it was successful, and my provision failed by the action of the gentleman who controlled the bill in the House.

But, Mr. Speaker, what an extraordinary result followed! Within nine years afterward grants of public lands to an extent unexampled in the history of any country were made to corporations by the same Congress. How does the account stand? I have before me a statement from the General Land Office. The grants prior to March 4, 1861, are as follows. Let us see the result by comparison.

All grants made up to this time for military service and education are as follows:

	Acres.
Military services, Revolutionary war	2,165,000
Military services, war of 1812	4,930,192
Military services, war with Mexico, act of 1855	61,028,430
Total for military services	68,123,622
Granted to States and reserved for Territories for school purposes	67,833,919
Universities	1,165,520
Agricultural colleges, act of July 2, 1862	9,660,000
Total for education	136,783,061
Grants made to States prior to March 4, 1861, to aid in constructing railroads and wagon-roads	29,824,032
	165,607,093

GRANTS AFTER MARCH 4, 1861.

	Acres.
To States to aid in the construction of railroads	19,240,883
To corporations	163,643,944
For wagon-roads	2,781,733
Grand total since March 4, 1861	185,666,733

It appears, therefore, that while it was not thought proper on February 22, 1862, to grant bounty lands to the soldiers of the Union Army on account of its tendency to land monopoly, yet beginning with July 2, 1862, with a grant of 28,000,400 acres to the Union Pacific Railroad corporations, Congress within ten years gave directly to corporations and to States for corporations 185,666,560 acres of land, a territory eight times greater than the State of Indiana. All this in ten years! While from the year 1787 down to this day all the grants made by Congress for common schools, the foundation of the grandest system of education the world has ever seen, including the sixteenth section of every township of the public domain down to the formation of the Territory of Oregon, and the sixteenth and thirty-sixth sections in every township of every State and Territory organized since, including also all grants for universities and colleges, and all grants for military services in all the wars from the Revolution down to the war with Mexico, aggregate 136,783,061 acres. Add to this all grants to States for railroads and military wagon-roads (none were made to corporations) prior to March 4, 1861, namely, 29,824,032 acres, and the entire aggregate is 165,607,093. This aggregate of 165,607,093 for education. Military internal improvements covers the grants of our entire history, except the period covered since the Republican party came into power, and in ten years only that party gave to corporations and States for corporations 185,666,560.

SPEECH

OF

HON. S. S. COX,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 11, 1888.

The House having under consideration the bill (H. R. 1659) to provide for taking the eleventh and subsequent censuses—

Mr. COX said:

Mr. SPEAKER: When the bill for the Tenth Census, which I had the honor to introduce, was reported to the House, by its courtesy I was allowed double the usual time to explain its provisions and advocate the reform which it produced. Inasmuch as its provisions were a departure in many respects from former modes, especially in the selection of the enumerators and in the division of the districts of the United States, it was logically necessary for me to bear the onus of their explanation. This burden was made easy by the fact that General Garfield, who had been chairman of the Census Committee for the Ninth Census, had at that time made an exhaustive investigation of the subject, with a report which was both interesting and voluminous.

The bill for the Tenth Census was taken in its principal features from the bill of General Garfield. His vindication of these features made the onus of its defense light and agreeable.

VALUE OF CENSUS OF 1880.

Still, sir, there was much criticism, as there should be upon all new propositions. But the taking of the census of 1880 amply sustained the wisdom of that new departure, since it has given us the most authentic and valuable statistics of our people and their resources, known to our history, or that of any other nation.

I had then occasion to review the general history of census-taking from the earliest eras. I had occasion also to show that that government was wise and just that based its legislation and administration on an accurate account of the people and the resources which enrich, comfort, and strengthen their energies.

A good census is invaluable. A poor census is worse than none; and therefore it was, sir, that there was greater heed in the preparation of the Tenth Census, as well in Congress as in the bureau, so as to obtain accurate results as to names, ages, civil conditions, occupations, birthplace, mortality, and health, as well as to the boundaries and constituencies which distinguish that census.

BASIS OF APPORTIONMENT.

It is not necessary to state here that our constitutional requirement for the apportionment of Representatives and direct taxes is based upon population. Nor is it necessary, at this stage of the duties of the Committee on Census, to consider the Amendments of the Constitution in reference to disabilities which might affect the aggregate of our population and the consequent scheme of apportionment.

Slavery being abolished, there is no longer the three-fifth representation. The duty, therefore, of apportionment, which can not come before the House until after the census is taken, so far as the enumeration of the people is concerned, is simplicity itself. Nor is it pertinent for any gentleman to raise the question now that we can not go beyond the constitutional requirement as to the enumeration of the people, and collect the various classes of statistics relating to our resources.

RESOURCES OUTSIDE OF POPULATION.

However strictly gentlemen may construe the Constitution, I repeat what I said in 1879, that there is in our fundamental law the incentive and the nucleus, if not the prescript itself, for a larger statistical scope of our varied interests.

Almost contemporary with the Constitution, learned societies, with Thomas Jefferson and Timothy Dwight at their head, urged Congress to take a scientific view of the requirements of the census and to make an important adjunct, so that the Government might take something beyond a mere enumeration of the population.

Of the ten censuses taken since the origin of the system, seven have had various schedules.

We are now in the habit of supplementing this census work and assigning to various bureaus the collection of statistics other than those of population.

The attempt was made, as early as 1810, to obtain the facts relating to manufactures. Jefferson, Madison, and Gallatin were then the great lights of "strict construction," and yet they found no obstacle to the enlargement of the census returns.

This attempt was repeated in 1820, under Monroe, and again in 1840, under Van Buren.

The law of 1850, although it provided some very awkward and unofficial means for the collection of data for returns, and though the officials were marshals and deputy marshals, who were unfitted for the business, was a great advance upon previous statutes.

But that advance of 1850 led to further advances in 1860 and 1870. These might have been improved but for the impending civil struggle in 1860 and the consequent confusion of 1870.

It remained for the act of 1879 to accomplish the best results. It was a vast improvement. I have had inserted in the RECORD, from time to time, enthusiastic commendations of these results. They emanated from the best minds of England, Scotland, Austria, Hungary, and Russia. They unite in saying that they can not applaud too much the exhibit of our political and social conditions at the end of the first century of our existence.

It is impossible now, after such success, to return to old methods, or limit the census statistics to an enumeration only.

STRICT CONSTRUCTION AS TO LIMITS OF CENSUS.

If I were to construe the Constitution with such strictness as to limit the census to an enumeration of the people I should be laughed out of this House, for it is as fixed as anything in the form and spirit of our legislation can be, that the people of the United States demand to know, from authentic sources, their own condition and resources, as well as their numbers. As General Francis J. Walker remarks in a pamphlet which he has recently issued—

It has become simply absurd to hold any longer that a Government which has a right to tax any and all the products of agriculture and manufactures, to supervise the making and selling of butterine, to regulate the agencies of transportation, to grant public moneys to schools and colleges, to conduct agricultural experiments, and distribute seeds and plant-cuttings all over the United States, to institute scientific surveys by land and deep soundings at sea, has not full authority to pursue any branch of statistical information which may conduce to wise legislation, intelligent administration, or equitable taxation, or in any other way promote the general welfare.

It by no means follows, Mr. Speaker, that the committee which authorized this report mean to belittle the primary object of the enumeration (which is apportionment) by burdening the census with extraneous matter.

There are, incidentally connected with making the schedule count of the people great facilities and much economy in collecting the facts for certain other schedules as to age, sex, nativity, occupation, and the like.

SUPEREROGATION.

Perhaps the thing we have most to guard against in taking the census is to avoid giving too much labor to the ordinary enumerator, who bears about among the people his portfolio of blanks and instructions.

It would astonish gentlemen who are unaccustomed to this peculiar line of official duty to note the immense quantity and variety of materials which are collected for digestion and scrutiny. It is estimated that when the returns for 1890—the schedules of population—come in, they will exceed in bulk fifteen hundred merchant's ledgers of the largest size; schedules of agriculture three or four hundred volumes more, and the returns relating to manufactures, wealth, debt, taxation, schools, libraries, churches and mortality. They are an immense library. And this repertoire, in all its extent and variety, must be tabulated and compiled by an office in whose execution there is no respite, and whose detail of labor is simply enormous.

PREREQUISITES.

I have often thought, sir, that in order to lessen this labor, it would be well to keep our Census Office open and active, as in other countries, during the entire decennial period. In the absence of such permanency there must, therefore, be a corresponding and timely appropriation for this work. I can only on this occasion give to the House a skeleton of what is its prerequisite.

Since the taking of the Tenth Census inventors have been at work on

tabulating devices, aggregating methods, and kindred inventions. Some of these should be tested thoroughly, and if by some of them original data can be expeditiously transferred to tabular form in half the time required under the old methods, or in a decreased time, they should be adopted.

Two years is none too long a time of preparation for the Eleventh Census. The amount of printing necessary for the enumeration, after all blanks and schedules are carefully decided upon, is enormous. The whole matter of preparation and such printing should be completed months before the enumeration begins. After all preliminary work the supervisors and enumerators may be selected, and with ample time for their proper instruction. Heretofore scant time for preparation was allowed the Census Bureau.

The very small expense that would be necessary for carrying on the work of preparation during two years prior to the actual enumeration, in June, 1890, would be saved tenfold in carrying out the work, while much unnecessary expense resulting from hasty work and the rush of the speedy preparation would be avoided.

Again, ample time should be given the Superintendent of the Census to study the best scientific methods in vogue in other countries for tabular presentation. The simplification of the tables reduces expense, and experience shows that tabular matter can be arranged in such a way as to take up much less room than of old, and at the same time simplify its presentation and increase its value. But such study and examination of the work of different countries can not be undertaken after the practical work of the census begins.

I have before me a volume, published by an expert, Charles F. Pigdon—"A Hand-book of Practical Statistics." It is an useful compendium from a practical source. It shows the advancement of this art within the past quarter of a century.

DETAILS OF CENSUS WORK.

There are three great stages in census work: first, the collection of the material; second, its tabulation and analysis; and third, its publication. The first and second involve the great labor and expense of a census; the first should not be undertaken until the second is thoroughly understood and laid out.

The collection of the material involves all the plans necessary thereto:

First. The division of the country into proper districts of supervision;

Second. A division of supervisors' districts into enumeration districts, of which there should be now at least thirty thousand; and

Third. The preparation of all blanks, instructions, and paraphernalia for the use of supervisors and enumerators.

Under this last point the chief cause of delay heretofore arose largely through tardy legislation; the officer intrusted with the execution of the census law having had but a few months in which to prepare his blanks. A superintendent should have at least two years in which to arrange, harmonize, and justify all the blanks necessary for a census. This may seem an extravagant estimate of the time required, but when the great variety of the industries, business interests, and other data of the country are considered, the statement becomes reasonable. The preparation of blanks for the collection of facts relative to the population only requires little time, but the schedules for the collection of manufacturing, agricultural, mining, and other statistics relating to the material wealth and welfare of the country require not only great care, but consultations with experts in all the various industries involved.

All this preparation should be made under the direct personal care of the superintendent. He should delegate but little of this work to clerical assistants. If time be allowed by law, the superintendent can do this, and the result will be schedules harmoniously constructed with a view to securing the best results. This preparatory work has never been done under any census in this country.

As to the tabulation and compilation of the results of the enumeration, this topic or division of census work should be clearly projected and thoroughly understood when the schedules are used in the collection of material. This is essential even for economy.

Much expense has heretofore been incurred on account of a plan for the use of material not being considered in connection with the collection thereof. All such plans for the utilization of the material of the census should be in perfect harmony with the plan of the collection, and the same mind should pass upon all points; otherwise there will be incongruity, inequalities, and inharmony in the whole work. No superintendent has heretofore had the opportunity, in any complete way, of doing this. Much expense can be saved by careful study in this direction.

In general it may be said that the cost of the enumeration can not be reduced beyond the per capita cost of previous censuses; nor can the printing expense be lessened to any great extent; but much money can be saved in the processes of reducing the facts originally returned by enumerators to tabular form for printing. In this direction a great saving may be effected by carefully experimenting upon new methods of reaching tabular results. These experiments should be conducted in ample time for a complete system to be laid out, so that when the work of the census begins the executive officer may not find himself involved in a great whirl of material without any plan of reducing the same.

APPROPRIATIONS.

This economic measure brings me to the consideration of the appropriation necessary under the bill which I present to the House. The question of cost involves an answer to the harsh and in many instances ungracious and unjust criticisms which have been made on the last census.

LIMITATION OF WORK.

These criticisms pertain to the publication of the reports of experts in connection with our marvelous industrial development.

It may at first sight seem that this work was overdone, but the twenty-two volumes printed remain to speak for themselves. The four remaining volumes not yet printed have been appropriated for in the urgent deficiency bill of this Congress.

I append to my remarks (Exhibit A) an authentic statement of the cost of the several volumes of the last census, of 1880, and the separate cost thereof; also a statement of the subjects and utilities of these volumes; and also the cost of the entire census.

Still, let me repeat that the expense of this census will not be much greater per capita than it was in former censuses.

The bill limits the expense of the Eleventh Census to a maximum of six millions. The cost of the Ninth Census in 1870 was $3,360,000, exclusive of printing and engraving. The per capita cost was 8.71 cents.

The cost of the Tenth Census, making the same exclusion, was $4,853,350. This would be 9.68 cents per capita. The Tenth Census was not, therefore, extravagant in its cost. The increased work had but a slight relative increase of cost.

The Massachusetts census of 1885, which was very similar to the national census as to enumeration, cost 9.47 cents, not counting the printing.

The impression that there was a great lack of economy in the census of 1880 was not produced by the cost per capita of the enumeration. However wrong the impression as to the utility or inutility of the published volumes of the Tenth Census, it has been proven that the agricultural reports were far less economical.

ESTIMATED COST OF ELEVENTH CENSUS.

If I were to be called upon to give an *a priori* estimate of the population in 1890, I should take as the basis the increase from 1870 to 1880, and, inasmuch as I fell below the mark in the estimate I made ten years ago, I am disposed to be a little more liberal in prophecy, and will fix it at, say, 64,000,000. At 9½ cents per capita the cost would be $6,080,000, exclusive of printing. This was about the cost of the Ninth Census, in 1870. If the population be not more than 62,000,000 in 1890, the cost will be $5,890,000. There was quite an increase in the cost from 1860 to 1870, for reasons which members will appreciate. It ran from 6.25 cents in 1860 to 8.70 cents in 1870, and in 1880 the per capita, to be strict, was 9.68 cents.

The cost, per capita of inhabitants, of the last four censuses, exclusive of printing and engraving, was as follows:

	Cents.
Seventh Census, 1850	5.84
Eighth Census, 1860	6.25
Ninth Census, 1870	8.71
Tenth Census, 1880	9.68

The increase from 1860 to 1870 represents: (1) the advance in wages and salaries which took place during the war period, and which, in the main, has never been receded from; (2) the addition of extensive statistical inquiries beyond what had been previously undertaken; (3) the rendering of the familiar matter of enumeration into vastly greater detail, as will appear in the next paragraph.

The increase in wages during the war has not since been lessened. Besides, more was required of the enumerator in 1880, as will appear by the note which is taken from General Walker's statement in the article before referred to:

Thus, in 1860, the distribution of the population, according to ages, was into the following classes: Under 1, 1–5, 5–10, 10–15, 15–20, 20–30, 30–40, and so on, by decennial periods upwards; in all, 14 classes. In 1870, under the demand for more minute information regarding the number of persons of school age, of voting age, of military age, etc., the following classification was adopted: Under 1, 1, 2, 3, 4, 5–10, 10–15, 15–18, 18, 18–20, 21, 21–25, 25–30, 30–35, and so on, by quinquennial periods upwards to eighty years, and thence upwards by ten-year periods; in all, twenty-five classes.

Even so, the occasions for distributing population according to ages were not considered to have been met, and in compliance with numerous and pressing requests, including resolutions of conventions and public bodies, the ages of the population of 1880 were ascertained by single years, amounting to over one hundred specifications.

Again, in 1860, the occupations of the people were tabulated in the gross solely. In 1870 the occupations reported were distributed among six different classes, according to sex and age. At a score of points a corresponding increase took place in the amount of detail presented. Every such instance adds appreciably, often greatly, to the labor and cost of compilation.

I remember very well taking much interest in the tables and work of the Ninth Census. The cost was not a matter of wrangle, nor is it a matter for the challenge of an intelligent statistician that the increase from 1870 to 1880 was only 1 per cent.

The truth is, considering the work done at the census of 1880, for which so much reproach has been heaped upon the Census Office, there was ample compensation in the results, in the judgment of those who are competent to speak.

NEED OF STATISTICS.

In order to vindicate the value of census-taking, in addition to the constitutional enumeration requirement under the law, I desire, gentlemen, as a preliminary, to recognize the fact that it is now indispensable to gather statistics pertaining to the actual condition of the people, to some extent their nationality, their ages, their physical condition, especially as it relates to permanent infirmities, and their social

condition, which means whether single, married, widowed, or divorced. This is necessary in order that legislation may be properly directed when governments are called upon to provide either for the amelioration of some conditions or the extension of privileges growing out of some other conditions. A special instance might arise in this way: The Government is called upon through philanthropic efforts to establish an insane asylum. The first question that arises is, Is there a necessity for such an institution? The necessity can only be determined by accurate statistics. But the accurate statistics of a single period are not sufficient. The facts must be at hand for an extended period of time, taken at different intervals, so that the legislature may know whether insanity is on the increase or is declining. This illustration covers all others of the same kind.

In nationality we find one of the most important features of the enumeration. The port statistics of immigration can not possibly give the distribution of immigrants. They are counted only at the ports where received, and there the account must end so far as ordinary immigration statistics are concerned.

What becomes of the foreign element coming into the country, how is it distributed among the various industries, in what proportion to manufactures and to agriculture, and in what localities? These questions can only be determined through the enumeration of the population. For example, the census of 1880 showed that of the population of the State of Nevada 41 per cent. were actually born in foreign countries. This is the highest rate of foreign element exhibited in any State. On the other hand, in North Carolina but twenty-seven one-hundredths of 1 per cent. were born abroad.

The statistics of mortality accompanying population returns, while crude heretofore, are the only statistics on deaths for most of the States. The same is true of births and marriages.

When the different States of the Union shall have adopted careful registration systems, like those of England, the vital statistics of the census can and should be dropped. Until that time the death rate in various localities for the purposes of ascertaining sanitary conditions can only be determined through the Federal census.

Are marriages increasing or decreasing, according to the growth of population? This also can only be answered for the whole nation through the Federal census.

As the chief expense of the enumeration of the population is in ascertaining its numerical strength, these various social statistics should be taken along with the enumeration, in order that the Government may have the most value for the chief outlay.

The statistics of manufactures show the progress from decade to decade of the industries of the country. They know what industries have been planted anew, what have gone out of existence, what are declining and what increasing; and with the production exhibited there come the economic questions of the relation of capital to production, the total wages paid, and the number of people employed in the industries of the country.

These are the chief facts to be brought out by an enumeration of the industries of the country. They are constantly brought into use in all discussions of an economic character. In fact, no argument can be made and no article written of an industrial nature which does not incorporate the statistics of manufactures or those of the industry discussed as obtained through the Federal census.

These statistics should be so classified as to show the whole number of people employed in them who are receiving certain wages—as, for example, how many people receive $5 per week in an industry, how many $6, how many $10, etc. Under this method, if the statistics are taken with reasonable care, we should learn the actual composition of our industrial force in a wage point of view, and get rid of the average wages as applied to the whole body of employés. This means in itself not a little.

The intelligent encouragement of industry comes through such statistics. If the growth is reasonable, prosperity is shown, the finances of the country sustained, the credit of the nation increased, and the whole economic work, as exhibited by our industries, fostered. The nature of our industries, and their distribution over the country are, of course, clearly exhibited by such facts.

In agriculture, the reasons for statistical information are still more vital; whether the farms are being consolidated, or whether they are increasing in number by subdivision, or what is their relative production per acre. The schedules should show the distribution of crops, as to locality, climate, and other conditions, whether the aggregate of this or that crop has increased or decreased, and whether the yield per acre increases or decreases. All these facts regarding agriculture every publicist and legislator should know in order to qualify himself to speak intelligently of the fundamental source of our prosperity.

The statistics of valuation, taxation, and public indebtedness, while not absolutely within the census enumeration, can only be secured by a very wide and complete collection of statistics. No volume of the Tenth Census has received so much attention, or been so thoroughly used in every discussion, of whatever nature, having an economic character, as the volume on these subjects.

To ascertain now, whether valuation increases or decreases relatively in proportion to the increase of population, whether taxation increases relatively to valuation, or decreases, and whether indebtedness is a growing feature of municipal and State administration, are questions of the most vital importance. Once in ten years is a sufficiently long interval for the collection of such facts. Perhaps it is the proper period. The chief information under this topic is derived from official sources and is largely a matter of correspondence; it adds but little to the actual cost of the census.

The prosperity of the people may be judged, perhaps, as much by the degree of indebtedness, if one only knows for what the indebtedness was contracted, as by any one item of economic statistics.

The increase of manufactures, mining, and agriculture shows the normal prosperity, or lack of prosperity of a people; but what is done with the created wealth is certainly of inestimable importance. There is no means of knowing through regular official publications the total valuation of the whole country, its taxation in all forms, and its indebtedness and production, except through special provision of Congress.

In answer to any criticism in regard to the dilatoriness displayed in the Tenth Census, I remark that Belgium furnishes a good response, so far as industrial statistics are concerned. Belgium is the only European country that has attempted to collect through its censuses the statistics of industry. An attempt to do this was made by that Government in 1843, but the facts were considered very faulty indeed, although published. In 1866 Belgium again made the attempt, but failed; the results never being published. The Government again undertook the matter in connection with the census of 1880, and the volumes relating to the industrial statistics of Belgium have just appeared. The industrial statistics of the United States, as well as the statistics of population, were published in the Tenth Census very promptly indeed. The delay has been in publishing the volumes comprehending the results of special agents' work.

The House will observe that the publications on these various features which I have enumerated are the indispensable volumes which we have authorized under the provisions of this bill. There are other publications made in the Tenth Census which we propose to omit in the Eleventh. These can well be dispensed with, not only because it will save money, but because they are not required at the present time. The necessity for their publication is obviated in 1890 by reason of their publication in 1880. We do not, therefore, propose to give the same latitude for the publication of the census of 1890 as that given in 1880.

General Walker, in the publication from which I have quoted, gives many reasons why the publications of 1880 were delayed. He makes a very deserved compliment to Colonel Seaton, whose mind broke down in the service. He also refers with regret to the resignation of Mr. Clarence King as Director of the Geological Survey prior to the conclusion of his investigation into the mining industries as another cause of delay. And still, as another cause of delay, he refers to the death of Dr. George W. Hawes, who made an elaborate investigation into the building stones of our country, and which was not completed according to his plan. Still he advocates the utility of the census of 1880 in the extract which I herein present:

In its nature much of the work done from 1880 to 1883 is definitive, or else such as to require only slight additions or corrections from time to time. The magnificent report of Professor Charles S. Sargent on the forest trees and forest wealth of the United States—a work without a superior, if, indeed, it finds anywhere its peer, among the government publications of any country—is of the former character. The two volumes on water-power employed in manufactures and the two volumes on the cotton culture are of the latter character. Much of the work in them has been done once for all; while, though the industrial and economic statements will require to be changed from census to census, a suitable and ample background will have been furnished for them in the geographical and hydrographic studies of Professors Swain and Porter and their colleagues, or in the geographical, agronomic, and chemical investigations of Professor Eugene Hilgard and his corps of assistants, embracing the highest skilled and scientific talent of the Southern States.

In a greater or less degree the same is true of many others of these reports, notably those on tobacco culture, on the grazing interests of the frontier States, on building stones, on petroleum, and on the social statistics of cities, etc. The Tenth Census was more than an enumeration of population, wealth, and industry. It was a survey of the conditions of life, industry, and production, such as can not fail to be of great value to a rapidly growing nation, such as was peculiarly appropriate to the tenth decennial census under the Constitution—a survey which, though lacking something of completeness, by reason of insuperable obstacles in some cases, and by reason in other cases of the loss of some of its chief officers, is yet a work worthy of the nation and of the age.

The well-known names of the hundreds of men of science, economists, and statisticians who contributed to the giant undertaking afford a sufficient guaranty of the thoroughness, the conscientiousness, and the ample scientific knowledge with which their several tasks were performed, while a wealth of graphic illustration brings the results within the comprehension of the least skilled and the least learned.

But while, for the reasons above stated, it is not to be expected that immediately succeeding censuses will be of such colossal magnitude, it is yet, in the judgment of the present writer, not desirable that the presentation of results should ever again revert to the traditional form of bare statistical tables, accompanied only by brief notes and explanatory remarks.

General Walker, in concluding this statement, estimates that eight or ten volumes are not too much to properly set forth the array of facts concerning a nation of sixty or eighty millions, of such vast and varied industry and social interests and concerns, which are published only once in ten years.

ONLY SEVEN PUBLICATIONS.

We propose in the present bill only seven publications. We omit those which related to transportation, forest trees, the production of petroleum, coke, etc., water-power of the United States, social statistics of cities, wages, prices of commodities, etc. All these had their value at the time, because no collection of facts on any general scale relating to them had as yet been made. They not only had a value at the time, but they have a fixed and permanent value. As, for instance,

the admirable report under the Tenth Census on forest trees of North America. It need not be repeated, for that report is and will be good for many years. It constituted one of the most attractive and valuable extra features of the Tenth Census.

So the report on the water-power of the United States need not be repeated, because the water-power of a country is a stationary condition, so far as increase or decrease is concerned, and as natural water-power is considered. Therefore the elaborote report, in two volumes, on the water-power of the United States must and should suffice for some, if not for all time.

If the question be asked whether we have not other bureaus which will discover and discuss problems as to water-power and its diminution by the destruction of forests, or as to the scientific modes (not the product) of our mining industries, it may be answered that the statisticians of the Agricultural and other Departments should show these features.

Two volumes of the Tenth Census were published on social statistics of cities. The original intention in regard to this work was to present the sociological features of cities in a statistical manner. All the conditions of the people, the changes in such conditions since the foundation of the cities up to the time (1880), so far as nationalities, health conditions, sanitary regulations, the introduction of water, of lighting and heating of cities by artificial means—all such matters were to be, and to a large extent were, incorporated in these volumes. But the gentleman in charge of this branch of the census work in 1880 extended the scope to historical features to a greater or less extent, thus bringing that branch of the census into greater elaboration than was originally intended.

These reports are exceedingly valuable, and having been made so recently, they need not be repeated, so far as the historical features are concerned. The schedules would furnish all that is requisite to show the changes in other matters in the population of the great cities of the country.

Other volumes were published, showing the mechanical powers in use—all very valuable material—and giving the statistics and technology of the precious metals, and the mining laws of the United States, and scientific features accompanying mining industries.

All these facts, valuable in themselves, are now subjects placed under the Direction of the Geological Survey and other bureaus, so that there is no necessity of bringing them again into the census work.

An exceedingly valuable volume was published relating to wages, trade societies, strikes, and lock-outs, but the pressure in census work—of securing immediate publication—renders investigation into these matters of less importance here now, when the same topics are investigated by a Department equipped especially for such work. There is no necessity in the coming census of including any statistics of this character, except, perhaps, of the wages, for the purpose already specified under remarks relating to manufactures.

A volume was also devoted in the Tenth Census to newspapers, Alaska, and ship-building. These topics, with the exception of Alaska, which was specially treated, belonged to the statistics of production. Newspapers and ship-building should in this view be classified and treated in the volume on production of manufactures.

THE MAIN OBJECT.

But at last we come back to the main object of the census, namely, the enumeration of the people, upon which I beg to remark with emphasis that the system of enumeration, through supervisors' districts, was an immense advance on all previous methods of enumeration in vogue in this country. General Garfield, I think, did the great work of his life in making that method very explicit in his bill. In this regard, our bill of 1879 followed him.

COMPENSATION.

One fault of the system of enumeration followed in the Tenth Census was that of the compensation of the supervisors. Each was paid a fixed sum, while the duties of one man might be tenfold those of another.

In one instance a supervisor spent seven months of hard work, giving almost his entire attention to the supervising of his district. For this labor his compensation was only the sum of $500. The supervisor of this district had over nine hundred enumeration districts, while another supervisor was paid the same amount for supervising only forty or fifty or it may be one hundred enumeration districts.

That fault has been remedied in this bill by allowing a small fixed sum and then making a compensation per capita. We tried in vain after the Tenth Census to make a supplementary bill about this subject, but there was no feasible way out of the trouble. The proposed compensation does not increase the aggregate sum paid to any great extent. It will not have an appreciable effect on the cost of the census, except that accruing from the increase of the population.

The compensation for enumerators has been adjusted in the light of the experience of the Tenth Census. While the provisions therefor in the Tenth Census were in the main exceedingly well adjusted, they worked unjustly in certain instances, and the superintendent could not avoid it.

Under this bill, this injustice need not occur; and the expense would be no greater, except in the matter of the enumeration of farms, manufactures, and products. The present bill gives a proper increase of pay for such enumeration, in order to secure more complete and perfect results. Under the old rates of compensation for enumeration of farms and manufacturing establishments, an enumerator could not earn enough money to support him for a day; and sometimes he therefore left his work incomplete and badly done, in order that he might take farms enough, or manufacturing establishments enough to secure a fair day's pay for his work.

SPECIAL OBJECTS.

In preparing a measure of this nature it is not possible to comprehend in its provisions all the various details that may be suggested by members who have special objects paramount in their minds.

A member from Texas or Alabama thinks of cotton; a man in Chicago thinks of houses; a man in New Jersey of horses; another of soldiers and pensions, and another of public and private indebtedness. A man of one peculiar bias or faculty will think of mortgages, and desires a return of them for political argument or social discussion. Another man will make insurance prominent, another transportation, another manufactures of a peculiar kind. But it is impossible, in a law of this nature, to do all that is desired, or to do more than give general direction, and leave some accomplished administrator to go as far as he can in the collection of those resources which it is feasible and economical to obtain.

INDEBTEDNESS.

It will be observed by the House that the committee desires full information in reference to the indebtedness of the country; not merely the indebtedness of States and municipalities, but of the people. No more important result of a census, if we must go outside of the stated subjects, can be recommended than this; and we have endeavored to do it by the cheapest mode. It is indispensable for a correct understanding of the condition of the people, as well as for the prosperity of business.

It may be said that the States, through their statistical bureaus, may obtain this information. Many of the States have undertaken it in part. I notice this in the recent return of Mr. Heath, commissioner of labor for the State of Michigan. It is dated February, 1888. It is a lesson for us all. Michigan is a sample of what could be done in other States, and of what may be done by the Federal Government. Michigan is an agricultural State. As the prosperity of all other branches of industry depends upon the prosperity of the farmer, whatever tends to cripple him must react upon the business of the merchant, the manufacturer, and the laborer. When he is prosperous, all kinds of business are remunerative.

In Michigan only fifty-eight one-hundredths per cent. of all the farms were reported. Their valuation was nearly two hundred million. The mortgage indebtedness was about 20 per cent. of the total assessed valuation. The rate of interest was 7.2 per cent., which was $2,701,669 in interest annually. The commissioner estimates all the farms in the State, on the basis of the reports, at an assessed valuation of $335,000,000, and the mortgage indebtedness of $64,000,000, with an annual interest of nearly $5,000,000 on farms alone!

This is a startling exhibit. Nearly one-half of the farms of a great State—a Western State—burdened with mortgage! One can readily see from this where the large percentage of the surplus products of the farm is expended; and yet this does not represent the full indebtedness, for there are debts unsecured to double that amount, and this is but a counterpart of what exists in other States. It represents the changed condition of things. It puts the legislature upon its best caution. Unless crops and prices are better the farmer is destined to cruel disappointment.

Can there be any greater utility of legislation than that which would collect these data with a view to adjust more equitably the liabilities, duties, and rights of all classes in the matter of public burdens, individual indebtedness, and taxation? But, sir, the best to be done on this line will be inexact, uncertain, and expensive. It is difficult to arrange it.

Some States, New Hampshire, for example, have taken a census of the soldiers of the civil conflict, and we are petitioned to collect in a more general and comprehensive way a full return. This we attempt in the general schedule.

The danger-signal is always out when too tempestuous a storm of schedules falls upon the Census Bureau. What subjects to include is the main question. What not to include is a vast *terra incognita* which no census office can survey. Therefore, much must be left to the discretion of the Interior Department or the Superintendent of the Census.

In making his schedules the Superintendent will consult authorities all over the world. In some countries, as in England concerning deaths, there is more to be learned than in our own country, and so on as to other matters in other countries.

The ordinary man who takes up the Census Compendium or the larger census reports and runs over the perplexing tables in reference to manufacturing and agricultural industries, exclaims at the end of his research, "*Cui bono?*" But when he begins to debate questions, such as we have here in Congress, concerning finance, pensions, taxation, and tariff, he seeks with avidity those tables, and draws conclusions which concern the most vital interests and the advancement of our country.

LESSONS OF THE CENSUS.

I asked a distinguished statistician not long since to give me one practical illustration of a good lesson taught by the census. "What department of industry," I asked, "do you think will show the greatest de-

gree of increment during the past ten years?" He replied, "I think that the manufacturing industries have added a great deal to our population, especially in the South and Southwest."

I asked, "Do you think the manufacturing industries have been increased greater, relatively, than the agricultural?" He replied, "In those quarters." He thought that the relative increase between agriculture, mining, etc., was about in the same proportion as in previous decades; but the population engaged in manufacture had increased in some localities and in other localities was keeping up the aggregate.

The recent census of Massachusetts showed an increase from 1875 to 1885 of nearly two hundred millions of product in manufactures. It was an increase in value and quantity rather than in wealth.

Another lesson which he gave me had reference to the distribution of immigration. Upon that subject, this statistician said:

The distribution of immigration is one of the most interesting things to be drawn out of the census. Now, let me give you, personally, the result of a little study. I was asked a little while ago to prepare a little article on the influence of the foreign immigration on the electoral power of the country. It gave me some very curious results. Taking all the States, the popular idea is, you know, where the most foreign-born population is, there you get the greatest Democratic votes, and the reverse. So that out of the 38 States, taking all those above 10 per cent.—there are 20 of them having a foreign-born population of about 10 per cent.—all but 3 of those went solid Republican in the last Presidential election; while the 18 having less than 10 per cent.—pure American—went, with one exception, solid Democratic. And the Irish and the German votes have quite offset each other in the whole business. So that there is no practical influence, through immigration, on the electoral power.

If it be said that we should limit the Federal census to only a few inquiries, and leave the body of our statistics to other Federal bureaus, and to the States, I answer that these are but subsidiary to the Federal bureau. The other bureaus find much of their data in the Federal census. From those data they add to or subtract from, as they make their own auxiliary investigations.

STATE BUREAUS.

It is true that twenty-two States have statistical bureaus. They can not supply the census, but they can relieve. They can not offer any practical auxiliary to the census, but they can aid the census by making certain things unnecessary in a great enumeration.

The State bureaus occupy toward the census another important relation, and that is, they take out of the census returns specific things relating to their respective States in a detailed way. This was done in two cases in the Tenth Census—by Illinois and Massachusetts—the Superintendent of the Census affording the bureaus in those States, at the expense of those States, returns and details that could not properly enter into the Federal reports.

In this respect these bureaus have an important and valuable function as disseminators of information for the respective States. They send a clerical force here, and pay for having taken off the desired information. They lay the foundations for their own work. They get the results without the expense of enumeration; the only expense they have is that of compilation.

POPULAR DEMAND.

I have said, Mr. Speaker, that it was impossible, while properly regarding the question of economy, to have any very great reaction from the comprehensive step taken in the act of 1879. My reason for saying this is that there has been a great progress among all classes of our people, and especially among the laboring element, in the demand for statistics. They are not merely interested in the Federal enumeration because of its political relation, but they are interested in the statistical tables, which reveal our social and industrial conditions.

Compare the current newspaper reports and speeches, in and out of this House, with those before 1870. Read the magazines and books, or curriculums of our colleges to-day, and contrast them with the press and the debate and the studies of ten or twenty years ago. You will find that there is a hundred-fold more intelligent demand for statistical information to-day than there was then.*

WHAT NOT TO OMIT.

To omit from our schedules the statistics which show our social condition, our achievements in agriculture, commerce, manufactures, and national wealth of every form—is to obscure, if not blot out the United States from the map of the world in matters where we are an ensample and incentive and an attraction to immigration.

The census not only concerns our own progress, especially in the South and West during the past decade, but it concerns our prominence among the nations of the earth.

New homes, vast possibilities for labor, grand developments, marvelous changes, cities which spring up in a night, as if under the touch of some magic wand,—these are a part of that wonderful advancement which can only be properly illustrated by the authentic returns of our Federal census.

THE CENSUS A GRAPHIC PICTURE.

When these vast returns are laid before our bureaus at this Federal capital, then the work of analysis begins. And what a graphic picture comes from the pencil of the analyst! It is a picture of individual as well as of social life. On one side is dependent infancy, on the other helpless old age. In front, bearing his stalwart strength toward the setting sun, is the pioneer with his family, perhaps from the remotest nations of Europe or Asia. Each and every one forms a part of the grand total which makes up our composite commonwealths. Each and every one is counted in the grand aggregate, not only as instrumental in forming the element of civilization, but as a part of that unsceptered empire and uncrowned sovereignty which are the genii of our constitutional polity.

FOREIGN EULOGIES OF OUR CENSUS.

Mr. Speaker, I have heard in this House during this session the eulogies which Gladstone and others have pronounced upon our country. I am not altogether sure that we have perfect immunity from industrial dangers, but as long as our resources are what they are, and our advancement continues upon the march, there can not be to the imagination of the American orator or seer a horoscope of our nation which will equal its reality.

THE NATION'S HOROSCOPE.

Properly to draw our horoscope let me take a few salient features of what we now are, in order to determine what we may be.

I am sure that the House will excuse me for calling upon that distinguished statistician, Mr. Edward Atkinson, who has furnished me not only many statements of the elements of our progress in national wealth and welfare from 1865—the end of our civil war—to 1888, inclusive; but who has also presented these data in charts which illustrate these elements and changes which have made our country what it is.

These charts depict every form of our wealth, and every form of labor, and the amount of wages, traffic, and transportation of our various products. I append to my remarks, with the permission of the House, the letter and statements of Mr. Atkinson. They are worthy of the perusal of men who are studying our social science and political problems. The charts which he has prepared with so much science and skill, and for which the country owes him a debt of gratitude, make easy to the plainest mind a fair comprehension of the resources of our domain, the population and debt, the miles of railway, the corn crops, hay crops, cotton crops, pig-iron products, and other computations of wealth, such as are not easily accessible always in a census. They also show the relative gain in population, production, wealth, and savings from 1870 to 1885, and on some items to 1886. They show what Mr. Atkinson calls the "food providers," which constitute one of the elements of our remarkable prosperity.

They also show samples of reduction in price and cost of labor, the rise and rate of wages, and the increase in the purchasing power of wages. They inform us as to skilled men, average mechanics, and all the operatives inside and outside of certain establishments. They conclude with a table of the price of quantities of the same kinds of food, fuel, and materials for clothing, and the average consumption of products by a good mechanic in the Eastern and Middle States. Whatever may be thought by gentlemen who study these tables and their deductions, they will certainly provoke interesting and studious inquiry; and, coming from Mr. Atkinson, they inspire the highest respect.

I therefore ask that they may be printed in the RECORD for our thought, reflection, and instruction.

REMARKABLE STATISTICS.

From these and other data we gather, among others, the following remarkable comparative facts:

The largest of our States (Texas) in area is greater by nearly 23,000 miles than the Austrian Empire, greater by fifty than the German Empire, and twice as great as Great Britain and Ireland. Russia leads, it is true, in population, having 87,472,900. On the 4th of July, 1887, we had at least 60,000,000 people—nearly 15,000,000 more than the German Empire, nearly twice the population of France or of Great Britain and Ireland, and almost quadruple that of Spain.

The relative population of countries at the dates of the last census taken in Europe and of the United States, June 1, 1886, is shown in the diagram, which I ask leave to publish along with that of the area of our States in comparison with other countries.

THE VISION OF THE FUTURE.

But what a vision there is in the possibilities of our future when we come to consider the product of the United States.

The land in actual use at this time for growing maize, wheat, hay, oats, and cotton embraces 272,500 square miles. It is but a little more than the area of the imperial State of Texas. Texas alone could raise more wheat than the best quality of all the land in the present area of the German Empire.

The cotton factories of the world require 12,000,000 bales of cotton of American weight. Given 1 bale to the acre, the world's supply of cotton could be grown on less than 19,000 square miles, or 7 per cent. of the area of Texas!

Another table displays the arable and pasture land of the United States in actual use for corn and pork, wheat, hay, and oats, cotton

* Statistical science, methods and results: This course is intended to furnish a basis for a social science by supplementing the historical, legal, and economic knowledge already gained, by such a knowledge of social phenomena as can be gained only by statistical observation. Under the head of statistics of population are considered: race and ethnological distinctions, nationality, density, city and country, sex, age, occupation, religion, education, births, deaths, marriages, mortality tables, emigration, etc. Under economic statistics: land, production of food, raw material, labor, wages, capital, means of transportation, shipping, prices, etc. Under the head of moral statistics are considered: statistics of suicide, vice, crime of all kinds, causes of crime, condition of criminals, repression of crime, penalties and effect of penalties, etc. Finally is considered the method of statistical observations, the value of the results obtained, the doctrine of free will, and the possibility of discovering social laws.—From circular as to the study of statistics in Columbia College, New York.

and other fibers. But it gives no idea of the immense domain of mountain and timber land, which is one-fourth perhaps of our whole area.

GROWTH OF POPULATION.

Since 1860 there has been a great increase of our population. We leaped from thirty-one and a half millions in 1860 to 50,155,783 in 1880. The computation of the current decade, running up to 1890 in the future, as the table illustrates it, will probably show sixty-four millions, as I had estimated it, or 64,476,000, as Mr. Atkinson's table estimates it.

NATIONAL DEBT AND DEVELOPMENTS.

After the war ended our debt on the last day in August, 1865, amounted to the enormous sum of little less than three billions, or $84 per capita. Gradually since that time, out of the resources of the people, it has been reduced until, on the 1st day of October, 1886, by the old form of computation, our debt was only $1,274,728,153.

Since the war ended in 1865 our miles of railway have leaped up from 33,908 to 128,967 in 1886. A million of men are occupied to-day in the construction and operation of these railways. The past two years show that the increase of our railways continues.

The grain crops of the United States during nearly the same period, from 1865 to 1885, have nearly trebled. They have kept pace with the increase of transportation, and have given increased product to the Western farmer, and a superabundant supply of food not only to ourselves but to the commercial world. The increase of this product of grain per capita between the same periods has been from 32½ bushels to 52½.

These facts show an enormous, complex, and absolute increase in all the elements that make up the welfare of the people; and though a less proportion of the people may be occupied in agriculture now than in 1865, still, by the invention of agricultural implements, the toil has been relieved and the harvest made more abundant and certain.

The increase of the hay crop has been still proportionably greater.

IRON AND CIVILIZATION.

It is said that the employment of iron is a good test of the civilization from the earliest days to the present. For reasons, not necessary to discuss, the product of pig-iron in the United States has leaped up from 931,582 tons in 1865 to over 6,000,000 in 1887. The consumption of iron is greater in the United States than in any other country. It indicates the many-handed forces which contribute to our comfort and wealth.

FIFTEEN YEARS' PROGRESS.

Glance at one of these remarkable tables and you will observe the relative gain from 1870 to 1885 in population, production, wealth, and savings.

In fifteen years our population has increased 48 per cent.; the production of grain, 85 per cent.; consumption of cotton, 86 per cent.; consumption of wool, 88 per cent.; production of hay, 100 per cent.; production of cotton, 108 per cent.; production of iron, 143 per cent.; and miles of railroad, 168 per cent.

TERRITORIAL GROWTH.

To go back further, commencing with our small area in 1783, when the world acknowledged our independence, with 819,815 square miles, we have since then added the vast Louisiana country, amounting to 877,268 square miles, in 1803; in 1805, Oregon, with 225,948 square miles; in 1812, West Florida and East Florida, 64,030 miles; and in 1819, Texas, 262,290; additional in Oregon in 1846, by treaty, 58,880, and New Mexico and California, 614,439, in 1848; to which add the Gadsden purchase of 1853 and the Alaska treaty of 1867, amounting to 578,739 square miles. Thus we have thus extended our present area to 3,501,409 square miles.

We are in the habit of pointing to the civilization of ancient Rome under the Cæsars as an example for all time of an empire which taught mankind patriotic devotion to law. The Roman code still remains unparalleled for its lessons in equity. But Rome, under the Cæsars, in spite of all its virtues, was but laggard rottenness within, growing more and more corrupt as personal liberty decayed.

OUR STABILITY.

Another and more permanent civilization sprang up in our new hemisphere. Here the people, through their decennial enumeration, become the Cæsar, adding to new principles of government the refinements of jurisprudence and the administration of justice. We have deduced order and prosperity out of the wilderness.

Although during the rule of imperial Rome the nations of the elder world were closely allied, how insignificant such an alliance appears in the present century, and especially since the celebration of our Constitution. Travel has become so easy and so frequent, the means to procure the necessaries and luxuries of life so abundant, and, above all, the checks upon bad administration and legislation so full of journalistic criticism, methodical information, and patriotic meaning, that no one who looks honestly to the future of our country can become a pessimist like Tacitus or a scandal-monger like Suetonius. The seeds of death are not yet sown in our body-politic, and so long as our resources are intelligently used for the regulation of the state there is little danger of our becoming corrupt unto a premature decline and fall.

OUR CIVILIZATION; WHAT MATTHEW ARNOLD THINKS ABOUT IT.

Matthew Arnold published many harsh criticisms upon our country and its institutions. But in all the fault-finding which he indulged, he was compelled to pay a proper respect to our polity.

He sums up our success in solving the political and social problem by the remark that the United States had constituted themselves in a modern age, and that their institutions complied well with the form and pressure of those circumstances and conditions which a modern age presents. Aside from the question of how much merit for this may be due to the wisdom and virtue of the American people and how much to their good fortune, he acknowledges that our institutions do their work well and happily. He uses a homely though apt figure to illustrate the play of our institutions. They suggest the image of a man in a suit of clothes which fits him to perfection, leaving all his movements unimpeded and easy; a suit of clothes loose where it ought to be loose and fitting close where its fitting close is an advantage; a suit of clothes able, moreover, to adapt itself naturally to the wearer's growth and to admit of all enlargements as they successively arise.

So much as to our polity from this distinguished critic, who has just passed away from the stage.

The social problem does not escape his observation. He emphasizes our freedom from the distinction of classes and our singular homogeneity. No division of rich and poor here accentuates the division between man and man. He confesses that our communities use their understanding with the soundness of health, and that they see their way clear and straight in social and political concerns.

Under such favoring conditions, the star of empire still moves on, shining down upon valley, hill, and mountain, under which lie our precious metals, our salt, our coal, and our natural gas, and on rivers which flow amid woodlands and prairies and plateaus and basins of incalculable fertility and richness, until, like another star which led the "wise men of the East," it shall be fixed as the star of our destiny, for the guidance of our "ship of state" amidst all the bewildering currents which our American human nature must master in order to hold the van in the race of progress.

How do we ascertain the position of this "star of empire?" Simply thus: Taking the map of the United States as it were a plane, with dots of equal weight upon it, one for each inhabitant, at what point would such a plane balance? That point has varied with the lapse of time. In 1790 it was on the Chesapeake, south of Baltimore; in 1880, on the Ohio, near Cincinnati. Every decade it moved 50 miles westward, but always on the same (thirty-ninth) parallel. It varied a little to the north in 1870. It returned in 1880. The steadiness of this westward movement is only equaled by the marvelous flood of immigration, with the army of native-born citizens, which, following it, have sought new homes in the West.

In 1880 nearly seven millions of our population were foreign-born, 45 per cent. being Irish, settled mostly in the large cities, and about the same number of Germans and Scandinavians, mostly upon the farm lands.

The movement of these masses of people has had wonderful uniformity, and this movement has been a safety-valve, not only giving comfort and content to those who are left behind in the race of immigration, but adding to the interests imbound indissolubly with millions of lives.

CONCLUSION.

In conclusion, Mr. Speaker, it will no doubt occur to gentlemen that the first census of our country was taken nearly one hundred years ago. We are therefore approaching the centenary census. It will mark most conspicuously the end of a grand epoch in our experience and history,—a cycle whose splendor is unparalleled in the career of nations. Such a cycle of patriotic felicity is fruitful of suggestions as to the value of our public institutions and their effect on our social conduct. Shall not the grand results of this shining cycle inspire us with the hope of a still grander future?

One hundred years ago the Philadelphia convention had already submitted and a sufficient number of the States had approved the fundamental form of our Government. The Articles of Confederation had dropped apart like ropes of sand, unable longer to bind the stalwart thews and sinews of sovereign States in any form of a federative body-politic.

What a contrast with the present is the picture of the political and other conditions of our American life in that initial year of our creation, when our vessel of state was launched. Bounding and rebounding upon an uncertain element, avoiding the Scylla of centralization, on the one hand, and the Charybdis of secession on the other, but always steering by the chart, we sailed securely if not serenely on a halcyon sea, with new horizons opening at every vista and decade.

Many amendments have been made to our organic law in these ten decades, but the fundamental idea, the genius of our liberties, that which concerns person, property, liberty, religion, and life, remains adamantine and permanent in our representative system of government.

The questions that now concern us are comparatively harmless in their issues. Whatever form of settlement they may have, they only touch policy; they do not threaten our polity.

While the nations of the Old World are in process of constant mutation, with one-tenth of their population non-producing soldiery, ready at the beck of autocracy to contend for boundaries and dynasties, and while the peoples of these nations are advancing under Divine Provi-

dence towards the establishment of a new and more liberal order and the enfranchisement of their millions, our Republic remains steadfast as a beacon to all, and as a sure warning and defense against internal turbulence and external attack.

No one element, Mr. Speaker, has contributed more to give us this conspicuous place among the nations of the earth than the system by which, decennially, we readjust upon foundations fixed in popular enumeration and intelligence our representative system. Thus, out of our own capabilities, we light the torch of liberty each decade and illume the stars which shine as States around our Federal orb to give their glory to the Republic without losing one gleam of their own radiance.

After four hours' debate and amendment the bill as amended was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time, and passed.

APPENDIX A.

PUBLICATIONS OF THE CENSUS OF 1880.

DEPARTMENT OF THE INTERIOR, BUREAU OF LABOR,
Washington, D. C., March 21, 1888.

DEAR Mr. COX: I have yours of the 19th, and have carefully considered the same.

I want to congratulate you on securing concurrent action relative to the printing of the Tenth Census. As you say, that closes the matter.

I have been in consultation this forenoon with Mr. Wardle regarding the possibility of ascertaining the expense of each of the volumes of the Tenth Census, but I find it is utterly impossible, from the manner in which accounts were kept for the Tenth Census, to secure any figure relative to the cost of each volume, except for the printing, and this is secured by getting the total cost of printing all the volumes and adjusting it over each volume according to the number of pages in each; but the clerical cost and other for each volume was so distributed over the whole census work that a statement as to each can not be made. The best available statement on the cost is inclosed herewith.

In regard to your other point relating to the merit of each volume—not merely as contemporaneous with the census of 1880, but as useful during the decade and for the future—I can give you a better reply by speaking specifically of the volumes that have been or will be published. There are twenty-two of these, the number and title of the volumes being as follows:

Vol. 1, Statistics of Population.
Vol. 2, Statistics of Manufactures.
Vol. 3, Statistics of Agriculture.
Vol. 4, Agencies of Transportation.
Vol. 5, Cotton Production in the United States, part 1.
Vol. 6, Cotton Production in the United States, part 2.
Vol. 7, Valuation, Taxation, and Public Indebtedness.
Vol. 8, Newspapers, Alaska, and Ship-building.
Vol. 9, Forest Trees of North America and portfolio of maps.
Vol. 10, Petroleum, Coke, and Building Stones.
Vol. 11, Mortality and Vital Statistics, part 1.
Vol. 12, Mortality and Vital Statistics, part 2 and portfolio.
Vol. 13, Statistics and Technology of the Precious Metals.
Vol. 14, Mining Laws of the United States.
Vol. 15, Mining Industries of the United States.
Vol. 16, Water-power of the United States, part 1.
Vol. 17, Water-power of the United States, part 2.
Vol. 18, Social Statistics of Cities, part 1.
Vol. 19, Social Statistics of Cities, part 2.
Vol. 20, Wages, Prices of the Necessaries of Life, Trades Societies, and Strikes and Lockouts.
Vol. 21, Deaf, Dumb, Blind, Insane, etc.
Vol. 22, Mechanical Reports.

Of the foregoing volumes 17, 19, 21, and 22 are not yet printed. Those which belong legitimately, in my opinion, to the normal census of the United States as it has existed for the past forty years are volumes 1, 2, 3, 7, 11, 12, and 21. These are of very great value, and the results shown in them are properly drawn from the actual enumeration on the three great schedules relating to population, manufactures, mining and other products, and agriculture, with the exception of volume 7, relating to valuation, taxation, and public indebtedness. The facts for this volume must be drawn from separate schedules. The volumes on morality and vital statistics are essential in a census of the United States, because so few of the States make returns of mortality. The census reports on this subject are not and for many decades can not be complete, but they are far better than the lack of statistics on the subject. All the other volumes in the list just given are exceedingly valuable in themselves, but there is no necessity whatever of connecting them with the census, either for the purpose of contemporaneous collection or for future value. Volumes 5 and 6, relating to cotton production in the United States—a very valuable compilation of facts—when they are needed again should be produced under the care of the Department of Agriculture. The same of volume 9. The facts brought out in volume 8 would, to great extent, be included in volume 2 under the production of manufactures. Volumes 10, 13, 14, and 15 take up subjects legitimately belonging to the geological survey. Volumes 16 and 17, relating to the water power of the United States, having treated of those topics, they need not be touched again for many years. Volumes 18 and 19—social statistics of cities—treated more fully of the historical growth of cities than otherwise. The purely social statistics of large cities are fully borne on the population schedules, and should be a part of the regular report on the census. Volume 20, relating to wages, cost of living, etc., deals with subjects which naturally belong to and will hereafter be dealt with by the Bureau of Labor, which was not in existence when the census of 1880 was taken. Volume 21 deals with facts which may be entirely drawn from population schedules, while volume 22 has no particular place in census work.

This disposes of the list, and I see no reason whatever for the eleventh census dealing with any volumes beyond those relating to population; products, both of manufacture and agriculture, as they should be given in volumes 1, 2, and 3, and the facts called for under volumes 7, 11, 12, and 21.

This statement I believe very fully answers your question. The removal, however, of the other volumes from the census would not make so very great a difference in the total expense. How much of a difference it is utterly impossible to say, because on many of the volumes large bodies of clerks were employed without any distinct classification as to the expense.

I am, very respectfully, yours,

CARROLL D. WRIGHT, *Commissioner.*

Hon. S. S. COX, M. C.,
House of Representatives.

COST OF PRINTING VOLUMES 1 TO 20, INCLUSIVE, OF THE UNITED STATES CENSUS OF 1880.

	Number of copies published.	Total cost.		Number of copies published.	Total cost.
Volume 1	32,000	$54,000	Volume 12	12,000	$20,400
Volume 2	22,000	37,400	Volume 13	12,000	20,400
Volume 3	32,000	54,000	Volume 14	12,000	20,400
Volume 4	12,000	20,400	Volume 15	12,000	20,400
Volume 5	12,000	20,400	Volume 16	12,000	20,400
Volume 6	12,000	20,400	Volume 17	12,000	
Volume 7	12,000	20,400	Volume 18	12,000	20,400
Volume 8	12,000	20,400	Volume 19	12,000	
Volume 9	12,000	20,400	Volume 20	12,000	20,400
Volume 10	12,000	20,400			
Volume 11	12,000	20,400	Total		446,600

The above statement is the average cost of the editions of each volume, and does not include the printing of the monographs or the compendium. The average is hardly a fair one, because some of the volumes are quite fully illustrated, while others are not; but the figures given above are the result of a distribution of the total cost of the volumes enumerated—that is, from 1 to 20 inclusive.

THE TOTAL DISBURSEMENTS FOR THE CENSUS OF 1880.

Enumerators	$2,095,563.32
Special agents	625,067.29
Printing reports	678,624.61
Superintendent's office, salaries, stationery, tabulation, clerks, etc.	2,385,999.50
Being a total of	5,785,254.72
To this should be added for printing the sum involved in the urgency deficiency bill	77,495.52
Making the aggregate	5,862,750.24

The total appropriations have been $5,871,466.49.

APPENDIX B.

LETTER OF EDWARD ATKINSON AS TO CHARTS, ETC.

BOSTON, *June 5, 1888.*

MY DEAR SIR: In accordance with your request, and by consent of the Photo-Gravure Company, with whom I had made an agreement for the publication of my charts under copyright arrangements, and reserving all rights, I send you charts Nos. 1 to 8, inclusive, in which I have given the elements of our progress in national wealth and welfare from 1865, the end of the civil war, to 1888, inclusive. In No. 9 I give you the relative elements of the changes which have occurred.

In numbers 10 and 11 I submit a recent study of progress in the railway service. The railways which are included in these tables did last year 35 per cent. of the railway service of this country. You will observe how the volume of traffic continues to increase in the face of falling prices, lesser rates of charge, and diminishing exports of farm products. These twenty-six lines of railway which center in Chicago from East and West, received in the last four years a little less than $340,000,000 for moving food, fuel, materials for shelter and clothing, and other necessaries of life, at the rate of eight hundred and fifty-four one-thousandths of a cent a ton a mile. The charge for the service of these same railways from 1865 to 1873 averaged 2.315 cents per ton per mile.

The reduction in the rate of the last four years has therefore been 1.461 of a cent a ton a mile as compared to the previous period. Had the traffic of these last four years been charged this difference, or in other words, had it been charged what was considered a reasonable rate from 1865 to 1873, the cost of the service in the last four years would have been $1,091,000,000 more than it actually was, or 35 per cent. of the whole traffic of the country.

The reduction in the charge on other lines has been as great or greater than on these great trunk lines, and as they do but 35 per cent. of the whole service we may estimate the saving in four years at $3,200,000,000, or $800,000,000 a year. Now, while this has been the source of some of the great fortunes of to-day, yet how do these fortunes differ in their quality! In some cases every dollar which has been gained by their owners is but a token of the true and honest service which they have returned to their fellow-men; in other cases it may be as truly said that every dollar of the gain of the owners of certain huge fortunes is but a token of theft, fraud, and corruption. Yet, good or bad as may have been the origin of these great fortunes, the railways themselves under the higher law which governs the exchanges of men with each other, and in spite of restrictive legislation, continue to do their work to the benefit of those who consume the products which are moved over them.

In Nos. 12, 13, and 14 I submit to you tables and text showing how all the benefits of science and invention gradually distribute themselves.

In No. 15 you will observe what vast changes in the relations of men to each other these inventions have all worked; the laborers making progress from poverty in the exact measure of their relative capacity, and securing to their own use and enjoyment a constantly increasing share of an increasing product. On the other hand, under the equally inexorable law of the tendency of profits to a minimum, the rate of interest has declined, and as capital has become more abundant and effective it has been able to secure to its use a lessening proportion of the increasing product.

Thus it is that both, through the abundance and increased effectiveness of capital, the workmen in whose service it is made use of, secure its service for a constantly lessening proportion of the joint product.

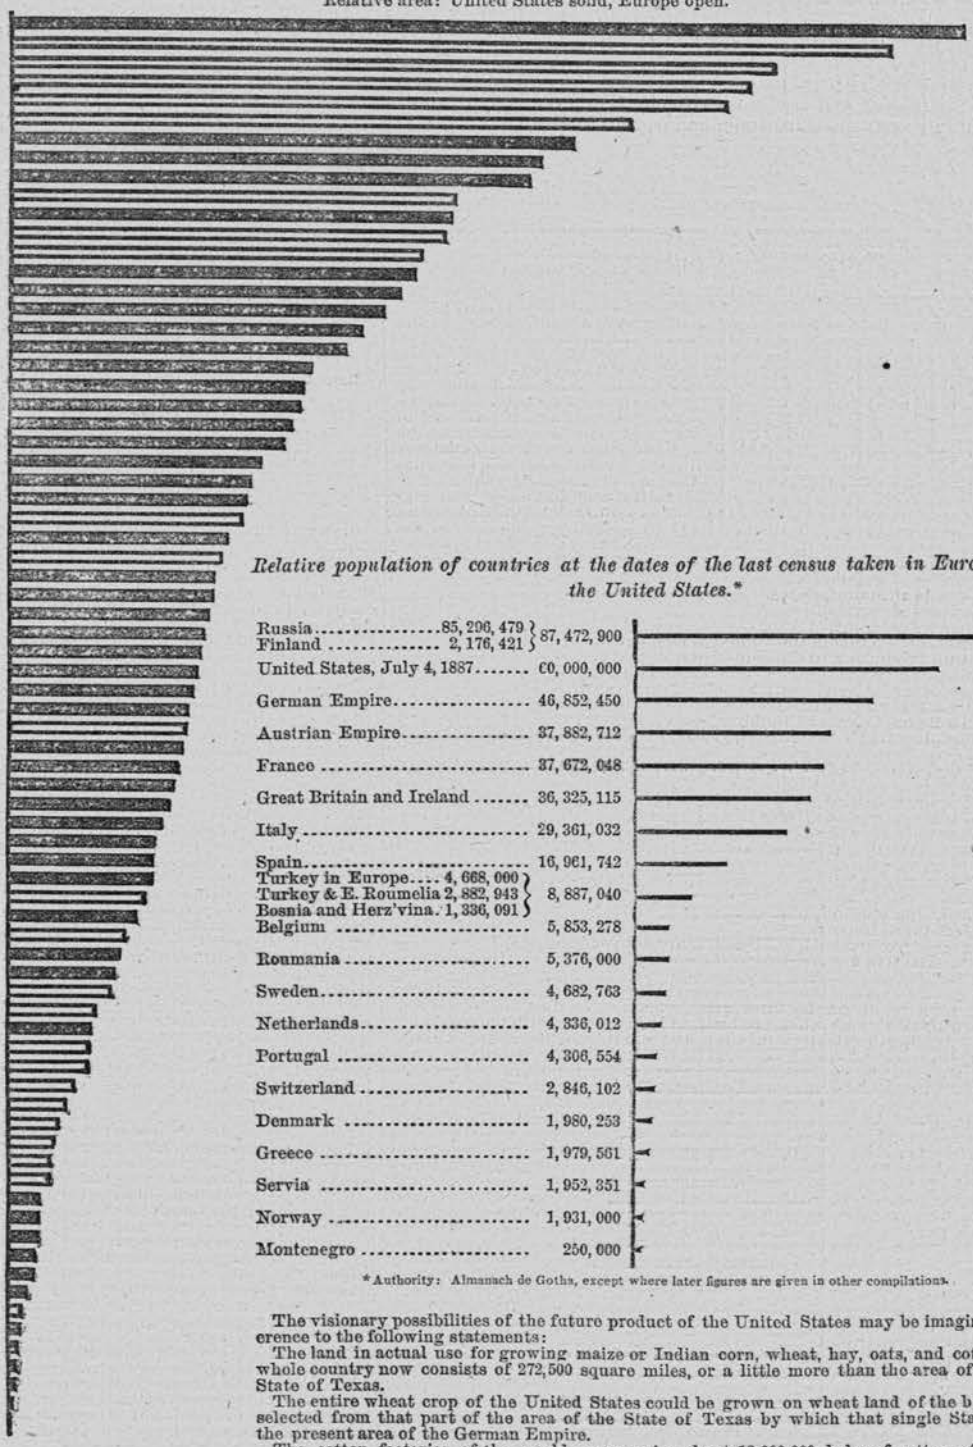
If you can make use of any or all of these tables in your speech upon the census, I am very glad to place them at your disposal.

In conclusion, permit me to repeat what I think I have written you before. I have come to view with increasing distrust the great average of the census data covering huge totals, and treating of arts which are conducted under different conditions all over this country.

I venture to suggest that a department of the census should be continued throughout each decade, either as a part of the Bureau of Labor Statistics, or as a specific department of the census itself, to the end that typical establishments may be treated year by year through a long period in which the progress of inventions and the effect of the application of science and invention can be more accurately measured than they can be by mere averages taken ten years apart. These data being gained and conclusively proved, may thereafter be used as a check upon the results of the census proper, since by analogy one may judge of the change in the rates of wages by the facts developed by a relatively small population occupied in branches of industry which are continuous.

Very truly, yours,

EDWARD ATKINSON.



Hon. S. S. COX,
Washington, D. C.

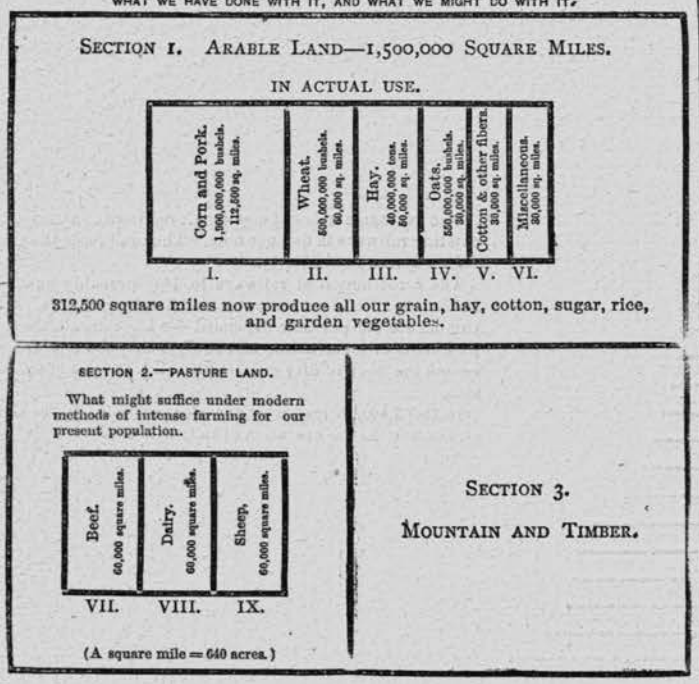
The visionary possibilities of the future product of the United States may be imagined by reference to the following statements:



The land in actual use for growing maize or Indian corn, wheat, hay, oats, and cotton in the whole country now consists of 272,500 square miles, or a little more than the area of the single State of Texas.

The entire wheat crop of the United States could be grown on wheat land of the best quality selected from that part of the area of the State of Texas by which that single State exceeds the present area of the German Empire.

The cotton factories of the world now require about 12,000,000 bales of cotton of American weight. Good land in Texas produces one bale to an acre. The world's supply of cotton could therefore be grown on less than 19,000 square miles, or upon an area equal to only 7 per cent. of the area of Texas.

OUR NATIONAL DOMAIN.

WHAT WE HAVE DONE WITH IT, AND WHAT WE MIGHT DO WITH IT.

[Compiled from the records of the Agricultural Department and other sources.]

The public debt of the United States.

The cost, measured in money, of removing the compromise with slavery from the Constitution of the United States, was as follows:

The national revenue collected from April 1, 1861, to June 30, 1868—four years of war and three of reconstruction under military rule—was:

From taxation and miscellaneous receipts	$2,213,349,486
From loans which had not been paid June 30, 1868	2,485,000,000
Total	4,698,349,486
The peace expenditure would not have been over	698,349,486
Cost of the war	4,000,000,000

To the computed cost of the war—$4,000,000,000—must be added by estimate the war expenditures of the Northern States, and the value of the time, materials, and destruction of property in the Southern States, together probably amounting to a sum equal to that spent by the National Government.

The price of liberty in money has therefore been $8,000,000,000.

This comes to $1,135,000,000 per year for a little over seven years. The productive capacity of an average man is now about $600 worth per year. If it was then $500 worth, this sum represents the work of 2,270,000 men for seven years; at $400 each, 2,837,500 men.

The average population during this period was 35,000,000. If we assume one in five an adult man capable of bearing arms, there were 7,000,000, of whom one-third paid the price of liberty in work for seven years, or in life.

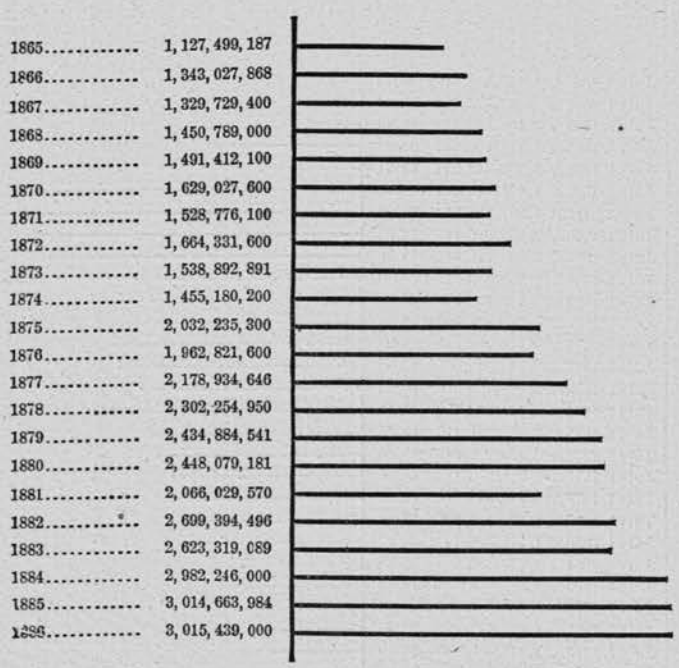
Reduction debt per capita.

* New form, less bonds advanced to Pacific Railroad Companies.
† Estimated.

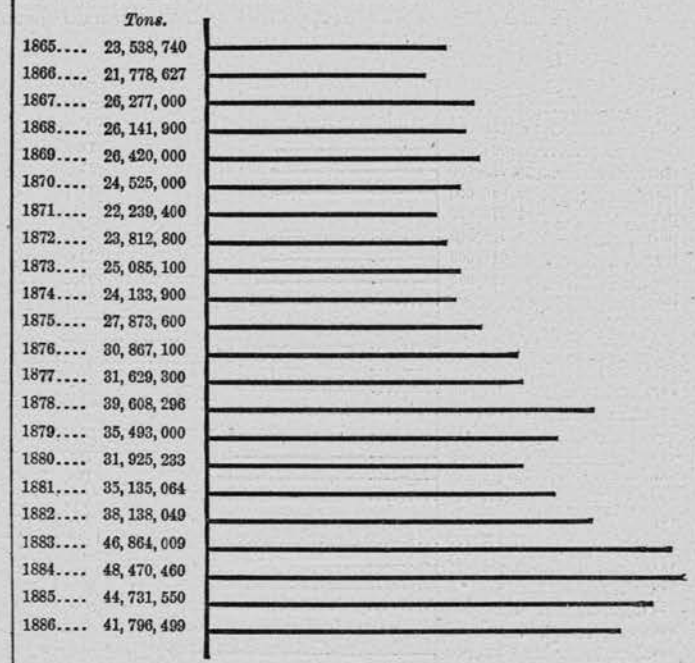
MILES OF RAILWAY IN OPERATION IN THE UNITED STATES.



The average number of men employed in the operation of existing railways is five per mile. The total force thus occupied is now about 750,000.

The construction of railways in 1887 probably equaled 13,000 miles, at an estimated cost of $25,000 per mile. Assuming $20,000 per mile expended for labor in all the departments of construction and equipment, each mile represented the work of fifty men, at $400 each; a total of 650,000 men.

In 1887 1,400,000 men were therefore occupied in the construction or in the operation of railways.



The railway mileage January 1, 1881, was 93,545. In a treatise upon what would be an adequate service, written in that year, the writer said that 117,500 miles should be added in the next fifteen years; but as we should have at least one commercial crisis and railway panic during that period, it might be safer to assign twenty years to the work. Since January 1, 1881, we have had both the crisis and the panic, but we have added 57,455 miles, leaving only 60,000 for the next five to seven years.

GRAIN CROPS OF THE UNITED STATES.

It may be held that by the construction of the railways in advance of the population a great rise in the value of fertile land in the East has been retarded, and the increased product of the Western farmer has been rendered possible; while, under the land-grant system, land which might otherwise have been sold in large parcels has been broken up into small farms by the reservation of alternate sections. Under this influence a superabundant supply of food has been produced by a less proportion of the population occupied in agriculture in 1885 than in 1865.

HAY CROP OF THE UNITED STATES.

The hay crop at the farm is worth much more than the cotton crop at the factory.

Food costs the average family three to four times as much as clothing. The combined value of the poultry and eggs only, which are annually consumed, is computed at $200,000,000. This is more than the value of the product of pig-iron, silver bullion, and the wool-clip combined.

COTTON CROPS OF THE UNITED STATES.

	Bales.
1865-'66	2,228,987
1866-'67	2,059,271
1867-'68	2,498,898
1868-'69	2,439,039
1869-'70	3,154,946
1870-'71	4,352,317
1871-'72	2,974,351
1872-'73	3,930,508
1873-'74	4,170,388
1874-'75	3,832,991
1875-'76	4,669,288
1876-'77	4,485,423
1877-'78	4,811,000
1878-'79	5,073,531

1883-'84	5,714,052
1884-'85	5,669,021
1885-'86	6,550,215
1886-'87	6,513,623
1888 (estimated) ...	6,700,000
	106,602,654 23 crops made by free labor.
1839-1861, inclusive.	61,833,294 23 crops made by slave labor.
	44,769,360 Excess by free labor.

The average weight, per bale, has also steadily increased. The value of 45,000,000 bales of cotton produced by free labor in excess of the product of slave labor can not have been less than $2,500,000,000, or more than the full valuation of all the slaves who were made free by the war. This gain is due not only to the freedom given to the blacks, but to the emancipation of the white men of the South from the indignity of enforced idleness.

PRODUCT OF PIG-IRON IN THE UNITED STATES.

1865	921,582
1866	1,350,343
1867	1,461,626
1868	1,603,000

1885	4,529,869
1886	6,417,148
1887	7,187,206

The production of pig-iron is an arduous and undesirable but necessary occupation, giving employment to about 150,000 men and boys. On the other hand, the conversion and use of iron is one of the surest signs of prosperity. In 1887 the per capita consumption of iron was substantially 300 pounds.

The total quantity of iron and steel consumed in that year, imported and domestic product combined, exceeded 9,000,000 tons.

PROGRESS IN WEALTH.

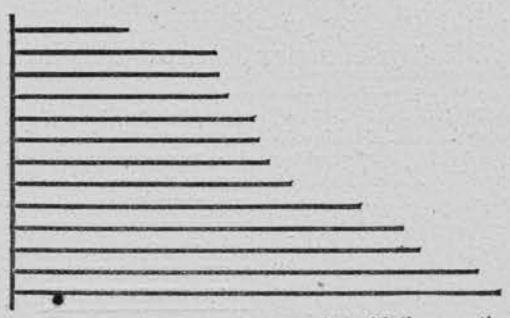
1886	11,349,685,459
1887	12,230,325,078



Computations of wealth, such as are given in the census are not of much value. Progress in wealth can, perhaps be measured as accurately by the amount of insurance against loss by fire as by any other standard.

The accompanying table, compiled by Mr. C. C. Hine editor of the Insurance Monitor, of New York, gives the amount of risks taken by all the fire insurance companies which are licensed to transact business in the State of New York.

In the judgment of Mr. Hine, 80 or 90 per cent. of all the insurance taken in the United States is covered by the companies which make an annual report of their whole business in the United States to the insurance commissioner of this State.

The effect of the war may be traced by the apparent reduction of risks during the period in which business intercourse with the Southern States was interrupted.

GAIN IN POPULATION, PRODUCTION, WEALTH, AND SAVINGS, 1870 TO 1885, AND ON SOME ITEMS TO 1886.

In considering these relative gains it will be observed that they represent a constant gain in the means of subsistence over population; that with the exception of the increase in personal wealth, which is indicated by the increase in the amount of property insured against loss by fire, they represent the progress of the million in the means of common welfare rather than of the millionaire in personal wealth, and that they give testimony to the beneficent law of progress *from* poverty.

1887	84,754,598	13,543,351,451	.718

The cost of the materials for food, of materials for clothing, boots and shoes, and of fuel probably represents about 70 per cent. of the cost of living on the part of well-to-do mechanics, railway employés, or of other persons in analogous occupations who may be considered in the average position of working people. All these elements of life have declined very greatly in their prices in the period under consideration. In some regions rents have declined, in others they have been stationary; in crowded cities they have either advanced in some small measure or else the apartments hired for a given sum of money have not been equal to those previously occupied. So far as I have been able to compare rents, however, either those paid to a landlord or the rental value of premises owned by the occupant, there has not been, on the average, much variation from the rule affecting commodities in the period under consideration.

The standard portions of food, cloth, boots and shoes, and fuel, which are made use of in the subsequent computation of the purchasing power of a day's or a year's wages, have been established in the following manner:

FOOD.

By comparing data gathered by myself with other data gathered by several State bureaus of the statistics of labor it has been fairly established that the average food supply of mechanics and adult factory operatives in the Eastern and Middle States cost in 1880, 1881, and 1882 substantially 25 cents per day, and consisted of very nearly the proportions of different kinds of food given in Table A.

The consumption of dairy products, sugar, tea, and coffee given is probably greater than in other parts of the country; but if a deduction of 2 cents per day be made for this, it then becomes necessary to add 3 cents per day (probably more) to account for the known average consumption of wine, beer, and spirits. (60,000,000 at 3 cents per day average comes to $657,000,000). Recent computations put the cost of liquor to consumers $700,000,000.

Although the actual consumption of food, cloth, and fuel may not in any single case have corresponded identically with these standards, yet it may be safely assumed that the proportions are correct, and that the variation in the prices of what has been actually consumed will have corresponded to the variation in the prices of these standard articles and quantities.

For convenience in computation the small quantities of the single ration of food have been extended so as to cover 400 portions, which may be taken as the consumption of one year by one adult, 35 rations being added for extras.

Table A.—Standard of a single day's ration, with its average cost in 1880, 1881, and 1882.

Table B.—Standard of 400 rations, or one year's supply for one adult, with 35 extra rations.

It is assumed that the prices of meat, fish, and poultry, fresh or salt, will have varied substantially with the variations in salt and smoked meats, and as the prices of the latter are more uniformly quoted, the prices used in making up the general standard are those given for salt and smoked meats. In the same way the price of potatoes has been taken as a standard for the variation in the price of all green vegetable food or roots.

A.—ONE RATION PER DAY.		B.—400 RATIONS.
	Cents.	
½ to 1 pound meat, poultry or fish, varying according to kind and quality, costing on average	10	200 pounds corned beef. 100 pounds salt pork. 100 pounds smoked ham.
½ to ¾ pints milk	5	100 quarts milk.
1 to 1½ ounce butter		30 pounds butter.
½ to ¾ ounce cheese		20 pounds cheese.
1 egg every other day	½	17 dozen eggs.
¾ to 1 pound bread	2½	1 barrel flour. ½ barrel corn-meal.
Vegetables and roots	2 to 2½	20 bushels potatoes.
Sugar and sirup	2	80 pounds sugar.
Tea and coffee	1	4 pounds tea. 8 pounds coffee.
Salt, spice, fruit, ice, and sundries	1½ to 2	$6 worth assumed at all dates.
	25	$100

Standard portion of cloth for one year: 10 yards medium brown cotton; 10 yards standard gingham; 10 yards 36-inch bleached shirting; 20 yards printed calico; 10 yards 4-ounce woolen flannel or worsted dress goods; 5 yards 16-ounce cassimere; 5 yards Kentucky jean-satinet, or light cassimere.

Standard of boots and shoes for one year: Two pairs men's heavy boots.

Standard of fuel for one year: 1½ tons anthracite coal, or its equivalent in bituminous coal or wood.

In establishing the average cost of a day's portion of the above, the prices given in volume 20 of the United States Census, in ten shops east and ten shops west of Buffalo, 1860–1880, have been averaged for each year designated. These prices have been verified from other sources of information. Prices of dry goods have been verified fully. Prices for 1885 and 1886 have been derived from typical establishments and from market reports. The average of 1885 and 1886 was probably less than the estimate used.

CLOTHING.

By a computation made by the undersigned when engaged in the compilation of the census of the cotton manufacture of the United States in 1880, it appeared that if all the fibers of cotton, wool, silk, and flax, imported or raised, were carried through the factories and then converted into clothing, carpets, and other forms for final use, with the imports of textile fabrics added, the average consumption of textile fabrics by the people of this country in that year was substantially $30 worth per head, of which about $25 worth was for clothing. It being impossible to set up a standard of the exact cost of clothing, certain quantities of cotton and woolen cloth have been taken which are a little above the average consumption of the whole country. In a final computation cloth is converted into clothing at the ratio of three parts materials and two parts for manufacturing and distributing.

In this computation I have made great use of the twentieth volume of the United States Census. It was prepared by Mr. Joseph D. Weeks, and is of the greatest value in statistical research.

The gain in the purchasing power of wages is measured by the number of portions of the materials for food, clothing, boots and shoes, and fuel, which one year's work would buy at different periods: three hundred working days to one year. Each portion consists of the same quantities and corresponds to the daily consumption of mechanics in New England and in the Middle States, as determined by close inquiry on the part of bureaus of labor statistics and of the undersigned.

CLASS I.—*Specially skilled men: Foremen, overseers, boss blacksmiths, carpenters, etc., customarily earning $3 to $5 per day at the present time.*

Year.	Average per day.	Average per year (300 days).	Cost of day's portion.	Purchasing power in number of portions.
			Cents.	
1860..	$2.45	$735.00	30.95	2,374

* Estimated, $1.40. † Estimated, 30 cents or less.

It may now be suitable to submit a very few examples proving how the rule of diminishing prices, decreasing profits, and diminishing cost of labor has been consistent with the general rise in the rates of wages and in their purchasing power. This principle would of necessity be deduced from all the tables which have already been submitted; but a few specific examples may be a matter of curious interest, and will fully sustain it.

Examples of reductions in price, reduction in cost of labor, rise in rate of wages, and increase in purchasing power of wages.

STANDARD COTTON SHEETING.

Year.	Price per yard.	Cost of labor per yard.	Earnings per year.	Purchasing power in food, cloth, and fuel.

1880	24.00	2.10	1.76	7.01

Compiled from Vol. XX, U. S. Census, by Joseph D. Weeks; computed by Edward Atkinson, and verified by comparison with other authorities.

Could space be spared me, examples of the same kind could be added from almost every industry to which modern machinery has been applied, but these must suffice.

The following table has been computed on the prices of equal quantities of the same kinds of food, fuel and materials for clothing at the different periods corresponding in kinds and quantities to the average consumption of a good mechanic in the Eastern or Middle States.

EDWARD ATKINSON.

Gain in the purchasing power of wages in food, fuel, and materials for clothing.

Class I. 1886 over 1860, 70 per cent.; over 1865, 108 per cent.

Class II. 1886 over 1860, 50 per cent.; over 1865, 90 per cent.

Class III. 1886 over 1860, 40 per cent.; over 1865, 78 per cent.

Class IV. 1886 over 1860, 43 per cent.; over 1865, 67 per cent.

Reduction in the average rate of interest 1860 to 1886 × 6 50 per cent.

Gain in the purchasing power of $100 1860 to 1885 × 6 $\frac{1}{10}$ of 1 per cent.

Gain in the purchasing power of $100 1865 to 1885 × 6 46 per cent.

Loss in the purchasing power of the income of $10,000 invested at interests in safe securities, 1860 to 1885 × 6 48 per cent.

American Zollverein or Customs Union of all the Nations in the Western Hemisphere.

This is the most transcendent and far-reaching question of the present age, which affects the peace, prosperity, and general welfare of the New World.

SPEECH

OF

HON. RICHARD W. TOWNSHEND,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 18, 1883.

Mr. TOWNSHEND said:

Mr. SPEAKER: This is the most transcendent and far-reaching question of the present age which affects the peace, prosperity, and general welfare of the new world. Without assumption of superior prevision, I have for years earnestly endeavored to direct attention to the advantages and importance of uniting all the independent and sovereign governments on the American continent in a commercial league or customs union.

My thoughts upon the subject were directed by studies of the diversity of the natural resources, climate, and production of the various countries on this continent. When these conditions were taken into consideration, in connection with their proximity to each other and their separation by wide oceans from all other continental countries, I became convinced that the basis for true reciprocity of trade existed, and that some such system as that of the German Zollverein or customs union, which had produced such marvelous beneficial results among the German nations, might be made applicable to the American nations and greatly promote their development, prosperity, and peace.

In order that a movement might be inaugurated for the accomplishment of this object I introduced a joint resolution in this House over four years ago for the establishment of an American zollverein or customs union. I am satisfied it is the first suggestion of such a scheme ever made. Whatever time I could spare from engrossing duties has since been given to the investigation of this subject and to engaging the public mind therewith.

On the 31st of the same month the New York Sun commended the proposition in a leading editorial, as follows:

Mr. TOWNSHEND, of Illinois, has introduced in the House of Representatives a joint resolution, which is inspired by a higher purpose and cut upon a larger pattern than most of the measures that are proposed in our legislative bodies.

"Joint resolution requesting the President to invite the co-operation of the Governments of American nations in securing the establishment of free commercial intercourse among those nations and an American customs union."

* * * * * * *

This proposition has an idea in it that is destined to live long. It would be a great thing if the nations of America could be united in one confederation after the manner proposed by Mr. TOWNSHEND.

The most important and influential journals in all the States soon after approved and strongly urged favorable action on this proposition.

I am now very much gratified at the report just made of the conference committee between the two Houses, which announces that the measure of which my original proposition is the basis has, with some elaboration and additions of other features of kindred nature, been unanimously adopted by both Houses of Congress.

Soon after the introduction of my proposition, January 7, 1884, I urged the adoption of the joint resolution, but Congress deemed it best to ascertain the sentiment of the southern countries upon such a scheme before taking such decided action, and for that purpose the appointment of a commission to visit those countries was authorized, and an appropriation was made in the following July to defray its expenses. That commission performed its duties, visited most of the countries south of us, found a cordial welcome and an earnest desire for the formation of such a union in all the countries except one, which is dominated by English influence.

The commission made an elaborate and able report, which was printed by order of Congress, and may be found in the document-room; extracts from which were published in my speech of June 30, 1886.

In the next Congress—the Forty-ninth—other members of the House and members of the Senate followed up my effort and emphasized their aproval of this idea by introduction of bills more or less elaborating and extending the scope of my original proposition, most of which I incorporated in my amended proposition introduced this session, among which was one introduced and passed in the Senate on the motion of Senator FRYE, which was substantially in the terms and shape of the present bill. The gentleman from Kentucky [Mr. MCCREARY] became deeply impressed with the importance of the idea and introduced and secured for my proposition a favorable report from the Committee on Foreign Affairs of a substitute which increased its effectiveness by providing an appropriation to defray the expenses of the continental congress suggested in my resolution, and further provided that it should be convened in this city. These efforts failed in that Congress because of the pressure of other business, but were renewed in the present Congress and have finally culminated in the present action, which includes Hayti and San Domingo in addition to the countries in my proposition.

Senator FRYE and the gentleman from Kentucky [Mr. MCCREARY] are entitled to much credit for the energy and ability with which they have promoted the adoption of this legislation. I have thus specifically stated the origin and purpose of this movement because an examination of the debate in this House which occurred on this bill last March, whilst I was temporarily absent from the city, discloses the fact that the gentleman from New Jersey [Mr. PHELPS] intimated that this "grand and far-reaching" scheme, as he was pleased to designate it, had originated in the fertile brain of the great leader of his party, Mr. J. G. Blaine. I do not believe that gentleman would intentionally claim a credit for Mr. Blaine not his due, and therefore have no doubt he has been misled by those who lack information on the subject. An examination of the whole record of Mr. Blaine, in and out of Congress, will prove that he never suggested such a scheme as embraced in my original resolution and embodied in this bill.

The gentleman from Kentucky [Mr. MCCREARY] was absolutely correct when he denied in that debate that Mr. Blaine had ever introduced such a proposition in Congress, and he might have truthfully added that Mr. Blaine had never suggested such a proposition anywhere; and had my friend from Kentucky been a member here as early as the Forty-eighth Congress he would have been able to remind the gentleman from New Jersey that the first proposition of that kind originated as I have mentioned.

When he was Secretary of State under Garfield, Mr. Blaine did announce himself in favor of a policy towards the southern countries which was then derisively styled by some as a "jingo policy," which was more political than otherwise. It contemplated political alliances and better commercial relations with those countries by reciprocity treaties. But he was not in fact the author of that policy, for just such a political policy had been agitated in this and the southern countries prior to the "Panama Continental Congress," which assembled in 1826.

Those countries did not favor such a policy then and were more offended than pleased with it when Mr. Blaine attempted to revive it under the Garfield administration. They admire our power and greatness and look up to us as an elder sister republic, but they mistrust us when we approach them with political designs and will repel any political schemes for union as dangerous to their political autonomy. They do, however, cordially welcome us when we approach them with the arts of peace, and stand ready to join in any commercial union founded upon a fair basis. They favor the most intimate and liberal trade relations, but will have no political alliances with us.

In truth, sir, the happiness, peace, and prosperity of neither the people of this or the southern countries can be promoted by entangling political alliances. I repeat what I said in my speech four years ago:

This proposition is not political in its character, but purely commercial. I do not believe it to be desirable or beneficial for us to make political conquest in any quarter. The welfare of these countries can be best promoted by the continuance of their separate and independent sovereignties. The territory subject to our political power is already large enough. I would rather see our flag supplant that of England over the commerce of the seas than behold it the symbol of political sovereignty over the whole American continent. We ought not to wish to govern the Spanish-Americans, but to trade with them. They will be unfriendly whenever we approach them with a menace against their independence, but will receive us with open arms when we come with the arts of peace to show them the way and to assist them in the development of their marvelous resources and the promotion of their prosperity.

The reciprocity treaties suggested in the policy of Mr. Blaine and attempted to be formed under the administration of Mr. Arthur would no doubt improve our commercial relations with those countries, but the zollverein or customs union contemplated in this legislation will far more effectually accomplish the object we have in view and give us the almost exclusive control of the foreign trade of those countries, where, if we only had reciprocity treaties with them under the "most favored nation" clauses of existing treaties between the southern and the European countries, the same advantages offered us by reciprocity treaties can be secured by our European rivals, thereby greatly lessening the value of any privileges obtained by treaties.

I confidently believe this action of Congress for the establishment of a customs union will meet with the acceptance of most if not all the nations in the western hemisphere, and that the time is not far distant when all customs-houses and barriers obstructing the freedom of trade among American nations will be entirely removed, and that such an era of peace, commercial prosperity, and internal development will dawn upon this continent as has never been seen on any other.

In my first speech on this subject I said:

This is intended to be an initial step for the formation of a commercial league or trades union of all the independent and sovereign governments of the American continent. It does not include any of the adjacent islands, nor does it embrace any of the provinces of European governments, because I think it best in this scheme to avoid any complications with European governments or interests, and confine it exclusively to American governments.

* * * * * * *

This proposition it will be seen has for its aim the establishment of free commerce among these countries with a common rate of customs duties against

the products of Europeans and others. It contemplates as a basis the same principles as that of the German Zollverein, and would result in bringing about the same freedom of trade on this continent as that which exists among the States constituting our nationality. It would open to our agricultural, manufacturing, and mineral products a free market in these countries, with protection against the competition of England, France, Germany, and the remainder of the world.

Since then a similar union of the Canadian Dominion with the United States has been agitated and favored by many in both countries. I have also received from those authorized by the Government of Dutch Guiana and the Government of the Republic of Independent Guiana to represent those countries urgent request that this bill be so amended as to embrace those countries in the zollverein. From these manifestations of the provinces in the Western Hemisphere I am now inclined to think it will eventually be practicable to include most if not all the provinces on and adjacent to this continent, without opposition or interference from the mother governments. It has, however, been deemed best by Congress at the begining to confine the scheme to the independent governments.

It may seem that my views on this subject have been sufficiently expressed in the speeches which I have heretofore delivered during the past four years, but as I was then in possession of only such statistics and official information as I was able to find in the few accessible official documents of the southern countries, and have lately obtained additional important information, official and unofficial, regarding these countries, I will ask the attention of the House to some further observations I desire to make in relation to the importance of this legislation.

If the statesmanship of Von Stein laid broad and deep the foundation of the Prussian Kingdom, the men who brought about the German Zollverein made possible German unity and the establishment of the German Empire. So long as each German state was hedged about with barriers to commercial intercourse political unity was well-nigh impossible. Moreover, the industrial expansion of the different states was thereby rendered impossible. That which juxtaposition and common aspirations favored, artificial regulations and ancient prejudices prevented. If the people of the thirteen States of our confederation had not wisely determined to have perfect freedom of interstate trade, the permanent Union of the United States would not have been possible. It will no doubt be generally admitted that the unexampled growth of our Republic and the wonderful prosperity of our people are more largely due to the establishment of absolutely free and unrestricted interstate commerce among them than to any other cause. The German Zollverein was nothing more nor less than an attempt to regulate upon the same principle commerce between the German states. Free interstate trade was not practicable, and hence the regulations were somewhat complex, as all artificial contrivances for regulating trade must be. The necessities of different governments, long established and having heavy burdens of indebtedness, had to be respected and provided for. Certain state monopolies had to be preserved, and the one to which the greatest advantage from commercial union would accrue had naturally to make the greatest sacrifices.

The establishment of an American continental zollverein is far more feasible. Its results will be far greater, not only in the benefits which the people of the different countries will derive therefrom, but in the advancement of the cause of peace and civilization. There are no political complications to be overcome; no rivalries of trade to be considered; natural obstacles are not interposed. Climatic differences, by reason of continental locations, conspire to forward this proposed commercial Union.

The present industrial condition of our country is not satisfactory. We have reached a point of development where the problem of the distribution of our surplus products seriously troubles us. This problem is complicated by the attempts of the governments of certain countries of continental Europe to arbitrarily, and upon false pretenses, shut out some of our food products. England is straining every nerve to develop the agricultural resources of her colonies and dependencies and become independent of the United States for her supply of breadstuff. France is encouraging wheat farming by imposing duties on our flour and wheat shipped to her ports. England, France, Germany, Italy, Austria, and Spain are making great efforts to extend their commerce in every direction. Holland and Belgium maintain their ancient activity in trade. Germany, France, and Italy are seeking to establish colonies, in imitation of England, and are bent upon having a fair share of whatever has thus far escaped the clutches of the British lion. Russia is concentrating her mighty energies on the development of her Asiatic possessions, and, while keeping her hand ready to grasp and control the Bosphorus, is preparing to seize whatever she can of China and of the British East Indian empire.

This is an era of wonderful, unexampled commercial enterprise. Ambitious sovereigns, restless European statesmen, with their dreams of territorial aggrandizement, their projects of revenge, their schemes for maintenance of established supremacy, are forced to exact yearly vast sums of money in taxes to keep up their military and naval armaments. They are compelled to stimulate the money-making energies of their people.

The inventive genius of mankind, concentrated upon two grand objects, subjecting natural forces to our behests and overcoming natural obstacles obstructing our progress, has worked marvels. The results of these inventions are most perceptible in increasing and cheapening production and in facilitating distribution. Coincident with these is the spread of general intelligence, the consequent longing of the masses of mankind to improve their physical and mental conditions. The States of our Union have, to a large extent, been benefited by the different causes which set the tide of emigration from Northern Europe to her shores. They have been benefited by the surplus capital of those countries that found opportunity for profitable investment in consequence of the remarkable development which our own energies, supplemented and quickened by new forces, have wrought. But we are now 60,000,000 of people, and so rapid has been our growth, and so wonderful the development of our resources, that we are beginning to experience some of the difficulties which have for ages beset European communities. We have no longer a vast domain of fertile and cheap public lands, a great undeveloped West, where homes can be had for the minimum of labor, whither turbulent spirits can be attracted, and the surplus population of other countries welcomed. The problem that stares us in the face is to provide for the expansion of the natural increase of 60,000,000 of people. Overcrowded cities, and all that is incident to an immense aggregation of bread-winners, compressed within limited areas, dependent on trade for their living, give us cause for serious reflection, and will soon give us something more than "food for thought."

The remedy for the evils which threaten us is to find markets for our surplus productions. But to do this we must compete with nearly the whole of continental Europe and Great Britain. How eager these old communities are to find or create new outlets for surplus productions is shown by the prosecution of discoveries in equatorial Africa, and by the race between Germany, France, and England to hoist their flags over even insignificant unappropriated islands in the Pacific Ocean. By our continental position we should control the commerce of the American continent, notwithstanding the competition of European countries. It is only the regions south of us that we can especially look for that market which we want and must have. Leaving out the islands southeast of our southern seaboard, the countries south of us have an area of 8,118,844 square miles, with a present population of 44,000,000. The aggregate trade of those countries with the rest of the world is $730,000,000 yearly. Our share of that trade in 1887 was only $145,971,709. And, beggarly as this total seems, an analysis of the commerce of the continental countries south of us gives a still worse showing. The imports to those countries was over $340,000,000, and of this the United States in 1887 only furnished $43,729,203, while of the $400,000,000 exported from the same countries we took $102,242,560.

The trade of the West Indies with the rest of the world in 1887 was about $250,000,000. Our share was $95,774,870, our purchases being $70,043,561, and our sales only $25,701,309.

The unsatisfactory condition of our commercial relations with the continental and insular countries south of us becomes apparent when the statistics are studied. During the fiscal year 1887 we imported from Mexico, the Central American States, British Honduras, from the West Indies, and from South America, products to the value of $172,468,526 and exported of our products to those countries to the value of $67,695,742. The balance of trade against us was $104,772,784. In other words we paid to our Southern neighbors, to balance accounts, $104,772,784 in gold.

These trade conditions become still more unsatisfactory as we compare the statistics of 1887 with those of 1868, a period of nineteen years. In 1868 we imported from the same countries their products to the value of $103,679,475, and we exported thereto our products to the value of $56,614,412. That year the balance of trade against us, in our dealings with our neighbors South of us was $47,065,063.

During nineteen years the total trade has increased from $160,293,887 to $240,164,268, and the balance against us from $47,065,063 to $104,772,784! The increase of trade was $79,870,381, and the increase of the balance against the United States was $57,707,721! In nineteen years we increased our sales $11,081,330 and our purchases $68,789,051. The growth of business was nearly $80,000,000, while the growth of the volume of our exports was measured by about $9,000,000—an increase per year of our purchases by $4,210,526, and an increase per year of our sales by $473,684!

Of the total trade of $240,164,268 between the United States and her neighbors to the south $233,119,264 were by the high seas; the balance, $5,002,721 of imports and $2,042,283 of exports, was in cars and other inland vehicles. The values carried by American bottoms were $115,999,776 and by foreign bottoms $117,119,488.

A more detailed examination of our trade statistics with the individual countries south of the United States will make still more apparent the necessity for the improvement of these commercial relations in order that the accounts may, if possible, be made to more nearly balance.

The following table shows the imports from the countries south of us in the years 1868 and 1887, and the exports from the United States to those countries during the same years:

Countries.	Exports.		Imports.		Total imports and exports.	
	1868.	1887.	1868.	1887.	1868.	1887.
Mexico	$6,441,339	$7,959,557	$1,590,667	$14,719,840	$8,632,006	$22,679,397

Grand total	56,614,412	67,695,742	103,679,475	172,468,526	160,293,887	240,164,268

Upon an analysis of the foregoing table it will be seen that the countries to which we sold more than we took in exchange in the years 1868 and 1877 were Hayti, French West Indies, Dutch West Indies, Danish West Indies, United States of Colombia, Dutch Guiana, and French Guiana.

The following table shows the state of trade with those countries at the respective periods of 1868 and 1887:

Countries.	Exports to.		Imports from.	
	1868.	1887.	1868.	1887.
Hayti	$3,247,536	$3,230,128	$755,866	$1,752,537
French West Indies	913,121	1,352,778	218,953	406,625
Dutch West Indies	507,832	539,805	289,573	256,695
Danish West Indies	1,170,996	613,626	573,004	500,675
United States of Colombia	3,711,796	6,114,941	2,538,297	3,950,953
French Guiana	36,986	142,712	15,477	1,448
Total	9,588,267	11,993,990	4,389,160	6,868,933

With four divisions of the West Indies and two southern continental countries the balance of trade in our favor in 1868 was $5,199,107. In 1887 the trade with the same countries was in our favor to the extent of $5,125,057, a loss of $74,050 in nineteen years.

The following table shows the insular divisions and southern continental countries with which our trade in 1868 gave a balance in our favor, but which was against us in 1887:

Countries.	Exports to.		Imports from.	
	1868.	1887.	1868.	1887.
Mexico	$6,441,339	$7,959,557	$1,590,667	$14,719,840
British West Indies	6,742,381	6,647,204	2,765,116	11,569,779
Chili	1,580,999	2,069,138	951,767	2,863,233
Dutch Guiana	465,523	239,634	422,581	482,424
Boliver, Honduras, Guatamala, Ecuador, Nicaragua	8,264	1,054,076	2,366	1,131,169
Total	15,236,506	17,969,609	5,732,497	30,766,445

In 1868 a total trade with one island division and several southern continental countries of $20,971,003 gave a balance in our favor of $9,506,009. In 1887 a total trade with the same countries of $48,736,054 gave a balance against us of $12,796,836. The increase of trade in nineteen years was $27,765,051, and the charge against us was $22,302,845.

The following table shows the countries with which the balance of trade against us has been steadily growing:

Countries.	Exports to.		Imports from.	
	1868.	1887.	1868.	1887.
Central American States and British Honduras	$647,347	$3,290,379	$1,271,351	$7,940,934
Cuba	14,675,697	10,546,411	49,774,704	49,515,434
Porto Rico	2,547,536	1,738,492	6,345,639	4,661,690
San Domingo	66,201	1,032,865	83,363	1,380,126
Brazil	5,695,404	8,127,883	23,595,740	52,953,176
Venezuela	961,262	2,871,719	8,261,236	8,261,236
Uruguay	821,006	1,567,981	1,177,520	2,818,761
Total	25,413,453	29,144,730	84,618,634	127,581,357

With the above seven countries we did a business, in 1868, of $110,032,087, the balance against us being $59,205,181. In 1887 we did a business of $156,676,087, the balance against us being $98,386,627, an increase in nineteen years of $39,181,446. The increase of our imports was $42,912,723, and the increase of our exports $3,731,277.

The two countries which sold in 1868 to the United States more than they bought, and bought more of us in 1887 than they sold to us, are Peru and the Argentine Republic.

In 1868 we sold Peru $1,666,355, and bought of her $1,765,397—making a total business of $3,431,752, the balance against us being $99,042. In 1887 we sold Peru $722,829 and bought of her $461,726, a total trade of $1,184,555, and leaving a balance in our favor of $261,103. But the falling of in the volume of trade was $2,247,197. This does not show healthy conditions. It is accounted for by the fact of Peru's impoverishment—she having very little to sell, and still less to buy with.

In 1868 we sold to the Argentine Republic $2,732,600, and bought of her $4,806,299, making a total trade of $7,538,899, the balance against us being $2,173,699. In 1887 we sold her $6,364,545, and bought from her $4,100,192, the total trade being $10,464,737, and the balance in our favor $2,264,353. Our sales in this case increased $3,631,945 and our purchases fell off $706,107. The falling off in purchases is accounted for by the discrimination against Argentine wool. The interpretation of the tariff of 1883 is to the advantage of Australian wools which compete with those of the Argentine Republic. Here again is an unhealthy condition. It is greatly to the advantage of the United States to encourage trade with the Argentine Republic because it is a field which offers great opportunities to certain of our manufacturers, and under fair conditions the share of trade they have already obtained can be greatly enlarged.

The following table shows that of the products of the countries south of us which we imported during 1887, $94,003,487 worth came in free of duty, while we collected duty on $78,383,027 worth:

Table showing values of products of countries south of the United States imported into the United States during the year 1887, *giving those admitted free and those on which duty was collected.*

Countries.	Free.	Dutiable.
Mexico	$9,928,122	$4,791,718
Central American states	7,195,705	441,946
British Honduras	267,197	36,086
Cuba	2,033,205	47,482,229
British West Indies	2,776,573	8,793,206
Porto Rico	74,367	4,587,323
Hayti	1,740,106	12,431
San Domingo	189,100	1,191,026
French West Indies	24,741	381,884
Danish West Indies	33,058	467,617
Dutch West Indies	226,939	29,756
Brazil	47,076,473	5,876,703
Venezuela	8,248,450	12,786
United States of Colombia	3,934,359	16,954
Argentine Republic	3,347,936	752,256
Chili	2,634,336	228,897
Uruguay	2,381,111	437,650
British Guiana	15,212	2,724,661
Ecuador	1,130,934	225
Peru	450,147	11,579
Dutch Guiana	394,995	87,429
French Guiana	433	1,015
	94,003,489	78,381,027

It is worth while to observe that of this $78,383,027 worth on which we collected duty, $63,587,419 worth came from Cuba, the British West Indies, Porto Rico, and British Guiana; and that the French West Indies, Danish West Indies, Dutch West Indies, Dutch and French Guiana, furnished as of dutiable products $967,701 worth. Of the total $78,383,027 worth of dutiable products of the countries south of us which we imported in 1887, $64,555,120 worth came from the possessions of Spain, Great Britain, France, Holland, and Denmark, with which we do not propose commercial union.

The following tables show the countries of South America and the islands of the West Indies with whom our aggregate trade during 1887 was $145,971,709; of which amount we bought $102,242,506 worth, and sold $43,971,203 worth. And of the $102,242,506 worth which we bought $88,262,839 came in free of duty, and on $13,773,839 we colected duty.

Table showing trade of United States with the countries south of us in 1868 *and* 1887, *with whom commercial union is proposed.*

Countries.	Exports.		Imports.	
	1868.	1887.	1868.	1887.
Mexico	$6,441,339	$7,959,557	$1,590,667	$14,719,840

Peru	1,666,355	722,829	1,765,397	461,726
All other South American states	8,264	1,054,076	2,366	1,131,169
Total	27,664,440	43,729,203	40,081,388	102,242,506

Table showing values of products of countries proposed to be embraced in commercial union imported into the United States during the year 1887, *giving those admitted free and those dutiable.*

Countries.	Value of products free.	Value of products dutiable.
Mexico	$9,928,122	$4,791,718
Central American States	7,195,765	441,946
Hayti	1,740,106	12,431
San Domingo	189,100	1,191,026
Brazil	47,076,473	5,876,703
Venezuela	8,248,450	12,786
United States of Colombia	3,934,359	16,594
Argentine Republic	3,347,936	752,256
Chili	2,634,336	228,897
Uruguay	2,381,111	437,650
Ecuador	1,138,934	235
Peru	450,147	11,597
Total	88,262,839	13,773,839

As will be seen by the table showing our trade relations in 1868 and in 1887 with the countries with whom we propose commercial union, the general course has been unfavorable to us during nineteen years. In 1868 we bought $40,081,388 worth and sold $27,664,440 worth. The balance of trade against us was then $13,416,948. In 1887 we bought $102,242,506 worth and sold $43,729,203. The balance of trade against us was $58,513,303.

With two of these South American countries, the Argentine Republic and Chili, we can with advantage to ourselves and without injury to a single interest largely increase our trade relations. Both countries are large producers of coarse carpet wools, which our manufacturers require and which are not produced in the United States in sufficient quantity to fill the demand. At present, by some discrimination which I do not understand, Australian wools of the same grade can be sold cheaper in our markets than those of the Argentine Republic and Chili. Both countries are anxious to secure advantages which will enable them to supply the demand here for coarse carpet wools. We already have in both these countries a market for agricultural implements and machinery, for builder's hardware, mechanical tools. There is a growing demand for sugar machinery in the Argentine Republic and for steam-engines in that country and in Chili. We already supply large quantities of railway supplies, and the increase of traffic by affording business for competing lines of steamers will reduce freight charges.

Our trade relations with Brazil are by no means satisfactory. We take more coffee from Brazil than from all the rest of the world; we admit it free, while Brazil imposes an export duty on it, thus increasing the cost to our consumers. Everything we sell to Brazil is subject to heavy duties. There should be some reciprocity. During 1887 we bought of Brazil $36,401,864 worth of coffee. We are not altogether dependent on Brazil for our coffee. Mexico is already a large producer of coffee, and so are Venezuela, the Central American States, and the United States of Colombia. These countries can produce all the coffee we require, and it is in our power to increase their production by favoring trade relations with them. I do not advocate any retaliatory measures, but I do favor reciprocity for favors received. The Empire of Brazil is destined to be of vast commercial importance to us, and it behooves us to have and maintain the friendliest and most favorable trade relations with that country. The disposition on the part of Brazil is to cultivate and encourage commercial intercourse with the United States. It is to her interest to do so. It is equally to our advantage to do the same. Brazil has done, is doing, more to maintain a market here for her products than we are to find and to secure one for our products in Brazil. There can be mutual concessions on both sides, and I am confident that we will find Brazil ready to do her part.

We can not dispense with any of the products of our southern neighbors which we import. They are either necessaries of life or essentials in the way of raw materials to be turned into goods by our manufactures, which we must have. In a very large degree we are so situated by reason of continental position and climate that we ought to be able to supply in turn the things which our neighbors require and do not produce themselves. Moreover, there ought to be other than mere traffic reasons for a continental commercial intercourse, and the United States should lead in a policy which will bring all the countries of the continent into relations which have a fraternal, a sentimental, if you please, as well as business basis. It is said that business is without sentiment, but this familiar saying like many others, is not altogether true. Sentiment is not infrequently more potent than mere mercenary considerations. Some of the grandest movements of the human race sprang from a mere sentiment. The greatest commercial movement of modern times is bottomed in no inconsiderable degree upon sentiment. I refer to the attempt which rejuvenated old Spain is making to reunite to her incommercial bonds Spanish America. There is no continental power exhibiting such marvelous industrial progress as Spain is, and has been doing for years past. Her resources are vast, her climate and soil varied, and her people have latent qualities which once had full scope and amazed mankind, and which, in a different field of enterprise, may again achieve great things.

An industrial revolution is taking place in Spain. The object of her statesmen is to develop the material resources of their country and extend her commerce. They seek to effect by an enlightened, energetic, and peaceable policy another world-wide conquest. Just now Spain is directing her attention specially to enlarging her trade with Spanish-speaking countries of the American continent, and one of her methods is at least novel. She has fitted up a fleet of floating exhibitions, the ships being converted into workshops, and this fleet is to make the voyage to all Spanish countries, as well as to Brazil, and give a free display in every port of the wares as well as of the handicraft of Spain and Spaniards. It is unquestionably a valuable auxiliary to the stationary world's exposition.

If there are no race affinities to be appealed to by us in seeking to bring about more intimate intercourse with the people south of us, there are at least no race prejudices to bar the way. Political interests are common, and the manifest business advantages can not fail to suggest themselves to the intelligent and broad minded, whether of the United States or of the West Indies, of Mexico and of Central and

South America. The United States are not aggressive. We do not dream of territorial aggrandizement. As the eldest sister Republic all our desires, as well as our interests, are centered in the advancement of the family of Republics. We have been the beacon light of liberty, the inspiration, as well as the model politically, and why should we not aspire to the strengthening of these political relationships, and at the same time enlarging and coalescing commercial relationships?

There are no commercial rivalries between our southern neighbors and ourselves. On the contrary, there are manifest reasons for commercial co-operation. It will be mutually advantageous. There is still another reason why the people of the United States should endeavor to cultivate this commercial co-operation. We are fast becoming rich and we will not always be able to find sure and profitable investments for our surplus capital in home enterprises. A nation of sixty millions of people, we will soon be a hundred million, and our rapidly accumulating excess of wealth must look outside our borders for employment. Central and South America offer the field for enterprise and investment. Look at the map of that half of the continent. See the vast area of territory and the little development yet made. A beginning has been made in Brazil—a country exceeding in territorial extent our own, with an inviting climate, agricultural, pastoral, and mineral resources rivaling those of the United States. Greater progress has been made in the Argentine Republic, and a continental railway is about to unite Buenos Ayres on the Atlantic to Valparaiso on the Pacific, but with 2,000,000 square miles of territory that Republic has less than 10,000 miles of railways. The west coast has here and there a short line of railroad, and Venezuela and Central America are practically virgin ground for the railway engineer and constructor.

The old Spanish and Portuguese miners by no means exhausted the precious metals of Central and South America, and countless wealth in the deposits of the baser metals remain to be exploited. It is true that nine-tenths of the southern half of the continent is unpeopled, but the filling of the uninhabited places is not to be postponed long. The generation which was taught in our schools that there was, just beyond the Missouri, a great American desert has not passed away. Forty-one years ago it was not believed that the vast region between the Rocky Mountains and the Sierra Nevadas would afford sustenance to other than scattered savage tribes of miserable Indians. And yet what a transformation has been wrought! The youngest man in business was taught by the text-books that the pampas of the Argentine Republic were fit only for vast pasture ranges, and Sarmiento, greatest of Argentines, was laughed at by his countrymen when, in 1858, he proposed to plant an agricultural colony at Chivilcoi—now almost a suburb of Buenos Ayres. The lands, the pampa herding grounds, which sold a few years since by the square league for a few dollars are now worth from fifty to a hundred dollars an acre.

The vast interior of Brazil, four-fifths of an area of territory 200,000 square miles greater than the United States, excluding Alaska, is an elevated table-land ranging from 2,000 to 3,500 feet above sea-level, with a delightful climate and an inexhaustible, rich soil, having greater and more varied mineral and other natural resources than any like extent of the earth's surface. The natural obstacles, the coast ranges of mountains, which barred access to this interior plateau, have been overcome. Railways have been built over them and are beginning to penetrate the eastern edge of the table-land. There are more than 5,000 miles of railways in operation in Brazil, and yet only two provinces, one diminutive, Rio de Janeiro, and the other San Paulo, of large extent, have made a fair beginning at railroad building.

Chili and Peru have great undeveloped resources, as well as fertile, uninhabited interiors, and all northeast South America practically awaits settlement and development.

That the commerce of the continental countries south of us will be doubled during the next quarter of a century is by no means improbable. That a mighty change is to be wrought there, no one informed as to what has taken place during the last decade, and as to the progress being made, can doubt. The tide of immigration has set in a great, steady stream to South America from the Mediterranean countries of Europe. Already nearly a half million of Italians, Spanish Basques, and Portuguese have found homes in the Argentine Republic and Brazil. Within three years nearly 300,000 Italians and Spanish Basques have migrated to the River Plate countries, and this year it is estimated that 130,000 immigrants will settle in the Argentine Republic. The certainty of the speedy extinction of slavery in Brazil caused an increase of immigration to that country from Italy and Portugal. Over 35,000 settled in the province of San Paulo alone. The arrivals this year are from seven to ten thousand a month.

The abolition of slavery removes the only impediment in the way of an enormous influx of immigrants to Brazil. The way has been made ready for the settlement of the vast interior of that country, and it is not unreasonable to suppose that during the next two decades a development will take place there to a considerable extent comparable to that which we have witnessed in our great West. The world does not afford a more inviting field for immigration. The Italians, Spanish Basques, and Portuguese are industrious, thrifty, orderly people, and make most excellent citizens. In Buenos Ayres the Italians monopolize the trades. They make good agriculturists. The Central Argentine Land Company, an English corporation, bought several years ago 900,000 acres of land in the provinces of Santa Fé and Cordoba, and began to colonize Italians and Spanish Basques. Their capital was $650,000 paid up. They have paid their whole capital back in dividends and 36 per cent. more, and have left 384,796 acres, worth at present selling price $1,923,980, and a reserve fund of $350,000. They paid this year 22½ per cent. in dividends and placed $150,000 to the reserve fund. They have just bought 360,000 acres of land on the Rio Negro, in the southern part of the Argentine Republic, where they propose to plant colonies and repeat what they have done in the north on the Parana River.

It is impossible to convey any adequate idea of the recently remarkable progress which has been made in the Argentine Republic and of the present onward march of development in the short time at my disposal. Neither can I pause to recount to you what has been done and is doing in Brazil. If the people of the United States were more fully acquainted with the vast resources and possibilities of our southern neighbors, a determination would no doubt be aroused to make use of such means as would not fail at an early date to transfer most of the foreign trade of the whole American continent to our flag.

It would be well if the debate over this measure had brought out the principal features of the physical characteristics, material conditions, and the power of expansion of the commerce of all those countries. Such a presentation of statistics and facts exceeds the proper limits of Congressional debates. I will, however, avail myself of the opportunity of appending to my remarks much valuable information concerning the Empire of Brazil and the Argentine Republic, two of the most important of the South American countries, which has been very kindly furnished to me by a gentleman of culture, who has traveled extensively in these countries. His attention having been attracted to the origin and progress of this movement for the establishment of an American customs union, he has prepared and offered me the use of the articles which I will append as an appendix to my remarks.

I also ask that the bill, as it has finally passed both Houses, be appended to my remarks.

The advantages of a commercial union of the countries of the American continent must be apparent to every reflecting man. It may be difficult to accomplish, doubtless will be, but its feasibility and desirability are beyond question. The other subjects which this measure provides for the consideration of by the conference are natural incidents to the main object in view. They were incorporated in the bill which I had the honor to introduce in this House during the last Congress, and are an elaboration of my original propositions introduced four years ago. I do not doubt that we will find our neighbors to the south of us ready to respond to the invitation which we shall extend to them, and fully alive to the great importance of the subjects the conference will have to consider. We have doubtless more to gain at the outset than they, and therefore should be prepared, as Prussia was to make concessions in order to secure the establishment of the German Zollverein. It ought to be far easier for the countries whose representatives are to undertake the formation of an American zollverein to succeed than it was for the German states to agree upon a practical and mutually satisfactory plan. There can be no apprehensions on the part of our neighbors of ulterior dominating political purposes on the part of the United States. We are not a Prussia seeking imperial confederation and rule. We ought not and will not ask that for which we can not give a fair equivalent in return.

It behooves us to contemplate certain events as reasonably certain to transpire in the near future. The rapidly increasing commerce of the world demands water transit across the isthmus connecting North and South America. So pressing is the necessity and incalculable the advantages to commerce it is but a question of few years when one, if not two, canals will be constructed. It is believed by many that the Nicaragua route is the most feasible. I am inclined to the same opinion, and believe that a ship-canal can be constructed across Nicaragua at less cost than on any of the routes which have been surveyed. There is now good prospect that it will be built under American auspices, but we can not close our eyes to the fact that the French Government by its late indorsement of the new lottery loan of the Panama Canal Company has morally pledged itself to the completion of that undertaking. It is true that the Chambers in voting permission for the issuance of this new loan was careful to say that beyond this permission the Government assumed no responsibility. But it is notorious that the downfall of Grévy was more largely due to the influence exerted by the Panama Canal Company than to any other cause. The bonds which represent the enormous indebtedness of that company are almost entirely held by the peasant farmers and tradesmen of France. The bankruptcy of the Panama Canal Company would precipitate a revolution in France, and no political party will dare to alienate the tremendous following De Lesseps has behind him. The greatest undertaking of modern times doubtless will not be completed, as its projector promises, in 1890, and a much larger sum will be required than estimated, but that it will be finished there is little room to doubt. Whether or not it may be necessary for the French Government to directly pledge its credit in behalf of the canal company depends upon the willing-

ness of the French people of moderate means to absorb further lottery loans.

We are bound by treaty obligations to preserve the integrity of the United States of Colombia and to maintain the neutrality of Isthmian transit. We have only recently asserted our authority under this treaty. There is the possibility of some European power becoming the owner of the controlling interest in the Nicaragua or Panama Canal after it is finished, as England secured the control of the Suez Canal.

The union of all the countries south of us in a commercial league with the United States would make the ownership of either the Nicaragua or the Panama Canal by European capitalists or countries of comparatively little consequence. In a matter of such vital interest there would be a common object to prevent political or commercial dominance by any European power on this continent. There are other grave questions affecting the rights and the security of some of our southern neighbors which would become of common interest the moment such a league was established. Great as might be the advantages which the United States would derive from the proposed commercial league, there is not a country south of us which would not be correspondingly benefited politically and materially.

The establishment of frequent and speedy communications between the ports of the United States and those of the South American countries is a subject of the deepest mutual concern. The Empire of Brazil now pays an American company $100,000 a year and gives it the valuable privilege of participating in its coast trade between Pará and Santos. One of its objects is to have competition for freights on coffee between Santos, Rio de Janeiro, and New York. Before this line was established English steamers made the rate of freight on coffee, and competition has reduced them one-half. Unfortunately for shippers from the United States, there is scarcely any competition between our ports and Rio de Janeiro and Santos, or, indeed, to Pernambuco and Bahia. The English steamers go out direct and make the homeward voyage via New York.

The Argentine Republic deems direct trade with the United States so important that it has guarantied 5 per cent. a year for fifteen years on $1,800,000 to an English company which is to establish a monthly line between Buenos Ayres and New York. Within two years railway communication will be established between Buenos Ayres and Valparaiso, on the Pacific coast, and the time between Liverpool and the west coast of South America will be shortened twenty days.

I have earnestly sought for several years to have initiated this scheme to unite in a commercial league all the independent and sovereign countries of this continent, because I believed that the result would be of far-reaching and lasting importance not only to the people of the United States but to the people of every nation becoming a party to it. This league once established will, I believe, eventually embrace the whole continent of America and all its insular divisions. It will not endanger any particular interests of the individual nations, but will tend to develop the special and common interests of all. It will afford a practical, honorable, and impartial method of determining peacefully all disputes and make impossible the interjection of outside influences, whether springing from ambitious motives or from commercial rivalries. With none other than laudable purposes to serve; without dreams of extensions of our territory or of dominating influence in the affairs of others, our invitation to meet us in the proposed conference can not be misconstrued by our neighbors. As I have said heretofore, if the results of this conference should not meet our expectations; if an agreement satisfactory to all can not be arrived at, the foundation of the union may be laid and its benefits in time made apparent to all by the practical working of a plan which is approved by a few. If no agreement is effected, still the meeting, intermingling, and conferring of the representatives of all the countries will undoubtedly be of common advantage and can not fail to be productive of good results.

The largest and most inviting field for enterprise on earth exists in the countries south of us on the American continent. Their natural resources are incalculably valuable, and their trade and commerce are capable of immense extension. Their progress and development until recently have been slow and bear very insignificant comparison with that of the United States. During very recent years, however, much enterprise and energy have been manifested, and such a degree of increase in development has been shown as gives promise of very rapid progress in the future. The importance and value of the trade of that region are appreciated by our European rivals, who are using their utmost exertions to obtain as large share as possible. Notwithstanding the superior energy and enterprise of our people and the natural advantage we have of proximity and otherwise, yet we have been greatly outstripped in the markets of the southern countries by England, France, and Germany.

We should not only have a larger share of that trade than any country, but we should be able to control most of it. It is the only great market left for our surplus products. We can and ought to have it. But in order to meet with the fullest measure of success statesmanship must precede and open the way for the producers, tradesmen, and capitalists of the United States. The most effectual and surest means that can be devised to this end is the establishment of an American Zollverein or commercial union as contemplated in the measure before us.

APPENDIX.

A.

An act authorizing the President of the United States to arrange a conference between the United States of America and the Republics of Mexico, Central and South America, Hayti, San Domingo, and the Empire of Brazil.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he is hereby, requested and authorized to invite the several Governments of the Republics of Mexico, Central and South America, Hayti, San Domingo, and the Empire of Brazil to join the United States in a conference to be held at Washington, in the United States, at such time as he may deem proper, in the year 1889, for the purpose of discussing and recommending for adoption to their respective Governments some plan of arbitration for the settlement of disagreements and disputes that may hereafter arise between them, and for considering questions relating to the improvement of business intercourse and means of direct communication between said countries, and to encourage such reciprocal commercial relations as will be beneficial to all and secure more extensive markets for the products of each of said countries.

SEC. 2. That in forwarding the invitations to the said Governments the President of the United States shall set forth that the conference is called to consider—

First. Measures that shall tend to preserve the peace and promote the prosperity of the several American states.

Second. Measures toward the formation of an American customs union, under which the trade of the American nations with each other shall, so far as possible and profitable, be promoted.

Third. The establishment of regular and frequent communication between the ports of the several American states and the ports of each other.

Fourth. The establishment of a uniform system of customs regulations in each of the independent American states to govern the mode of importation and exportation of merchandise and port dues and charges, a uniform method of determining the classification and valuation of such merchandise in the ports of each country, and a uniform system of invoices and the subject of the sanitation of ships and quarantine.

Fifth. The adoption of a uniform system of weights and measures, and laws to protect the patent rights, copyrights, and trade-marks of citizens of either country in the other, and for the extradition of criminals.

Sixth. The adoption of a common silver coin, to be issued by each Government, the same to be legal tender in all commercial transactions between the citizens of all of the American states.

Seventh. An agreement upon and recommendation for adoption to their respective Governments of a definite plan of arbitration of all questions, disputes, and differences that may now or hereafter exist between them, to the end that all difficulties and disputes between such nations may be peaceably settled and wars prevented.

Eighth. And to consider such other subjects relating to the welfare of the several States represented as may be presented by any of said states which are hereby invited to participate in said conference.

SEC. 3. That the sum of $75,000, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the same to be disbursed under the direction and in the discretion of the Secretary of State, for expenses incidental to the conference.

SEC. 4. That the President of the United States shall appoint, by and with the advice and consent of the Senate, ten delegates to said conference, who shall serve without compensation other than their actual necessary expenses, and the several other states participating in said conference shall be represented by as many delegates as each may elect: *Provided, however*, That in the disposition of questions to come before said conference no state shall be entitled to more than one vote.

SEC. 5. That the Secretary of State shall appoint such clerks and other assistants as shall be necessary, at a compensation to be determined by him, and provide for the daily publication by the Public Printer, in the English, Spanish, and Portuguese languages, of so much of the proceedings of the conference as it shall determine, and upon the conclusion of said conference shall transmit a report of the same to the Congress of the United States, together with a statement of the disbursements of the appropriation herein provided for.

Approved, May 24, 1888.

B.

SKETCH OF THE ARGENTINE REPUBLIC.

ITS PRESENT POLITICAL AND MATERIAL CONDITION.

The superficial area of the Argentine Republic is six times greater than that of France and Germany combined. It extends from the twenty-second degree to the fifty-fifth degree of south latitude, and from the Atlantic Ocean to the highest ridge of the Andes. The extent of the territory is about 2,000,000 square miles, and less than one-fifth is unfit for cultivation. Three-quarters of the whole area lies within the southern temperate zone. The climate is delightful. The population in 1884 was estimated at 3,152,160 souls, exclusive of Indians, and during the last three years more than 300,000 immigrants have landed in Buenos Ayres, the great majority of whom were thrifty agriculturists and mechanics.

THE GOVERNMENT

of the Argentine Republic is modeled after that of the United States. The President is elected for six years. The Congress is composed of senators and deputies, the former being apportioned as in the United States, two to each State, and an addition of two to the capital city, and the latter, one to each twenty thousand inhabitants, the capital city having its proportion of deputies. There are fourteen States, each having elective executive officers and a legislative assembly. The judicial system is, like ours, both National and State, and the constitutional guaranties in respect to the rights of person and property, the liberty of speech and of the press, and the freedom of religious worship are, as in the United States, embodied in federal and State constitutions. The civil-law procedure, with the English jury system engrafted thereon, prevails.

The national spirit has been of slow growth in the Argentine Republic. For more than forty years intestine conflicts raged, and every province and city suffered indescribable woes. The guacho element, the semi-barbarous pastoral population, was arrayed against the civilization of the cities, and the struggle finally culminated in a gaucho chief making himself the tyrant of the entire country. It was not until 1869 that a real republican form of government was firmly established, and the remarkable prosperity of the country dates from that period. The city of Buenos Ayres was federalized, and a citizen of an interior province was elected president. Buenos Ayres, being the commercial metropolis, and the province of that name the most populous, had, after the overthrow of Rosas and the downfall of Urugaiza, sought to dominate the government of the republic. The administration of General Roca, which terminated two years ago, established a stable national government and inaugurated an era of most wonderful prosperity. The credit of the republic is very high, and the capitalists of London, Paris, Berlin, and Amsterdam compete for the Argentine securities, whether those of the government or of private enterprises.

There are nine national territories, Misiones, Formoso, and Gran Chaco in the north, and Pampas, Rio Negro, Menquem, Chubut, Santa Cruz, and Tierra del Fuego in the south. By act of Congress of 1884 territorial governments, similar to those created by the United States, were provided for these several

divisions of the national domain. The area comprised within these territorial subdivisions is nearly equal to that of the fourteen States. Formoso, Gran Chaco, and Misiones have semi-tropical climates, and, in large part, are covered by magnificent forests. They are being opened to settlement by the construction of railways and the improvement of their great rivers. The remaining six territories, with the exception of Tierra del Fuego, lie altogether in the southern temperate zone, and are wonderfully rich in all natural resources. Gold has been found in Tierra del Fuego and Santa Cruz. Extensive fields of coal are found in Menquem. Pampas, Rio Negro, and Chubut are agricultural and grazing countries. Lines of railways are projected for the development of Pampas, Rio Negro, and Chubut, and large colonies and many flourishing settlements have been established therein.

DIVERSIFIED SOIL AND CLIMATE.

The Argentine territory has a wonderfully diversified soil and climate. The coast-line extends over 20 degrees of latitude from the mouth of the Rio Plata to the Straits of Magellan. Until the mouth of the Rio Chubut, on the northern confines of Patagonia, is reached, the Pampas begin at the coast and extend to the foot-hills of the Andes, rising with a gradual inclination as you go westward. The coast of Patagonia has a mountain range, and this littoral part is rich in nitrate deposits, but is considered sterile. Back of the coast range the vast interior of Patagonia is exceedingly fertile—a great pasture range—which, both on account of soil and climate is well adapted for diversified agriculture. The fluvial region of the south borders the great rivers Colorado, Negro, and Chubut. The colonies which have been planted there are flourishing in agricultural as well as in pastorial pursuits. The great rivers of the North, the Parana and Uraguay, and their tributaries, drain a region which in diversified products and resources is far more wonderful than our great Mississippi Valley. The Rio Plata is formed by the junction of these two rivers, which have their sources in Southeastern and Central Brazil. The Parana and its principal tributary, the Paraguay, are navigable for more than 2,000 miles. The Vermejo and the Pilcomeyo have their sources in Bolivia, and, before uniting with the Parana, each traverses a thousand miles of Argentine territory and drains a large area of the Gran Chaco, until recently a comparatively unexplored region with a semi-tropical climate, grand forests, interspersed with open savannas.

South of the Gran Chaco, on the west coast of the Parana, lies the State of Santa Fé, the development of which has been wonderfully accelerated by the establishment of colonies and the building of railroads for the convenience of the settlements centering about the capital city, Santa Fé. The States of Santiago del Estero and Salta lie immediately west of the Gran Chaco. The Rio Salado, which rises in the center of Salta, forms the line between Santiago del Estero and the Gran Chaco, and flows into the Parana at the city of Santa Fé, and, with its tributaries, drains the northern half of the State of Santa Fé. Jujuy, north of Salta, is the most northern State, touching at the twenty-second degree of latitude the territory of Bolivia.

THE NORTHERN ANDEAN STATES.

Catamarca, Tucuman, Salta, and Jujuy are the Northern Andean States. They have a civilization older than the Spanish conquest, the rule of the Peruvian Incas having extended over this region. The climate would be tropical but for the great elevation of the mountain ranges and intervening valleys. Agriculture is dependent upon irrigation, which the aborigines had brought to a high state of perfection. The mineral wealth, although comparatively undeveloped, is known to be vast, while the extent of the forests, and the value of their products, are almost incalculable. Petroleum has been found in Jujuy, a large lake of it, which compares favorably with that of the United States and Russia. The national government has built a narrow-gauge railroad from Cordoba to Salta, and the same is now being extended to Oran in Jujuy. This road has recently been sold to English capitalists for the cost of construction. At the ancient city of Cordoba this narrow-gauge system connects with a branch of the broad-gauge trans-Andine from Villa Maria. A branch of the narrow-gauge has been constructed to Santiago del Estero, the capital of the State of that name. The sugar industry of Santiago del Estero, Tucuman, Salta, and Jujuy has, with the opening and construction of three railways, received a great impetus. The most improved French machinery and processes have been introduced and the yield of sugar in these States during 1883 was 24,000,000 kilograms, about half the home consumption, and the product is steadily increasing.

CENTRAL AND WEST ANDEAN STATES.

The State of Cordoba lies west of Santa Fé and south of Santiago del Estero. The northeastern portion is fertile, the surface rising gradually to the westward. The western and southern portions of Cordoba are fertile, but the former part depends chiefly upon irrigation. The capital city, Cordoba, has a population of 60,000, is the center of considerable wealth, the seat of an ancient university founded by the Spanish conquerors, and situated in the midst of lovely scenery, and favored with a delightful climate. It is a charming place.

West of Cordoba lie Rioja, San Luis, Mendoza, and San Juan, the Western Andean States. Railroads from Rosario, on the Parana, and from Buenos Ayres, uniting at Villa Mercedes, in San Luis, have opened a wonderfully fertile country, and the transformation wrought is comparable only to the settlement and growth in population of some of our Western Territories. From Villa Mercedes a railway has been completed to Mendoza, the capital city of that State, and a branch northward to San Juan, the capital of the State of that name, brings those regions into rapid transit connection with the capital city and commercial emporium of the Republic. The extension of the main trans-Andine line from Mendoza across the Andes to a junction at Los Andes with the Chilian railroad from Valparaiso is being constructed by an English company under contracts with the Argentine and Chilian Governments. The distance from Mendoza to the Chilian frontier is only about 140 miles. The route is through the Uspallata Pass, which offers easy gradients and no very difficult work. Within three years railway transit between Buenos Ayres, on the Atlantic, and Valparaiso, on the Pacific, will be an accomplished fact.

Grape culture and wine making in the States of Mendoza, San Juan, Rioja, and Catamarca is now a great industry and the opening of railway communications has given it wonderful impetus. The olive and the fig grow to perfection in these same States. Extensive coal deposits have been found which stretch from the State of San Luis for hundreds of leagues. The quality is said to be excellent.

The government of the Republic two years since appropriated money to experiment with artesian wells for supplying water for irrigation in the States of Santiago del Estero, Cordoba, San Luis, Mendoza, and San Juan. The result has been satisfactory, and now the States are also having wells bored, and are constructing other extensive irrigation works.

European mining engineers of high standing during 1883 visited the Western and Northern Andean States, and their reports represent the Sierras as being very rich in gold and silver veins. About 80 leagues south of the city of Mendoza a large lake of petroleum has been found. The yield is 40 per cent. of pure oil. In the near neighborhood of Mendoza oil flows to the surface in several places, and the supply is said to be constant and in enormous quantity.

THE EMPIRE STATE.

Buenos Ayres is the empire State of the Argentine Republic. Its area is 186,184 square miles, or considerably over the area of all New England, and its population in 1887 was 648,140. This was exclusive of the city of Buenos Ayres, which, with 27 square miles, belongs to the nation, as our Federal capital does. The population of the city of Buenos Ayres in 1887 was 434,600 souls. The State of Buenos Ayres has nearly a thousand miles of coast, including its river front, with several good harbors on the Atlantic Ocean. The capital is La Plata, which, with its port of Ensenada, was in a state of nature in 1882. Now it has a population of 50,000, with splendid public buildings and a magnificent dock, to which ships drawing 21 feet of water come and load and unload. There are 27 miles of street railways and as many more miles of electric lights. The Southern Argentine Railway Company has more than 600 miles of railroad within the State of Buenos Ayres, which pays 10 per cent. annual dividends to the stockholders. The bonds of this company, with the guaranty of the State, are quoted in the London market at 170, and the stock commands a like price.

The first attempt to grow wheat on the pampas was made at the expense of ex-President Sarmiento, at the colony of Chivilcoi, founded by him in the Province of Buenos Ayres. This colony was established in 1858 for the purpose of demonstrating the capabilities of the pampa region for agricultural purposes, the prevailing impression being that the vast plains of the Republic were only fit for pastoral pursuits. Sarmiento had another object also, the breaking up of the vast estates of thousands of square leagues of land which were held by gaucho-owners. Their estates came up to the very city limits of Buenos Ayres, and it was impossible to obtain milk, butter, and garden vegetables for city supply. Chivilcoi was surveyed in 1858, an immense tract of land escheated to the Government, being divided into small farms, and in 1867 a railroad was built to it from Buenos Ayres. Now the settlement consists of 40,000 people, all well-to-do and prosperous. There are miles upon miles of orchards, avenues lined with trees, handsome public buildings, school-houses, and an agricultural community which supplies in part the capital of the Republic with the necessaries of life. Sarmiento furnished agricultural implements, the seed wheat, instructed the colonists in planting and reaping, and the result was to demonstrate that the pampas are among the best wheat-fields of the world. The yield and the quality far exceed the best product of our Red River Valley, and equal the best crops of the famous irrigated lands of Cache County, Utah.

The prosperity of the State of Buenos Ayres is beyond question. The well-founded belief in its future is attested by the fact that its credit stands very high in the money markets of Europe. A loan of $50,000,000 at 6 per cent., authorized by the State, was offered to investors in Germany by the Deutsche Bank of Berlin during the summer of 1886, and the subscriptions therefor amounted to $445,000,000. A system of railways for the development of agricultural colonies, aggregating in length nearly 1,000 miles, has been authorized, and will be constructed during the next two years upon the credit of the State.

THE POLICY OF THE REPUBLIC.

The federalization of the city of Buenos Ayres, the opening of railway communications with the most distant States, the liberal policy of the national and State governments in pushing forward works for the development of every section of the country, have resulted in the firm establishment of stable rule and the evokement of a spirit of patriotism and national feeling which is paralleled only in the United States.

The immigration which has been and is pouring into the Republic from the Mediterranean countries of Europe supplies an industrious and thrifty class of citizens, who are rapidly developing the Argentine Republic.

THE MESOPOTAMIAN REGION.

The States of Entre Rios and Corrientes and the Territory of Missiones lie between the two great rivers Parana and Uruguay, which united form the Rio Plata. This region is known as the Mesopotamia country. For agricultural, pastoral, and manufacturing pursuits they are unrivaled by any of the States or Territories of the republic. The soil is exceedingly fertile, and all the cereals and the fruits of the temperate zone grow to perfection, while those of semi-tropical origin flourish equally well. The surface rises gently from both rivers to a central ridge, with an altitude of about 600 feet. There are numerous streams of water, which afford magnificent water powers. A great portion of Corrientes and of Missiones is covered by pine, cedar, and different varieties of hard cabinet woods.

A system of railways have been authorized and the national Government has granted liberal subsidies to insure the construction thereof. These public works will rapidly develop a region that is capable of sustaining an enormous population. Already many colonies have been established at Entre Rios, Corrientes, and Missiones, and they are prospering wonderfully. Thousands of immigrants from the Basque Provinces of Spain and from Italy are settling in this Mesopotamian region. They are frugal, industrious agriculturists, and the results of their labors is already manifested by the increased exports of Entre Rios and Corrientes. There are many Irish and Scotch settlers in Corrientes who have grown rich with the increase of their flocks and herds.

NEW INDUSTRIES.

The opening up of the vast pine and cedar forests of Missiones will work a great revolution in one branch of trade in the Argentine Republic. Now all the pine lumber used in these States is brought from the United States and Canada. During 1884, the last year yet reported, 8,212,334 feet of pine lumber was received from the above-named countries. The pine and cedar of Missiones grows to immense size and makes a beautiful, durable lumber, which is as easily worked as our white pine. When the Corrientes and Missiones Railway is completed the lumbering business will become a great industry, and wood-working establishments in the city of Buenos Ayres will furnish employment to great numbers. The fine cabinet woods of Missiones, the Gran Chaco, and of Tucuman and Salta are almost endless in variety, and are very beautiful. Ebony is found in Missiones in such size that logs 1 foot in diameter 40 feet from the stump are not rare. Satin and rosewood and mahogany of large size are abundant. In Tucuman and Salta laurel grow to immense size, the trees frequently exceeding 4 feet in diameter. There are several varieties—one yellow, with brown and black veins; another brown or black, with yellow and green veins. The red quebracho is another very durable hard wood, which is largely used for beams and piles. The manduby is in great demand for posts and palings.

Fine furniture is manufactured to some extent in Buenos Ayres, and also fine interior wood-work for the best houses, but machinery is but little employed. The Italians and Basques are excellent cabinet-makers, and there will be a great opening for capitalists who will introduce the best American wood-working machinery and set it going. During 1884 the official valuation of furniture imported was $410,348.

THE CAPITAL CITY.

The city of Buenos Ayres is the national capital and commercial metropolis of the Argentine Republic. It has a population of 434,600, and is growing rapidly. One of its greatest drawbacks has been the want of a safe and convenient harbor, but a partial remedy has already been provided by the improvement of the Riachuelo Canal, just south of the city. Ocean steamers drawing 20 feet of water can now come alongside the quay and unload and load, and commodious warehouses are provided for storage. Formerly ships had to anchor from 8 to 10 miles out in the river and their cargoes were subject to double lighterage. The national Government, not satisfied with the Riachuelo, has made provision for the expenditure of $20,000,000 on most extensive port works to be built immediately in front of the city. The loan for this great work has been placed in London, and the work of dredging and building of breakwaters, piers, and warehouses is now in progress. The largest ocean steamer, when this port is completed, will come up to the city and discharge and take on passengers and cargo.

The city is divided into regular squares, each side being 130 meters, with streets

whose roadways are 10 meters wide. The houses of different ages are splendid habitations, with every luxury and comfort of the age. There are many public squares, the principal one being the Place of Victory, which is ornamented with palms and surrounded by beautiful edifices. Here are the government palace, the post-office department, the department of justice, the cathedral, the Episcopal palace, the Theater Colon, the bourse, and the municipal palace.

The library contains 40,000 volumes, the museum of natural history is rich in collections. The university, the school of medicine, the national college, and the different normal and public schools are large and imposing buildings.

Five tramway companies occupy the city with their different lines, which extend to every quarter and offer perfect facilities for reaching any point. The total length of their tracks traveled in 1884 in 827,509 trips was 149,775 kilometers, and the number of passengers carried amounted to 22,832,325.

Seven railways center in the city, whose aggregate lengths are about 4,000 miles.

The Buenos Ayreans are a gay, fashionable people, as fond of dress and amusements as the Parisians. Club life is very popular. Restaurants are numerous and good, but hotels are rather to be avoided. The shops and stores are showy and do an enormous business. The marked characteristic of the Argentines is their hospitality. Strangers who are introduced are everywhere welcomed. There is no jealousy toward foreigners. New enterprises and new inventions are looked upon with great favor. There is great wealth and corresponding extravagance in living, thus creating a great demand for all the luxuries of life.

A grand system of improvements in the city was begun in 1873 and the under-ground drainage is nearing completion. The whole work will have cost, when completed, about $20,000,000. These improvements, the new port and the new boulevards, which are to rival those of Paris, will make Buenos Ayres one of the healthiest and finest cities in the world.

TRADE AND COMMERCE.

The commerce of Buenos Ayres is immense, whether measured by the number of vessels and their tonnage arriving and departing during the year or by the money value of the exports and imports. During 1884 the number of steamers arriving in the La Plata was 5,745, whose aggregate tonnage was 2,278,704 tons. The departures were 5,455, representing 2,263,023 tons. The number of sailing vessels arriving was 5,231, with a tonnage of 753,659 tons, and the departures were 2,732, carrying 589,269 tons. The total arrivals of steam and sailing vessels were 10,976, with a tonnage of 3,012,363, while the departures were 8,187, with tonnage of 2,852,296 tons. The aggregate total being 19,163 vessels, with a carrying capacity of 5,864,635 tons. The foreign commerce of the Republic for the year 1884 was $162,085,980 against $140,643,804 for 1883, and $121,634,984 for 1882. This was an increase of $43,810,099 in two years.

The movements of commerce on the Parana and Uraguay Rivers in 1884 amounted to $44,304,876. Of this sum wheat and flour represented $4,063,904.

The city of Buenos Ayres transacted in 1884 75 per cent. of the entire commerce of the Republic. The next port in importance was Rosario, which did nearly 13 per cent. of the whole commerce. The great bulk of this trade of $162,103,980 was done by Germany, Belgium, France, and Great Britain. These five countries traded with the Argentine Republic in 1884 to the extent of $115,055,467. Great Britain had the decided advantage, her goods selling to the amount of $30,727,694, while she took of the products of the Republic only the sum of $7,211,437 worth. The trade of the United States with the Argentine Republic in 1884 was $11,519,680, of which she bought $4,064,848, and sold $7,454,832. France and Belgium take the largest proportions of the products of the republic, the former buying in 1884, $22,518,371 worth, and Belgium, $14,879,945.

A GROWING PROVINCIAL CITY.

The city of Rosario, on the Parana River, 190 miles above Buenos Ayres, as a commercial entrepôt, is second in importance only to the national capital. It has a population of nearly 60,000 inhabitants and its imports and exports represent 12 per cent. of the whole commerce of the Republic. It is a railroad center, being the beginning of the trans-Andine railway and of that leading to the colonies of Santa Fé. It is now connected with Buenos Ayres by rail. A large grain elevator has been built by a citizen of the United States, and docks costing $2,000,000 are being built by the national government. Santa Fé has sixty-eight agricultural colonies, and its development as a grain-growing region has been really wonderful. In 1882 there were 55,143 colonists, who had under cultivation 900,000 acres of land, and that year 1,000,000 bushels of wheat were exported. Official returns give 16 bushels of wheat to the acre as an average yield, but 25 bushels to the acre is claimed by the Santa Fé colonists. Indian corn grows luxuriously, and 100 bushels to the acre is not considered an extraordinary yield. The area planted in 1883 was nearly 150,000 acres. Peanut culture is extensive in Santa Fé, and another great crop is flax. In 1882, 40,000 tons of flax were exported. There is an opening for the latest improved flax-thrashers and for machinery for manipulating flax fiber. Clemens, in his book on the La Plata countries, says of Santa Fé.

"There* are many points of resemblance between the Province of Santa Fé and the State of Illinois in soil and general configuration, but it lies 8° nearer the equator. The mean temperature at Rosario in 1880 was 63° Fahrenheit, and the greatest extreme of heat was 101.7°. The heat increases in going northward at about the rate of one-half degree of the thermometer for each degree of latitude. The southern part of the province is wholly prairie. A few leagues north of the mouth of the Corcaual River the heavy timber growth that characterizes the plains of subtropical South America makes its appearance along the Parana River and spreads to the west as it continues northward. In the northern part of the province woodland alternates with prairie."

A private letter from Rosario in August last says: "The building that is going on here is astounding. In every street houses are springing up and every one rented before the doors and windows are put in."

THE TRADE OF THE UNITED STATES

with the Argentine Republic is handicapped in several ways. In the first place there is no regular direct steam communications between the two countries. The mails are irregular and slow. Forty-five days is the shortest time in which letters can pass between New York and Buenos Ayres. The mails going via Rio de Janeiro are there distributed, and the result is unavoidable delay and frequent miscarriage. This is especially true of mails from Buenos Ayres to the United States. It will continue so long as there are no through mail pouches between the River Plate and New York. Heretofore British steamers of Lamport & Holt's line have on their return voyage come by way of Brazilian ports and the West Indies to New York and thence to Liverpool. Foreign steamers in the South American trade all go via Lisbon and the Cape de Verde Islands on their outward trip. During December, 1886, two steamers, one German and the other British, departed from New York for Buenos Ayres. Three departures for that port from Baltimore occurred during 1887, and now make semi-monthly voyages. The Argentine Republic has subsidized a line of English steamers, carrying the Argentine flag, to make monthly voyages between Buenos Ayres and New York, paying therefor 5 per cent. per annum on the capital employed, $1,800,000.

But one of the chief obstacles to trade between the United States and the Argentine Republic is the lack of enterprise on the part of our manufacturers. They, with rare exceptions, do not seek this trade. The Baldwin Locomotive Works, the Harlan & Hollingsworth Manufacturing Company, and one or two makers of agricultural implements and machinery have sought trade with South American countries and found it. They sent representatives who could speak the language of the people, who had tact and capacity, and the result has been highly satisfactory. Harlan & Hollingsworth are now filling one order at their works on the Delaware for railway rolling-stock which they secured from the Argentine Republic, amounting to more than $500,000. The Baldwin locomotives are fast taking the place of English locomotives in Brazil and the Argentine Republic. A. B. Farquhar of York, Pa., sent agents to Buenos Ayres and introduced his agricultural implements, and maintains a steady business despite all the disadvantages from want of regular and speedy communications.

WHAT CAN BE DONE.

What has been done by these enterprising manufacturers in their lines can be successfully imitated by manufacturers of other specialties. It is a notorious fact that American cottons are far better than those made in England. Years ago they were well known throughout South America, and so great was the raputation they had that to-day Manchester cottons, flimsy fabrics, filled with sizing, are sold because they have the trade-mark of an American eagle stamped on them and are fraudulently marked "The best American cotton." Within a year or two Georgia manufacturers have been sending sample lots of their goods to Brazil, and without any particular exertion further than this are securing a fair demand for their wares. To succeed fully they must study carefully the requirements of the people, cater to their taste, and must pack their goods first to stand long sea voyages and to admit of transportation in the interior, where, especially in Brazil, they have to be carried long distances on pack-mules or in bullock carts.

Another line of manufacture in which our mechanics excel the world, wagons of every description, can be successfully introduced in the La Plata countries and Brazil. But the manufacturers must incur considerable expense before they can get returns. Samples must be sent out and the people must be instructed in regard to their advantages and excellences.

There is a like good opening for horse-powers and wind-mills of American make. Saw-mills, portable engines, and wood-working machinery will find a good market in the Argentine Republic. The lumber regions of the Gran Chaco are now being opened, and those of Misiones, where pine and cedar are found in great abundance, soon will be opened by the building of the Corrientes and Misiones Railway.

The sugar industry of the States of Tucuman, Salta, and Santiago del Estero has assumed considerable proportions and is growing rapidly. When the Misiones is opened a new sugar field will be rapidly developed. The business of supplying plants for sugar-mills is well worth looking after by our manufacturers.

The following are some of the articles concerning which inquiries are constantly received: Fire-engines of latest design and improvements. Building materials, such as cast-iron columns and fronts for business buildings, rolled-iron girders, encaustic tiles. Brick-making machinery, electric-light machinery, small steam launches, tug-boats, dredging machinery, steam-engines, fixed, semi-portable, and portable. Machinery for making fish-oil, for linseed crushing, for flax breaking, for stone breaking, for sewing socks. Gas-engines, gas-stoves, pumps of simple construction for farm work. Horse-powers and wind-mills and pumps worked by both. Rivets, bolts, chains, bar-iron, tin-plate, wire ropes, sisal ropes, flour-mills on the roller system, soda-ash, palm-oil, siphon-bottles for aerated waters, bags for frozen mutton, kidneys, tongues, etc. Machinery for stamping tins, granite, hollow-ware, stationery, and bookbinding goods, paper for newspapers. The manufacture of paper would be profitable. Straw boards, wood-pulp machinery could be introduced. Builders' and saddlery hardware, mechanics' tools, carriage hardware and fittings are in demand. Cotton-gins, cotton-seed oil machinery.

Large deposits of petroleum have been found in Jujuy and Mendoza, and although undeveloped as yet, these fields will soon furnish opportunities for pipe lines and refineries. Coal fields of vast extent and near railways built or in course of construction have been found in the Western Andean States. They await development.

HARVESTS REAPED BY ENGLISH CAPITALISTS.

The following will show the reward which English investors have met by investing their capital in enterprises in the Argentine Republic. The quotations are those of the London market, December 23, 1887.

Liebig's Beef Extract Company	par...	£20	£54
Central Argentine Lands	par...	1	3

Western Railway of Buenos Ayres	par...	100	113
East Argentine Railway	par...	100	118
West Argentine Gold	paid...	1	1½

The average age of the seventeen companies is only fourteen years. The shareholders have received dividends of 8 or 10 per cent. per annum, while their investments have increased in value an average of over 40 per cent.

At the meeting of the shareholders of the Buenos Ayres and Ensenada Port Railway, held in London December 21, 1887, the chairman said in the course of his remarks:

"Have you any idea of the relative traffic of your line and the other lines out there as compared with that on the English lines. Let me inform you. There are twelve main railways in the Argentine Republic. The one that heads the list for earning power per mile—that is the true test—the one whose trains are most filled with passengers, which runs the most frequent trains, and which earns more money per mile than any other company in the Argentine Republic, is the Buenos Ayres Northern, a line 20 miles long. It earns £117 ($585) per mile per week, gross of course. Have you any idea what that compares with? Let me tell you that the Midland Railway in England earns £104 ($520). This railway then has an earning power per mile per week greater than the United Railway. I am taking these figures from last week's returns in the Railway News, Railway Times, and Herapath, which are accessible to yourselves, and you can go and look at them and see whether these are not accurate figures.

"The Buenos Ayres and Ensenada, 35 miles, has a railway earning of £100 3*s.* 4*d.*, or, taking last week, because I do not want to exaggerate, £98—but the avegage is £100 3*s.* 4*d.* Shall we compare that with the London and Northwestern, earning £101, and remember we are earning all this on a single line, while the London and Northwestern has double, triple, and quadruple lines. The Central Argentine, with 264½ miles, is earning £55 per mile per week. The Great Western in England earns £55, and the London and Southwestern £55, and that will give you some idea of the relative traffics. The Buenos Ayres Great South-

*La Plata Countries of South America. By E. J. M. Clemens. Philadelphia: J. B. Lippincott Co. 1886.

ern, one of the most magnificent properties in the whole of the Argentine Republic, with 832 miles, is earning £33 per mile per week. I can not find any railway in the English list that will exactly fit it. The Buenos Ayres and Rosario, 341 miles, a young and very energetic railway, earns £26 per mile per week. We have no railway in England that is earning exactly that sum, but the Grand Trunk Canada earns £25 mile per week, which will give you an idea for comparison.

"The Western of Buenos Ayres, a Government line of 604 miles, is earning £24 per mile per week—very nearly the same as the Grand Trunk of Canada. The East Argentine, of 100 miles, is earning £10 per mile per week, the same as the Mid Wales. The Central Norte Tucuman Railway, from Cordova northward 664 miles, earns £9 per mile per week. Few railways in England except branch lines earn so little. The Andine Railway, the Argentine Great Western, and the Buenos Ayres and Pacific have not published their returns, but I have no doubt gentlemen here who are connected with the Argentine press, could obtain the information and ascertain how these railways compare with other railways in this country."

The Central Argentine Land Company bought large tracts of land from the Government ten years ago, binding itself to colonize them. Forty-acre lots, with improvements and stock and implements were sold to colonists upon easy terms, the company defraying the expenses of immigration. The success has been marvelous. The colonists have all prospered, have paid for their property, repaid advances from the company, and in many instances have bought and paid for additional 40 acres of land. The land unoccupied owned by the company has quintupled in value, and 20 per cent. dividends have been distributed to the stockholders for several years.

The Santa Fé colonies is another very successful land enterprise from which the investors have reaped a rich harvest.

BANKING.

The last Congress enacted a national-banking law modeled on that of the United States. One of the discouraging features of the commercial situation in the Argentine Republic has been a depreciated paper currency, the premium on gold fluctuating during the past year between 35 and 45 per cent. Another difficulty has been the want of banks in the interior. By the sale of Government lines of railway the national treasury has gained a large stock of gold, and the national-banking law contemplates the return to specie payments January 1, 1890. An eminent British financier, Mr. George W. Drabble, speaking of this new national-banking law, says that it has been carefully framed and promises well.

The principal banking business of the Republic has been carried on heretofore by the Provincial Bank of Buenos Ayres, the National Bank of Buenos Ayres, the Hypothecary Bank, the National Hypothecary Bank, the London and River Plate Bank, the English Bank of the River Plate, the River Plate Trust, Loan, and Agency Company, the Bank of Italy and the River Plate, and the Carrabassa Bank. The Provincial Bank and the Hypothecary Bank are institutions of the province of Buenos Ayres, and the National Bank and the National Hypothecary Bank are national concerns. The others are private banks.

The Provincial Bank has recently been removed to La Plata, the capital of the province of Buenos Ayres. It has a capital of $35,000,000 gold, and its deposits in 1885 averaged $86,631,982, while its operations were $956,039,999. It is a bank of issue; its bills were formerly legal tender in payment of debts. Its circulation in 1885 was $21,640,290. It receives deposits of not less than $16, all drawing interest if not withdrawn before the expiration of sixty days, after which time they bear interest from the day of deposit. All interest not drawn before the end of the year is added to the principal. All deposits at interest are entered in a book which the bank delivers to depositors, and all interest is payable after the 1st of the month or on withdrawing the deposit. The number of its depositors in 1885 was 35,165. Thrice a week the bank discounts bills with two signatures at ninety days' sight, and promissory notes at six days to four months, on condition of payment at maturity. Its discounts up to December, 1885, for the year were $76,727,278. It draws at three days' sight on twenty-four branches at different points in the province. The deposits in these branches, exclusive of La Plata, for 1885 were $15,800,000 and the discounts $20,400,000. The branch at La Plata did a business of $149,500,000. The Provincial Bank sells exchange on all the principal cities of Europe, makes loans to the national and provincial governments, as also to all the industrial establishments planted in the interior with guaranty, and transacts all the fiscal business of the State of Buenos Ayres with Europe. The exchange business of 1885 amounted to $90,323,502.

The opposition party of the Republic, which had its main strength in the province of Buenos Ayres, met with a Waterloo defeat in 1885, when President Celman, a native of Mendoza, was elected. An investigation of the affairs of the Provincial Bank which followed revealed some startling misdemeanors on the part of its political managers. Its franchises have been considerably curtailed since, and the removal of the main office to La Plata deprives it of much of its former prestige. It is still a powerful institution, and the growth of La Plata and its port of Ensenada will be greatly accelerated by its permanent establishment there. It will doubtless become a national bank under the new law, as will also its different branches.

The national bank was chartered by the national government with a capital of $20,000,000, of which the government holds $6,000,000. It is a bank of issue. It does not enjoy fiscal privileges in the Republic, but it is provided that its credits shall not be inferior in point of preference to those of any other banking establishment organized by provincial law. The bills of the bank and all paper issued by it are exempt from taxation or stamp, and the bank and its branches not only act as national depositories, but all judicial deposits, national or provincial, must be made in these institutions. The paid-up capital is $20,000,000, the deposits in 1885 were $253,269,000, loans $412,420,000, drafts and remittances $65,889,000, circulation $33,000,000, reserve $5,112,167. The administration is by a president and eight directors, four elected by the shareholders and four appointed by the President and confirmed by the senate. The savings department has $1,424,654 of deposits. The bank holds treasury bills to the amount of $432,500,000.

The Hypothecary Bank was founded in 1871 by the provincial legislature. According to its statutes it is really a dependence of the Provincial Bank, although it has its own board of directors. Its object is to facilitate and make loans on mortgage, which include the interest, the amortization, and the commission of the bank. Its transactions have already reached to very large proportions. Its operations consist in issuing cedulas, or certificates of credit, which are transferable, based on real estate mortgages made in its favor; in collecting the amounts falling due to the bank from the mortgagor, and in paying the interest falling due to the holder of cedulas. These cedulas are issued in series; all those which bear the same interest have the same per cent. of amortization, and the same times for the payment of interest belonging to the same series. By the terms of the law the interest can not exceed 8 per cent., nor can the amortization be more than 2 per cent. nor less than 1 per cent. The cedulas are made payable to bearer or to order, and in the latter case they are transferable by indorsement. They circulate like other securities, and are bought and sold on the market. In all cases the cedulas bear the same rate of interest that the bank collects from the mortgagee. The value of the real estate mortgaged can not be less than $2,000, nor can the loan be less than $500, and the loans are not permitted to exceed one-half the value of the property mortgaged.

The annual amount which the bank receives is divided into quarterly payments; and the cedulas, which at present the bank is issuing, and are series I and J, which have twenty years and one hundred days to run, 6 per cent. interest, 2 per cent. amortization, and 1 per cent. commission; in all, 9 per cent. or 2¼ quarterly. The mortgagor, however, is at any time allowed to release his property in whole or in part by anticipating the contract. The manner of making the loan is as follows: The applicant makes his request in writing, designating the real estate which he offers to be mortgaged by exact boundaries, accompanied by his title deeds and abstracts, his tax receipts, and the amount of the loan he desires to effect, the bank furnishing the forms and the tables of amortization, and paying the amount of the loan in cedulas. The provincial government is responsible for all the transactions of the Hypothecary Bank. Besides the operations mentioned, it has likewise the following franchises: (1) To make financial arrangements, with the consent of the governor, to facilitate the placing and the payment of cedulas held abroad; (2) to open credits within and without the province, with the consent of the governor of the province; (3) to organize and open a savings department, on such basis as the legislature may sanction; (4) to make loans to farmers and agriculturists on such terms and conditions as the legislature may provide; (5) to open credits for the erection of houses under special conditions and guaranties; (6) to make loans to municipal and other corporations under such guaranties and securities as may be agreed upon; (7) to make loans for the drainage of lands, taking into account the increased value which lands will thus acquire, and under such regulations as the legislature may provide; (8) to establish, with consent of the governor, such branches outside the province as may be deemed necessary.

There are a president and eight directors nominated by the governor and confirmed by the provincial senate, together with an advising attorney, a judicial agent, and a notary.

The cedulas of the Hypothecary Bank are a favorite security on the London market, and since the provincial loan of Buenos Ayres met with such success on the Berlin bourse the Deutsche Bank has made arrangements to place a large amount of the cedulas on that market.

The total issue of cedulas from 1878 to 1886 has been $93,835,000, and the balance outstanding on the 1st of August, 1886, was $70,986,000. The issues were in eight series, from A to I. The price, according to length of time to run, is from 81 to 101.

National Hypothecary Bank: The success of the Provincial Hypothecary Bank led the Congress of 1885-'86 to authorize the establishment of the Argentine National Mortgage Bank. It is to give loans by means of cedulas all over the Republic. The head office will be in Buenos Ayres with administrative councils in each State and Territory. The emission of cedulas will be limited to $50,000,000, unless special law authorizes an excess. The nation guaranties the interest and amortization. There are nine directors named by the President and confirmed by the senate, the chairman alone to receive a salary. The provincial councils are a paid manager and four persons of property in each place. These provincial councils can make loans up to $5,000, and may, with approval of the directory at Buenos Ayres, loan up to $20,000. A monthly report has to be published and also an annual one. The cedulas are either to person or bearer, interest in no case to be over 8 per cent. with 2 per cent. amortization. The interest of cedulas must be same as that of mortgages. No cedulas can be less than $25 or more than $1,000. The bank charges 1 per cent. commission, which must go to the reserve fund. No loan can exceed one-half assessed valuation of property. The bank pays cost of examination of titles. The National Government advanced $2,000,000 to the bank to begin business. An exclusive right to issue cedulas on property in the city of Buenos Ayres and in national territories is given. Every precaution for mutual protection of borrowers and of holders of cedulas seems to be provided.

The Provincial Pawn Office is another institution which was authorized by the Legislature of Buenos Ayres in 1877. It loans money on pledges or pawns, in the discretion of its officers, and according to a classification made periodically. The rate of interest is fixed every six months and must be paid in advance. Two-thirds of the value of articles are loaned for one to twelve months. The certificates given are transferable by indorsement and give the nature, condition, and quality of the article pawned, its valuation, amount of loan, the rate of interest, the time payment must be made. A president and five directors are nominated by the governor and confirmed by the Senate of Buenos Ayres. Public pawn offices can be established in all the cities of the State under the same regulations.

The London and River Plate Bank, under charter in England has a capital of $10,000,000, of which $7,500,000 has been paid up. Its reserve fund is $1,750,000. It added to the reserve fund last year $450,000. Its net profits in 1885 were $582,214, exclusive of its addition to reserve. In 1887 it paid 13 per cent. dividends after writing off £20,000, or $100,000 for bank furniture and increase of building fund, and adding $450,000 to reserve fund.

The English Bank of the River Plate has an authorized capital of $7,500,000 with $5,000,000 paid up. It declared a dividend of 7½ per cent. in 1885. In 1887 it did a business of $11,095,000 compared with $28,750,000 in 1886. Its net profits in 1886 were $425,065, and in 1887 $607,925. It increased its reserve fund $250,000 in 1887 and paid 7½ per cent. dividends.

The River Plate Trust, Loan and Agency Company, limited, is another English banking concern for loaning money on mortgages in Buenos Ayres and advancing on bonds for city improvements. It has loaned about $1,000,000 on real estate and has invested $750,000 in the water-works stock of Montevideo. It declared a dividend last year of 10 per cent.

The Bank of Italy and the River Plate has a paid up capital of $1,500,000 and a reserve fund of $200,000.

The Carrabassa Bank is a private native bank which does an immense discount business, and enjoys a large share of the public confidence.

A French bank with a capital of $2,000,000 is about to be started.

With all these banking institutions you can not buy exchange on New York. There is absolutely no banking business done with the United States. Even our minister and consuls have to draw for their salaries through English banks. The disbursements to our naval force in La Plata waters, the rendezvous of our South Atlantic squadron, have to be through London. You can not remit money to or from South America except by way of London.

SOME NEW RAILWAYS BUILDING.

Santa Fé has authorized the construction of a narrow-gauge railway from its capital city, Santa Fé, to Reconquista colony in the Gran Chaco, a distance of 140 miles. The road will run inland about 40 miles from the Parana River. A railway is also to be built to Tucuman, a distance of 330 miles, which will open up a fertile country.

Cordoba is to have another railroad to connect it directly with Buenos Ayres and bring into market the rich pampa lands of the southern part of the province. This province is destined to be great and prosperous. Its population had doubled in the last fifteen years and with the immigration now pouring into it, the increase of the coming decade and a half will be much greater.

All the fertile pampa country between Buenos Ayres and Mendoza is coming into favor with immigrants by the construction of the railroad which gives a direct line from the national capital to a junction with the Trans-Andine Railway at Mercedes.

The Central Argentine Railway is building a branch from Las Yerbas to Pergamino at a cost of $5,000,000. This is without any Government guaranty, the business of the company warranting the increased mileage. This company paid in 1887 12 per cent. dividends and had a surplus of $324,785.

The Northwest Argentine Railway Company is building an extension from

La Madrid to Tucuman, traversing a fertile country. This enterprise is without Government aid, and the additional capital required was at once subscribed by the Northwest Argentine shareholders.

The Clark Brothers, who are building the Trans-Andine from Mendoza to Los Andes in Chili, are also building about 600 miles of railway in the province of Corrientes and the territory of Misiones. The lines start from Monte Caceros, the termination of the East Argentine on the Uruguay River, one running to Posades on the Parana, opening up for settlement the rich territory of Misiones, and the other to Mercedes and Corrientes—the latter the capital of the province of Corrientes on the Parana just south of the inflowing of the Paraguay River.

The last Congress granted concessions for railways with 5 per cent. guaranties per annum, with the exception of one—the Formosa line, which has 4½ per cent.—as follows:

Railways.	Miles.	Cost.
Buenos Ayres to Cordoba	465	$18,000,000
San Juan to Catamarca	610	35,000,000
Cordoba to Carlota	305	10,000,000
Villa Maria to Reconquista	305	11,250,000
Nueve Julio to San Rafael	455	16,750,000
Buenos Ayres and Limay	740	26,000,000
Chaco Great Southern	610	20,250,000
Rio Bermejo Northwestern	335	10,000,000
Bahia Blanca to Rio Quinto	710	22,750,000
Rio Quinto to Rioja	370	13,000,000
Chaco and Tartargal	560	25,500,000
Formosa to Tarija	465	18,000,000
Chilecito to Famitina	35	1,500,000
San Juan to Chumbicha	180	9,000,000
Entré Rios and Corrientes	300	12,000,000
S. Cristobal and Tucuman	370	11,000,000
Other shorter lines	1,110	32,500,000
	7,925	292,500,000

It is calculated that a traffic of say 10,000,000 passengers and 7,000,000 tons of freight will suffice to earn sufficient to cover this guaranty obligation, which is $14,535,000 a year. These lines will be many years in building, and several of them doubtless will never be built under the guaranty, as English capitalists prefer to take railway securities of Argentine railways without government guaranties when the prospective business gives fair promise of earning fixed charges and operating expenses. The government, so long as it pays guarantied interest, retains control over the lines, regulating freight and passenger tariffs, and continues to do so until all its advances on account of interest guaranties are repaid with 6 per cent. interest. It is a striking fact that the government thus far has lost nothing by its guaranties of interest on railway cost, and those roads built by the government itself have been sold to private companies at a fair profit.

During 1887 the Argentine Republic borrowed in Europe $35,000,000 at 4½ per cent., and Argentine railway enterprises secured $35,000,000 more, and other industrial enterprises obtained $10,000,000 at an average of 6 per cent., most of the latter securities being placed at less than 5 per cent. discount.

The field for enterprise, the opportunities for increased trade and for investment in the Argentine Republic are constantly widening, and it behooves the people of the United States to look sharply after business which awaits their coming, but which will not wait long. The French, the Italians, the Germans, the Belgians, and the English are already in the field, and are reaping a rich harvest. Soon, very soon, they will monopolize the business.

The correspondent of the South American Journal, London, writes from Rosario, under date of September 11, 1886, as follows of the Argentine Republic.

"It is not only a pastoral country, nor a grain-producing country, rich as it is in these respects and great as its future developments in these branches of industry undoubtedly must be. It is rapidly advancing to a prominent position among the wine, sugar, and oil producing countries of the world, and the facilities offered by the government to those who endeavor to promote these very remunerative industries are such as are not to be met with elsewhere. Of course the successful carrying on of these trades demands capital, but they are enterprises which prove, as few things besides are capable of proving, the truth of the saying that capital begets capital and money makes money. It is the very fact that the plant of wine and sugar making establishments is so costly that has kept many who would have been glad to go into the business from doing so, but I have known some who, accepting subordinate positions, with a very small interest, at sugar works in Tucuman and Santiago del Estero, are to-day rich men, and are able to establish works of their own."

C.

A SKETCH OF BRAZIL—PHYSICAL CHARACTERISTICS—PRESENT MATERIAL CONDITION—ITS FUTURE PROSPECTS.

Comparatively speaking, very few people in the United States have an approximately accurate knowledge of the vast territorial extent, of the physical characteristics, of the present material condition, and of the future possibilities of Brazil. The prevailing idea of the country is that of a tropical region, with a very unhealthy climate, a land of malaria and fever, of big alligators and bigger snakes, of a mongrel race, without energy and enterprise, indolent, unintellectual. It is strange in this intelligent age that such misconception should prevail concerning one of our greatest neighbors on this continent, about the most favored portions of the earth's surface. Four-fifths of Brazil is an elevated plateau, with an altitude ranging from 2,000 to 5,000 feet above sea level.

The continent of South America comprises one-seventh of the habitable surface of the globe, and Brazil includes within her borders more than three-sevenths of South America. Extending from the fourth degree of north latitude to the thirty-third degree and forty-one minutes of south latitude, and from the thirty-fifth to the seventieth degree of longitude west from Greenwich, Brazil has an extreme length of 2,600 miles and a maximum width of 2,500 miles. Its seacoast is more than 4,000 miles in extent. Within its borders, according to the best statistical authorities, are 3,287,964 miles. The area of the United States, including the vast territory of Alaska, is 3,501,404 square miles. The area of Europe, including all of Russia, is 3,761,657 square miles. The United States has a population of 60,000,000, Europe 334,000,000, Brazil 14,000,000. The United States, all Europe, Brazil, each have, after eliminating unarrable portions, probably about equal proportions of population-sustaining land.

FORM OF GOVERNMENT.

The Government of Brazil is a constitutional limited monarchy. The constitution establishes four powers, the moderating, the legislative, the executive, and the judicial.

The moderating power is vested exclusively in the Emperor, as chief representative of the nation; that he may maintain the equilibrium and harmony of the other powers.

The legislative power is vested in a general legislative assembly composed of senators and deputies. The senators are elected for life, every province having a certain number nominated in triple lists, from which the Emperor selects one-third. The senators are 58 in number, the deputies to the number of 122 are elected every four years. They are chosen by electors who are elected by citizens having an income of $122.50 a year. The session is annual and lasts four months. The deputies have the initiative in taxation and public expenditures, and a vote of want of confidence terminates the life of a ministry.

The executive power is vested in the Emperor and his ministers and secretaries of state, who are responsible to the people's representatives. There are six ministers, one for each of the departments of justice, war, marine, finances, foreign affairs, agriculture, commerce, and public works. One of these is the premier. There is added a council of state, composed of twelve ordinary members, to whom may be added twelve extraordinary associates, all appointed for life.

The provincial governments are intrusted to a president in each, appointed by the executive power, and to provincial assemblies elected every two years by citizens qualified to vote for national deputies.

The judiciary is independent, the judges holding their offices for life, but subject to impeachment. In criminal cases all proceedings are public after indictment. In civil cases arbitrators may be appointed, whose decisions are final, and no civil law suit can be carried on without previous declaration that conciliatory means were tried in vain.

The constitution guaranties the inviolability of liberty, safety, and property of citizens, and of their civil and political rights. Individual liberty is subject only to law, and in the same way liberty of thought and of the press are guarantied. No one may be persecuted on account of religious belief, and every kind of labor or industry is free which does not interfere with public well-being. No one can be arrested save upon lawful authority.

A constitutional monarchy in name, the Government of Brazil is practically a republic with a president for life. The Emperor Dom Pedro II is broad and liberal minded, and lives only for the advancement of Brazil materially and morally. He has reigned since he was fourteen years old, and has been on the throne for more than twenty-six years. He is especially interested in public works of internal improvement, the encouragement of immigration, and the promotion of industry and commerce. There is no privileged aristocracy, only descent from noble Portuguese families, distinguished services, or great fortunes, receiving a tacit consideration. The emperor confers, for life only, titles as reward for services, of marquis, count, and baron. The royal family is a most estimable one, and every member of it is sincerely loved by the whole people.

PROVINCES AND THEIR PRODUCTS.

There are twenty provinces varying greatly as to size and populousness. The six largest are Amazonas, Matto Grosso, Grand Para, Goyaz Minas Geraes, and Bahia. Amazonas and Matto Grosso are sparsely populated. Goyaz has less than one person to the square mile. Grand Para, Bahia, and Minas Geraes are more advanced in development, although their population bears no adequate proportion to their extent and wonderful capabilities. The most populous provinces are, in the order named, Rio de Janeiro, Bahia, Pernambuco, São Paulo, Minas Geraes, Ceará, Rio Grande do Sul, Parahyba, Maranha, Algoas, Rio Grande do Norte, Piauhy, Sergipe, Goyaz, Sta. Catharina, and Parana. Those which offer the greatest opportunities for colonization are Minas Geraes, Goyaz, São Paulo, Sta. Catharina, Rio Grande do Sul, Parana, and Matto Grosso. The opening of the navigation of the Rios Tocantins and Araguaya, which is now assured, will open for settlement the finest lands and the most salubrious climate in the world.

In 1884-'85, the total agricultural products of sixteen provinces, there being no returns from Goyaz, Rio Grande do Sul, and Rio Grande do Norte, were 274,746,119 milreis, or $187,373,059.50. These values, it must be understood, were in most cases those on which export duties were charged, and returns from some ports are not given. The value of the agricultural products for the year 1885-'86 may be safely put at $250,000,000. The total import and export trade for 1885 of Brazil—the latest complete statistics obtainable—was $218,841,413. The exports were $118,323,551 and the imports $100,525,862.

TRADE WITH THE UNITED STATES.

The present importance of Brazil to the people of the United States is very great, and year by year our interests there will increase. In 1887 the trade between the United States and Brazil amounted to $61,024,829. We bought of the products of Brazil $52,953,176, and sold her of ours $8,071,653. The balance of trade against us was $44,881,523.

The total trade of Brazil for the year 1885, the latest complete statistics I can obtain, was $218,849,413. Of this the exports were $118,323,551 and the imports $100,525,862. We bought in 1887 not quite one-half of all Brazil sold, and sold her a fraction more than one-thirteenth of what she bought in 1885.

On the other hand, during 1886 England sold to Brazil $29,953,876 worth of products and bought only $16,843,613. The balance of trade in favor of England was $13,110,263.

France sold to Brazil in 1885 $12,521,623 of her goods and bought of Brazil $19,717,384. The balance of trade against France was $7,195,761.

Germany in 1884 sold Brazil $3,936,520 of products and bought $5,354,458. The Germans bought $1,417,938 more than they sold.

England, France, and Germany took of the products of Brazil $41,915,455 and sold her $46,418,019. The United States bought of Brazil $11,057,721 more than England, France, and Germany, did and sold her $38,340,366 less than those three countries did.

The British public has invested in Brazilian securities and enterprises about $500,000,000. The returns on this annually are quite 8 per cent., or $40,000,000 a year. Therefore England draws at least $53,110,263 of gold due to Brazil every year. In other words, our $44,881,523 of gold, the balance of the account between the United States and Brazil, went to England. More than that, every dollar's worth we sell to Brazil and every dollar's worth we buy pays a toll to English banks and bankers of 1½ per cent., or on $61,024,829 we paid in exchange in 1887 at 1½ per cent. $915,372.

For, notwithstanding our trade with Brazil averages more than $61,000,000 a year—or only $27,302,745 less than that of England, France, and Germany—we have no direct money transactions between the two countries. All exchange is on London. Even our gold eagle and half eagle are unknown coins here in Rio de Janeiro, but every shop-keeper knows the value of an English sovereign!

MODERN PROGRESS.

The progress of Brazil in the last twenty years has indeed been marvelous. This is illustrated by the march of public improvements. In 1867 there were but 410 miles of railways in the Empire. On the 1st of January, 1887, there were in operation, or about completed, 5,742 miles of railroad and in addition partial provision made for 3,115 miles more. Before the end of the present century there will be more than 10,000 miles of railway in operation, and in connection with the navigation of the great rivers of the Empire the vast interior of Brazil will be fully opened for settlement and development.

GOVERNMENT RAILROADS.

The Government has built and is operating 1,059 miles of railroad, which cost $76,206,888.50. The receipts for the fiscal year 1884-'85 were $6,672,300.50, and the expenses $4,007,177.50, leaving a net balance of $2,665,123—or about 3½ per cent. on the capital employed. When it is taken into consideration that these Gov-

ernment roads were built for strategic purposes, and to open for settlement the interior, this snowing is not discouraging. The principal lines are: The Dom Pedro Segundo, 450 miles in length, with net earnings in 1884 of $2,454,766.50; the Mogyana of São Paulo, the completed part of which in 1884 yielded nearly 16 per cent. on its cost. This line is being extended into Minas Geraes at the rate of 1 kilometer a day and will soon reach Uberaba with the object of eventually penetrating Southern Goyaz and Northern Matto Grosso. Every mile of the road is through a fertile, beautiful country, with a delightful climate. The West of São Paulo Railway pays nearly 12 per cent. It is a provincial line. The São Carlos and Rio Claro pays 10 per cent. The Gran Para pays 9 per cent. The Leopoldina, a branch of the Dom Pedro Segundo, pays 9 per cent. The Campos and Carangola pays 5 per cent. The Macahé and Campos pays over 8 per cent.

The English lines are the São Paulo, which pays an annual dividend of 17 per cent., and whose stock is worth 200; the Brazilian Imperial Central Bahia, whose 6 per cent. guarantied debentures sell on the London Exchange at 110 to 111, and the $100 shares at 98½ to 99½; the Great Western of Brazil 6 per cent. unguarantied debentures being worth 119 to 121 and its preferred stock, 7 per cent., 99½; the Minas and Rio, whose guarantied 7 per cent. stock is worth 102 to 103; the Receife and San Francisco, whose 5½ per cent. guarantied stock is worth 102 to 104; the Southern Brazilian Rio Grande do Sul, whose 6 per cent. debenture stock sells for 118 to 120; the Alagoas, whose 6 per cent. debentures bring 104 to 106; the Carpos and Carangola, whose guarantied 5½ per cent. stock brings 101 to 103; Leopoldina, whose mortgaged bonds sell at 101 to 103; the São Paulo and Rio de Janeiro 5 per cent. debentures worth 105 to 107; the Western, of São Paulo, whose debenture 7 per cent. bonds sell for 112; the Conde d'Eu, whose 5½ per cent. debentures are selling at par; Brazil Great Southern, whose 6 per cent. debentures bring 103 to 105.

These quotations are of sales on the London Exchange January 6, 1888.

TELEGRAPHS AND STEAM NAVIGATION.

There are 6,175 miles of telegraph lines with 10,987 miles of wire owned by the Government. The entire coast from Rio Grande do Sul to Para is in telegraphic connection with Rio de Janeiro. It is proposed to connect this Government line at Para with a cable to the United States and for this purpose the Dom Pedro Segundo Cable Company has been organized in New York.

The fluvial navigation is more than 15,000 miles in extent, and employs a large foreign and domestic capital. More than 2,000 miles additional is provided for under contracts with the Imperial Government. The coast navigation comprises more than 10,000. There are two native lines, the Northern and Southern Steam Navigation Companies, with fleets of fine steamers running to all the northern and southern ports from Rio de Janeiro. The United States and Brazil Mail Steam-ship Company is permitted to engage in this coastwise traffic, and finds it very profitable. There are twenty-four lines of steamers regularly engaged in the Brazilian trade. With the exception of the United States, the countries under whose flag these steamers sail contribute to their support by very liberal mail pay and some of them in addition pay a tonnage bounty.

FOREIGN TRADE AND NATIONAL CREDIT.

The foreign trade of Brazil for the fiscal year ending June 30, 1887, was about $218,000,000. The United States' share was $61,081,059—$52,955,591 being imports from Brazil and $8,125,468 being exports to Brazil. The exports of coffee by Brazil last year were over 6,000,000 bags of 120 pounds each, valued at about $80,000,000. Rubber made about $15,000,000 more. Sugar was a considerable item, 330 tons, and cotton about 100,000 bales, and hides about 24,000 tons.

The year 1887 was generally a prosperous one for Brazil, the advance in the price of coffee and the increase in the value of the milreis counting largely in her favor. Exchange is now worth 24½ pence, bringing the milreis up to 48½ cents.

The credit of Brazil is very high. Its 5 per cent. sterling bonds are quoted on the London Exchange at 103, and her railway securities range from par to 200. Every engagement of the government is scrupulously kept, and there has never been a default in interest or failure to meet the requirements of her sinking fund. Her foreign debt is being gradually reduced, and she is able to borrow money at home at 5 per cent., a domestic loan to refund 6 per cent. securities into 5 percents two years ago, being subscribed several times over. Her paper currency has appreciated more than 33½ per cent. in two years.

The foreign debt is $109,232,889. The internal debt—that is securities held at home, interest payable in currency and not gold—is $219,059,900. The paper currency amounts to about $93,000,000. This paper currency is within 7½ cents of being worth its face in American gold.

RIO DE JANEIRO.

The political and commercial metropolis of Brazil is Rio de Janeiro. It has a population of over 500,000, and its trade is nearly one-half that of the whole Empire. The entrance to the Bay of Rio de Janeiro is quite narrow, only 1,700 yards, almost concealed by islands. The Indian name was Nitherohy, "Hidden Water," and Cabral, the Portuguese discoverer, mistook it for the mouth of a great river, hence the name, "River of January." The harbor, the surrounding scenery, and the city itself are beautiful beyond description. The mountains rise sheer from the water and pointed peaks are in the foreground as well as in the distance. Sugar-Loaf Mountain, a most striking rock formation, stands guard on the south side of the narrow entrance. Gavia and Corcovado seem to overhang the city. The bay is a broad expanse of water with many pretty coves and jutting headlands and picturesque islands. The city is built on and about seven hills—some of them low mountains. There is no spot in the world which in strikingly grand and beautiful scenery will compare with the surroundings of Rio de Janeiro. The city itself is very picturesque: turn which way you may, you catch a different view of some one or other of the prominent features of the mountain landscape or of the bay. The harbor is one of the finest and safest, and the navies of all the world might anchor there.

The streets of the business portion of the city are very narrow and vehicles can not pass; even pedestrians have to take refuge in doorways to escape passing carriages. The residence streets are wider and the suburbs have broad avenues. The architecture is not striking, but the business houses and public buildings have a solid appearance. The walls are very thick, being of concrete, either with tile facings or plastered. There are street railways everywhere, and where, as the natives say, none but Englishmen and dogs walk, these tramways are very profitable property. The public squares are numerous and very attractive with their carefully attended tropical adornments. The streets are well paved and there is a perfect system of drainage, thanks to an English improvement company, which has made a good thing of supplying first-rate sanitary conditions.

During the summer months, from November to April, it is very hot in Rio de Janeiro, but in an hour you can be on the mountains, where it is delightfully pleasant. There are always sporadic cases of yellow fever in the summer, but for several years there has not been an epidemic.

The quarantine regulations are very stringent; while cholera has afflicted the Argentine Republic and Chili during the past two years, Brazil has entirely escaped.

There are many fine residences with ample grounds, some of them costing more than a million dollars. Those located on the high grounds command magnificent views of the whole range of mountain and bay scenery. The two principal suburbs are Botofago and Larangerias, which with their wide streets, handsome cottages, and large, well-kept grounds filled with tropical trees, shrubs, plants, and flowers, are perfect beauty spots.

The city is provided with abundance of water brought by aqueducts from mountain streams. The old aqueduct, built more than a hundred years ago, follows the old drive-way to the Corcovado, and the walk or ride along the road is full of interest, and affords many entrancing views of the city below, of the island-dotted bay, its bold headlands and beautiful coves. There is a railway to the peak of Corcovado, and the ascent by it is far more enjoyable than the ride to the summit of Mount Washington, and the view from the former is altogether grander and more awe-inspiring.

Rio de Janeiro is in every way an interesting city. The harbor is full of the shipping of every commercial nation. The quays and docks are grand works, and the bustle and activity of a great commercial emporium are apparent on every hand. The streets of the business part of the city are thronged, and the shops are interesting with their displays and throngs of customers. In Rua Primero de Marco, street of the 1st of March, is concentrated the commercial business of the port—a business amounting to more than $100,000,000 a year.

Notwithstanding the fact that Rio de Janeiro has the reputation of being an unhealthy place, the death rate per thousand is less than that of New York, London, or Paris. Although yellow fever is popularly supposed to have its habitat along the coast of Brazil, the fact is that consumption claims more victims than fevers do. The mean temperature during a period of thirty four years is 74° 62′. The hottest day in all that time was in January, 1880, when the mercury rose to 99° 50′. The coldest day was in September, 1882—50° 36′.

The foreign trade of Rio de Janeiro for the year 1887 was a little over $100,000,000, nearly half of that of the whole empire. About two-thirds of the coffee crop is shipped from Rio de Janeiro.

The principal native banks of Rio de Janeiro are the Banco do Brazil, Banco do Commercio, Banco Rural, Banco National, Banco Industrial, Banco International. These banks have a paid-up capital of $45,000,000. These are all banks of issue. The English Bank of Rio de Janeiro and the London and Brazilian have an aggregate paid-up capital of $5,000,000 and a nominal capital of $10,000,000. The London and Brazilian has a reserve fund of $1,500,000, and the reserve of the English Bank of Rio de Janeiro is $950,000. The annual dividends are 10 per cent. A German bank, with a capital of $2,000,000, has just been established, the Deutsche Bank of Berlin and the Discount Bank of Hamburg supplying the capital. There is also a strong French bank and nine private banks.

NATIONAL TRAITS, RELIGION, AND POLITICS.

The Brazilians are an affable and hospitable people, very well bred, and, as a rule, decidedly intelligent and quite accomplished. They are fine linguists and excellent musicians. Generally they are under medium size, but you see many splendid physical specimens among the men. The urban Brazilians are French in their manners and dress, and it is rare that you meet an educated gentleman or lady who does not speak French as fluently as their native language. They are domestic in their habits and conjugal infidelity is very rare indeed.

The prevailing religion is Catholic, but there is absolute freedom of religious belief and worship. By law Protestant churches can not have steeples or bells, but that is the only restriction.

The press is untrammeled. The Brazilian writer is not a respecter of persons, and public men and public affairs are criticised and discussed with a freedom unexampled in any other country except the United States. Satire and carricature are favorite weapons in political contests, and even the Emperor does not escape. Journal do Commercio, the Journal of Commerce; and O Paiz, the Country, are the two leading newspapers of Rio de Janeiro.

The National Library is a creditable institution, and literary, scientific, and musical societies are numerous. The leading men are greatly interested in popular education, and there are several organizations devoted to promoting it. The Emperor is the leading spirit in this as in every other scheme for the intellectual and material advancement of the country.

There is an intensity in the politics of Brazil and for several years past the party contests in many respects resembled our *ante-bellum* political struggles. The divisions are into conservatives and liberals. The great issue was slavery, but that question is now a thing of the past. The conservative party opposed for years an anticipation of the normal results of the emancipation laws of 1871 and 1875, which provided a gradual and certain extinction of the admitted evil. But the general conviction that immigration would not be spontaneous and in great proportions so long as slavery exists impelled the conservatives to yield to the pressure for a law declaring immediate emancipation. The Italian immigrants have proved so much more efficient laborers in comparison with the slaves, being perfectly reliable and accomplishing far more, that the economy of getting rid of slavery was forced upon the planters. The system of free negro labor was tried in the coffee districts and proved to be perfectly satisfactory, and a general movement among slave-owners themselves to hasten emancipation followed. The session of Parliament which met May 3, 1888, passed an immediate emancipation measure.

MANUFACTURES.

The manufacturing interests of Brazil, although they have not reached great magnitude, are important and are steadily growing. All Spanish and Portuguese countries depend upon customs revenues for their main source of government incomes. Brazil has a high tariff, and in certain lines the products of native industry are steadily increasing. There are some eighty cotton mills in the Empire and every one is paying. The manufacture of hats on a large scale has been started in Rio de Janeiro and the undertaking has proved profitable. Boot and shoe factories are also starting. A large match works has been established in São Paulo. The German colonies are making beer, and native larger of a good quality can be had in Rio de Janeiro. English capitalists have built large flour mills and elevators in the harbor of Rio de Janeiro, and native flour of the roller process is competing with our best brands. The iron industry is beginning to assume importance. The ore is the best in the world, and immigration supplying skilled labor will make Brazil an iron-producing country of the first order. The only possible drawback may be the failure to find coal of the right quality contiguous to the ore and the flux. It is claimed that the coal-fields of Goyaz are in juxtaposition to the iron ore and the limestone.

There is a great want now of skilled machinists, the employés in even the government workshops being imported. This must continue to be the case for some time to come, because the demand will have to be greater before there will be sufficient inducements to attract immigrants of this description.

The lumber business must develop in the southern provinces, where the great pine forests are found, and the wood-working industry ought to become important. The variety and beauty of the cabinet woods of Brazil have attracted great attention and excited general interest at all the international expositions where she has made exhibits.

PHYSIÇAL GEOGRAPHICAL FEATURES.

In outline the physical geography of Brazil is quite simple. The mountain system is comprised in five principal serras. The Serra do Mar, or coast range, begins in the Province of Rio Grande do Sul and skirts the sea line, sometimes rising abruptly from the water, again with a strip of lowland intervening, until the Province of Espirito Santo is reached. The Serra da Mantiqueira apparently breaks off from the Serra do Mar near the city of São Paulo, the capital of the province of that name, and continues northward for some distance as one range, lying back of the Serra do Mar. Northwest from Rio de Janeiro, in the Province of Minas Geraes, the Mantiqueira branches into three prongs; the one tending northeast continues to be known as Serra Mantiqueira, the one running almost due north is called Serra Espinhaço, and the one having for some

distance a due west course is named Serra Vertentes. This last, almost midway of of the breadth of Minas Geraes, turns northwest and joins the great Serra da Mangabeira, which, under different local nomenclatures, runs north and south by west from within 350 miles of the mouth of the Amazon to the fifteenth degree of south latitude, where it begins to trend more to the west till the southern part of the Province of Goyaz is reached, where it makes a great horseshoe curve, and crossing that province and Matto Grosso, joins the highlands of Boliyia. It is this uplift which, striking across the Rio Madeira, causes its great rapids and interrupts the navigation of that magnificent tributary of the majestic Amazon.

There are a great many outlyers, spurs, and offshoots of these different Serras, and the map-makers throw in, more or less hap-hazard, all as abrupt mountain ranges. The Serra do Mar is bold and striking in its outline, and has been wrought into jagged lines and grand peaks, but, save at particular points where there have occurred spasmodic and Titanic upheavals, the ranges represented on the maps as mountains are flat-topped "chapadas," or table-lands. All the geological facts recorded by the many distinguished geologists who have made general examinations of the grand plateau of Brazil show incontestibly that eons of ages ago it was one vast plain, submerged, and has been elevated by successive upheavals and fashioned by various agencies into its present configuration.

Far back of the submergence was the ice age, when the equatorial belt, as well as the rest of the earth's surface, was wrapped in frigid embrace. The melting, moving glaciers triturated, ground, and wore, and plowed, and scraped, and bored their way in divers directions, and rounded and molded the primitive metamorphic rock surface. As they slowly melted they floated, and the *détritus* of metamorphic materials was deposited in a layer over the whole face of the region. This drift, so peculiar to Brazil, which is spread everywhere, a thick stratum of rounded and angular metamorphic gravel, pebbles, and bowlders, with finer triturated materials, cemented by ferruginous admixture, over mountains, ridges, hills, and valleys, conforming even to channels and gouges in the rock basis, Agassiz calls glacial drift. He and his followers insist, and with reason, that water never deposits *détritus* of this description in this way. The erratic bowlders, conspicuous in almost every Brazilian landscape, furnish corroborating evidence of the glacial-drift theory. So also do the masses of pure, almost pure, metal found, like the great mass of copper in Northwestern Bahia, leagues from any copper-bearing locality.

The glacial theory is still further borne out by the fact that over the drift—the "cascalho," as the natives term it—there is always found a clay deposit, such as water does deposit. And, again, over this comes, in places, immense deposits of limestone, and superimposed also enormously thick layers of sandstone. Everywhere you see the remnants of the sandstone formation. In the Amazon valley it is conspicuous in the Ereré chapada, near Monte Alegré and Santarem. In the valley of the mighty Rio Tocantins, along the western face of the Serra Mangabeira, the red sandstone cliffs are grander than those of Southern Utah and Northern Arizona. They stand out bold in the valley of the Rio São Francisco, and the chapadas of Northwestern Bahia and of Northern Minas Geraes, the "tabaleiro," or high table-lands, divides of the tributaries of the Rio São Francisco, of the Rio Mucury, of the Rio Jiquitinhonha, and of the Rio Paroguassú.

The denudation which followed upon the subsidence of the waters and continental uplift has left vast areas of sandstone in the "chapadas" and serras like Espinhaço and Mangabeira. The Serra Vertentes, the water-divide between the tributaries of the São Francisco and those of the Paraná of the Argentine Republic, is simply a rounded ridge, a great "chapada." The Mangabeira where it makes the horseshoe curve in Southern Goyaz, and there called the Pyreneos, is a vast metamorphic uplift with peaks nearly 10,000 feet high.

The highest points of the Serra do Mar, the striking, pointed peaks of the Organ Mountains, forming so conspicuous a feature of the landscape, and adding grandeur to the prospect as you enter the Bay of Rio de Janeiro, are only about 7,000 feet above sea level. The Itatiaiassú, "great flamboyant rock," the apex of the Mantiqueira, in Minas Geraes, is 10,300 feet in altitude. The peaks of Itabira, Itambé, and Itacolumé, of the same range, while of lower altitude, are imposing features of Mantiqueiran landscapes. But the Mantiqueira and Espinhaço, as they approach their northern limits, flatten out into "tabaleiros" or "chapadas." This is the case at Diamantina, Minas Novas, in Minas Geraes, and the diamantiferous region about Lencoes and Sincora, of the Province of Bahia.

The grand plateau of Brazil, with an average altitude of nearly 3,000 feet, is part of the great table lands, which, beginning in Venezuela, extend across Guiana, and, cut by the valley of the Amazon, are prolonged south to Paraguay and west to the foot-hills of the Bolivian Andes. The Amazon basin, at its eastern edge, is really quite narrow. From the summit of the sandstone "chapada," near Monte Alegré, you can look across to the highlands of Guiana. From the Serra da Tumucumaque, the boundary between French Guiana and Brazil, to Serra Tiracamba, on the northeast edge of the Province of Maranham, the distance is less than 500 miles.

HYDROGRAPHIC SYSTEM.

It results from the mountain system of Brazil that there are three general hydrographic divisions, that of the Atlantic coast, that of the Amazon, and that of the vast number of streams and rivers which finally swell by their waters the Uruguay, the Parana-Paraguay, which in turn uniting form the La Plata of the Argentine Republic.

The Atlantic coast watershed really begins a short distance south of Rio de Janeiro. There are but two streams of any size flowing into the Atlantic south of Rio de Janeiro. The Rio Iguapé, of São Paulo, and the Rio Pardo, of Rio Grande do Sul, flow into the Atlantic, and while they drain considerable areas, they are of comparatively little importance. Southwest of Rio de Janeiro the coast range follows the sea very closely, and practically all southwestern Brazil drains into the La Plata through the Uruguay, the Parana, and Paraguay. The great Rio São Francisco falls into the Atlantic; but less than 200 miles of its 2,000 miles of course are through the coast low-lands. The vast area it drains, an empire in extent as well as in natural resources of far more consequence, in mineral wealth, in agricultural and pastoral capabilities, and in superficial extent than the great valley of the Ohio, lies chiefly west of the Mantiqueira Mountains, and forms no inconsiderable part of the great plateau of Brazil. The São Francisco is obstructed about 200 miles from its mouth by the Falls of Paulo Affonso, the Niagara of South America. Above this obstruction the São Francisco, and one of its main affluents, the Rio das Velhas, are navigable for more than 1,800 miles. A line of steamers runs from Bahia to the Lower São Francisco and up it as far as Piranhas. The low lands along the Lower São Francisco are as fertile as those of the Nile, and some of the finest sugar estates of Brazil are found there. The São Francisco forms part of the boundary between the Provinces of Bahia and Pernambuco, and divides Sirgipe from Alagoas, two small provinces at its mouth.

One of the principal rivers of the Atlantic coast watershed is the Parahyba, of the Province of Rio de Janeiro, the region of which is famous for its coffee. This river has its source only about 80 miles southwest of Rio de Janeiro, and running southwest for some distance turns north, and traversing the whole length of the Province, falls into the Atlantic north of Cape Thome. It is not navigable for steam-boats, but serves a useful purpose, in places, by affording barge transportation to coffee planters to and from the railway. The Dom Pedro Segundo Railway follows it for some distance north, as well as south, and the railway to São Paulo runs along it for many miles. The Rio Doce is the great river of the Province of Espirito Santo. Its mouth is obstructed by a bar, but light draft steam-boats run up as far as Porto da Suza. Its sources are in the east slope of the Mantiqueira range, and the country drained by it is wonderfully fertile with a very healthy climate.

The Jiquitinhonha is the next great river to the north. It is famous for the gold and diamond mines on its headwaters. Along the Bom-Successo, one of its source streams, was found the first gold washings of Brazil. This occurred in 1698, but no mining of consequence was attempted until 1720. In 1740 diamonds were found in the Jiquitinhonha, and the whole region was taken into the hands of an officer appointed by the King of Portugal, called the intendente of diamond mining. Gold mining was prohibited, and ingress and egress could only be had by permits issued by the intendente. The region is still rich in gold "placers," but no regular attempt at working them has been made since 1740. Hartt in his Geology and Physical Geography of Brazil speaks of the Jiquitinhonha region as still virgin gold fields.

The province of Bahia has but one navigable stream, the Rio Paraguassú, which falls into the bay on which is situated the city of Bahia, the capital of the province. It is only navigable for a short distance. North of Bahia the provinces of Sergipe and Alagoas are wedged in at the mouth of the Rio São Francisco, which is only navigable 129 miles, to the town of Piranhas. There are many streams flowing into the sea in the provinces of Alagoas, Pernambuco, Parahyba, and Rio Grande do Norte, but not one is navigable, except by canoes. There are many important cities on the coast of these provinces, among them Macio, Pernambuco, Parahyba, and Natal, south of Cape São Roque. These ports are important because of their sugar and cotton shipments. Pernambuco is the third city of Brazil and has over 200,000 inhabitants. It is known to Brazilians as Recife, on account of the reef in its front, inside which is the harbor. This reef extends along the coast south of Cape São Roque for a long distance, and at Pernambuco there is an opening through which ships drawing 19 to 20 feet can pass. North of Cape São Roque the coast falls off rapidly to the west, and the mouth of the Amazon is 838 miles west of the extreme eastern point of Brazil.

The first navigable river northwest of Cape São Roque is the Parnahyba, an immense stream which drains nearly the whole of the province of Piauhy. Ceará, just south of Piauhy, has a great number of streams, and, looking at the map, one would suppose it to be magnificently watered. But it is, unfortunately, subject to long droughts, and the streams not only go dry, but every bit of surface vegetation is parched, and dies. In 1878 a most frightful famine occurred, and a half million people are supposed to have perished. Great numbers of Cearánese have emigrated to the Amazon valley, and have become rubber gatherers. They are thrifty, energetic, and make good laborers. The city of Ceará has about 50,000 inhabitants, and is a place of importance. Agassiz was delighted with the beauty of its situation and general appearance. The province of Maranham has two large streams, navigable for a considerable distance into the interior—the Grajahú and Itapicurú. There is a great future for this province when immigration is turned thither. It is rich in minerals, and its cotton lands can not be excelled for fertility or the staple grown. The capital, Maranham, is a quaint old city, beautifully situated, and when its harbor is improved and new people possess the interior, it will become a great seaport. All this will come some day.

The railways in operation north of the province of Rio de Janeiro are: First, that of Espirito Santo, from Ponte de Area to Santa Clara, 100 miles long. Second, those of Bahia, the Central Bahia, the Bahia and São Francisco, which, with branches, are about 300 miles in length. Third, the Paulo Affonso Railroad about the falls of the São Francisco, and the Alagoas, from Macio to Palmaxes, about 100 miles in all. Fourth, those of the province of Pernambuco, the Receife and São Francisco, which extends from the city of Receife or Pernambuco to Garanhnus, three-fourths of the distance to the São Francisco River, about 150 miles long; the Receife and São Laurenco and Nazareth and the Receife and Caxanga short lines. Fifth, the Natal and Nova Cruz of the province of Rio Grande do Norte, the Parahyba-Independencia of the province of Parahyba, the Ceará-Baturite of the province of Ceará, and the Camorim-Sobral of the province of Piauhy. These railways of the provinces north of Pernambuco, except the Natal-Nova Cruz, are Government roads. The Natal-Nova Cruz is English.

The North Brazil Central sugar Factories were destined to work a revolution in the sugar-growing interests of that part of the empire. The Central factory system is necessary to enable the cane-sugar planter to compete with the beet-sugar product. Factories are established in the center of sugar districts and lines of tramways laid down to the plantations. The factories take the cane of the planters and pay for it according to the yield. The Brazilian Government guarantied 6 per cent. interest on several millions of dollars, and dishonest promoters and contractors came near involving a great number of British investors in heavy losses and destroying the hopes of the North Brazilian sugar planters. The factories were built, but the promoters stole a large part of the money of the investors and the contractors supplied inferior second-hand machinery at exorbitant prices. The result was there was no money for operating expenses, and the old-fashioned machinery and process proved well-nigh useless.

In the face of this misadventure, and while investments in central sugar factories were being vigorously denounced in England, Messrs. Westerndorp, of Amsterdam, brought out, in December, 1886, the project of the central sugar factory for the provinces of Parahyba and Sergipe, and asked proposals for £86,000 sterling in 5 per cent. debentures at 90. They set forth frankly in their circular the result which had attended the British venture in the North Brazil concerns, and gave in plain language the reasons which caused the failure. The Hollanders understood the sugar business, and believed in the great superiority of the diffusion process over the old crushing and extracting process. The result was that Messrs Westerndorp received proposals for 75 per cent. more debentures than they had to sell. The result has not only justified the confidence of the Hollanders, but the British investors, encouraged by the success of their neighbors, made satisfactory arrangements with the Government of Brazil, always liberal and just, reorganized their companies, and spent another million dollars in "diffusion" plant and providing working capital, and are now on the highway to success under capable and honest management. The central sugar factories of the province of Rio de Janeiro are a great success, although the yield of the cane is not as great as that of North Brazil. The Quissamá central factory netted during 1886 $75,000 on that season's operations.

THE SAO FRANCISCO VALLEY.

The Rio São Francisco watershed includes more than one-half of the immense province of Minas Geraes, a large part of the provinces of Bahia and Pernambuco, and the whole of the provinces of Sergipe and Alagoas. The two latter are small and lie along the lower river. The far greater part of the vast region whose waters it carries to the sea is an elevated table-land, blessed with a delightful climate, and having an inexhaustibly rich soil, which produces with a minimum of labor almost every fruit, vegetable, and cereal good for man. Coffee, cotton, sugar, and tobacco yield enormously. Indian corn, potatoes, mandioca, and all garden vegetables require but little cultivation. The wealth of its forests and natural products can not be estimated. Its deposits of iron ore are incalculable, and the richness of the ore and its purity are unequaled. Of gold and diamonds the yield from the infinitesimal area exploited has been fabulous. The gold "placers" and the diamond fields have not been exhausted. Every authority agrees in this. The gold fissure veins have been scarcely prospected. Starting from the sea and following this noble stream for more than 1,800 miles, the traveler undoubtedly passes through

the most wonderful portion of the earth's surface. Probably 2,000,000 of souls are scattered over this region, which would support in plenty—ay, in luxury—20,000,000 of people.

Capt. Richard F. Burton, the great English traveler, spent five months in the valley of the São Francisco and drifting down the river on a raft. He has left, in his "Highlands of Brazil," two volumes of 450 pages each, a most entertaining *mélange* of statistics, history, gossip, description, and reflections. John Mawe, Dr. Gardner, Rev. Mr. Walsh, in their "travels" in Brazil, in the early part of this century, describe different portions of the great São Francisco valley. Dr. Pohl and St. Hilaire covered more minutely the same field, while Count Castelnau trod in their footsteps. Dr. Liais surveyed the river itself and made elaborate maps to illustrate the exhaustive report he wrote. Milnor Roberts, one of our most distinguished civil engineers, was employed for years on like surveys and lost his life while engaged thereon. Mr. Orestes St. John, one of Agassiz's assistants in the Thayer expedition, studied carefully the geology of the region, and Professor Hartt, in his "Geology and Physical Geography of Brazil," summarized the results of his colaborer's work.

The falls of Paulo Affonso, the Niagara of South America, and the rapids above and below, are insurmountable obstacles and obstruct the navigation of the São Francisco for about 216 miles. The Bahia Steam Navigation Company regularly run steamers on the lower river, a distance of 129 miles, as far as Porto das Piranhas, and from thence to Boa Vista the Paulo Affonso Railway connects the upper with the lower river. The navigation of the upper river from Boa Vista to the mouth of the Rio das Velhas, a distance of 792 miles, presents no serious difficulties. The Rio das Velhas, at a trifling cost, can be made navigable at all seasons to Sabara, a distance of 366 miles, and brings you to within 222 miles of Rio de Janeiro. An extension of the Dom Pedro Segundo Railway to Sabara is now in course of construction. From Sabara to Boa Vista the distance is, by the rivers, 1,158 miles.

Captain Burton, having floated down the Rio das Velhas from Sabara, on a raft, in 1867, in speaking of his last night on the river, quotes approvingly from a Brazilian writer, as follows:

"The river, a natural line of navigation, despised by and despising art, rich in a thousand kinds of produce, fertilizing in its sinuous course millions of acres, was full of all but human life; to its silent banks here and there a canoe was tied, and from its waters rose the log which the solitary fisherman makes his perch; while at rare intervals a dwelling-place and clearings that ignore civilized agriculture dotted the forest shore. Such misery and so much want in the old world! Here such neglected wealth and so much that can make life happy! Lands that will fructify every manner of plant and grain cast into their bosom, shoals of fish to feed the poor, a wealth of precious stones and ores, a channel easily connecting with the outer world! But the age shall come, and the day has dawned when men shall flock to these unknown regions, when gardens, quays, and works of art shall adorn the river side, when town and village shall whiten the plain, and when the voices of a happy people shall be heard where the profound solitude and silence are now broken only by the moan of the dove, by the scream of the night bird, and by the baying of the wild dogs."

Of the great basin of the São Francisco, Captain Burton writes as follows:

"As was said of the Upper Amazon, 'here the sugar-cane and the pineapple may be seen growing by the spectator, standing in the barley-field and the potato-patch.' The uplands can breed in any quantities black cattle, horses, mules, sheep, pigs, and goats, while there will be no difficulty acclimatizing the camel. Of mineral wealth, besides diamonds and opals, agates, gold, and iron, we find mentioned by M. E. de la Martiniere and others, platina, argentiferous galena, mercury, copper (near the Seté Lagoas), antimony, arsenic, manganese, cobalt, and various pyrites. Salt and saltpeter, sulphur and alum, have been found in large deposits. Of building materials we notice marble, freestone, and slate, lime generally dispersed and hydraulic cement; silex, grindstones, and potter's clay are also abundant. The land is admirably fitted for the silkworm, and for the cultivation of cotton, which will some day rival its immense fisheries.

"The hop, and to a certain extent the vine, will flourish; amongst the cereals it produces a wealth of maize and rice, whilst barley, rye, and probably wheat, will succeed in the Geraes. Most of the fruits and vegetables that belong to the subtropical and temperate regions may be introduced. A sugar plantation lasts ten years without replanting, although the cane is most inefficiently treated. Coffee grows admirably. The tobacco is some of the best in the empire; sarsaparilla and cochineal cactus, aloes, and vanila grow wild. The lumber trade is susceptible of a vast development; the aroeira, the branna, the candea, the peroba, the canella, and the fine hard woods of Brazil generally await development. Oil plants and tanning barks, basts and fibers, drugs and gums, as the jetahy-capal, the balm of Peru, the copaiba, and the asafoetida, are yielded in abundance, and the same may be said of bees-wax and of the carnuba wax, which is converted into candles at Rio de Janeiro. The dyes are abundant, from indigo to the pau amarello, and of cabinet woods a long list is headed by the jacoranda (rosewood) and the Brazilian cedar. In the presence of such vast and unexploited wealth awaiting the distressed classes in Europe, we may exclaim with Goethe, 'who says there is nothing for the poor and vile save poverty and crime.'"

The province of Minas-Geraes, a large part of which is drained by the São Francisco and its main tributaries, the Rios das Velhas, Pardo, Paraopeba, Paracatú, Unucutá, Jaquitahy, Verdé, and their numberless affluents, is an empire in itself. It covers ten degrees of latitude and seven degrees of longitude, and its superficial area is 450,000 square miles. Lying west of the coast range of mountains it is all plateau land, and the climate is pleasant and salubrious. Captain Burton, who spent five months principally on the Rios das Velhas and São Francisco, says "with alternations of storm and rain, cold wind and hot wind, mists and burning suns, I had not an hour of sickness." The scenery is both pleasing and grand. Its mountain ranges, with peaks towering more than 9,000 feet above sea-level, its wide-stretching, rolling campos, its lovely valleys, present to the eye of the traveler at every turn new features of landscape beauty.

In mineral wealth no region on earth excels, if it equals, it. Its deposits of iron cover thousands of square miles, and whole ranges yield ores that are 76 per cent. pure iron. The Moro Velho gold mine, worked constantly for fifty years, has yielded over $100,000,000. The famous Braganza, Abaeté, and Estrella do Sul diamonds were found in Minas Geraes mines. The Braganza was found in 1741 in the mine of Caithé Mirim, and is one of the crown jewels of Portugal. It is larger than a hen's egg. The Abaeté was found in 1791. The following is the story of its finding: Antonio Suza, José Felis Gomes, and Thomaso da Suza, exiled for offenses to the far west of Minas Geraes, while washing for gold in the Abaeté River, one of the small tributaries of the São Francisco, found this diamond, which weighed 144 carats, or nearly an ounce. Through a priest they secured their pardon upon delivering to the authorities the diamond. The Abaeté is also among the crown jewels of Portugal. The Estrella do Sul was found in 1853 by a negress at Bagagem, in Minas Geraes. It weighed in the rough 254 carats. The ignorant negro woman sold it for $15,000. The Bank of Rio de Janeiro bought it for $150,000. It was reduced to 125 carats in cutting, and was bought by the Khedive of Egypt. It is not perfectly white, but its "fire" makes it one of the finest gems in existence.

Burton compares the work of the searchers for diamonds in Minas Geraes to the scratching of beavers. He says "the rivers have not been turned, the deep pools above and below the rapids where the great deposits must collect have not been explored even with the diving helmet. All is conducted in the venerable old style of the last century, and the fiend routine is here more deadly than red tape in England."

Twenty years ago Minas Geraes was the far interior of Brazil. The Dom Pedro Segundo Railway had not climbed over the coast range, and a fairly good turnpike, which afforded fairly comfortable stage-coach facilities to the borders of the province, was looked upon as a modern marvel. But now well built and equipped railroads are in operation, and are being steadily extended, and the province makes liberal provisions for defraying the expenses of immigrants. There is steam navigation on the Upper São Francisco, and the railroad will soon be at Sabara, the head of navigation on the Rio das Velhas. There is a grand future awaiting Minas Geraes.

Throughout Minas Geraes the traveler finds a succession of interesting objects to engage his attention. In the towns and cities reached by the railroad he can contrast decaying magnificence with the freshness of a new life and a new order of things which attends on the civilizing and progress-inspiring advent of the iron horse. You can form some idea of the enormous wealth yielded by the old gold "placers" when you inspect the solid constructed churches and public buildings. The former were built from the pious offerings of the fortunate gold miners. The private establishments, with provisions for troops of slaves, betoken the lordly state once maintained by the local grandees and magnates. Several causes combined to bring about the long reign of "innocuous desuetude" which is only now giving way to modern progress in the heart of Minas Geraes.

The old Portuguese settlers in the interior of Brazil and their immediate descendants were bold, enterprising, hot-headed fellows. The vice-royal government was oppressive and short-sighted. The exaction of a fifth of the gold mined was wholesale robbery. Its collection was enforced with great severity, but illicit mining and evasion of the royal exaction were notorious. The effect was demoralizing in every way. Lawlessness was the rule and not the exception. The adventurers from São Paulo and the mineiros of Minas Geraes were always at swords' points, and scarcely a mining center but has its tradition of bloody encounters.

When gold-mining was in full progress and the yield at its height, diamonds were discovered in different parts of the province, and immediately vast districts about the diamantiferous localities were taken possession of in the King's name and the intendente of diamond-mining assumed arbitrary sway. Gold-mining was absolutely prohibited and the prohibition was enforced. The royal competition for slaves to work in the diamond washings increased the price of slaves enormously. Ingress to and egress from the diamond regions was regulated by the intendente of diamond-mining. Trade of every kind could only be carried on under permits from the same authority. Every road was guarded and no one could pass, even with a passport, without the most minute examination of all his effects, even his whip handle being split to see if it had been hollowed to conceal diamonds.

Agriculture was always neglected in the Brazilian mining districts. All supplies came from the seacoast, being packed on mules over the coast ranges. The cost of living, of the bare necessaries of life, was fabulously dear. Trade with her colonies was selfishly and unwisely restricted by Portugal. It was late in the eighteenth century before England compelled the mother country to allow a restricted intercourse between English traders and the Brazilians. It was not till the House of Braganza had to flee to Brazil and become a dependent of England that English merchants had the ports of Brazil freely opened to them. Then came the movement for independence, the colony becoming the empire, and quickly following the abdication of Dom Pedro Primero and the minority of Dom Pedro Segundo. The troublous times were intensified in the interior by local seditions and rebellions.

The people of São Paulo and of Minas Geraes have always been republican in their tendencies. They had suffered much from the senseless laws and the crushing exactions of foreign rulers and their representatives. The rich gold "placers" in time were worked out, and diamond mining destroyed all other industries over wide tracts of country. The old miners had no knowledge of deep mining, and exploitation of the richest quartz never was carried below water-level. Those of the interior who had amassed great wealth left for Rio de Janeiro and Bahia or returned to Portugal. Those who remained soon became impoverished, and their descendants, too proud to work without slaves, degenerated into "Matudors," intermarried with Indians, begot offspring in illicit intercourse with negro women, and slowly but surely the race deteriorated. A few families maintained their purity of blood, and their descendants are at last beginning to prove that "blood will tell" in the long run. During the two decades that have passed since Minas Geraes felt the first impulse of modern progress through a turnpike road which brought the seacoast within a few days' journey great changes have been wrought. The provincial government retarded the great work by unwise and extravagant attempts to hasten railroad building. The guaranties voted recklessly to railway companies could not be met, and with credit injured projected lines started could not be completed. But the national government has slowly but steadily pushed on its lines and the new day has dawned. It is yet morning, but high noon is marching on.

THE AMAZON VALLEY.

The mighty Amazon is the conduit which carries off the drainage of a region so vast that the mere statement of the proportions oppress the human mind. The Amazon Valley proper is a bottle-shaped depression, the narrow neck with a funnel-mouth to the east. This funnel-mouth, from the highlands of Guyana to the serras of Maranham, is 500 miles across, gradually narrowing until, 700 miles from the sea, at Monte Alegré, the Amazon Valley contracts to a few miles. Thence westward it rapidly widens, swelling, like a great bellied bottle, till it is more than 800 miles wide. From the sea to the ascending plains of the western shore of Peru in a straight line the distance is over 1,300 miles. Two great rivers of Peru, the Marañon and the Ucayaly, the former having its source in Southeastern Peru and the latter in Bolivia, drain the watershed of the Andes into the Amazon. The Rio Negro, having its source streams in the highlands of Venezuela and New Granada, pours an enormous volume of water into the Amazon. The interlocking headwaters of the Orinoco and the Negro make it possible for canoes to pass from one main stream to the other.

The area of the grand plateau of Brazil, draining into the Amazon through the Tocantins, Xingu, Tapajos, and the Madeira, compares with that of our Mississippi Valley. The Xingu and the Tapajos are obstructed some distance from their mouths by rapids, resulting from serras running east and west; but above these obstructions, although traversing an elevated plain, the banks are low, and in the rainy season the country overflows. The Madeira is a majestic river, and its forests and other natural riches are innumerable. The rapids, 400 miles from its mouth, are insurmountable obstacles to navigation, but above them the Madeira and its great tributary, the Guaporé, are navigable for more than a thousand miles with light-draught boats. The whole western slope of Bolivia, a vast region but little known, is tributary to the Madeira.

The Xingu has recently been explored from its source down by a German scientific expedition which ascended the Parana and Paraguay and spent a year in Matto Grosso and on the Xingu. The report is especially interesting, and is an important contribution to biology as well as to geography and zoology. The Purus, although a larger river, is almost wholly of the Amazon valley proper, drawing little from the Brazilian plateau watershed. The Purus, the Xingu, the Tapajos, and the Madeira are wonderfully rich in rubber, and the rubber gatherers swarm through the forests bordering the streams in search of this article, which is almost as precious as gold. The rubber tree is of several different

varieties, but that which yields the most valuable product, known as the seringuia, is found in greatest numbers along overflowed bottom lands. It does not require great moisture, but the seeds are naturally carried by overflows to low lands where they are deposited by the subsiding water and germinate and grow. The tree is incised, the bark being barely per orated, and the milk exudes and is caught in a tin cup affixed below the incision with a bit of clay. The exudation is coagulated over a fire of palm nuts, and is worth now about 75 cents a pound.

Notwithstanding the Amazon valley is a low, flat plain, lying under the equator, and a great part of it is overflowed for months during the year, it is not unhealthy and the heat is not oppressive. Mr. Edwards, an American in "A Voyage up the Amazon," gives, pages 206-7, the following unqualified testimony as to the climate and healthfulness of the Amazon valley:

"It seems singular that directly under the equator, where, through a clear atmosphere, the sun strikes vertically upon the earth, the heat should be less oppressive than in the latitude of New York. This is owing to several causes. The days are but twelve hours long, and the earth does not become so intensely heated as where they are sixteen. The vast surface of water constantly cools the air by its evaporation and removes the irksome dryness that in temperate regions renders a less degree of heat insupportable. And finally, the constant winds blowing from the sea refresh and invigorate the system.

"According to observations made by Mr. Morris during the months of June, July, and August, at the hours of 6 a. m., 3 p. m., and 8 p. m., the mean temperature for June was 70° 98′ Fahrenheit, the highest 86°, lowest 77°; for July the mean was 80° 54′, highest, 86°, lowest, 77°; for August the mean was 80° 92,′ highest, 86°, lowest, 77°. The mean for the three months was 80° 81′, and variation but 9°. I do not believe another spot upon the face of the earth can show a like result. This heat we never felt to be oppressive, except dining in state in black cloth coats. Moreover, we were never incommoded by heat at night, and invariably slept under a blanket. The reason for this and also for wearing flannel next the skin at all times, is, that in a very few weeks a person becomes so acclimated as to be sensitive to a very slight degree of variation in the temperature.

"This equality of temperature renders the climate of Para peculiarly favorable to health. There is no kind of epidemic disease; people live to a good old age, and probably the average of life is as high as in the city of New York."

Wallace, in his "Narrative of Travels on the Amazon and Rio Negro," says, page 128:

"Here the seasons are so modified as to render the climate one of the most agreeable in the world. During the whole of the dry season scarcely ever more than three days or a week passes without a slight thunderstorm and heavy shower, which comes on about 4 in the afternoon and by 6 has cleared off again, leaving the atmosphere delightfully pure and cool, and all vegetable and animal life refreshed and invigorated. Had I only judged of the climate of Para from my first residence of a year, I might be thought to have been impressed by the novelty of the tropical climate; but on my return from a three years' sojourn on the Upper Amazon and Rio Negro, I was equally struck with the wonderful freshness and brilliancy of the atmosphere and the balmy mildness of the evenings, which are certainly not equaled in any other part of the world I have visited."

Professor Agassiz and his wife were equally impressed, and speak in the following emphatic way about the climate:

"We are very agreeably surprised in the climate here. I had expected from the moment of our arrival in the region of the Amazon to be gasping in a fierce, unremitting, intolerable heat. On the contrary, the mornings are fresh. A walk or ride between 6 and 8 o'clock is always delightful, and though during the middle of the day the heat is certainly very great it cools off again toward 4 o'clock. The evenings are delightful and the nights always comfortable. Even in the hottest part of the day the heat is not dead; there is always a breeze stirring." (*)

Commodore Maury, in "The Amazon and the Eastern Slopes of South America," gives the scientific reasons for the climatic conditions being so favorable. They are due to the physical configuration of the southern half of the continent and the trade winds, which, constantly blowing across wide reaches of the ocean, regulates the rain-fall and moderates the heat.

The value of the commerce of the Amazon Valley was, in 1885, $30,000,000. Of its exports nearly 61 per cent. came to the United States.

THE TOCANTINS WATERSHED.

The Tocantins, usually classed as an affluent of the Amazon, has in reality no connection with the Amazon Valley proper. The physical characteristics of its watershed are entirely different. Ages ago the Tocantins emptied directly into the sea, without mingling its floods with those of the Amazon. But in time the channel, which cut off the Island of Marajo from the mainland, was formed, and a small part of the water of the Amazon found an exit by the Tocantins outlet. The Para mouth of the Amazon, so called, is the old channel of the Tocantins. The Tocantins has almost a due north course from its sources in the Pyrenneos Mountains of Southern Goyaz. It has numerous tributaries flowing west from the highlands of the Provinces of Minas Geraes and Maranham.

In an elevated, grassy plain, midway between the valleys of São Francisco and the Tocantins, two rivers take their rise in the same lagoon, one of which flows east into the São Francisco, and the other west into the Tocantins.

The Mangabeira Serra, which follows the course of the Tocantins, is flat-topped and breaks down in places on its west side, forming red sandstone cliffs resembling those of Southern Utah. The Araguaya, which joins the Tocantins at the fifth degree of south latitude, about 350 miles from Para, has its sources also in the Pyrenneos Mountains, which extend into Matto Grosso. Its course is also due north, and it is separated from the Tocantins by a range of mountains. To the west the Araguaya Valley is, in turn, separated from the Xingu Valley by a serra which traverses Matto Grosso. The Rio das Mortes, one of the principal western tributaries of the Araguaya, is a great river that rises in central Matto Grosso, its principal source-stream springing from a plain where the headwaters of the Paraguay have their origin. It is possible to go in a canoe from Para, 100 miles from the sea, by the Tocantins, the Araguaya, the Das Mortes, to the Paraguay, and down that river and the Parana to Buenos Ayres.

The region drained by the Tocantins, the Araguaya, and their tributaries includes nearly the whole of the Province of Goyaz, large parts of the Provinces of Maranham, Minas Geraes, Matto Grosso, and one-half of the Province of Para. The superficial area of this great watershed can not be far short of 600,000 square miles. Nine-tenths of this area is elevated table-lands, with great mountain ranges, and consequently there is no excessive heat and a perfectly salubrious climate. In every respect it rivals the watershed of the São Francisco, and in many others it is superior. Its mineral resources are as varied and as wonderful. The "chapada" east of the Tocantins, in Maranham and Minas Geraes, rivals the Serra do Mantiqueira in its gold veins and "placers." The Maranham River, which, with the Paranatinga, forms the Tocantins, is more than 500 miles in length, and for this distance traverses a gold field that was worked in spots a century ago by Portuguese miners, and yielded $50,000,000. The Maranham and its tributaries have over 3,000 miles of water courses, and, with scarcely an exception, the lands drained are gold fields of unrivaled richness. The Cayapo, the Claro, the Piloes, the Rio Grande, the Vermelho, the Das Mortes, some of the principal tributaries of the Araguaya, flow through gold and diamond yielding lands. These streams flow through a country which, until recently, were possessed by numerous and strong tribes of Indians. It is only within a decade that these Indians have been brought under subjection and gathered into villages and Christianized. The Brazilian Indians are, unlike our North American savages, susceptible far more quickly to civilizing influences and soon make fair agriculturists. As laborers they, in some branches of industry, are preferable to Brazilians of the interior.

The iron deposits of the Tocantins and Araguaya watershed are equal to those of the São Francisco region. There is scarcely a useful metal which is not found in Goyaz, and, on the headwaters of the Tocantins, a coal field of great extent has been recently discovered. The quality is superior, and it can be transported by water to Para, where it will drive out English coal.

But wonderful as are the mineral resources of this highly-favored region, its agricultural and pastoral resources are far more valuable. Extending from the third degree of south latitude to the twenty-first, the variety of products yielded by the soil can scarcely be enumerated. Good wheat can be grown in Southern Goyaz, and sugar-cane thence northward requires to be replanted only once in eight years. The coffee tree, planted at military posts along the Araguaya a half century ago, now grows wild, and the members of the Government commission, which surveyed the river in 1873, were astonished at the loads of berries on the uncultivated trees. Indian corn, beans, and mandioca yield four crops a year The mandioca is a tuber which, when grated, makes a coarse meal, the favorite substitute for bread among Indians and Brazilians. The national dish of the Brazilian is black beans and farinha, the meal of the mandioca. The juice of the mandioca makes tapioca, which we convert into a favorite dessert.

The Tocontins-Araguaya country is a rolling campos, interspersed with forests, and is a natural pasturage land. Stock breed rapidly, the increase being phenomenal, and the herds of Goyaz are the chief support of the people. The breeds are inferior. They are the deteriorated offsprings of the animals carried to the interior by the miners of the early part of the eighteenth century. What little agriculture there is carried on now is of the rudest and worst description. If there is a plough used it is precisely similar to that of the Romans of the time of Cæsar—a forked stick, not even iron-shod.

The natural products of the forests include every balsam, vegetable oil, drug, and dye-stuff known to Brazil. The cocoanut palm, the castanha, or Brazil nut, supply a part of the articles exported. The best rubber of the Amazon comes from the Lower Tocantins, and the Mangabeira rubber tree is found in great quantities on the Alto Tocantins. From this tree a superior article of rubber for commerce can be made by a new process of coagulation. The cabinet woods are almost innumerable, including rosewood, satinwood, and ebony.

The Imperial Government and the provinces of Para and Goyaz have conferred extraordinary land privileges upon, and granted large subsides to a North American company which is to establish regular navigation on the Tocantins and Araguaya to connect the port of Para with Southern Goyaz. It is believed the development of this region will be greatly accelerated by this enterprise, and the province of Para to encourage immigration, has appopriated $750,000 to be expended by the navigation company during five years. Once the gold and diamond fields of Southern Goyaz and Matto Grosso are rendered accessible from the sea by steam communication, bringing them within a few days of New York, a "rush" like that to California, Australia, and South Africa will very probably follow.

The city of Para, only 100 miles from the ocean, with easy and safe entrance for the largest steamers, is the metropolis of all the region rendered tributary thereto by the water ways of the Amazon, which were estimated by Humboldt to aggregate 45,000 miles, and hence he fitly denominated that grand net-work the Mediterranean of South America. The population of Para is about 80,000. Its trade is that of an empire in extent, while in magnitude of transactions it rivals Rio de Janeiro. The rubber trade is second only to that of coffee.

The province of Para is one of the most prosperous of the empire, and its custom-house receipts come next to those of the port of Rio de Janeiro. Without debt the province of Para shows a million of milreis to the credit side of its ledger.

BRAZIL'S SOUTHERN WATERSHED.

The southern watershed of Brazil includes practically all the provinces of Paraná, Santa Catharina, and Rio Grande do Sul, the greater part of the province of São Paulo, a considerable part of the province of Minas Geraes, about one-sixth of the province of Goyaz, and a quarter of the province of Matto Grosso. An immense number of streams, great and small, pour their waters into the Uruguay, the Paraná, and the Paraguay, and the combined flood finds its way to the sea through the River Plate. The northern part of this immense watershed is the southern side of the great Serra Vertentes. But this Vertentes, which means water-divide, is not in any sense a range of mountains. It is simply, on the south side, a gentle-sloping plain, cut by stream courses. Through São Paulo and Southern Minas Geraes it is "campos" land, with strips of timber along the streams, and sometimes "sertoes," sandy ridges, covered with thickets of scrubby trees. In Paraná, Catharina, and Rio Grande do Sul there are great forests of the long-leaf pine—a lumber region *par excellence*. There are also great grass-covered plains in these provinces, and here cattle-raising has flourished on a scale comparable to that of the pampas of the Argentine Republic and Uruguay. New railways are opening communication with the interior from the coast, immigration has set in, and a new era has dawned. Agricultural colonies are established and are forming. A revolution is being silently, slowly, but none the less surely effected.

The province of São Paulo was settled by a sterling, energetic, enterprising race, the best Portuguese blood. Their descendants have been worthy of such sires. The ancient Paulistas were ruthless, even cruel, as all strong races are when planted in a new country. They were gold-seekers and also slave-hunters. They fought Indians with the object of first possessing the land and its hidden treasures, and then to capture slaves who could oe made to work the gold "placers." When Portuguese newcomers, imitating the example of the Paulistas, penetrated to the highlands of Minas Geraes in search of gold they were welcomed to bloody encounters. All through the interior the frequent occurring rivers of death—Rios das Mortes—attested the fierceness of the contest that greed incited. The vice-royal government had a hard time of it keeping the peace and collecting the "royal fifth." Across the grand plateau of Brazil, from the Serra do Mar to the Bolivian Andes, the Paulistas led the way in search of new gold fields. The story, as told in "Relatorios" and "Itinerarios," left by the ancient Paulista leaders, is as exciting and entertaining as the romances of Rider Haggard.

The city of São Paulo, the capital of the province, was the pride of the Paulistas. Fierce and ruthless as the old pioneers were, they did not neglect the cultivation of the gentler humanities, and the university founded has continued the chief seat of belle-lettres in the Empire. The spirit of sturdy independence manifested during colonial days survives unimpaired. The glamour of transplanted royalty, the tinsel and frippery of the court transferred from Lisbon to Rio de Janeiro, had no attractions for the bold and independent patriots of São Paulo. Their leaders were the first to insist upon independence, and when Dom Pedro Primero, after yielding and accepting a constitutional crown, attempted to wield power unconferred, the Paulistas were foremost in demanding abdication. Dom Pedro Segundo, succeeding upon the retirement of his father to Portugal, was an infant, and a regency reigned in his name. Giving offense, the regency was abolished and Dom Pedro Segundo at fourteen became a responsible sovereign. During all these troublesome times one family of São Paulo, the Andradés, was conspicuous for its patriotism, its fearlessness, and its un-

* A Journey in Brazil, page 142.

comprising integrity. Three brothers, statesmen of great ability and unswerving fidelity to principle, two of them were banished from the Empire and recalled by the demands of the people. They were worthy to be ranked among the world's foremost champions of liberty and the rights of humanity. Intrusted at times with great power, they never profited by their opportunities and died poor. The same virtues have been displayed by their descendants, and the Andradés of to-day, although poor, are universally esteemed, and have been frequently honored by the Emperor.

The province of São Paulo is the most progressive and its prosperity is great. It has more than a thousand miles of railways. It liberally promotes immigration and makes generous provision for the immigrants. One of the first railroads built in Brazil was that from the port of Santos to São Paulo. It was a work of great difficulty, climbing over the coast ridge at an elevation of more than 3,000 feet. The cost was enormous, but the return has been ample on the investment. The railroad from São Paulo to Rio de Janeiro, an English enterprise, has for years netted 17 per cent. on the capital employed. The coffee crop of São Paulo is very large, and plantations are being planted westward in the new lands brought into market by the extension of the Mogyana railway. The port of Santos is second to Rio de Janeiro in coffee shipments. The exports of the province have more that doubled during the last seven years. In 1881 they were valued at $20,172,715.50, and in 1887 at $42,553,222.40. More than 30,000 immigrants came into the province during 1887.

The city of São Paulo has a population of more than 100,000. It is delightfully situated on the eastern edge of the great plateau, and the days are always pleasant and the nights cool. It is well built, the streets paved, and has perfect drainage. Street railways afford accommodation to residents of every quarter. It is a busy, bustling, thriving city, and has a grand future. The extension of the Mogyana Railroad to Southern Goyaz is only a question of a comparatively short time. When completed it will make the fairest portion of the empire tributary to São Paulo.

Parana has a railway completed from the port of Paranagua to Curitiba, 110 miles long. The extension of this line to the interior is being constructed. Rio Grande do Sul has four lines of railway, the Porto Alegeré and Hamburg, the Porto Alegre and Itaqui, the Southern Brazilian Rio Grande do Sul, and the Uruguayana. These are all English enterprises, and although incomplete are giving very satisfactory returns. It is believed by the best informed that it will not be long before Southern Brazil will show a phenomenal development.

THE CAUSES WHICH HAVE RETARDED DEVELOPMENT.

The causes of the long continued undevelopment of the great plateau of Brazil are not difficult to comprehend when the topography of the country is understood. The mountain ranges, hugging the Atlantic coast, the few great rivers extending into the interior, and the obstructions in these have been until quite recently an almost insurmountable barrier to progress westward. The policy of Portugal was restrictive in the extreme, and it was not until the royal family fled to Brazil, upon the overrunning of its European possessions by Napoleon, that England, always Portugal's firm friend, obtained unrestrained trading relations with Brazilian ports. After the independence of Brazil was declared the influence of Portuguese traditions dominated her commercial policy for many years.

Upon the discovery of gold, at the beginning of the eighteenth century, in the provinces of São Paulo and Minas Geraes, and a half century later in the provinces of Goyaz and Matto Grosso, a rush of gold-seekers followed. But no agricultural development accompanied or succeeded the mining era. The miners were slave-hunters as well as gold-seekers. First the Indians were subdued, and those escaping death were put to work in the "placers." The Portuguese traders to the coasts of Africa brought negroes by the tens of thousands, who were hurried to the mining districts as fast as they arrived. All industry on the seacoast was paralyzed by the drawing away of slaves to wash for gold in the interior. During three-quarters of a century some of the richest gold "placers" of Minas Geraes and São Paulo were systematically worked and exhausted. A limited area of Goyaz and Matto Grosso was explored and great quantities of gold obtained along a few streams. Diamonds were discovered in Minas Geraes, Goyaz, and Matto Grosso, and thereupon the Government of Portugal took absolute possession of the diamantiferous regions, and ingress and egress were solely by permits given by the intendente of diamond mining. Troops guarded every trail and by-way and the penalty of disobedience of the interdicting orders was death. The government worked the diamond mines by slaves and fixed its own price for their hire from their owners. Gold washing was prohibited, and over vast regions of Minas Geraes, beginning in 1740, all industry, save that conducted under government supervision, was stopped. The same thing occurred twenty years later in Goyaz and Matto Grosso.

All communications with the seacoast was by pack-mules. Even the necessaries of life, even the provisions on which the miners subsisted, had to be transported across the Serras do Mar, Mantiqueira, and Espinhaco by mule trains. It was not till 1867 that a fairly good turnpike road was constructed across the Serra do Mar and the Sierra Mantiqueira, and the stage-coach travel between Rio de Janeiro and the eastern edge of Minas Geraes, in three days, made possibly. The exhaustion of the richest gold "placers," the royal working of the diamond fields, the political troubles, beginning in 1800 and continuing until 1830, nearly depopulated the little of the vast interior of Brazil which had been settled during the mining era.

The yield of the limited era of gold "placers" worked, and of the diamond fields, was something fabulous. At least $1,400,000,000 of gold was extracted, and $120,000,000 worth of diamonds. But Brazil was only the poorer therefor. There had been no permanent agricultural development of the interior, and even the progress of the seacoast provinces was not very greatly accelerated.

The Crown exacted one-fifth of all the gold won, and Portuguese adventurers carried off still more. Reckless extravagance was everywhere the rule, and fortunes quickly accumulated were speedily dissipated. The old miners were an adventurous, energetic, reckless, extravagant race. Their descendants, impoverished, without slaves, were too proud to work and too poor to attempt any great mining works. For nearly three-quarters of a century the people of the interior simply maintained a mere existence. There was no attempt at deep mining, and beyond washing along the borders of streams with the "batea" (pan), no "placer" washing was done. Hydraulic mining was unknown to Brazil, and a "little giant" has never been tried in the Empire. Immense areas of Minas Geraes, Goyaz, and Matto Grosso are covered with virgin "placers," and await exploitation. Burton says the whole extent of the Serra Espinhaço is undoubtedly diamantiferous, but, save the Jiquitinhonha region, in Minas Geraes, and Lencoes and Sincora, in Bahia, it has not been intelligently prospected. The mines of Diamantina, in Matto Grosso, yielded in a few years a great number of gems, but, excepting at one or two places in the rivers Claro and Piloes, no regular diamond mining was ever attempted in Goyaz. That was more than a century ago, and hostile Indians compelled the abandonment of the attempt. The region of the Cayapo River, in both Goyaz and Matto Grosso, is rich in diamonds, as the occasional arrivals thence of precious stones in Rio de Janeiro demonstrate, but only a few white men, fugitives from justice, have even visited the locality.

The barrier which the coast ranges presented to the development of the vast interior of Brazil has but recently been overcome. There are now more than 5,000 miles of railway in operation and nearly 4,000 miles in course of construction. Long lines of river navigation in Minas Geraes and São Paulo will supplement the railways of those provinces, but still only the edge of the grand plateau has been fairly opened. The Mogyana Railroad is the only line pushing far westward into the great interior. The navigation of the Tocantins and Araguaya will open more than a thousand miles north and south of the plateau of the central interior. These two great undertakings, the pushing northwest from São Paulo of the Mogyana Railway and the navigation of the Tocantins and Araguaya south from Para, will effect a great change in the material condition of Brazil. They are promoted by the two most prosperous provinces of Brazil, backed by the credit of the imperial government. The treasuries of São Paulo and Para are overflowing and their credit stands high. Senator Prado, late minister of state for affairs of agriculture, commerce, and public works, is the controlling spirit in the Mogyana enterprise, and Senator Sequira Mendes, of Para, the great conservative leader of North Brazil, is the zealous and disinterested champion of the navigation of the Tocantins and Araguaya.

OTHER OBSTACLES TO PROGRESS REMOVED.

As great as the changes are which have been wrought by overcoming the physical obstacles to the progress of Brazil, they are not greater than those which have been effected in Brazilians. Race characteristics, being of slow growth, can be modified only by time and favoring circumstances.

The Portuguese of the sixteenth and seventeenth centuries were remarkable for their bold enterprise and their tireless energy and ceaseless activity in pushing discoveries and establishing colonies and trade relations. Had their intellectual growth been commensurate with their physical expansion Portugal today would have been the first power of the world. It is not necessary to deal with the causes which led to the decadence of Portugal. They are patent to every student of history. The Brazilian of the eighteenth century promised to far outstrip their progenitors in material and intellectual development. But when we consider the tenacity of traditional influences and the obduracy of race prejudices it was too much to expect the descendants at one or two removes from the old Portuguese stock to develop new lines of polity in even a new theater of action.

The discovery of gold in marvelously rich alluvial deposits, enabling vast sums to be quickly won, while it begot a spirit of daring enterprise, elicited tremendous energy, and superinduced phenomenal development, was nevertheless the cause which by and by worked greater injury than good to Brazil and the Brazilians. The thirst for gold, the passion for acquiring quickly great wealth, dominated and subordinated every other aspiration. All interests of country, of family, of the future were disregarded in the race for gold getting. The rapacity of the Crown, eager for the one-fifth royalty of all gold mined, the selfish greed of the ruling powers of the home government, the corruption of the vice-royal government, all contributed to the same evil end in Brazil. In return for the vast wealth poured into the royal coffers Brazil got nothing. There was no commerce developed, because Portugal would suffer no trading with her colonies except under her flag.

The only labor in the mines was that of slaves. The adventurers who banded themselves together to search for gold always calculated upon capturing Indians to work the "placers" they might find. Those who had capital depended upon slaves brought from Africa, but the Portuguese slave-traders could not begin to supply the demand. The Jesuits humanely endeavored to throw the protecting ægis of the church over the unfortunate Tupi and Bocotudi Indians, but it was in vain. These powerful tribes, treacherously betrayed, were decimated in their efforts to resist enslavement, and those who escaped the speedy death of the mines fled to the inaccessible recesses of the far interior. In Paraguay and Misiones the Jesuits had gathered into communities the Guarani Indians of the River Plate region, and were fast civilizing them. Religious intrigues led to the banishment of the Jesuit fathers by Spain, and the helpless Guaranis were pounced upon by bands of Paulistas from Brazil and tens of thousands led captive, to die under the lash and cruel treatment of mining "bosses" in São Paulo and Minas Geraes. The bloodshed, the misery, the suffering, the woe attending gold-winning in Brazil can scarcely be imagined, much less detailed. Every nobler instinct of humanity was banished by the demoniacal lust for gold. The lowest depths of human depravity were sounded.

All industry save that of gold mining was paralyzed for the want of slave labor. White men would do no work. It was degrading. They trooped to the mines and took their chances in the general scramble. The end came, fortunes vanished, slaves disappeared, and the impoverished descendants of the mining nabobs, too poor to get slaves, and too proud to work, have dragged out a mere existence, have simply vegetated.

For more than a hundred years Brazil and Brazilians have been paying the penalty. It is thus that the iniquities of the fathers are visited upon the children unto the third and fourth generations. The decadence which began with the beginning of the nineteenth century and the causes superinducing it have heretofore been detailed. The intervening hundred years have been a long period of pupilage for the Brazilians, but the schooling of adversity has not been in vain. The Brazilian of to-day is liberal-minded. Religious liberty exists in fact as well as by law. Civil marriages can be contracted. The dead Levite can be interred even in consecrated ground. The foreigner is welcomed instead of being tolerated.

A hundred years ago only ships flying the flag of Portugal could enter a port of Brazil. Now Brazil allows steamers bearing the stars and stripes to participate in her coasting trade. In 1853 public meetings were held in the United States to demand of our Government coercive measures against Brazil to compel the opening of the Amazon to free navigation. In 1867 Brazil of her free accord made the Amazon a free highway for all the world. The schoolmaster is a part of the machinery of the state in Brazil. Free schools are, as with us, an institution. A Brazilian lady, one of the distinguished Andrade family, has graduated at the Normal College of the city of New York, and is introducing the normal-school system in Brazil under the special patronage of the Emperor.

THE ABOLITION OF SLAVERY.

Slavery is dead. The gradual emancipation law of 1871, which provided that thereafter all children born should be free, and requiring annual registration of slaves, and manumission of those over sixty years of age, had reduced those in bondage to about one million in 1886. At that time an earnest movement in favor of immediate emancipation began, and a bill providing therefor was introduced in the Chamber of Deputies in 1887 by Affonso Celso, jr., and although it failed to pass, the support it received showed that the day of freedom was nearly at hand.

The impelling cause behind this movement for immediate emancipation was the consuming desire of Brazilians to attract immigration. They saw with envy, not unmixed with alarm, the tremendous impetus the immigration to the River Plate from the Mediterranean countries of Europe had given to the Argentine Republic. A few Italian immigrants had been introduced by coffee planters of the province of São Paulo during 1885 and 1886, and their labor in cultivating and saving that crop had proved far more satisfactory in every way than slave labor.

The Prado family, one of the most progressive and influential of the province, started the practical work of immediate emancipation by calling together their neighbors and proposing to give all their slaves freedom forthwith, and to arrange for a system of free labor. The proposal was adopted and the slaves set free. They remained on the old plantations and, as free laborers, proved to be better and more reliable workmen than they had been while slaves. The Pradós and their neighbors had no trouble in getting their coffee crop to market, and once the news of this movement reached Italy, immigrants began to flock

thence to São Paulo. During 1887 more than thirty-five thousand immigrants came from Italy and Portugal and found employment in that province. The abolition of slavery, so far as São Paulans were concerned, was settled.

The example of the Prados was followed, and during the last three months of 1887 at least 100,000 slaves were manumited. During the first three months of 1888 nearly 30,000 immigrants came into the province, and the large slave-holding provinces of Rio de Janeiro, Minas Geraes, Bahia, and Pernambuco began to see that if they did not get from under the incubus of slavery they would be left far behind, and, singular to say, what had not before been generally perceived, the rapid progress the provinces of Parana, Santa Cathirina, and Rio Grande do Sul were making, began to be universally talked about. There were no slaves in these provinces, and as railroads were built a small but steady stream of immigration flowed in; agriculture, which had been largely abandoned years ago for pastoral pursuits was beginning to revive, and the trade of these southern provinces was found to have grown enormously in a few years.

The movement for immediate emancipation which had begun in the province of São Paulo spread to other provinces. The people of Minas Geraes, that immense region so wonderfully rich in soil and mineral wealth and favored with a delightful climate, saw, in the example of their neighbors of São Paulo, their own means of industrial redemption. They not only began to emancipate their slaves, but made liberal overtures for immigrants. Their provincial assembly appropriated large sums to defray the cost of bringing in immigrants, and petitioned the Imperial Government to survey public lands to be given to the newcomers.

The planters of the province of Rio de Janeiro were the only laggards in this great movement. They persisted in decrying it, and insisted that the immediate emancipation of slaves would demoralize the labor system and bankrupt all coffee planters. But they could not stem the tide, and their slaves began to run away to São Paulo and Minas Geraes. The provincial assembly had to act. It authorized the sale of the Leopoldina Railroad, and provided a large fund for the promotion of immigration.

The registration of slaves completed in January, 1888, showed that only about 600,000 remained, at least 400,000 having been set free by the popular movement begun in São Paulo. There is not in the history of any people a more splendid example of magnanimous liberality than that exhibited by the majority of the slaveholders of Brazil.

But while it was settled beyond peradventure that slavery must be unconditionally abolished by legislative enactment, still many politicians feared to undertake the task. They doubted whether a free labor system could be substituted immediately, and feared the consequences which would follow a general demoralization of the entire agricultural industry of the country.

The conservative ministry in power hesitated and failed to grasp the opportunity presented for gaining political immortality. It manifested no disposition to prepare a bill providing for immediate emancipation, and the people began to insist upon a change of ministers. The demand was loud and persistent for Antonio da Silva Prado, ex-minister of agriculture, commerce and public works, who had started the immediate emancipation movement in São Paulo, to be called to form a ministry. But that gentleman was modest, and suggested João Alfredo Correa d'Oliveira for prime minister, who was authorized by the princess regent to form a cabinet. Choosing the post of finance minister himself, Pereira was called to the foreign office, Prado to the department of agriculture, commerce and public works, Ferreira Vianna to the department of justice, Almeida and Silva to the war and navy departments.

It was a strong ministry, and when the general assembly met, May 3, a bill was presented to the chamber of deputies abolishing slavery. It passed as rapidly as the forms to be observed permitted, and went to the Senate. That body, to add to the impressiveness of its action, called a special session for Sunday to consider and adopt the measure. By the 14th of May, eleven days after the meeting of the general assembly, the act of emancipation had become a law by receiving the approval of the princess regent. The Emperor, whose dearest wish was to see slavery abolished, had been compelled last year to seek rest in Europe, and simultaneous with the receipt of the news of the accomplishment of that great work was stricken by paralysis. He has recovered sufficiently, it is hoped now, to return to Brazil and celebrate in the cathedral of Rio de Janeiro, where he was baptized, *Te Deum* for this crowning glory of his long reign.

The abolition of slavery, the great works of internal improvement completed and in course of construction, have prepared the way for the incoming of vast numbers of immigrants, and the development of the immense interior of the empire.

An English writer, entirely competent to speak with authority about Brazil, says:

"When one glances back only a few years, and compares the then utter want of national public enterprise with the present actual state of affairs, it is marvelous to see what has been done by national capital, science, and work in railways, steam-ship companies, tramways, telegraphs, telephones, commercial and industrial undertakings, besides the institution of scientific and art societies. It is an awakening from the great relapse that followed the evanescent and fictitious national prosperity of the old days, a recovery from the crisis that in comparison with that of the slave and the financial questions are mere bagatelles; for it was a crisis that temporarily ruined the country, body and soul. Now look at the long list of undertakings by native capital, by native engineers and builders; and by means of the increased facilities for communication and traveling the people go farther away from the narrow circle of their villages and their ideas become enlarged." *

Why should not the future of Brazil be assured? It is true that the climate of the coast lowlands are hot and fevers prevail in places. But the death rate of Rio de Janeiro is less relatively than that of London or New York. The climate of the coast is more endurable than that of Louisiana. And the climate of the grand plateau of Brazil is delightfully pleasant, and can not be excelled for healthfulness. Four-fifths of Brazil is plateau. It is a vast expanse of rolling "campos," traversed by grand mountain ranges, and cut by the valleys of mighty rivers. The natural resources, whether agricultural, pastoral, or mineral, are incomparably superior to any other like extent of the earth's surface.

It requires no gift of prophecy to foretell that this immense and delightfully situated region will attract an immigration rivaling, to a large extent, that which has so largely contributed to the growth and progress of the United States. It can not be otherwise. This is an age of steam and electricity, of general diffusion of knowledge. The masses of mankind are moving steadily in one direction with irresistible momentum—the improvement of their condition. The tide of immigration from Europe during the past year is unprecedented. What is the impelling cause? The political condition of Europe does not afford a satisfactory explanation. "The face of the poor" has been held closer to the grinding process even in modern times. The iron-shod juggernaut of "military necessity" has been quite as ruthless in the past as it is now, without causing an exodus like that of 1887. The dynamic force is wide-spread general intelligence.

The United States has been the promised land toward which all eyes were turned, but how long will we continue to attract "bread-winners" and "bread-growers?" Already we are becoming circumspect. It is time, because we have a "labor problem" of our own. Moreover, prudence dictates that we take thought of the future needs of our own people. We have no longer an immense public domain to dispose of. The generation born to-day will see one hundred millions of people under our flag. The natural increase of a hundred millions! Think of it! It is not a wild flight of the imagination to picture an expansion within the allotted period of one life, coextensive with the North American continent!

Until within recent years there was comparatively little immigration from the Mediterranean countries of Europe. But during the last decade the tide from Italy and the Basque provinces of Spain began to flow toward the Argentine Republic and Southern Brazil. For the last three years over one hundred thousand Italians a year have landed at Buenos Ayres. The phenomenal prosperity of the Argentine Republic is largely due to this influx of Italian settlers. They come largely from the north of Italy, and are of the peasant-farmer class; are industrious, thrifty, and worthy people. The Spanish Basques are a similar class, and make good citizens. The unwise policy of the Argentine Republic in selling its public land in great tracts by the hundreds of square leagues to speculators has resulted in speculative values for lands in the far interior. It is becoming difficult for immigrants to obtain cheap lands in the Republic, and the tide of immigration is turning to Brazil and the southern countries. During the last six months of 1887 the arrivals of immigrants at Santos and Rio de Janeiro averaged over one thousand a week. The arrivals for the first six months of 1888 have been over forty-eight thousand. Nearly if not quite one hundred thousand immigrants will find homes in Brazil this year. Under wise laws and an enlightened and liberal government the future of Brazil as a great state will be assured.

* Paper read before the Royal Geographical Society, London, February 8, 1886, by James W. Wells, M. Inst., C. E., F. R., G. S.

Pensions.

SPEECH

OF

HON. BYRON M. CUTCHEON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 12, 1888.

The House having under consideration the special order for July 12 (being numerous private pension bills allowing pensions greater than provided by the general pension laws)—

Mr. CUTCHEON said:

Mr. SPEAKER: The special order for this evening exhibits in a striking degree the need of revision and codification of our pension laws.

Ostensibly the highest rate to which any officer is entitled under the general law, even of the grade of a general officer, is $30 per month, and therefore the highest rate to which any widow is entitled. And yet we are constantly passing private pension bills granting $35, $40, $50, $75, and even $100 per month; and we do this without uniformity or system, without equality or equity, without any known or unknown rule or modus, without rhyme or reason, according to the eloquence of the plea, the strength of the written report, or the sympathy of the passing hour. It is against this unsystematic and anomalous procedure of granting pensions that I desire to enter my protest.

I do not claim to be less blameworthy than my brother members, for I have voted for many of these anomalous bills. But it seems to me that the time has come for reform.

If the widow of a brigadier-general ought to have $50 per month, then let us make that the law and send the claimant to the Pension Office.

If the widow of a major-general ought to have $75 or $100 per month, then let us fix that amount by general enactment, and not be pensioning the widows of officers of the same grade all the way from $360 to $2,000 per year.

It was to meet just such an ill-regulated and unregulated condition of affairs that in the early days of the session I introduced the following bill:

Be it enacted, etc., That the Commissioner of Pensions, together with two members of the House of Representatives, to be designated by the Speaker of the House, and two members of the Senate, to be designated by the President of the Senate, shall constitute a commission on revision of pension laws; and it shall be the duty of said commission to carefully collate, compile, revise, and codify all existing pension laws of the United States so as to exhibit clearly all existing classes of pensioners and the rates of pension paid to each class; also all the different rates of pension paid to invalid pensioners, and the nature of the disabilities for which such rates are paid, and the basis upon which the various degrees of disability are computed; also what further legislation is required to make the pension laws systematic, uniform, and just. They shall also report whether any rate for widows' pensions should be established by general enactment higher than $30 per month, and whether the benefit of the pension laws ought to be extended to any class or classes of those who have served, or may serve, in the military or naval service of the United States not at present embraced within the provisions of existing pension laws.

SEC. 2. That said commission shall report at the next regular session of Congress upon all the matters referred to them, and with their report they shall lay before Congress such recommendations as their investigations shall suggest in regard to such legislation as may be required to make the pension laws systematic, uniform, equal, and just.

SEC. 3. That said commission shall employ a clerk and stenographer and such other clerical assistance as may be necessary, and all proceedings, evidence, hearings, and arguments had, taken, or made before them shall be taken down and reduced to writing and reported to Congress with, and as an appendix to, their report.

SEC. 4. That said commission shall have power to sit during the recess of Congress, to require the attendance of persons and the production of papers, and to administer oaths.

SEC. 5. That the sum of $20,000, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the necessary expenses of said commission, to be paid upon the

requisition and certified statement of the president and secretary of said commission.

I believe that the carefully-considered report of such a commission would be of almost incalculable value in directing the pension legislation of the country, and such special orders as that of to-night would be no longer possible.

But, Mr. Speaker, I desire to take a somewhat wider view of the

QUESTION OF PENSION LEGISLATION;

first, in its underlying principles and equities; second, in its historical development; and third, in its political aspects and the relation of political parties thereto.

The two great questions that confront us at this hour are, first, how shall we dispose of the existing surplus in the Treasury; and second, how shall we prevent its further accumulation?

For the first there is no lack of remedies. There are debts to be paid, public buildings to be erected, water ways and harbors to be improved, coast and frontier defenses to be provided, a navy to be built, and national education to be encouraged and fostered.

I mean to say that there are proper, economical, and legitimate expenditures under each and all of these heads that may be made without waste or extravagance. But there is still another object of legitimate, proper, and patriotic expenditure by which this plethora may be relieved and the highest interests of the country subserved, and that is in the extension of our pension system to honorably discharged, disabled, and dependent soldiers. There is no form of disbursement of public funds that brings so great benefits to the business of the country, alleviates so much suffering, and, upon the whole, accomplishes so much for "the general welfare." It is scattered in small sums into all the remotest parts of the country. It enters at once into circulation among the people and passes through all the channels of trade.

It is like the arterial blood, constantly forced out to the extremities and constantly returning again to the heart; or it is like the vapor that rises from the ocean and is borne upon the wings of the wind to all quarters of the globe and returns again through a million rills and a thousand rivers to its source, making fruitful the fields of agriculture, turning the busy wheels of industry, and bearing the commerce of an empire.

But it is said that our pension-roll is already enormous. If that be so, Mr. Speaker, it is because our Army was enormous, and that was because the rebellion was an enormous rebellion, and the loss of life, limb, and health were enormous; and, moreover, the blessings that these sacrifices brought are immeasureable, and the wealth, both individual and national, that they rendered possible are also immense.

The question is not whether our pension-roll is large; it is whether it is as large as justice and the national honor require.

Any pension system has its drawbacks, which should lead us to exercise care in extending it. Whatever tends to lessen the manly self-dependence, the virility, and the chivalry of a people is, to that extent, an evil. Whatever tends to put a money price upon patriotism is not a blessing. But we can always afford to be just, and overcaution should not lead us to injustice.

Our pension system is the growth of a quarter of a century. It has grown up piece-meal, according to the changing opinions or political inclinations of successive Congresses.

It lacks in symmetry, in logical arrangement, and in homogeniety. The whole system sadly needs digestion and assimilation; but that is a work that should be intrusted to friendly hands, and not to those who would gladly see the system crippled.

But with all its faults and incongruities this is still the most generous pension system, especially to the private soldier, that has ever existed under any government.

This system in

ITS UNDERLYING PRINCIPLE IS RIGHT AND JUST.

It is founded upon the truth that all can better bear the burdens and losses of war than the few.

For instance, a wife gives her husband to the service of his country. She loses her natural supporter and protector. The nation receives the benefit.

It is only right that the nation shall share the widow's loss, by a pittance to keep her from the pinchings of want.

The Government does not undertake to compensate or make good the whole loss, but only to mitigate it to some extent.

A father gives himself to defend his country, and his children are left fatherless. Can not that country for which he died divide with those orphans their loss in support and education better than they can bear it alone?

Or the soldier returns from the war maimed and crippled, or broken in health, to drag out a weary existence through years of suffering. He has become disabled for self-support.

Is it not just and equitable that the sixty millions of people who enoy peace, progress, and prosperity in part through his sacrifice, should, out of an overflowing Treasury, contribute to keep him from actual want?

But suppose that a soldier who has served for not less than two months, and has been honorably discharged, has without fault of his own become incapable of self-support, and yet can not distinctly trace that disability to the service, and is without means of gaining a livelihood. He must either be supported by local charity, or receive aid from the Government which he served. Would there be anything contrary to the principles of our pension system if the Government should say to the keeper of the local almshouse: "This is one of my loyal defenders, this it one of my boys; I will provide for him out of my abundance?"

Would it not conduce to national honor if in the case of men who have worn the national uniform and borne the national flag national aid should take the place of local charity?

We thought so when in our weakness and poverty we cared for the unfortunate veterans of the Revolutionary war. Shall we do less in the days of our greatness and power and wealth for the hapless heroes of the war of preservation? Among "the plain people," as Lincoln called them, the demand for it is almost universal. It is only among the representatives of centralized capital or within the influence of our late antagonists that opposition to this beneficent measure is found. This is the much-needed and much-reviled dependent-pension bill.

AGE DISABILITY.

And it may be well considered whether, as the weakness and infirmity of age come to these men, an age limit may not be established, upon arrival at which the proof of any other disability may be dispensed with. Let that age limit be, say, sixty-two years, as in the Mexican pension bill, and let the amount of the pension be made the same as the pension paid to soldiers of the Mexican war—$8 per month; then as they arrive at that age they would consecutively go upon the pension-roll. The youngest of the soldiers of the war are now about thirty-eight years of age; it will therefore be not less than twenty-four years before the last of them will reach the disability age. Meanwhile the older soldiers will be passing away and vacating their places on the pension-roll as rapidly as the younger ones come on, and the result will not be to largely increase the amount required for pensions, but, on the contrary, it will after a few years rapidly diminish. I have introduced such a bill at this session, but it has not been reported.

Having thus provided for the disabled and the aged and those unfitted for self-support, I would say to my comrades who are disabled neither by age or disease, and who are fully capable of caring for themselves, let us not crowd to the front and get in the way of the crippled, the infirm, and the aged, and those upon whom the shadow of the poor-house has fallen; but let us stand back until our less fortunate comrades have been provided for, and when age or disease or infirmity overtakes us we shall receive the same benefits as they. I would advise my comrades to take as their motto, "one thing at a time, and that the most needed thing."

Sometimes to attempt too much is to fail in all.

Above all, let us not sacrifice the pride and satisfaction of having served our country for the sake of patriotism, and not for pay or pension.

But, Mr. Speaker, I did not rise at this hour solely or chiefly to speak of the beneficence of our pension system, nor of the propriety or wisdom of its enlargement, but rather to say a few words on an issue that has been raised of a

POLITICAL CHARACTER

in regard to pension legislation and pension administration.

During the political campaign of 1877, in that part of the country where I happened to be, I found a Democratic campaign document, in which the attempt was made to prove that the Democratic party was the *par excellence* and simon-pure friend of the soldiers and their pensions, and none others genuine.

It was evident that since attention had been drawn in so great a degree to the subject by President Cleveland's veto during the first two years of his administration of 124 private pension bills, and his refusal to sign 156 more, which became a law without his signature, and by his most significient veto of the "dependent pension bill" in such marked contrast with his signature of the Mexican pension bill, so-called, the leaders of the Democratic party felt the necessity of counteracting the effect of the President's course by making a showing as favorable as possible to the present Administration.

For this purpose, during the recent recess of Congress, a letter was opportunely addressed to the New York Herald, which, as stated in the press, was forwarded to the Pension Office for answer.

The letter, signed "Veteran," calls for a comparative statement of the

PRIVATE PENSION BILLS

approved by the administrations of Grant, Hayes, Arthur, and Cleveland. The letter concludes:

My object is to show the people of this country that the Grand Army of the Republic has no better friend than our present President.

At once, as is alleged, a force is set at work in the Pension Bureau to answer this nameless letter, and, after arduous labor, the following result is arrived at and the following answer made, namely:

During Grant's first administration 321 special acts were approved; during his second, 254. Hayes approved 303 special acts. During Arthur's administration 736 were approved. In the first two years of President Cleveland's administration he approved 836, or 275 per cent. more than during Grant's first term, 240 per cent. more than Grant's second term. and nearly double or 100 per cent.

more than Grant's two terms. President Cleveland has approved 183 per cent. more than Hayes, and over 17 per cent. more than Garfield and Arthur combined.

Therefore we are to understand that Cleveland is four times as good a friend of the soldier as Grant was, twice as good a friend as Hayes, and a better friend than "Garfield and Arthur combined"—though, as poor Garfield never had a chance to either approve or disapprove a single pension bill, it is hard to see what his name is brought in for, unless to delude.

This statement is understood to have been made under the direction of the Commissioner of Pensions, who is a lawyer. He is certainly lawyer enough to understand what constitutes a departure from the issue in pleading. The Commissoner understands perfectly that the issue is not how many private pension bills have been approved by the several administrations, but, so far as that class of pensions is concerned, in what proportion of cases presented to each Executive did he act favorably upon them, and in what proportion unfavorably.

Otherwise it might be said that as Garfield never approved any private pension bill, therefore he was wholly opposed to private pension legislation. But when it is answered that none were ever presented to him for approval, and therefore he could not approve them, it may be replied that he had just as much to do with the number presented to him as any other president had to do with the number presented to him. Commissioner Black is well aware that during the entire period considered, except a portion of Grant's term and two years of Arthur's, at least one branch of Congress and during a part of the time both branches were Democratic, and controlled absolutely the number of private pension bills presented to the President. If President Hayes approved only 303 such acts, it was because a Democratic House permitted only 303 to be presented to him.

If during his term President Arthur approved only 736, it was because that was all that Congress sent him to approve. If during his eight years President Grant approved only 575, it was because he did not have the opportunity to approve more, except in three cases where the proposed pensioners were deserters, and five cases in which the bills were returned for the benefit of the pensioners themselves.

THE ACCOUNT STANDS THUS:

	Approved.	Dis-approved.
Grant	575	3
Hayes	307	.....
Arthur	736	.....
All three	1,614	3

Or three Republican Presidents disapproved 1 in 538.

Now, how stands it with President Cleveland? During the first two years of his administration Congress sent to him for approval 949 acts. The Constitution (Article I, section 7, clause 2) directs that "If he (the President) approve (an act) he shall sign it." Therefore if he does not sign he does not approve.

Of these 949 acts, President Cleveland—

Vetoed and returned	124
Disapproved without returning	156
Pocketed and defeated	1
Total disapproved	281
Approved and signed	668

Or he disapproved 1 act for every 2.37 that he approved, or nearly 1 in 3. Republican vetoes, 1 in 538; Democratic vetoes, 1 in 3.37; in the ratio of 1 to 160. So much for this piece of Democratic special pleading.

In this statement of vetoes I have not included the fifteen Senate pension bills and the thirty-two House pension bills (making forty-seven in all) which President Cleveland has vetoed during the present session of Congress.

During twenty-four years of Republican administration, extending from Lincoln to Arthur, inclusive, there were but eight vetoes of pension bills—all by President Grant—five of which were in the interest of the beneficiary of the bills.

In three sessions of Cleveland's administration the pension vetoes already number 171, without counting the 157 disapprovals where the bills were allowed to become law without the President's signature. Therefore we make this comparison:

Vetoes of pension bills in twenty-four Republican years, 8, or 1 in three years.

Vetoes of pension bills in three Democratic years, 171—171 in three years.

I should think further comment unnecessary.

But, Mr. Speaker,

THE REAL ISSUE

s not so narrow as this. It is very much broader and more comprehensive. The real question is to which of the two great parties, in the light of history and reason, can the soldiers of the Republic most safely intrust their interests. It is an undoubted proposition that any cause can be most safely intrusted to the hands of its friends, not merely those who profess for the time to be friends, but those who are allied by the bands of sympathy and participation in that cause.

My first proposition is that the Democratic party is by its very constitution disqualified to successfully deal with the pension question. In discussing this question it will be necessary to refer to some facts that are not pleasant to recall, but which can not be avoided, because they are facts. In 1860 there was a great schism in the Democratic party. That division was substantially upon sectional lines. The Democracy of the North supported Douglas; the Democracy of the South supported Breckinridge. This schism produced the very result that it was designed by those who created it to produce; it afforded the pretext for secession, and resulted in war. Secession and rebellion in their leadership and in their controlling influences were wholly Democratic. This statement is not palatable, but it is true.

The Democrat who struck secession struck an old Democratic doctrine, proclaimed in the resolutions of 1798; and more than that, he struck his old political associates.

The North was by a vast majority Republican. The South was overwhelmingly Democratic. Then there arose, in the North, a new division among Democrats, and they were classed as "War Democrats" and "Peace Democrats."

The Republicans were all of one kind; they were all for sustaining the Government, and for restoring the national authority in every State and over every acre of land within the jurisdiction of the United States.

Hence

THE ARMIES OF THE UNITED STATES

were by a very large preponderance Republican.

My friend and colleague from Michigan [Mr. TARSNEY], in his remarks pending the passage of the Logan and Blair pension bills, undertook to show that there must have been a very large proportion of the Union armies made up of Democrats, by comparing the Republican vote of 1860 with the number of enlistments during the war. My colleague printed elaborate tables to show that the Republican vote of 1860 was 1,866,352, while the number of enlistments during the war was 2,859,132. The inference he would draw is that there were about as many Democrats as Republicans in the Union Army. Now, no one is disposed to deny that a large number of the "Douglas Democrats" enlisted in the Union Army. But very few "Breckinridge Democrats" did. My colleague makes two fundamental and important errors. First in supposing that 2,859,132 represents the number of persons who enlisted in the Union Army; and, second, in assuming that the number of Republican voters is a measure of the number of Republican soldiers. In regard to the first it may be said that while there were over 2,800,000 enlistments, there were, as near as can be ascertained, only 2,063,000 different persons enlisted. Hundreds of thousands re-enlisted, and thousands enlisted a third, and many even a fourth time.

In regard to the second error, my colleague would not have fallen into it if he had been himself in the Army, or had been old enough at the time to be personally conversant with the facts. In many regiments a majority of the soldiers were under twenty-one years of age, and in nearly all a large proportion were not voters. Because of these two radical errors my colleague's tables are absolutely worthless for determining the point at issue.

We have no complete statistics to determine this question, but we have partial figures which will aid us. In the Presidential election of 1864 twelve States provided by law for taking the

VOTE OF THEIR SOLDIERS

in the field. Michigan was one of these States. She sent commissioners to all her regiments in the field, and, as far as possible, to her voters in hospital. The Democratic candidate for President was General George B. McClellan, a Union soldier of unusual popularity. There can be no doubt that he drew the full Democratic soldier vote.

The result of this vote was as follows:

State.	Lincoln, Republican.	McClellan, Democrat.
Maine	4,174	741
New Hampshire	2,066	690
Vermont	243	49
Pennsylvania	26,712	12,339
Maryland	2,800	321
Kentucky	1,194	2,828
Ohio	41,146	9,757
Michigan	9,402	2,959
Iowa	15,178	1,364
Wisconsin	11,372	2,458
Kansas	3,876	543
California	2,600	237
Total	119,763	34,291

In an aggregate vote of 154,054 the Republican vote was almost four-fifths of the whole. Of course these figures embrace only a small portion of the Union Army: but they constitute the accessible fighting material of these twelve States at that time. At the time of that election

I had the honor to command a brigade composed mostly of Michigan troops; and I know that among them more than three-fourths of the voters were Republican, and I am confident that among the non-voters the proportion was even greater.

These 154,000 voters are sufficient to give us an average of the Union Army.

Assuming this to be a fair average, then, it appears that

LESS THAN ONE-FOUTH OF THE UNION ARMY WERE DEMOCRATS,

and more than three-fourths Republicans. Reasoning *a priori* it would seem apparent that the party to which more than three-fourths of the soldiers of the country belonged would be more in sympathy with them and safer custodians of their interests than the party the large part of whom was in open arms against them and another large contingent opposed to the prosecution of the war.

I beg to be understood that I would in nowise disparage either the numbers nor the spirit of the "war Democrats;" nor do I include them in what I say of the disabilities of the Democratic party on the pension question, except to say that they are in a decided minority, and are the controlled and not the controlling element. Again, when the war was over and the "erring sisters" returned once more to the great national family, it happened that as they had gone out Democratic so they came back Democratic, and they promptly assumed control of the Democratic party, and have continued to control it until this day. In the words of Horace Greeley—

The heart, the brain, the soul of the Democratic party is in the South.

THE "SOLID SOUTH"

has become a familiar expression. Solid as to what? Solid Democratic! Every State that cast its lot with the Southern Confederacy is a Democratic State. Scarcely a single Republican comes from all that vast domain. Call the roll. Alabama has 10 Representatives, all Democrats; Arkansas has 5 Representatives, all Democrats; Florida has 2, both Democrats; Georgia has 10 (elected by about 27,000 votes), all Democrats; Louisiana has 6, all Democrats; Texas has 11, all Democrats; South Carolina has 7, all Democrats; North Carolina has 9, of whom 7 are Democrats; Tennessee has 10, of whom 8 are Democrats; Virginia alone breaks in on this solidity with 3 Democrats, 6 Republicans, and 1 Independent; but in her State government she is solid as the rest. Out of the 170 Democrats in the House 105 are from the former slave States and 65 from the former free States.

The majority of these Representatives served in the Confederate army. They put heart and life and soul into that cause, and no men ever struggled more bravely or more desperately than they. It was their heroic age.

Let us grant for the sake of this argument that the "lost cause" is forever lost. That it is buried beyond all hope, and that its banners are given to the moths. Let us grant that our country is their country, our flag their flag, our honor their honor. Grant that the desolations of war have been outlived and repaired, and the resentments of that strife forever buried.

Yet, I submit that it is too much to ask or expect of human nature to suppose that these men will take the same interest in and have the same sympathy for the men who defeated them as would those who were their own comrades in arms and in full sympathy with the cause in which they fought.

It is contrary to human nature. Yet this same "solid South" is the dominant element in the Democratic party. They made your Democratic President; they control your Democratic House of Representatives.

I am not raising a sectional issue. I am simply pointing out the fact that the Democratic party is so constituted that it is

ORGANICALLY INCAPACITATED

for handling the pension question sympathetically or successfully. But it is said that notwithstanding this incapacity the Pension Office is being administered with energy and liberality.

My colleague [Mr. TARSNEY] says:

I likewise propose to demonstrate that under this Democratic administration the ex-Union soldiers have been dealt with as fairly and liberally, aye, more fairly and liberally than under any of the administrations that we have had in this Republic since the close of the war.

He then proceeds to print voluminous tables showing the number of pension cases pending in the Pension Bureau, and—

the amount of money appropriated year by year from 1860 to the close of the last fiscal year.

And he concludes triumphantly, as follows:

Thus year after year Democratic Congresses are making liberal and largely increasing appropriations for the payment of pensions.

And then "caps the climax" with the exclamation:

More than that, during the Forty-ninth Congress we passed more private pension bills, which became laws, than you, my Republican friends, ever passed during any Congress.

To this latter claim I have already made sufficient reply, and it might have taken a little from the triumphant tone of my colleague had he remembered that every one of those bills were passed by Republican votes in the House, and had to pass a

REPUBLICAN SENATE

before they could become law.

He also fails to mention the two hundred and eighty-one bills in that Congress which failed to receive the Presidential approval.

In regard to the amount appropriated, it may be said that it takes two Houses of Congress to make an appropriation, and I have yet to learn that it is any especial merit to make an appropriation to pay an honest debt already ascertained, as are all pension claims when allowed. I think that my colleague must have been for the moment oblivious of the provisions of section 4 of Article XIV of the Amendments to the Constitution, which provides:

The validity of the public debt of the United States authorized by law, including debts incurred for *payment of pensions* and bounties for services in suppressing insurrection and rebellion, *shall not be questioned*.

As to the administration of the Pension Office, let us grant that with the greater force at command, and the accumulated work of more than twenty years at his hand, General Black makes a good showing of his administration of that office.

General Black was a gallant Union soldier, a "war Democrat," himself a pensioner, and in full sympathy with Republican ideas in regard to pensions. The greatest praise that can be given to General Black is that he has administered a Republican system of pensions with commendable fidelity and vigor; with too much fidelity and vigor to suit the latitude of St. Louis at the date of the Democratic national convention. But the Democratic disability of which I have spoken pertains not to the Pension Bureau, but to the House of Representatives and the White House.

But, Mr. Speaker, we were told by the Democratic chairman of the Committee on Invalid Pensions in the last Congress (who is also the chairman of the same committee in this) on the 7th day of July, 1886, that "all the legislation friendly to the soldier that has amounted to anything since the war has been given by a Democratic House of Representatives." (CONGRESSIONAL RECORD, page 6636.)

I join issue with the distinguished gentleman from Indiana. I deny the statement in whole and in part. It is not true in substance or in fact, in letter or in spirit, in statement or in intendment.

Now, Mr. Speaker, I propose to examine the truthfulness and accuracy of that statement. I propose from the record to settle the question who has given "all the legislation friendly to the soldier since the war."

The pension system as it now exists

THE REPUBLICAN PARTY FOUNDED;

that party has enlarged and improved it from time to time; and up to March 4, 1885, has administered it.

We have seen, reasoning *a priori*, from the constitution of the two parties what we might expect would be their attitude on this question, and I now propose to show from the record that it has been what might have been expected. The fundamental law upon which our present pension system was based was enacted July 14, 1862, while the war was still progressing, and while the Republican party had undisputed control of every department of the Government. It provided the most ample and generous system of pensions that up to that time had been enacted into law. It provided for the disabled soldier, and for the widows, children, mothers, and sisters of those who should fall. It was a broad and comprehensive foundation upon which has been erected the entire superstructure of our present system.

From 1862 to 1875 the Congress remained in the hands of the Republicans, and the Executive was also Republican during that period, unless the administration of Andrew Johnson be regarded as an exception.

The principal acts that followed the fundamental act were:

1. Act of April 9, 1864.
2. Act of July 4, 1864.
3. Act of March 3, 1865.
4. Act of June 6, 1866.
5. Act of July 25, 1868.
6. Act of July 27, 1868.
7. Act of July 7, 1870.
8. Act of July 8, 1870.
9. Act of February 1[illegible], 1871.
10. Act of June 8, 1872.
11. Act of March 3, 1873.
12. Act of June 6, 1874.
13. Act of June 6, 1874.
14. Act of June 14, 1874.

There were a number of minor acts which I have not mentioned.

Each and all of these acts were passed by a Republican Congress and approved by a Republican President. None of them took a backward step.

Each of them either established some new class of beneficiaries or else increased the rate or enlarged the remedies of those already existing.

March 3, 1873, Congress revised and consolidated all the existing pension laws and created the pension code, substantially as we have it to-day in the Revised Statutes.

To show how reckless was the statement of the chairman of the Committee on Invalid Pensions, it may be said in brief that every law, section, line, word, and syllable relating to pensions in the Revised Stat-

utes of 1874 was enacted by Republican Congresses, by Republican votes, and approved by Republican Presidents.

I will not now pause, Mr. Speaker, to give in detail the substance of each of these acts, but refer those who desire to see how our pension system has grown up to the Statutes at Large of the several Congresses. I will now only name a few of the more important.

The act of July 4, 1864, extended the limitation of arrears to three years and fixed the pension for loss of both feet at $20, and for the loss of both hands or both eyes at $25 per month A Republican law.

The act of June 6, 1866, increased the pension for loss of both feet, both hands, or hand and foot; also for loss of one hand or foot.

This was also the first law granting pensions to dependent fathers and brothers. This was a Republican law.

The act of July 25, 1868, granted to widow pensioners $2 per month for each child by the soldier under sixteen years of age, and if there were orphan children but no widow surviving it gave the orphans what the widow would have received.

This was one of the most beneficial pension laws ever enacted. Under it about 18,000 widows received immediate increase, and the principle of the law remains in force until now. This was a Republican law.

The act of July 8, 1870, inaugurated a new system of paying pensions, and protected the pensioner from the fraud and avarice of pension cormorants.

No one has ever thought of repealing or dispensing with it. Another Republican law.

The act of February 14, 1871, provided pensions for the soldiers and sailors of the war of 1812, and for their widows. Another Republican law.

All these acts, and many not enumerated, were enacted by Republican Congresses and by Republican votes.

But at the election of 1874 the House of Representatives

PASSED INTO THE HANDS OF THE DEMOCRATIC PARTY,

and with the exception of the Forty-seventh Congress (1882–'83) it has remained Democratic ever since.

I propose now to analyze the pension legislation since that time, and show what has been done, and by what votes it has been done.

The act of February 28, 1877, allows separate pensions for the loss of both a hand and a foot.

The act of March 3, 1877, allowed pensions to disabled soldiers in certain cases, although they had engaged in rebellion against the United States.

The act of March 9, 1878, amended the Republican law of February 14, 1871, granting pensions to the soldiers and sailors of the war of 1812. It reduced the term of service from sixty to fourteen days. It provided that a widow's pension should cease if she should remarry. But the "milk in the cocoanut" is found in the following:

SEC. 5. That the Secretary of the Interior be, and he is hereby, authorized and directed *to restore to the pension-rolls* the names of all persons now surviving heretofore pensioned on account of service in the war of 1812 against Great Britain, or for service in any of the Indian wars, and whose names were stricken from the rolls in pursuance of the act entitled "An act authorizing the Secretary of the Interior *to strike from the pension-rolls the names of such persons as have taken up arms against the Government*, or who have in any manner encouraged the rebels," approved February 4, 1862, and that the joint resolution "prohibiting payment by any officer of the Government to any person not known to have been opposed to the rebellion and in favor of its suppression," approved March 2, 1867, and section 4716 of the Revised Statutes of the United States shall not apply to persons provided for by this act.

Section 6 provides pensions for the widows of persons stricken from the rolls, as above, and who died while their names were so stricken from the rolls. This was a Democratic act.

The act of June 18, 1878, makes the pension of a lieutenant-commander in the Navy the same as that of lieutenant commanding.

The act of June 20, 1878, limits the fee of claim agents to $10.

The act of June 17, 1878, increased the pensions of soldiers and sailors who had lost either both hands, both feet, or the sight of both eyes to $72 per month. These were all receiving $50 per month. It affected about two hundred pensioners.

The act of February 19, 1879, provides for paying three months' extra pay to the officers and soldiers engaged in the military service of the United States in the war with Mexico. A very large proportion of these were in the South.

The act of June 9, 1880, was intended to prevent the reduction of the pensions of certain petty officers in the Navy.

With one notable exception this embraces in detail the entire list of pension measures up to the time when the Democratic party again lost control of the House.

It will be noted that with the exception of the act relating to pensioners of the war of 1812, stricken from the rolls for aiding the rebellion, and the three months' pay to the officers and soldiers of the Mexican war, which benefited almost entirely those residing in the South, they amounted to very little indeed.

They affect but comparatively few cases, and those who were already drawing high rates of pension.

But the most important act of those six years from 1875 to 1881, which constitutes the exception referred to, remains to be considered, It was the act known as

"THE ARREARS ACT."

This was the most important piece of pension legislation ever enacted in this country. This act has been persistently claimed by the Democrats as a Democratic act.

In the Forty-ninth Congress one of the Democratic leaders, Mr. Bragg, of Wisconsin, said that the Republicans enacted the arrears limitation and the Democrats repealed it.

The only foundation for this statement is in the fact that the repeal was passed when the Democrats had a majority in the House, but I will show from the record:

1. That the bill was introduced by a Republican.
2. That it was brought up and put upon its passage by a Republican.
3. That it was passed by Republican votes.
4. That of the 150 votes absolutely necessary to pass it, the Democrats furnished about one-third.

Many people seem to suppose that the payment of arrears of pensions, or, in other words, the commencement of the pension from the date of discharge, was a new and unheard of thing until the passage of the act of January 25, 1879. On the contrary, it was

AS OLD AS THE PENSION LAW.

By the act of July 14, 1862, a limitation of one year was fixed within which the claim should be prosecuted in order that the pension should begin from the date of discharge. This limitation continued in force until the act of July 4, 1864 extended the limitation to three years from discharge. This limitation was re-enacted by the act of June 6, 1866. Before the expiration of this three years, the act of July 27, 1868, extended the limitation to five years from the date when the right to the pension should have accrued.

This five years' limitation became incorporated into the act of March 3, 1873, in which the pension laws were codified, and thence became section 4709 in the Revised Statutes of the United States, of June 22, 1874. Under each of these acts "arrears of pensions"—that is, pensions covering periods prior to the filing of the application therefor—were granted in thousands of cases. But as the period of five years from the date of discharge elapsed, the right to pension prior to date of application was lost until the limit of five years from discharge had been exceeded in all cases.

In this connection it will be interesting to examine the facts as to the passage of the act of July 27, 1868, which established the five years' limitation. In June, 1868, this House passed an act largely extending and liberalizing the pension laws. It was an act of many sections. The fifth section provided that all pensions under that act should—

Commence from the death or discharge of the person on whose account the claim has been or is hereafter granted, or from the termination of the right of the person having prior title to such pension, *provided* application for such pension has been or shall be hereafter filed with the Commissioner of Pensions within five years after the right thereto has accrued, otherwise the pension shall commence from the date of filing the last evidence necessary to establish the same.

This proviso constituted the

"ARREARS LIMITATION."

At the time of the passage of that act through this House, no objection was made to this proviso on any hand. Not an amendment was offered, not a vote was given against it, so far as appears from the record.

The simple record is that "the bill passed."

The bill was taken up in the Senate on July 20, 1868. The bill was amended, new sections added, and some sections changed, but the limitation proviso was not so much as alluded to in the debate. No objection was made, no amendment was offered, and no vote recorded against it. Again, it is recorded that "the amendments were agreed to and the bill passed."

That was in the Fortieth Congress. In the Forty-fifth Congress an attempt was made to repeal this limitation of the arrears proviso, but it never came to final action.

In the Forty-sixth Congress, upon the 19th of June, 1878, Mr. Haskell, of Kansas (Republican), moved to suspend the rules and pass the act introduced by Mr. Cummings, of Kansas (also a Republican). This was House bill 4234, known as the "arrears act." Upon this motion the rules were suspended and the bill passed by a vote of 164 to 61, distributed as follows:

Democrats for the bill	43
Democrats against the bill	61
Republicans for the bill	116
Republicans against the bill	None.

As this bill passed under suspension of the rules it required two-thirds, or 150 yeas, of which 150 the Republicans furnished 116 and the Democrats the remainder.

This bill was taken up in the Senate on January 16, 1879, and after brief debate it was passed by a vote of 43 to 3.

The ayes were 27 Republicans and 16 Democrats, and the 3 nays were all Democrats.

The arrears act was not introduced by a Democrat, was not moved by a Democrat, was not passed by Democratic votes. A majority of 13 Democrats in the House voted against it. Every vote cast against it in either House was by a Democrat.

That act received the approval of President Hayes January 25, 1879, and became a law.

IT REPEALED THE ARREARS LIMITATION ABSOLUTELY

and for all time. It created no new limitation. It was a measure of full relief. It was a Republican law.

But in the closing days of that Congress an appropriation bill was reported from the Democratic committee of the House by Hon. W. A. J. Sparks (Democrat) entitled "An act making appropriations for the payment of the arrears of pensions granted by the act of Congress approved January 25, 1879, and for other purposes." That act contained three sections.

Section 1 made the necessary appropriation for the payment of the arrears; then followed this general legislation.

Section 2 first substantially re-enacts the Haskell-Cummings bill granting pensions from the date of death or discharge, and then adds these words:

If the disability occurred prior to discharge, and if such disability occurred after the discharge, then from the date of actual disability, or from the termination of the right of the party having prior title to such pension: *Provided*, The application for such pension has been or is hereafter filed with the Commissioner of Pensions *prior to the 1st day of July*, 1880, otherwise the pension shall commence from the date of filing the application.

Section 3 repealed section 4709 of the Revised Statutes, which was the five years' limitation.

This act was approved March 3, 1879. Under this law we have been operating to the present time.

It will be seen that the Haskell-Cummings act of January 25, 1879, repealed the limitation on arrears absolutely; and that the act of March 3, 1879, created a new limitation of less than one year and four months, namely, July 1, 1880. *Such is the plain record* in regard to the repeal and the re-enactment of the limitation of arrears of pension.

The statement of the gentleman from Wisconsin was as far from the truth as the statement of the distinguished gentleman from Indiana. Of the

JUSTICE AND RIGHT OF THAT REPEAL

there can be no doubt.

As I have before said, Mr. Speaker, a pension is simply an attempt on the part of the whole people to compensate in part losses suffered by individuals in behalf of the whole people.

This compensation should be, so far as practicable, commensurate with the loss. The service of the claimant having been established, and the loss in the service, why should not the compensation begin at the same time as the disability and loss?

Why should 60,000,000 of people ask one poor man to bear alone a loss incurred in behalf of all? Is it because the pensioner has not claimed his right? Is it, then, to be counted against a man that from motives of patriotic pride he has forborne to claim his right when he might have claimed it, and that he has struggled manfully for years under increasing infirmities to avoid and postpone asking help and compensation for his loss from his countrymen? God forbid.

When we have duly adjudicated in our own constituted tribunal that the claimant has suffered a loss in serving his country, a loss for which he was entitled to a pension if he had asked for it, why should not the pension reach back to the disability? Why should one rule be applied to those who came forward promptly to claim their dues, and another applied to those who have sought to avoid the necessity of claiming the right which the law had given them? Why should we not now repeal the existing limitation, and thereby do an act of justice?

THE FORTY-EIGHTH CONGRESS.

With the Forty-eighth Congress the Democratic party once more returned to the control of the House of Representatives, with a majority of more than seventy.

Bills covering almost every possible phase of the pension question were introduced and referred to the proper committees.

There were bills to repeal the arrears limit; bills to pension soldiers in the Mexican war; bills to increase the pensions of widows and orphans; bills to pension prisoners of war; bills to waive proof of prior soundness; bills to dispense with proof of actual dependence of fathers and mothers; bills to increase rates, especially in cases of loss of limb, of sight, and of hearing.

There was a great abundance of material went to the committee, but very little of it ever came to action in the House. But a bill to pension

SOLDIERS OF THE MEXICAN WAR

was promptly reported, and a substitute therefor, introduced by Mr. TOWNSHEND, of Illinois, was passed granting a service pension to every soldier who served for fourteen days in the Mexican war, or was even carried on a muster-roll for that length of time, without any other requirement of age or service or disability or need.

This act repealed so much of the Revised Statutes as prohibited pensions to persons who had borne arms against the United States in the war of the rebellion, and conferred a uniform life pension upon them of $8 per month, regardless of the fact that they might have been subsequently disabled while fighting against the United States.

This bill went to the Senate (which was Republican) and was there amended so as to confer pensions upon honorably-discharged soldiers of the Union who had become disabled for self-support and who were dependent upon their own labor. The Senate amendments also provided for the increase of widows' pensions, and those of dependent parents and children.

It embraced the most meritorious features of the so-called dependent-pension bill afterward vetoed by the President. This bill, so amended, was returned to the House, and in the closing days of the first session of the Forty-eighth Congress, July, 1884, three days before the final adjournment, it came up for consideration.

Mr. Hewitt, of Alabama, antagonized these Senate amendments with the original Mexican pension bill, which pensioned everybody in the Mexican war and the Black Hawk war and the Seminole war, but no Union soldiers.

Upon Hewitt's motion to substitute, the yeas were 84, all Democrats, nays 126, of which 87 were Republicans and 39 were Democrats.

The House then proceeded to consider the Senate amendments, but when the sixth amendment was reached, the Democrats, under the lead of Mr. Hewitt, of Alabama, inaugurated a "filibuster," which was maintained up to the hour of final adjournment (July 5, 1884), and so the bill was killed for that session.

A few Democrats, under the lead of Mr. TOWNSHEND, stood steadfast for the bill.

After the reassembling of Congress (January 5, 1885), Mr. Keifer, of Ohio, moved to suspend the rules, take up the bill as amended by the Senate, and

CONCUR IN THE SENATE AMENDMENTS.

To do that would pass the bill. On that motion the yeas were 129, the nays were 85.

Democrats for the bill	57
Democrats against the bill	84
Republicans for the bill	72
Republicans against the bill	1

The one Republican against the bill was Bisbee, of Florida.

So, for the want of the requisite two-thirds to suspend the rules, the bill was lost.

This was the great pension contest of the Forty-eighth Congress, and this most just legislation was defeated by eighty-four Democrats.

The only pension legislation which became law in the Forty-eighth Congress was a petty bill which gave to those who had lost a leg at the hip the same pension as those who had lost an arm at the shoulder, and a three-line proviso on an appropriation bill, inserted by a conference committee, giving the presumption of prior soundness (*prima facie*) to pension claimants.

This Democratic House with its more than 70 majority was a very poor place for pension legislation. The Republican Senate did much. The Democratic House undid it all.

THE FORTY-NINTH CONGRESS.

The Forty-ninth Congress assembled with the Republicans in control of the Senate by a narrow majority, and the Democrats in a majority of about 40 in the House.

Again bills were introduced covering the entire field of pension legislation, including Mexican war, widows' increase, prisoners of war, dependent and disabled, and repeal of the arrears limitation.

The first contest arose on the "widows' increase bill." That bill came up in the House in regular order on January 21, 1886. Mr. BROWNE, of Indiana (Republican), offered an amendment to repeal the arrears limitation. A vote on the amendment was prevented. On February 2 Mr. MATSON moved to suspend the rules and pass the widows' increase bill (with an amendment relating to date of marriage) and without the Browne amendment. This motion cut off all possibility of General BROWNE'S motion being voted on, just as it was intended and designed to do. The vote was then taken on the bill (to increase widows' pensions from $8 to $12 per month) and it was passed by a vote of 198 yeas to 66 nays, as follows:

Democrats for the bill	80
Democrats against the bill	66
Republicans for the bill	118
Republicans against the bill	None.

All but two of the Democrats who voted against this bill were from the South. The two exceptions were Bragg, of Wisconsin, and Hewitt, of New York.

SENATE BILL 1886.

About the same time in the Senate was passed "Senate bill 1886," to pension disabled dependent soldiers.

It passed by a vote of 34 yeas to 14 nays.

Democrats for the bill	7
Democrats against the bill	14
Republicans for the bill	27
Republicans against the bill	None.

This bill went to the House, and the Democratic majority refused to consider or even report it, and it died in the hands of the Democratic committee.

DEPENDENT PENSION BILL.

As I have before said, the Senate had early in the first session passed a bill in the nature of a dependent pension bill, known as "Senate bill 1886." Petitions poured in from all over the country asking for its passage. The leaders on the Democratic side were in a dilemma. To take up and pass the Senate bill was to give all the prestige of the legislation to the Republican Senate, and that would never do. Thus matters stood until January 10, 1887, when Mr. MATSON, chairman of the Committee on Invalid Pensions, introduced House bill 10457, which,

after being considered and modified in committee, was reported back to the House and put upon its passage January 17, 1887. It was passed under suspension of the rules by a vote of 180 to 76.

Democrats for the bill	66
Democrats against the bill	76
Republicans for the bill	114
Republicans against	None.
Not voting	63
Republicans	25
Democrats	38

It will be seen that almost two-thirds of the affirmative vote was Republican, while 76 Democrats voted against it, and only 66 in favor of it, and 13 abstained from voting, without pairs.

The act now went to the President.

On February 11 the President returned the bill with his objection, or, as it is more commonly expressed,

VETOED.

The veto and the bill were referred to the Committee on Invalid Pensions, and after full and mature consideration that committee reported them back to the House with the unanimous recommendation that the bill pass notwithstanding the President's objections.

Upon this the vote was had on February 24, 1887, with the following result—yeas 175, nays 125.

Democrats for the bill	37
Democrats against the bill	125
Republicans for the bill	138
Republicans against the bill	None.
Not voting	18
Democrats	16
Republicans	2

Every Republican member of the House except two (who were absent, paired) voted, and are recorded for the bill. Of the 125 Democrats who voted against the bill, 96 were from the former slave States and only 29 from the former free States. Of the Democrats voting,

A MAJORITY OF 88 VOTED AGAINST THE BILL;

and so, for the want of the necessary two-thirds required by the Constitution the bill was defeated, primarily by the Democratic President, secondarily by the Democratic House.

It is not my purpose now, Mr. Speaker, to criticise this record, but only to call attention to it.

In order that these votes may be more readily referred to, I here append them in tabulated form.

It will be noted, first, that only in one case (that of the widows' increase bill) were there more Democrats voted for than against any bill; second, that in all these votes there was but one Republican vote against one of them, and that was from the State of Florida. This table, taken from the official record, ought to settle now and forever the attitude of the Democratic party toward pension legislation.

Tabulated statement of votes on pension bills.

Name of bill.	Democrats for.	Democrats against.	Republicans for.	Republicans again t.
Repeal of arrears limitation, Forty-sixth Congress	48	**61**	116	**0**
Mexican pension bill, with Senate amendments, Forty-eighth Congress, first session	39	**84**	87	**0**

Dependent pension bill, Forty-ninth Congress (to pass over President's veto)	37	**125**	138	**0**
On all the bills (aggregate)	334	**510**	572	**1**

Mr. Speaker, I do not think that any poor words of mine can add anything to the force of these figures. They are the mute, dumb mouths that speak louder and more eloquently than any human voice of the utter falsehood of the assertion that "all the legislation friendly to the soldier that has amounted to anything since the war has been given by a Democratic House of Representatives." That statement is worthy of a member of the Annanias fraternity.

But, Mr. Speaker, this review would not be complete without some reference to what has been done, or what has not been done, in the

FIFTIETH CONGRESS.

We stand now in the closing days of the long session of that Congress. Early in the session the Senate passed a well-guarded dependent pension bill, and sent it to the House. It was emasculated by the Democratic majority of the committee, but the House has not been permitted to consider even the poor substitute.

Among others, I had the honor at the beginning of this session to introduce a bill for the unconditional repeal of the limitation of arrears. A bill has been reported to effect such repeal, and is now upon the Calendar. The Republicans of the House stand here challenging you to consider and pass it.

But your Democratic Committee on Rules refuses to allow either this or any other general pension legislation to be considered. The country has not failed to note your insincere attitude.

And now, Mr. Speaker, I have rapidly and hastily reviewed

THE HISTORY OF PENSION LEGISLATION

from the beginning of the war until now.

It has not been altogether a pleasant task. I have dealt with facts; but facts are not always pleasant things. For the facts I am not responsible. The necessity for pensions is a sad one; but for that necessity we upon this side of the House are not responsible.

I would that there were neither sectional nor party lines on the pension question; but I do not suppose that it could be otherwise. The war was a sectional war, and the parties to it were divided largely upon party lines. I do not mention this by way of censure, but rather by way of history.

Because of ancient affiliation, and a certain sympathy of political ideas, the men who sought to sever the Union and establish a Southern Confederacy are to-day, with slight exceptions, in the Democratic party.

By the force of circumstances they are the controlling element in that party and in the Government, and until the ballot is as free and as universal in the South as in the North, they will remain so.

Hear what Bradley Johnson, an ex-confederate general, said in the city of Baltimore on the 6th of June last:

> Many of us might have kept out of that war, but we did not. * * * The South is progressing. She is not dead. *These old Confederate soldiers and their descendants elect ninety out of every one hundred Congressmen, thirty-four United States Senators, and the President of the United States.* [Applause.] The Government of the United States is controlled by Confederate soldiers. It is always the case that when you get into a position to command respect you will get respect. The old Confederate soldiers are not idle. Their work for twenty-six years in government, in railroads, and industrial enterprises of all sorts is making itself felt all over this land. In 1890 Texas will send twenty-five men to Congress. The anxiety will be then, not who can carry New York in the election, but who can win in Texas. [Applause.]

We know only too well how terribly the South suffered from the war; how its wealth was destroyed, its fields wasted, its industries for a time paralyzed.

We can hardly wonder that out of their poverty they do not feel like voluntarily voting to tax themselves to pension the men who marched through their section bringing the ruin and devastation of war.

The magnanimity of the Government which has exacted from them no penalty of disfranchisement, has produced this anomalous condition of affairs, that to-day the conquered are in control of the Government they sought to disrupt and destroy, and sit in judgment upon the rights of the victors.

But our path of duty is plain. It is to

BE TRUE TO MEN WHO WERE TRUE TO UNION

and liberty and law.

We dare not look into the bloody past, with its unequaled record of sacrifice and suffering, and do these men less than justice. We dare not look into the future, with all its thronging years, its crowding generations, and its momentous possibilities, and permit it to be truly said that the Republic has been ungrateful to its defenders.

The great Republican party, which placed Lincoln in the chair of state and stood around him while he called the volunteers from their homes and set their invincible battalions in the field, which sustained the hands of Grant from Donelson to Appomattox, will neither be unmindful of nor unfaithful to its duty. These men were our brothers, our kindred, our comrades.

It was our fight in which they fell. It was their valor and their sacrifice that preserved our country, that assured our future, that conquered our peace. It was while bearing their country's flag in the path of patriotic duty that they met disease, disaster, and death. Theirs was the sacrifice, ours is the fruition. It is easy in these times of blood-purchased peace to speak lightly of their service, their suffering, and their sacrifice!

But in that awful hour of our dire necessity, when the slippery slopes of Gettysburgh blazed with deadly fire and the fate of the great Republic hung in the trembling scales of destiny, the great metropolitan journals had not yet learned to sneer at "the grand army of paupers and mendicants." Then they were patriots. Then they were heroes. Then they were worthy of all praise and reward. Then there was nothing that could be done or promised beyond their deserts. And while the millionaires and the speculators and journalists made merchandise of their heroism, these men bared their breasts to the storm and rolled back the crimson tide of war.

Mr. Speaker, I can respect the feeling of brave men still smarting under the stinging blows of defeat, who hesitate, out of their comparative poverty, to vote pensions to their late antagonists; but I have naught but unmixed and unspeakable contempt for those organs of the piled-up millions of the wealth of the North who have lost all sense of gratitude to the men who made their hoarded millions possible.

Mr. Speaker, others may act as they see fit, but as for myself I shall stand, without evasion, or shuffling, or apology, for generous justice to the men who redeemed the Republic and kept "the jewel of liberty in the family of freedom."

Farm Products.

SPEECH

OF

HON. T. H. BAYLY BROWNE,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 28, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue, on the motion to strike out lines 133 and 134 of the free-list, "Vegetables in their natural state or in salt or brine, not specially enumerated or provided for," and to restore the duty thereon—

Mr. T. H. BAYLY BROWNE said:

Mr. CHAIRMAN: In speaking to this amendment to strike from the free-list of this bill these products of the farm I am actuated by no other motive than that of serving the interests of that class of our people who cultivate the soil for a living.

It is a well-known fact that the cereals can not be grown in the Atlantic coast States with profit. The new and fertile fields of the great West, aided by cheap transportation rates, have revolutionized the system of farming almost from Maine to Florida. Many of the people whom I have the honor here to represent and half a million more along the shores of the Atlantic no longer grow grain for sale. It is cheaper in the markets of New York than at their own doors, and the growth of our great cities, the increased number of our factories, and a fuller development of our mines have created a demand for the market-garden product, "these vegetables," so that where once our broad acres waved with golden grain, the potato, the onion, peas, and garden truck generally are seen as the crops upon which the farmer relies for his livelihood.

The present rate of duty, that of Canada, and the proposition of the bill are as follows:

Product.	Canadian rate per bushel.	United States rate.	Mills rate.
	Cents.		
Potatoes	10	*15	Free.
Beans	15	†10	Do.
Peas	10	†10	Do.
Tomatoes	20	†10	Do.
All other vegetables, including sweet potatoes	20	†10	Do.

* Cents per bushel. † Per cent.

From this we see that Canada has a duty aggregating more than ours at present, yet this bill proposes to make ours all free, and there can be no other question before us than the simple, direct one of, "Will we let the farmer of this land feed this people from the products of its own soil, or shall we consent for the foreigner to come here and do it for us?"

Sir, to say that this will not in a large degree be done if these duties are taken off, I have only to refer you to the report of the Secretary of the Treasury showing that for the month ending April 30, 1888, there was brought to this country of—

	Bushels.
Pease and beans	259,734
Potatoes	2,067,282

And for the eleven months ending the 31st of May there was imported into this country of—

	Bushels.
Pease and beans	1,887,104
Potatoes	8,475,182

The value of all vegetables imported for the eleven months ending at that time was $7,058,295, and as against a corresponding period of last year $2,083,159.

And in further confirmation of the statement that our market here will be absorbed by foreign products I will read to you extracts from leading commission men in Boston, New York, Philadelphia, and Baltimore, the large distributive centers of the country for these products:

BOSTON, *June* 21, 1888.

DEAR SIR: Referring to your favor of the 13th instant, we would respectfully report the receipts of foreign or dutiable potatoes in Boston since January 1, 1888, to date, as 1,199,630 bushels. Of cabbages there have been no receipts.

The effect on our market by the heavy importation of foreign potatoes has been to largely reduce the price of our native product. The average price at which this vast amount of foreign stock was sold is about 70 cents per bushel, and had it not been for this heavy importation the product of our New England farms no doubt would have sold readily at $1.50 to $2 per bushel.

Already Liverpool and Glasgow shippers have intimated that with a free *entrée* to American markets they would do a business of much larger magnitude than ever before. Should the duty be removed, and potatoes and other vegetables admitted free, the agricultural interests throughout New England and Eastern Shore of Virginia would be badly damaged.

Trusting these few facts may be of some use to you in defending the interests of your constituents and our friends, with anything more we can do for you, we remain,

Very truly, your obedient servants,

RICE & HOLWAY.

Hon. T. H. BAYLY BROWNE, M. C.,
Washington, D. C.

[Extract from letter of A. F. Young & Co., of New York.]

* * * * * * *

Speaking of potatoes, which are the only foreign vegetable we (A. F. Young & Co.) receive, there were over 2,000,000 sacks imported to this country during the past season, which sold from $2 to $2.35 per sack, and which price satisfied the importer. Domestic potatoes would have readily brought $5 per barrel if the foreign potatoes were not here.

We have no way of estimating how many sacks would have been received providing there was no tariff; but with the duty of 15 cents a bushel, or 45 cents a barrel, removed it is reasonable to suppose that the imports would be much larger, the result of which upon the vegetable interests in general we leave you to reflect.

Very respectfully, yours,

A. F. YOUNG & CO.

[Extract from letter of G. S. Palmer.]

NEW YORK, *June* 15, 1888.

* * * * * * *

The importations the past season have reached such immense proportions as to cause the native grower to stop and consider and investigate what the future must be to him, provided the present tariff be removed and he is compelled to compete with the cheap labor of Europe, and with the present ocean freights which are in many cases reduced to a nominal sum, where dollars must be had, thus enabling the large shippers to take advantage of the situation and make their own terms.

During the past season they have been brought for $3 per ton from Liverpool, and even less, and which is only about 9 cents per bushel, and as low as $4 per ton from Glasgow; whereas from the section of Accomac County, which you have the honor of representing, and one of our largest producing sections for Irish and sweet potatoes, the lowest rate is 40 cents per barrel, or about 15 cents per bushel. Thus you see your constituents in Virginia are paying nearly double what it would cost our foreign friends to land their product at our wharves in New York, and throughout the North and West, where they are dependent upon still higher priced labor than through the South, yet they continue to labor at a great disadvantage.

As regards the price this foreign product has been sold at there is a wide range, from $1 to $2.25 per sack, according to variety, quality, and condition of the market, but the safest I can average is from $1.50 to $1.75; the lower price, however, is nearer the average. If these prices have proved profitable to the shipper (and we can make no other inference, as they are still coming forward in liberal quantities), are we not safe to conclude that were the duty 45 cents a barrel removed the acreage of production abroad would be largely increased? as they would then be enabled to sell at the same average price, ranging from $1.05 to $1.30 a barrel.

For reasons above stated it is impossible for our American farmers to compete with this price, and the result would be that the lands now under tillage producing this crop would have to lie idle or be diverted into the production of something else, the increase of which would most seriously affect its market value. Our American farmers, our laboring classes, and also our home industries must receive our first consideration, and they appeal to their Representatives in Congress, whom, I am assured, will not see their interests neglected, and trusting that you will lend your aid to the defeat of the Mills bill,

I am, yours very truly,

G. S. PALMER.

T. H. B. BROWNE, Esq., *Washington, D. C.*

And now, Mr. Chairman, it may be asked how is this done? And the answer is perfectly plain. In the first place, the farmer has to pay living wages to the laborer, and wages that are measured by the American standard of living, not that of the foreigner, eking out a miserable existence. Then the great ocean which separates us from this labor has become a short ferry, reducing the time of its transit to a nominal period as compared with the voyages of old sailing-ships; and this class of freight, so far as transportation is concerned, is frequently brought here in ballast, as appears from the letters just read and the following freight bill, taken from the files of a commission merchant in the city of Baltimore:

DONNELL BUILDING,
Baltimore, February 3, 1888.

Messrs. J. E. Bell & Co. Dr. to owners of steam-ship Thanemore, per Patterson, Ramsay & Co., agents.

For freight as under:

Seven hundred and seven bags potatoes, £23 17*s.* 2*d.*; exchange, $4.85; currency, $115.93.

Received payment.

PATTERSON, RAMSAY & CO.,
Per W. BOWIE, JR.

Seven hundred and seven, containing 2¼ bushels to bag; duty, 15 cents per bushel.—J. E. Bell & Co.

From this freight bill it will be seen that a cargo of 707 sacks, holding about the same as one barrel of potatoes, was brought by steamship from Liverpool to the city of Baltimore for about 16 cents per barrel, cheaper than it could be carried from any landing in the State of Virginia for, and even cheaper than from here to Baltimore, a distance of but 40 miles. Then, too, we are taken advantage of whenever there is an exceptionally good year in the foreign countries opposite the Atlantic seaboard by the farmers there shipping to this country in immense quantities, and whenever the freighters can find no paying cargoes they will take this in ballast almost as we have just seen, and coming at irregular and odd times a glut is created to our damage, as was the case a week or more ago when a cargo of green stuff, consisting of potatoes, onions, cabbage, etc., from Savannah, Ga., was taken from the docks of the city of New York and dumped into the sea on account of the market then being overrun by supplies of a like kind

from foreign countries—potatoes from Bermuda and Scotland and onions from Spain and Egypt—and I refer to the following account of it taken from a New York daily paper:

OVERBOARD WITH TONS OF FOOD—THROWING FRESH VEGETABLES INTO THE SEA BECAUSE THE MARKET IS GLUTTED.

A crowd of men and women swarmed about the pier of the Ocean Steam-ship Company at Spring street and the North River, New York City, yesterday, and lingered for hours while stevedores in blue jumpers wheeled load after load of crates of vegetables from the covered pier to a big lighter that rocked at its anchorage alongside. Thousands of the crates were piled high on the lighter's deck before sundown. They all came from the steamer Augusta and contained tomatoes, cucumbers, string-beans, and cabbages, and the orders of the company were to take them out to sea this morning and pitch them overboard, crates and all.

The costly sacrifice was made because of the sudden and tremendous glut of the vegetable market developed in the past few days, which has knocked prices endwise and practically destroyed all demand for the cargoes that arrived on Saturday and Monday.

Onions have come in great quantities from Egypt and Spain, and potatoes from Bermuda and Glasgow, and commission merchants are trying to protect themselves against the prices of the demoralized market by storing them and awaiting a rise in values.

Then, too, we have seen the German Empire supplying her war-ships in the harbor of Norfolk with potatoes, onions, etc., brought directly from that country, because by reason of the duty being taken off, which is a courtesy between friendly powers in such cases, she could do so cheaper than by buying them in the Norfolk market. Then, if the German Government can do this when the tax is off, why not the German farmer? He has the ability, as will be seen by the following from the New York Mail and Express:

In Germany, as in Ireland, everybody eats potatoes. They are not only abundant, but cheap, and are the principal article of food in the laboring man's home. The crop is enormous. The whole country might be dropped in Texas and still leave enough space around the State for a race course, and yet the potato crop for a number of years past has fluctuated between 230,000,000 and 280,000,000 barrels, while that of the United States has ranged betwen 36,000,000 and 46,000,000 barrels.

The exporting of German potatoes to the United States is a comparatively new business, a rather small matter now, but growing, and likely to assume large proportions.

The first shipment was made last September, when 8,000 bushels were sent from Stettin; the results were so satisfactory that a regular business was established and shipments are now made every week.

Having the ability there can be no lack of inclination when the doors are wide open for him to enter and destroy the market in which the home farmer finds a remunerative demand for 90 per cent. of everything he grows. The following table will show in official figures the value of the most important farm products:

Value of products of American agriculture in 1886, *and of the proportion exported in the fiscal year* 1886–'87.

Products.	Production, farm value.	Exportation.		
		Export value.	Farm value.	Per cent.
Breadstuffs:				
Corn	$610,311,000	$20,052,704	$11,790,046	1.9
Wheat	314,226,020	142,666,563	87,668,833	27.9
Oats	186,137,930	635,657	343,659	.2
Barley	31,840,510	853,405	691,809	2.2
Rye	13,181,330	227,971	197,687	1.5
Buckwheat	6,465,120	.....	.....	.....
Rice	5,000,000	29,204	26,284	.5
Total	1,167,161,910	164,465,504	100,718,318	8.3
Meats	748,000,000	78,152,731	62,522,185	8.4
Poultry products	186,000,000	88,970	71,176	.....
Hides, hair, etc.	93,000,000	1,101,203	825,902	.9
Dairy products:				
Butter	192,000,000	1,983,698	1,487,773	.8
Cheese	32,000,000	7,594,633	6,455,438	20.2
Milk	156,000,000	258,971	181,279	.1
Total	380,000,000	9,837,302	8,124,490	2.1
Textile fibers:				
Cotton	257,295,327	206,222,057	177,895,501	69.1
Wool	77,000,000	78,002	70,202	.1
Hemp, flax, etc.	9,000,000	.....	.....	.....
Total	343,295,327	206,300,059	177,965,703	51.8
Vegetables:				
Irish potatoes	78,441,940	318,259	238,694	.3
Sweet potatoes	20,000,000	.....	.....	.....
Peas and beans	13,800,000	562,864	450,291	3.3
Market gardens	68,000,000	427,530	256,518	.4
Fruits	175,000,000	2,669,965	1,601,979	.9
Hay	353,437,699	218,006	130,804	.....
Tobacco	39,082,118	25,637,983	20,510,386	52.5
Hops	3,500,000	54,970	46,725	1.3
Sugar and sirup, including honey	33,500,000	12,976,061	.....	.....
Clover and grass seed	15,000,000	911,898	638,329	4.3
Wines	10,000,000	215,171	129,103	1.3
Totals	3,727,218,994	503,938,476	374,230,603	10.0

Now, what will he get in return for this free market to the foreigner? It is answered he will have cheaper clothing in making his other farm product, wool, free, and cheaper farming implements by reducing the duty on certain classes of raw material, and in this he injures the farmer in the one case directly and in the other indirectly, and no one tells him how much cheaper these articles will be; he knows that they have always been cheaper under a high protective duty than under a low tariff. It is asserted that they will be cheapened to the extent of the duty now imposed, but that sophistry was exposed by the distinguished member from Ohio [Major McKINLEY] so recently I will not repeat it.

Then may I not ask who is seeking this repeal? Surely it is not the farmer, for we are told that there are more than a thousand petitions with hundreds of names signed to them on file in the room of the Ways and Means Committee praying for protection, in substance about as follows:

PETITION FOR MORE EFFECTUAL PROTECTION OF AGRICULTURE.

To the Speaker of the House of Representatives:

The undersigned respectfully pray that agriculture may be more effectually protected, by preventing fraudulent importations of cattle on pretense that they are for breeding only;

By a duty of 20 cents per bushel on barley, with proportionate increase of duty on malt;

By duties of 25 cents per bushel on potatoes and onions, $2 per 100 on cabbages, $3 per ton on hay, 10 cents per pound on hops, 20 per cent. on beans and pease, 5 cents per dozen on eggs, 30 per cent. on fowls and poultry and on "vegetables in their natural state or in salt or brine, not otherwise provided for," with no removal or reduction of duties on market garden products now dutiable;

By such increased duties on flax and on linen goods as will effectually encourage the preparation of fiber and manufacture of goods;

By abolishing all duties on sugar, with a bounty to home producers;

By preventing imports of leaf tobacco suitable for wrappers at the duty imposed on other leaf tobacco, and repealing all internal taxes on tobacco;

By restoring to wool-growing the substantial protection enjoyed under the tariff of 1867, so modified as to meet the later forms of foreign competition and of evasion.

The undersigned further represent, respectfully, that they are practical farmers of this locality.

Rather, then, than repeal these duties and the direful consequences follow, let us grant these petitions and at the same time fulfill the pledges made to the people in 1884, and reiterated in 1888 by both political parties. The Democratic platform says:

The Democratic party is pledged to revise the tariff in a spirit of fairness to all interests. But in making reductions in taxes it is not proposed to injure any domestic industries, but rather promote their healthy growth.

And the Republican platform delares that—

The Republican party pledges itself to correct the irregularities of the tariff, and to reduce the surplus not by the vicious and indiscriminating process of horizontal reduction, but by such methods as will relieve the tax-payer without injuring the laborer in the great productive interests of the country.

Then in a spirit of fairness let us revise the tariff, and revise means adjust, not repeal; adjust it in its irregularities, not, as is proposed here, by striking down this "domestic industry," but put them on a competing footing with the foreigner. We see by the figures just quoted that 45 cents per barrel does not protect nor does it reduce the surplus, the duty this year amounting to three times as much as that of last year. Put the rate on potatoes at 25 cents per bushel, and 30 per cent. ad valorem on all other vegetables; you will then accomplish a twofold purpose—protect the farmer and reduce the accumulating surplus. But it is answered that this can not be; these things are the necessaries of life, and should be as free as the water that runs. Then may I not ask why protect the sugar planters of Louisiana or build a wall around the rice fields of Carolina? They are both just as necessary to our existence as anything we consume. Rice is amply cared for by a duty of 100 per cent.

Here we see irregularities deliberately created instead of adjusted—doing the very thing everybody is pledged not to do. And I do not wish to be understood as complaining because the Representatives on the floor of this House and the farmer of South Carolina have been able to so prevail on the Committee on Ways and Means as to secure 100 per cent. protection for his peculiar crop. Nor do I propose to criticise the course of the committee in this regard. I believe they are clearly right on that, and when the paragraph is reached I shall give it a most hearty support. The objection I have is that the duty on the other farm products, just as meritorious, are not put on something like equal terms with the product farther south. The reason for the discrimination is not plain, and there has been no attempt to make it so that I have heard. And further, it may be said that this is not the sort of farmer that should receive such distinguished consideration; he is a mere trucker, and does not measure up to the standard of the great grain growers of the West nor the aristocratic planter of the South; but I take it, he is a farmer nevertheless, he cultivates the soil, and that should be the test, and my eloquent colleague from the Valley of Virginia [Mr. O'FERRALL] makes the first farmer a market gardener. He says in his late speech that—

The Lord God when he made man took him and put him in the garden eastward from Eden to work and to keep it.

And I feel that I have a right to appeal to him to support this motion and stand by this farmer rather than the caucus, for he says in that speech—

In closing, I desire to say for myself that in this contest I am for the farmer.

And further on he prays God to "keep him steadfast to the end," and

I take it he will be steadfast when this vote is taken and stand by the interest which seems so dear to him, and along with him I hope to see my other distinguished colleague, General LEE, who is a farmer himself and knows what their wants are, and my friend, Mr. WISE, too, I hope to be with us, as he admits in his late speech upon the tariff—

That wages in the States are determined not in the factory, but on the farm.

And if that farm be in a foreign land, with nothing in common with ours, what will become, not only of the returns of the farmer here, but of the wages of the farm laborer and the factory hands too?

And now I appeal to those gentlemen of the other side whose bowels of compassion are constantly being moved towards the horny-handed sons of toil to show their faith by their works and vote to strike these articles from this free-list. For the rest of my colleagues from Virginia here and those on this side of the House generally, I can speak confidently that now and all the time they will be found extending a helping hand to the men who labor for their living, whether it be on the farm, in the factory, at the furnace, in the mine, or on the deep blue sea. No alien or foreign product will ever by them be encouraged to come to these shores to supplant the honest toil of this land. They are here always telling you that—

To your own new world's interest contrive to be true,
Keep your ears open wide to the future's first call;
Be whatever you will, but yourselves first of all.

The Tariff.

SPEECH

OF

HON. JACOB YOST,

OF VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 17, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. YOST said:

Mr. CHAIRMAN: The Bureau of Statistics reports imports of iron ore for the year 1887 at 1,194,301 tons, valued at $2,206,958. It also reports imports of 850,331 tons of bituminous coal, of the value of $2,620,975. Every dollar of this $4,827,963 ought to have been paid to American workmen, and would have been had there been adequate protection. It is to prevent a repetition of this report, to pay this money into the pockets of the laborers of this country, to develop the resources which lie almost within the shadow of this Capitol that I ask this committee to put such a duty on these so-called raw materials as will practically exclude the product of an ill-paid labor.

Each of the great political parties has solemnly declared that in the adjustment of import duties due regard should be had to the interests of the working people. It seems to me that no line of the tariff schedule offers so fair an opportunity to redeem this promise as the one now under consideration. From 80 to 90 per cent. of the cost of these materials is for labor. The importations of iron ore and coal during 1887 took a dollar a day from sixteen thousand Americans for three hundred days of the year. Within 300 miles of the spot on which we now stand were millions of tons of this material piled up in the mountains and thousands of idle hands who would have been glad of the chance to dig it out at even a dollar a day. There was not a pound of this coal nor a ton of this ore that could not have been mined in Virginia alone, to say nothing of the other States. And it would have been mined there had it not been cheaper to employ the labor of Spain, of Cuba, of Elba, and Algeria.

A glance at the statistics for the past eight years shows that notwithstanding an increase of the duty on iron ore the average value of the importations has gradually decreased from $2.80 per ton in 1880 to $1.84 per ton in 1887. Home competition has brought about this reduction, but home competition has reached that point now where it is no longer possible to contemplate further reductions, and as a result we are told that the year 1888 promises to witness a large increase of the importations of Cuban ore.

Can this Congress refuse to interpose here in behalf of American mines and American miners? Why should we allow a ton of this material to enter our ports when we know that it represents just so much taken from the pockets of our own people? The theory that these ores are required for mixing with our native ores in the production of Bessemer steel has long since been exploded. Bessemer ores of the finest quality are known to exist in vast quantities in various localities of this country, at Marquette, Lake Superior, New York, and throughout the Southern States. I have here now a report from Andrew McCreath, chemist to the geological survey of Pennsylvania, an authority accepted by all whose opinion is worth anything, in which he mentions twenty-five localities examined by him in Virginia alone, where the best of Bessemer ores are found in quantity. The maximum of phosphorus allowed in Bessemer ores is fourteen one hundredths of 1 per cent.

Here he gives a long list of deposits, the analyses of the ores of which show from 58 to 65 per cent. of metallic iron, with from .023 to .050 of 1 per cent. of phosphorus. But it may be asked why these valuable ores, so close to the market, are not mined. I can answer that question by quoting from a statement made by Mr. W. H. Patterson, of the Lynchburgh Iron Company. He says:

In a work by J. L. Campbell, LL.D., entitled "Geology and Mineral Resources of the James River Valley," he enters into a long and accurate description of the ores of that valley, and on page 20 he says: "Beyond the southwest limit of the James River district, but within the same broad belt, ores have been extensively mined in Franklin County and the northwest portion of Pittsylvania, and shipped northward for the manufacture of Bessemer steel."

I am familiar with the operations of the Pennsylvania Steel Company in that locality, and state that they took from there and used 60,000 tons of as rich and good a Bessemer ore as can be found in the world. Why, then, do you say, did they cease operations? Because the time when they ceased mining and shipping ores from Virginia was the same time that they invested largely in mines in Cuba, and they abandoned their source of supplies in Virginia because the cheap labor, low ocean freights, and insignificant duties, enabled them to procure these foreign ores cheaper than they could mine in Virginia and transport by rail to Pennsylvania.

Some one may again say: There was no more ore there; the deposits have been worked out. I have been assured by a gentleman who knows of the operations of the Pennsylvania Steel Company in those mines that the amount they took away was insignificant compared to what was left; and I further state that within the last two weeks I made a contract for the Lynchburgh Iron Company for a quantity of Bessemer ore from the same place, guarantied to run 55 per cent. metallic iron, and had to limit the quantity I would take for fear the contractor would send me more than I could use. Does this indicate that the supply is exhausted?

That explains the whole trouble. The Virginia mines are closed, and the output of the Cuban mines is pouring in upon us, because the Virginia miner can not work for the starvation wages paid his Cuban competitor. It is a simple question of wages, for, as I said before, the cost of iron ore, whether domestic or imported, represents practically nothing but the cost of labor.

It lies within the power of this House to remedy this wrong—to throw into the homes of the poor of this land this $5,000,000 annually. By increasing the duty on iron ore and coal you restore to the American miner that which rightfully belongs to him, and do injustice to none. Such an increase will not seriously affect the manufacturer.

He will get his material just as low as it can be produced under our system of labor. With millions of tons of ore swelling the sides of our mountains, and tens of thousands of eager hands waiting a chance to work, competition will limit the cost to a reasonable profit to the employer and a decent living for the employé. No man who is an American should object to this, for no American should want to see the day come when an honest, industrious workman of this country can not make a decent living.

The Tariff.

SPEECH

OF

HON. EDWARD J. GAY,

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 9, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. GAY said:

Mr. CHAIRMAN: I was about to say when I gave way to the gentleman from Maine, that when the sugar schedule first brought into the House by the Committee on Ways and Means was examined by myself and colleagues representing the sugar industry in Louisiana, we went to the committee, protesting against that schedule. We exhibited samples of sugar which we were making by the direct process upon the plantations in Louisiana, running up as high as No. 20 Dutch standard; not 16 alone, but up to 20; and we explained to the committee that we could not under any circumstances live with the schedule as then proposed by them.

I think it was mainly owing to our representations, and out of deference to our necessities and to the welfare of the sugar interests of Louisiana and of the country, that concessions were made, and that ultimately the schedule was changed. Louisiana, as has been stated before in this House, said to the Committee on Ways and Means that it could not stand any reduction under the existing tariff laws, but we have also said that it seemed to be necessary we should bear our part of the burden to bring about some practical mode of reducing the revenue. We could never have acquiesced, however, in the present bill had the schedule remained as it was at first, because if importations of foreign sugar up to 16 Dutch standard could come in they would come directly in

competition with the high grades of sugar which we are making by means of large investments of capital for the improvement of our machinery and fixtures. We found years ago that we could not live by making sugar to be sold at 2 or 3 cents a pound, and that therefore we must study the mode required to secure a better extraction from the cane, and must greatly improve the quality of the product. This, at large cost and great expense, we have done. Therefore we could not afford, under any circumstances, to allow foreign sugars no better in saccharine strength than those now imported, but appearing by their lighter color to be more desirable for consumption, to be brought into this country in competition with our sugars. Therefore we protested, and I rejoice to say that we succeeded in influencing the committee to make that change.

This would have admitted the weak, bastard sugars of the Scotch and English refiners, which by being washed become sightly to the eye, but are wholly unfit for use in competition with pure sugar.

And now, Mr. Chairman, a great deal has been said about another change made by the Committee on Ways and Means from certain wording of their bill as first proposed, and their second bill, which is now under consideration.

I refer to the provision in the first bill refusing the right of rebate on all sugar exported.

Being familiar with the subject, I used my best endeavors to convince the members of the committee that it would be unjust to allow any prejudice against trusts to deny a right granted to every American manufacturer of duty paid foreign merchandise to a return of the actual tax previously collected when exported, and that there were several refineries not in the trust.

I favored the continuance of an American right to export and to a rebate, restricted to the actual duty which the Government had received from the article.

I had a personal and representative interest in a continuance of the right of rebate, because as a planter and a merchant I had often seen large accumulations of surplus stock in the American markets which depressed prices and affected my interest as well as that of my constituents, and which were relieved to that extent by heavy exportations of refined sugar.

If stocks accumulate beyond the demand for consumption, and no export be possible, then the working force must be discharged.

On the contrary, if without loss to the Treasury, I would be glad if every pound of refined sugar consumed in Canada and Great Britain had to be refined in the United States, in order to give greater employment to the laboring men of this country.

When you strike at capital let it be done with cool consideration, not in the heat of excited prejudice, for there is a power behind capital which you do not wish to wound. This power is the laboring man, in all the grades of intelligence, skill, proficiency, and strength.

Mr. Chairman, gentlemen have stated and reiterated on this floor that the production of sugar in this country, instead of giving hopeful signs of increase and of becoming an important industry, has been positively on the retrograde, and that we have, after so many long years, failed to produce as large crops as before the war. Without going into details, I wish to say, sir, that starting in our impoverished condition in 1865 with a crop of 18,000 hogsheads we have gone on with a gradual average increase until in 1887 we reached the production of over 300,000 hogsheads of sugar, and of a quality far superior to any ever made in *ante-bellum* days.

The crop of last year equaled one-tenth the whole consumption of the 60,000,000 people of the United States.

The number of days in the year being 365, this gave a supply for the whole country of 36½ days.

This domestic supply, to that extent, saved to the country the sending abroad to aliens the sum of twenty million of dollars, which was the value of that crop.

The supply from Louisiana exerts an important influence in cheapening the price of sugar, and for a time paralyzes the business of the refining industry.

Our crops are made with borrowed capital, and as soon as ready for market the product must be sold at whatever prices it will bring.

Gentlemen have asked why it is that your production of sugar has not increased more rapidly.

To those who seriously desire a reasonable explanation, I can truthfully reply. The causes are numerous and the reasons are good.

First. The effects of the war and the period of reconstruction demoralized the laborers of that section. They were for several years in a state of vague expectation and unwilling to enter seriously into the common avocations of life for earning a livelihood. Many emigrated to other States, and a largely increased percentage of the negro race may be seen to-day in all the Northern States and Territories. Many were attracted to steam-boating, other large numbers into railroading, and many into politics as a profession.

It required years for them to decide of their own volition that it was the height of manhood and independence to join hand and hand with their white neighbors and employers in building up a common country and in identifying themselves in a united effort to restore the prosperity of the country. The happiest effects have been the result, and in the sugar districts of Louisiana may be found a laboring population possessing the advantage of remunerative constant employment, comfortable permanent homes, a congenial climate, and with all the elements of an advancing citizenship, and to incite in them a laudable ambition in every field of industry and the acquisition of property, and each recurring year improves the situation.

Second. The capital required to prosecute the planting and manufacturing business was scarce and dear. The cost of money to the average planter, interest and commissions, for many years amounted to at least 12 per cent. It was hard and difficult to build up under the weight of such a burden. We were regarded with apprehension by the great accumulations of capital in the North; we could only secure independence by delving it from the ground.

Third. The sugar districts have met with repeated disaster from widespread overflows, by crevasses from high water in the Mississippi River, in some cases destroying all crops for 100 miles in extent and requiring years to re-establish those sections. The people, unable to pay taxes, left the resources of the State powerless to rebuild substantial levees. But the last decade has enabled us to grow in strength, and now a sense of greater security and confidence pervades.

Fourth. We have been confronted with a constant depreciation of prices.

The crops of tropical cane sugar in foreign countries were gradually increasing and assuming greater proportions, while the beet-root sugar industry, which had been carefully nursed in its cradle by the fostering hand of European governments, was assuming the proportions of vigorous manhood, and under wise laws for its protection it came to supply not only the total consumption of their own population but to force out into the world a large overplus constantly growing in volume until the very existence of the cane industry was threatened.

The Louisiana industry required a struggle to exist under the necessity of marketing their products in competition with the tropical product of enforced slave and cooly labor on the one hand and the bounty-paid sugar of Europe.

We had experienced a constant annual decline until from 15 cents we had to come down to 3 or 4 cents.

The wonder is that we could survive at all.

But never was there more indomitable energy and intelligence implanted in the breasts of any people than was possessed by the struggling sugar planter of Louisiana. He saw the deficiency of his machinery and appliances, and was oppressed with the knowledge of his lack of capital.

To survive he must increase the percentage of extraction, and he must radically improve the quality of his product, and simultaneous with that he must go on with his business to make a support and to meet his liabilities.

The sugar industry has two departments—one agricultural, the other manufacturing. These give employment to the laborer in the planting, cultivating, and harvesting the crops, till delivered at the scales of the factory. It requires five tons of cane to plant an acre, worth from fifteen to twenty dollars. The value of the seed and the actual money paid to the laborer for his services through the year and until the delivery of the cane at the mill is not less than $60 per acre. This requires capital, for the laborer must be promptly paid. But the greater outlay required, and before the crops can be utilized, is in the sugar-house—the factory. To cope with the times, and to enable successful competition with the world, this factory is indispensable on every large plantation or in every neighborhood, and requires for each an outlay in buildings, fixtures, machinery, and appliances of from one hundred and fifty to two hundred and fifty thousand dollars, according to its capacity.

This changed situation and new outlay to enable the production of sugar suitable for the daintiest taste, connected with an increased and annual increase in the yield of juice, is the new era in the sugar production of Louisiana; and while the industry is comparatively old the problem for its practical vast expansion in results is with us but in its infancy.

We have never ceased to affirm that our permanance and success are dependent on protection. Call it by whatever name you will, we must have a discrimination in our favor, so that our tariff laws will shield us from an even competition with the products of other lands enjoying certain peculiar advantages of governmental aid and cheaper labor.

Mr. Chairman, among all our hinderances, none has been more detrimental than continued tariff agitation.

While we need the energy of new men and the use of greater capital, these have been constantly repressed by rumors of instable tariff laws.

My friend from Iowa [Mr. GEAR], who means well, says that our industry is limited, and that altogether we are only cultivating in cane what would amount to a few townships of one county in his great State.

We invite him to come to Louisiana, where he will be welcomed with warm, outstretched hands. We will carry him along the banks of the great Mississippi for 200 miles, where on all suitable soil green fields of cane are in view, on either shore, stretching out as far as the eye can reach. Next we will take him down the beautiful Bayou Lafourche, where for 50 miles in extent he will have spread out before

him on either bank fields of unrivaled fertility. Then we will accompany him to the home of Evangeline, the lovely waters of the Teche, the fair garden of the fruits and flowers of the tropics, that extended and beautiful section of our State which has been specially attractive to our new compeers in the sugar culture coming from Illinois, Ohio, New York, and Pennsylvania, shedding a new light by their accomplished energy and capital; and then he would not have gone half the round.

My friend would find it was more than a few townships, and very much resembling in its dimensions a State. When he came to know our genial people and to witness their industry, under disadvantages, I fancy he would be almost willing to cast in his lot with us.

It has been stated here that rains and cold destroy our crops, and that therefore we can never succeed.

Man's necessities point out the remedies, and we have not been sluggards. Deep drainage, which required another heavy outlay of capital, rapidly relieves the lands from the effects of heavy rains, and they soon become dry. Dry lands are warm lands, so that by deep drainage we counteract cold when it comes, and our crops in the average are as regular as the crops of other sections; so that labor, capital, and protection are all we require to make regular crops.

The gentleman from Pennsylvania [Mr. BAYNE] has said that climatic influences will prevent the possibility of the successful sufficient production of sugar in the United States, and therefore he is in favor of putting it on the free-list.

Now, sir, climatic influences and differences prove the great beneficence of Heaven, and from these come the surety of seed time and harvest to all latitudes.

Cuba has advantages over Louisiana, but Louisiana has its advantages over that island.

We far exceed them in tonnage to the acre of land, because we cultivate thoroughly, while they can not. With them cane must be twelve months' old to give satisfactory yield, while with us but eight months are required. The juices of all crops thicken to maturity with the approach of cooler weather. This is the salvation of Louisiana, but it is denied to the tropics, where the tendency is to continued growth, anc maturity comes only from age.

This principle comes to the relief of the sorghum as well as the beet crop, with a shorter season, and they enjoy the great advantage of inexpensive seed for planting and the opportunity of frequent rotation of other crops on the soil.

The interest of all sugar producers is identical, no matter from what plant or whatever latitude. Each has its peculiarities and each its advantages.

Can my friends tell me of any section or crop that is not subject to vicissitudes and irregularities? How is it with the great West? Have not they suffered failures time and again?

I say, yes; fully as often as the cane crop has failed in Louisiana.

Why should not the legislation of Congress studiously foster this industry as against the policy of crippling and destroying?

What are the advantages which would follow the wide extension of the production of sugar, until the whole consumption can be supplied at home?

What considerations present themselves to the people of this country to foster the sugar industry? Let me call attention to some points which are plain.

We are annually sending abroad to aliens at least $80,000,000 to pay for sugar.

We will soon have a hundred million inhabitants, when the cost now incurred will be increased in amount over 50 per cent.

This is a heavy drain, indeed, and by raising our supply at home we will retain every dollar of it in the hands of the people. Our interests are so intertwined that what benefits one benefits the whole.

Every dollar produced at home is thnt much positive addition to the common wealth.

Could we turn the labor of three hundred thousand men now engaged in other agricultural pursuits, which are overdone, to the production of sugar, a great relief would come to tho growers of grain, and they would find a market for their products among the employés of the new industry.

Ample supplies of sugar produced in the heart of the country where the consumers reside would save large sums in the cost of transportation alone.

This would give independence to the country in this regard, in peace and in war.

This would obliterate the large tariff revenue from sugar, for, no matter how high the nominal rate, each succeeding year of increased production will reduce the amount until the whole will cease.

This is the road to break up existing trusts. A product can be made in every factory of a quality to satisfy the most fastidious appetite.

The machinery and fixtures of the mammoth refineries would be distributed to the factories of the producers throughout the country and their avocation will be gone.

The sugar planters of Louisiana have always stood firmly and honestly for the principle of protection to all industries, and so they stand today.

But to us protection means nothing unless it is protection to us.

In times requiring decision a wise man must choose that which in his discretion seems best for the hour.

We do not propose to be left standing on the shore deserted. The voyage must be made and who is to complain if we find it necessary to take another pilot on board?

If the sugar interest was as fairly under way in Pennsylvania or Iowa or Illinois, even to the extent it is in Louisiana and Kansas, would our friends so ably representing those States vote to throw it overboard?

Let them remember that we are all one people and that we must all stand or fall together.

The Sugar Question, with Certain Allegations on the Subject, Considered.

The just demand of the tax-payer is that the sum of all the taxes collected on all the articles taxed shall not exceed the wants of the Government, economically considered.

SPEECH

OF

HON. THEODORE S. WILKINSON,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 9, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. WILKINSON said:

Mr. CHAIRMAN: As this question is one that very largely affects the interests of the State which I have the honor in part to represent on this floor, and as it is also very important in its relations to taxation and revenue, and in view also of the fact that on Saturday last ample time was allowed to the members from those States, Kansas and California, which are likewise specially interested in this question, to make their remarks without being limited by the ordinary five-minute rule, I will request unanimous consent that my time be extended so as to enable me to conclude what I wish to say upon this question.

The CHAIRMAN. How much time does the gentleman desire?

Mr. WILKINSON. That will depend in some measure on what interruptions I may have. Probably twenty-five minutes will be sufficient.

Mr. ROGERS. I ask unanimous consent that the gentleman be permitted to proceed without interruption for thirty minutes.

There was no objection.

The CHAIRMAN. The Chair will state that in view of the length of time that this debate has run, and the extension of time which has been granted to the gentleman from Louisiana [Mr. WILKINSON], that during the remainder of the debate the Chair will, if there be no objection, not insist upon the presentation of formal amendments, but will allow the discussion to run along upon the amendment offered by the gentleman from Illinois [Mr. CANNON].

Mr. WILKINSON. Mr. Chairman, I thank the gentleman from Arkansas [Mr. ROGERS] for his courtesy. I do not propose upon this occasion to go into the theories of taxation, or to discuss the subject of revenue reform, or the question of protection, whether that protection be furnished as an object or as an incident of taxation. I do not desire to go over again all the points that I presented in a speech made two months ago in the general debate on this bill; but it will be necessary to touch briefly on some of them so as to meet and offset some of the charges made on this floor. I spoke then at some length about the sugar tariff in its relations to the tax-payer and the consumer, and I think I showed that this tax, as it is left in this bill, is one that is not burdensome to the tax-payer except as a portion of the necessary burdens of taxation which the Government needed to be carried on.

That it was a tax I did not dispute; that all taxes or any taxes are burdensome I do not and did not deny. I claim for this tax no immunity from the rule that taxes are burdens, but that it is other than a portion of the taxes necessary to support the Government, that it is a needless burden that the tax-payers have to bear, I most emphatically and unequivocally deny. The law that all animated beings require a support—from the snail that is crushed beneath the feet to humanity, the noblest type of life—is as universal as the law of gravitation. This law applies to governments as well as to the individuals who are governed. No millenium has yet come when this or any other government can be maintained without cost.

He who with vehement declamation and uplifted voice prates about the outrage of taxing sixty million of people more than $50,000,000 annually chiefly for the benefit of Louisiana, or Florida, or Texas, or Kansas, or California, or of anybody or anywhere, knows when he says it—for God put reason in his breast which clamor and vehemence and partisanship can not entirely silence—he knows that when he says this that

SIXTY MILLIONS OF PEOPLE HAVE TO TAX THEMSELVES MORE THAN FIVE TIMES SIXTY MILLIONS OF DOLLARS.

in order to carry on their Government and maintain their institutions and their civilization. He knows full well that with the taxes reduced generally on a great number of articles, sugar among them, as is proposed by this bill, the revenues that will continue to be raised from sugar will be at least as little burdensome on the people as any taxes that will be left on the whole dutiable list. He knows—as any one may know who will take the trouble to ascertain—that the most civilized and enlightened countries of the world (except Great Britain), and even Canada, and many of the British colonies, have a duty, and most of them a very high duty, on sugar; that the first tariff act ever passed in the American Congress, as I have before said, when there was not a pound of sugar produced in the United States, levied a duty on sugar which has been kept up from the year 1789 until now; that during seven-eighths of that time the average sugar duty per pound was greater than it will be under the Mills bill; that this is the third reduction since the war, and that the average rate of duty per pound proposed in the Mills bill will be a reduction of about 50 per cent. in the rates per pound that prevailed from 1864 to 1870.

And yet, sir, with all this information available, this Hall has rung again and again with denunciations of this tax by professional friends of the tax-payer as if there was something intrinsically wrong, burdensome, and outrageous in it that other taxes did not possess. The vast majority of the civilized world who have thought otherwise—the example of our own country throughout its entire history—tend to show that the maintenance of a duty on this article, in most cases far larger per pound than the present duty with us, is intrinsically proper and wise, and as little onerous as any tax can be, as long as governments exist and taxes endure. The tax-payer is too intelligent to be persuaded that there is any discovered process by which the Government can exist without his contributions, or that he is to be benefited by the shifting of a burden from one shoulder to place a heavier burden on the other. His just demand is

THAT THE SUM OF ALL THE TAXES COLLECTED ON ALL THE ARTICLES TAXED SHALL NOT EXCEED THE WANTS OF THE GOVERNMENT ECONOMICALLY ADMINISTERED,

and when this is done, as this bill proposes shall be done, he can not complain, but will be accorded substantial relief.

Mr. Chairman, I am not upon the floor to-day to plead in behalf of an infant industry. The sugar industry of Louisiana is long past that stage of its existence. It has risen from disaster; it has lived amid dangers; it has triumphed over difficulties. It is a legitimate industry in this country, and it will continue to live and prosper as long as you gentlemen will continue to maintain the economic system on which it so largely depends, which was instituted by Mr. Madison and never in this particular departed from since.

I am not upon this floor, I repeat, in behalf of an infant industry; but there are infant industries in this pursuit. One in Kansas and another in California are infants of special promise. Upon these Louisiana looks much as a young and blooming mother looks upon her tender yet promising offspring, in the consideration of whom the mind is full of thoughts of future achievements in their coming career. These two infant industries—one of them almost certainly—promise to equal and surpass in their fair proportions the sugar industry of my own native State.

The sugar industry of Kansas, small as it now is, has made a start against difficulties which, it seems to me, would have discouraged everything except American industry, American enterprise, and American ingenuity. The sorghum industry is full of hope for the future, but it can not point, as the other can, to the example abroad of promises already fulfilled, and the home wants and more of nations already supplied. The other infant industry, that of the production of sugar from beets in California and elsewhere, belongs to a line which has attained already a commanding position in the sugar production of the world, and has already wrested a great part of the domain from the sugar-cane as the greatest of the sugar-producing plants.

About the further growth of that industry, if it is encouraged, or even if it should be let alone, I have no apprehension whatsoever. I do not propose in the time which has been accorded me to go into a detailed account of the industry which is existing in Louisiana, or of the prospects of the industries which promise to be firmly established in the West and North and South, in other States than Louisiana. But, sir, I have heard so many assertions on this floor that convey erroneous impressions upon this question that I feel called upon to take issue with them. The language that I have heard, not once only, but many times in this debate, has been less interesting, indeed, but hardly more real than the wild tales of the Arabian Nights Entertainment.

I have heard so many assertions which can not be sustained—and in this I mean to make no personal insinuations as to the motives of gentlemen who uttered them, for I think they sprang from lack of information, which is not always easy to obtain on so complicated a question as the sugar question, or from a misconception of certain facts which at first glance seem to sustain their views, but on closer examination have the contrary effect—I say I have heard so many assertions on this subject that can not be sustained that I would have to be deaf and dumb and blind, with memory destroyed and some little acquaintance with a part of the subject utterly obliterated, were I to sit quietly by and assent to all that I have heard.

We were told in the beginning of this debate that the sugar industry was languishing. It languished along last year at the rate of

A PRODUCTION OF ABOUT 340,000,000 POUNDS.

The gentleman from Iowa [Mr. GEAR] said "the sugar production of Louisiana is going down, down, down." On what does he base his assertion? Is it on our well-tilled fields, that have been made to produce to the acre more than was ever known before the war? Is it on the fact that the production has risen from almost nothing—from only 10,000 pounds in 1864 to nearly 340,000,000 pounds in 1887? On this point I quote from a speech that I delivered in this House on the 10th of May last:

There are two eras in the history of sugar culture in Louisiana. In each of these eras the growth of this industry contradicts the assertion that it has been or is a languishing industry. In the first era of its existence, in the decade be-1831 and 1841, the average product of sugar was 77,200 hogsheads; from 1841 to 1851, 192,327 hogsheads; from 1851 to 1861, 297,462 hogsheads. The second of these decades showed an increase in production as compared with the first of nearly 150 per cent., and the third of these periods showed an increase over the second of over 50 per cent.

But the gentleman seems to think it remarkable that the production now has not reached that of the exceptionally large crops of 1853 or 1861—the largest ever made in Louisiana. I would remind him, sir, that from a crop of only a little over 5 tons in 1864 it increased to 144,881 hogsheads in 1870, or fourteen-fold; that between 1870 and 1880 it increased to 213,314 hogsheads, or more than 50 per cent., and that the crop last year was an increase over that of 1880 of over 60,000 hogsheads, and while that was less than several of the largest of the *ante-bellum* crops, it exceeded those of 1855, 1856, 1859, and 1860. And this rehabilitation of the industry, this new birth and growth to sturdy proportions, has been achieved under such disadvantages that even the most skeptical may well question whether it has stood still or languished or proved a laggard in the industrial race.

The war fell upon it with peculiar hardship and most destructive effects. The cane-fields were not like the farms, where the soldiers, with the horses that had borne them to battle, turned the sod, and scattered the seed, and ripened grain stood ready for the harvest where cannon-balls had plowed the earth and armies had fought and bled only a few months before.

With levees broken and destroyed and fields open to devastation from the floods; with sugar-houses dilapidated or burnt down; with costly machinery broken or destroyed; with ditches overgrown with willows and fields set in weeds, briars, and young saplings; with seed cane scarce and almost impossible to obtain—for remember that it takes nearly 5 tons of seed cane to plant a single acre—it was the work, sir, of years, not months, to get well under way again, even. It took time, I admit, and it took money.

It took strong arms and brave hearts. It took dauntless courage, untiring energy, and arduous toil by night and by day to rebuild this industry, but we have done it. We fought the floods and they have been conquered. We have overcome the ravages of war, and in our factories and our fields have adopted such implements and machinery as American ingenuity has devised and our means have permitted us to adopt. We have contended with reductions in the tariff amounting actually to nearly 40 per cent., with constant threats in each recurring Congress of far more.

We have contended with free trade from Oceanica and indirect bounties from Europe, with productions of Hawaii and Chinese labor pouring in unrestrained on the one hand, and exports from France and Germany artificially stimulated on the other. We have contended with falling markets and furnished to the consumers of this country this season sugar at 5¼ cents for which they paid 15 in 1869.

With these difficulties in its re-establishment, with this reduction in the duties, with this competition with partial free trade and bounty, with this tremendous fall in the market, it might not have been remarkable if it had languished or stood still, or even gone back a little. But, remarkable to say, it not only held its own, not only did not stand still, but actually increased in production during that period—from 1869 to 1887—310 per cent.

The sugar industry was reported to be "languishing" in the beginning of this debate, and as the debate has progressed, if we are to believe the statements made on this floor, it has become sick and shrunken almost day by day. Its smiling fields by bayou and river lie beneath summer suns full of vigor and of beauty, and full of promise for the harvest, regardless of the fact that educated legislators have told of its failing existence. The plows and agricultural machines are making their last rounds up and down the rows in the cultivation of the crop of 1888, and within forty days from now the plows will commence anew to prepare the lands for the crop of 1889. The foundries and mechanics are hard at work building new machinery and repairing that which is already erected, so that the processes shall be a little better, a little more complete, year by year. There, it is well-tilled fields, busy workshops, and ceaseless activity.

THERE THE INDUSTRY IS ALL LIFE AND VIGOR,

but upon this floor it is in the last stages of inanition and decay. And more than that, even, we have been told that its life has at last departed and that it is a corpse. I was shocked to hear the sad news, or I would have been if I had attached full credence to it. My relations with the "deceased" were such that I trust I may be informed when the funeral is to come off, as it is proper that I should attend.

A MEMBER. As pall-bearer?

Mr. WILKINSON. Yes, as pall-bearer. If that industry is indeed a corpse my grief will be great indeed, for it has given me a support—not always a good one, indeed—for the last twenty-five years. But, sir, if it is a corpse it is one full of contradictions as to what a corpse is supposed to be. It is the liveliest corpse that you have had to deal with for a long time, as this debate, if nothing else, has shown. [Laughter.]

We have been told again by other gentlemen that this industry could not be promoted successfully; that it could not increase largely because climatic influences were against it; that the frosts which come every

few years, or the wet weather brings it such disaster as to make it unprofitable. The gentleman from Iowa [Mr. GEAR] says:

No man can raise a sugar crop in Louisiana when the season is adverse.

The gentleman from Pennsylvania [Mr. BAYNE] goes much farther than this, and speaking of the sugar industry of California, Kansas, and Louisiana (page 6502, CONGRESSIONAL RECORD), says:

I do not believe you will ever make the sugar industry in this country one that will supply the wants of the American people, though you may place the tariff at 4, 5, or 10 cents per pound and pay a bounty as large almost as you can think of, a bounty of 4 or 5 cents per pound. I do not believe it can be done in this country. Why? Because there is a law of nature intervening between that industry and its prosperity in this country which no act of Congress can overrule.

So far as the first part of these statements is concerned the cane crop is no more susceptible of damage by wet weather than any other dry-land crop that I am familiar with, and far less than some that I could name. So far as ruin by frost is concerned, it is damaged by frost occasionally, but notwithstanding this damage it is as free from vicissitudes as any crop grown in Louisiana in a similar area. In the twenty-eight years of my experience in sugar planting in Louisiana I have known a portion of several crops partially damaged by frost, but not a single crop entirely ruined, and only one in all that time injured by that cause as much as one-half. I am satisfied that

THE RECORDS OF AGRICULTURE THROUGHOUT THE NORTH AND WEST WILL NOT SHOW A BETTER RESULT.

Because certain other crops are occasionally injured by early frosts is that any reason why "climatic influences" should prevent their being grown? Early frosts often hurt the corn crop in our northern latitudes. How often is the tobacco crop hurt by the same cause in the fall, or the peach crop in the spring! In certain localities the cotton crop is subject to far greater vicissitudes (especially before the discovery of the use of Paris green) than the sugar crop is or has ever been.

I have known a field of cotton that was expected to give 400 bales to be in one week so destroyed by the army worm as to only give 2 bales instead of 400. I have never known vicissitudes such as that to exist in the sugar crop. But if, for the sake of argument only, I were to admit the force of what the gentleman from Iowa [Mr. GEAR] says—if I were to admit that sugar-cane to be profitable must be exempt from the vicissitudes of weather that other plants are subject to, how can the disadvantages of climatic causes be set up against beet culture in the United States, which would be included in the sweeping statements that I have quoted by the gentleman from Pennsylvania [Mr. BAYNE]? We know this sugar-producing plant is grown successfully in Russia, Poland, Denmark, Belgium, Holland, France, Germany, and in Austria-Hungary, and even the gentleman from Pennsylvania [Mr. BAYNE] admitted, in response to a question by my colleague [Mr. GAY] "that our climate is altogether more favorable" as compared with that of Russia "to the production of the beet and sorghum, and other things also." The ample production of sugar in this country is made impossible by a "law of nature" or "climatic causes" in one part of the gentleman's speech, and in another part "climatic causes" are dismissed with a wave of the hand and scattered to the four winds of heaven when he admits that, compared with the climate of Russia, which is an enormous sugar-producing country, "our climate is altogether more favorable." It is not so surprising that the gentleman should have made this last assertion, but, for the life of me, I can not reconcile it with the first that I have quoted. Sir, his last admission is so evident that any school-boy might bear him out in it by taking a map and tracing upon it the isothermal lines that bound the region of the culture of sugar beets in Europe on the north and south. Any school-boy could trace those lines across the ocean and project them over the map of the United States from ocean to ocean, and could show what magnificent areas of territory lie in our country within those climatic lines which bound the lands in Europe where the beet root attains perfection! Sir, Germany, France, and little Belgium, those three countries alone, without one-quarter of the amount of land that is suitable for beet culture in this country, make more sugar than all the people of the United States consume.

The gentleman from Pennsylvania cites bounties paid as one reason why Europe can make beet sugar successfully.

I will come to the true inwardness of the bounty question later on and will show that there is actually no such bounty system prevalent in Europe as has been held up for our imitation, but will remark here that the levying of high duties on sugar has been a main factor and an essential factor in the development of the beet-sugar interest in Europe.

But the gentleman from Pennsylvania [Mr. BAYNE] attempted to reconcile his last statement with his first—both made in the same speech—one that we did not have the climate and the other that we did (see pages 6502 and 6503 CONGRESSIONAL RECORD) by arguing that our proximity to the tropics and consequent competition from those countries would put us at too great a disadvantage. I quote his exact language:

But it should be remembered that the geographical position of those countries is such that they can not avail themselves as we can of proximity to the island of Cuba and the Sandwich Islands, and points in the South American States, where the cane grows and has long life, and where the saccharine matter can be obtained with infinite less labor and cost.

I do not think, Mr. Chairman, that the reason that is alleged is a sufficient reason why European countries can make beet sugar profitably and we can not. If the proximity to Cuba was such a great advantage, why do not the imports of sugar to this country come into the nearest point in America from Cuba? They ought, if this argument was correct, to come in at New Orleans, for New Orleans is decidedly nearer to the tropical sugar countries of this hemisphere than New York. Yet we find that hardly any of the imported sugar comes to New Orleans. Nearly all goes to New York, Boston, Philadelphia, and Baltimore. I have no reliable data to show the comparative difference between the present freight rates between the tropics and New York and the tropics and London, but do not believe there is any large difference between the rates to the two places. But even if there were a great difference in freight rates, of what force would the argument be when we find beet sugar coming across the Atlantic and meeting and selling side by side with the sugars of the tropics at the ports and in the markets of this country?

Another advocate of free sugar, the gentleman from Iowa [Mr. GEAR], who is sitting before me now, said that—

Sugar was not as cheap here as it is in Europe, and it is almost the only article that goes into the consumption of a family of which that can be said.

But, sir, we do get sugar very considerably cheaper here than in most of Europe. Sugar is decidedly cheaper in this country than it is in the great majority of the countries of Europe. England is an exception. I am informed by Dr. Wiley, the chief chemist of the Agricultural Department, a gentleman of the highest standing and reliability, that when he was in Europe several years ago inspecting sugar methods and machinery, he found the price of sugar in all the countries that he was in—France, Germany, and Spain—largely higher than here. The latest data, however, that I have been able to collect indicate that the price in Germany lately, on account of overproduction, has so gone down that it is a little cheaper there than here, and I desire to make a single exception of Germany from the general assertion, reasserting, however, the fact that the latest data show that the price generally in European countries, and in a majority of them, is decidedly higher than it is here.

I have not time to go through and endeavor to offset all the erroneous statements that have been made, evidently under a misapprehension of certain features of this subject; but perhaps the greatest error—the most cruel cut of all——

Mr. GEAR. Permit me to make an interruption.

Mr. WILKINSON. Certainly.

Mr. GEAR. The gentleman states that sugar is cheaper in England than it is in this country.

Mr. WILKINSON. Yes, sir.

Mr. GEAR. Why is it?

Mr. WILKINSON. Partly because England is the dumping-ground of the surplus sugars of the continent of Europe, and in addition to this, because there is no duty.

Mr. GEAR. That is the reason we want cheap sugar in this country.

Mr. WILKINSON. It is rather a novel sight, Mr. Chairman,

TO SEE GENTLEMEN ON THIS FLOOR POINT OUT THE EXAMPLE OF FREE-TRADE ENGLAND AS AN EXAMPLE TO BE FOLLOWED

in this particular, instead of the example of almost the entire civilized world in levying sugar duties. England admits sugar free, but many of its own colonies, and among them our neighbor across the border, Canada, levies a duty on sugar; and the Canadian tariff in rates and classifications is very similar to the sugar schedules in the Mills bill. The color line or bar is established there at 14, here at No. 13 Dutch standard. The lowest rate here is 1.15, there 1 cent. The polariscopic test commences here at seventy-five degrees, there at seventy degrees. The increase per degree of polariscopic test is here three and one-fifth tenths of a mill, there three and one-third tenths of a mill.

A refining sugar below No. 13 Dutch standard and testing ninety degrees will be dutiable here at 1.63 cents per pound. A refining sugar testing ninety degrees and below No. 14 is dutiable there at 1.66⅔ cents per pound. A different system prevails there on sugars above No. 14, as it does here on sugars above No. 13, Dutch standard. Here it is specific entirely; there it is specific and ad valorem combined. Here it will vary in amount from 2.20 to 2.80 cents; there it is 1½ cents per pound and 35 per cent. ad valorem additional, and under certain circumstances 7½ per cent. additional besides. The Canadian rate on refined sugar figures up greater than the rate that is proposed.

THE MARGIN BETWEEN THE DUTY ON RAW AND REFINED IS GREATER THAN UNDER THE MILLS BILL,

and the consequent advantage to refiners greater also. Notwithstanding these striking similarities in the sugar schedules, there is a striking difference in the privileges that the Canadian legislator has on the subject. On this question he is debarred from one of the most precious privileges of American Congressmanship. He can not lift his clarion voice in denunciation of this "monstrous taxation" that is imposed upon "every man, woman, and child" in Canada for the benefit of a few planters down in Huron, or Simcoe, or Addington, or Stormont, or somewhere else, for there is not a single one of that much-abused class following his pursuit in the whole of Canada, and not a pound of sugar, except, perhaps, from maple sap, produced upon all her soil.

But this is all a digression suggested by the interruption of the gentleman from Iowa. I started to say something about the most remarkable error of all that has been committed, one that gives us, without desiring to do so, I feel confident, the cruelest, the "unkindest cut of all." I refer to the charge made by the gentleman from Iowa [Mr. HOLMES].

In order that I may quote him with strict accuracy I read his language from the RECORD, page 6502. He says:

Now, sir, I know there are trusts, and every man of ordinary intelligence in this House and throughout the country knows there are trusts gotten up, and there is no more gigantic monopoly than the sugar trust.

Now, here comes the cruel cut. The gentleman from Iowa continues:

It is gotten up for the benefit of twelve hundred planters in the State of Louisiana.

Why, sir, those twelve hundred planters in the State of Louisiana and the people engaged in helping them to make this product—numbering directly and incidentally about four hundred thousand—those people instead of being "in" with the sugar trust

ARE COMPETITORS OF THE SUGAR TRUST,

and instead of helping to put up the price of sugar they help to put it down, and I think I can bring ample testimony to bear me out in this assertion. I quote from late editorials of the New Orleans papers giving the results of past experience and containing extracts from the circulars of those noted market experts, Messrs. Willett & Hamlin, who are high authority on this subject, stating that at certain times the Louisiana crop has a marked effect in lowering the price of sugar in this country.

The Times-Democrat in April last said:

The Republican press and some of the most prominent leaders of the Republican party are constantly complaining that the protection of five or six million dollars, involved in a tariff of fifty or sixty millions on sugar, is purely for the benefit of the Louisiana sugar-planters, who compose an insignificant proportion of the population of this country.

Those party leaders and journals fail to notice the fact that, besides the five hundred thousand souls dependent upon the sugar crop of this State, there are probably as many more who profit by it, as the carriers of our interstate commerce, as dealers in the provision trade of the West, as manufacturers of farm and plantation machinery in several States of the North and South, and as miners of the great coal fields of Pennsylvania.

Any one at all familiar with the bearing of the Louisiana sugar interest on other business in the country knows of the vast benefits it confers upon the people of other States and sections.

Some years ago the chambers of commerce or boards of trade of Cincinnati and St. Louis, recognizing the importance of the fact we have stated, petitioned Congress to let the sugar tariff alone in the face of a threatened reduction of the sugar duties by the National Legislature.

But the beneficial effects we have mentioned cover only a part of the country, a very large and important part, though it be. There is another way in which the 300,000,000-pound sugar crop of this State benefits the whole country, with the exception probably of the States of the Pacific coast.

It saves to the people of the United States annually many million dollars, more than the total amount of protection afforded by this almost purely revenue tariff to the planters of Louisiana. The fact has been noted by Messrs. Willett and Hamlin, the leading authorities in the country on sugar prices and statistics, that for a certain season of the year sugar prices are dependent upon or controlled by the Louisiana crop. The above authorities have frequently called attention to this fact in their published circulars, but, of course, without any political comment on the matter.

* * * * * * *

The Louisiana crop comes in to supply the sugar demands of the country for three months, say from October 15 to January 15.

* * * * * * *

Now, for nearly two months of this period the people of the country are dependent upon Louisiana for their sugar, and the market of the United States is controlled by this crop. It is produced when the importations of West Indian sugars have fallen off, or when the old Cuban crop has been practically exhausted, and before the products of the new subtropical cane crop begin to arrive in the United States.

Without the Louisia a crop to fill in this blank, caused by the deficiency of foreign sugar supplies, sugar prices would be forced up, in the opinion of the leading sugar dealers, to a point which consumers would find truly oppressive, and they would have to pay more for their sugar in this certain increase of prices than the total amount of all the protection received by the planters of this State.

This is the view of the question taken by some of the most prominent and well-informed members of our own sugar exchange. That it is a correct one there can be no doubt if the laws of supply and demand hold good in this commodity as in others.

The New Orleans City Item, an independent paper, but of strong protection views, which has for some time made a specialty of the sugar question, in an issue of a later date, says:

EFFECT OF THE LOUISIANA CROP ON PRICES.

In an article published three weeks ago the Item gave conclusive figures from the "Statistical Abstract of the United States," to show the effect of the Louisiana crop on the price of foreign sugar. In 1854, when the Louisiana crop was large, the price of foreign sugar fell to 2.87 cents per pound, while in 1857, when the crop was a failure in Louisiana, the price of the foreign article jumped up to 5.47. In other years, according to the table we presented, foreign sugar rose or fell according to the size of the Louisiana crop.

With the decrease of domestic production and the increase of consumption since the war, the proportion of the Louisiana crop to the importation is so much smaller that it is unreasonable to expect an influence on prices as great as that exercised by the *ante-bellum* crops. It is not, however, difficult to show that even now the Louisiana crop has a marked effect in cheapening foreign sugar.

Willett & Hamlen in their sugar circular of December 8, 1887, speaking of the strong statistical position of sugar, said:

"The figures of the sugar position are certainly startling and unprecedented for several years, and were it not for the rapid marketing of our Louisiana crop which supplies the country largely just now, and diverts attention from occurrences elsewhere, our markets would be advancing quite as rapidly as the foreign markets from which we must soon obtain our supplies."

Notwithstanding the continued advance in Europe, the same authority stated on December 22: "Free marketing of the Louisiana crop made a nominal decline of one-sixteenth cent in quotations possible under the peculiar conditions existing, but all the outside conditions have been wonderfully strengthened."

Same papers of January 5: "The rapid marketing of the Louisiana crop through New Orleans also tended to extreme dullness in the four ports, delaying for a time the advance in sugar which should have followed the improving statistical position of sugar."

These quotations taken at random show that the Louisiana crop just harvested held back the advance in sugar notwithstanding the rise in values all over the world.

The two following paragraphs go further than many might be willing to admit, but if we were to judge by the example of coffee, free sugar in the end would not be cheaper sugar.

It is notorious that in previous years the harvesting of the Louisiana crop almost invariably cheapened sugar for four months in the year to the extent of 1 cent a pound.

The stanchest advocates of free sugar admit that were the duty removed the foreign producers would add to the cost of sugar about one half of the remitted duties. As the destruction of the Louisiana sugar industry would cause a rise in price amounting to much more than the other half, it is evident that free sugar would not long be cheap sugar.

The same article says on the subject of the trusts:

The war on sugar seems just now to be largely instigated by animosity to the trust.

The best way to keep sugar at a moderate price and to make sugar trusts impossible is to stimulate domestic production of sugar by adequate protection. With this protection every large sugar plantation would be a refinery, and central factories would be scattered throughout the cane, beet, and sorghum regions. It would be impossible for any combination to control these numerous establishments and the present monopoly would cease to exist.

The present plan of destroying the domestic sugar industry in order to reach the trust is, as the Item has already shown, like burning down the barn to get rid of the rats.

Mr. WEBER. Will the gentleman permit me to interrupt him by a question?

Mr. WILKINSON. Certainly.

Mr. WEBER. Do I understand the gentleman to say that the crop produced in Louisiana appreciably affects the price of sugar in this country?

Mr. WILKINSON. I most certainly do, and if what I have adduced is not sufficient, will offer further testimony to prove it.

Mr. WEBER. Then taking the years 1883 and 1884 when the crop was cut in two, reduced about one-half, will the gentleman explain how it was that the prices of sugar still went down?

Mr. WILKINSON. In none of the years referred to was there any such reduction in production as the gentleman supposes. On the contrary, in one of the years mentioned there was produced the next greatest crop since the war. In the year preceding the time referred to there was a great falling off of the crop, almost as great as the gentleman mentioned, but sugar was higher then, not lower. It is, nevertheless, a fact that sugar has been falling generally throughout the civilized world since 1881, until within a comparatively recent date when there has been a turn the other way. I do not contend that a short Louisiana crop will stop the fall of sugar throughout the world, but I do contend that a large Louisiana crop will increase that decline or partially check a rise in this country. I do not assert that the Louisiana crop is the only factor in lowering prices in this country; I merely claim that it is one of the factors. The price of sugar in this country is of course very largely affected by the prices in the London market.

Mr. WEBER. It is precisely what I hold, that the sugar product of this country is so limited that it has no appreciable effect upon the price.

Mr. WILKINSON. I am compelled to disagree with the gentleman as to that. I have cited editorials from newspapers containing the opinions of those thoroughly posted on the subject, and quoting from the circulars of those eminent market experts, Messrs. Willet & Hamlin. Now, the Committee on Manufactures, in their investigation of trusts, has already secured information of value, and the assertions that I have made will be fully borne out by the testimony of several of the witnesses that were examined by them.

I hold in my hand the printed record of the testimony given before the Committee on Manufactures, from which I will read certain extracts. I find on page 37 of this record that Mr. Parsons, who is said to be the attorney of the sugar trust, was under examination by the gentleman from Arkansas [Mr. BRECKINRIDGE], and I read from the testimony:

Q. Am I to understand, then, from your present reply that the limited advance was due to the large output from Louisiana?

A. I have not said so, and I do not know that that is the fact; yet the fact is as I have stated, that while the advance in London was 1 cent, here it was but half a cent.

On page 38 the same witness was questioned and responded as follows:

Q. You have not explained where Louisiana came in.

A. As I understand it, but for this arrangement (referring to an arrangement to regulate the output) Louisiana would demoralize the market here.

Q. Make it lower, you mean, by demoralization.

A. Yes, and shut up the refineries more or less. Now, I am giving you the best information I have on the subject, but I am not a sugar refiner.

In another place, on page 103, Mr. Havemeyer, in reply to a question by the gentleman from New Jersey [Mr. BUCHANAN] who is now in his seat, spoke of the curtailment in production that was necessary "when the market suffered by the Louisiana crop."

Turning back to page 101, we find the following information elicited in response to the questions of the gentleman from New Jersey, which will still further sustain the views that I have advanced:

Q. Now tell me what the purposes were that were to be subserved by such consolidation, as they existed in your mind?
A. The general benefits arising from what we considered the aggregation of capital.
Q. And what were those general benefits? Please specify them.
A. The most particular one was the influence of the Louisiana crop upon the sugar-refining industry of this country.
Q. Was it a desire to counteract that influence?
A. It was a desire to limit the losses, during the marketing of that crop, to a minimum.
Q. How does the marketing of that crop create losses in the sugar trade?
A. The marketing of the Louisiana crop, representing about 40 per cent. of the consumption of the entire country, during the four months that it is marketed, formerly required a reduction on the part of somere fineries and complete stoppage on the part of others. This arrangement enables the better refineries to continue work and the absolute stoppage of the others. The economy is in the absolute stoppage, representing the tonnage marketed by Louisiana, as against a pro rata reduction of the entire refineries.
Q. I do not understand exactly what you mean by reduction. Do you mean reduction in price or reduction in the production of the refinery?
A. Reduction of the production.
Q. So that your object was, that while the Louisiana crop was upon the market, thus augmenting the supply of sugar, a proportion of the production equivalent to that crop should cease?
A. Yes, sir.
Q. Maintaining an equilibrium in the supply all the year around?
A. Yes, sir; instead of the disastrous overproduction which always occurred at that time of the year.
Q. Which disastrous overproduction was disastrous in what respect?
A. All that was left was lost.
Q. Please state what loss, and how accruing?
A. If you carry to market the entire production you break the price.
Q. In other words, the result of the throwing of the Louisiana crop upon the market was a reduction of the price of sugar?
A. To a certain point.
Q. And it was to avoid this reduction of the price that this consolidation was formed?
A. To avoid the loss attending such a reduction. Louisiana reduced the price.

The testimony of one more witness, who was examined by the chairman of the committee [Mr. BACON], ought to be sufficient. During the examination of Mr. William H. Morris, a merchandise broker, especially in sugars, doing business in New York City, the following occurs (see pages 154 and 155):

Q. You are familiar with what is known as the Louisiana sugar crop?
A. Yes, sir.
Q. What portion of the country is that marketed in principally?
A. The local trade contiguous to New Orleans, in the first instance, and after that in the West and Southwest.
Q. And during what season of the year does the Louisiana sugar product enter into and became a factor in that business?
A. From the 1st of December to April or May.
Q. What is the effect upon the quantity of sugar called for by that section of the country?
A. The requirements from the Eastern markets are much less.
Q. What has been the effect, omitting this winter, upon prices during these months?
A. The fact is, when a so much larger supply was upon the market the price was less.
Q. Was that the general effect, taking a series of years back, and omitting this year, that the price on the product of the refineries of New York has been diminished during these months generally?
A. As a general thing, I should say it was; but I can not decide, without reference, what other influences may have come in.
Q. I am not asking about the influences, I am talking about the effect.
A. I would not like to state that as a fact unless I consulted the record.
Q. Without looking to the reasons for it, I ask you whether it is practicable? The prices of sugar have ordinarily diminished during the months when the Louisiana crop was in the market.—A. That would be the natural effect.
Q. Has that result varied usually in the trade?—A. My impression is that it has, but I am not positive about it. Perhaps I can make an explanation and give you some good reasons why I do not want to be positive about it.

By Mr. WILSON:

Q. Do I understand you to mean unless there are some counteracting influences that would be the natural effect of it?
A. Yes, sir.

By the CHAIRMAN:

Q. I am asking you if the general rule as you have observed it during fifteen years has been that the price of refined sugar has been less during the months when the Louisiana product is being marketed than it was at other seasons of the year?
A. Yes, sir.

Mr. BUCHANAN. If the gentleman will permit me, I will say I am satisfied from the testimony taken before that committee that the "trust" is not at all friendly to the Louisiana producers.

Mr. WILKINSON. I am very glad to have the corroborative testimony of my friend from New Jersey to offset and make atonement for the cruel cut—the unwarranted stab—which was given to us by the gentleman from Iowa [Mr. HOLMES] when he says of the sugar trust that "it is gotten up for the benefit of twelve hundred planters in Louisiana."

Mr. BUCHANAN. I am also satisfied that the rates on refined sugar in this bill are friendly to the "trust."

Mr. WILKINSON. I am going to discuss that topic later on, if I have time. I do not believe that the framers of this bill desired to crush out a legitimate sugar-refining industry. To say the least, the margins of profit have been very largely reduced in the bill; but of that later on.

I think, Mr. Chairman, the testimony that I have offered demonstrates beyond dispute that sugar was cheapened—as Mr. Havemeyer stated, that "the market suffered by the Louisiana crop."

THE MARKETS DID SUFFER, INDEED, BUT THE COMSUMERS WERE BENEFITED—THE PEOPLE GAINED BY THE LOUISIANA CROP.

Another assertion was that no sugar fit to go into direct consumption could come in at the rates imposed under the schedules of this bill. To offset that statement here are two samples. Under the present rates of duty this sugar [exhibiting sample] pays a duty of 2.20 cents per pound. It is a dark-colored centrifugal sugar, testing ninety-five degrees. Here is another sugar, a lighter sugar, which can come in under the Mills bill and is light enough to go into direct consumption at the same rate at which this other dark sugar, which is only fit for refining, comes in now—2.20 cents per pound. I do not say this will be the effect, for I believe that when this bill goes into operation the price for such sugars will be put down so as to keep out such grades as this lighter-colored sugar that can come in at the same rate as the dark sugar that I have shown. But the effect will be the same so far as the consumers are concerned; for if the price is cheapened it is not material to them by whom it is cheapened. I repeat it, sugars fit for consumption up to 16 Dutch standard can come in under this bill at the same rates as sugars come in now which are only fit for refining.

But a gentleman who is credited with having given this subject a great deal of study, and whose amendment is now under discussion, was the gentleman from Illinois [Mr. CANNON]. He went into details to a large extent, and in doing so drew some conclusions which I can not permit to pass unchallenged. Among other things he advocated a bounty. He expressed his opposition to bounties as a general rule, but favored an exception being made in this case. (See CONGRESSIONAL RECORD, page 6577.) As a measure of relief to the country his amendment proposes to abolish the sugar duties, except those on maple sugar and an insignificant amount on the high grades of other sugars, and to give a bounty of 2 cents per pound to the producers instead. But how are the tax-payers to be benefited by that?

WHERE DOES THEIR RELIEF COME IN, WHEN THE EVENTUAL RESULT OF THIS PROPOSITION WILL BE TO INCREASE THEIR TAXATION?

The Government, as I said in a speech some time ago, needs and must pay about $320,000,000 annually to be run. The sugar tax, which is provided for in this bill, is a part of that amount and included in it. It is a part only of the amount which will be needed to conduct the Government.

This bill does not propose to increase the $320,000,000 one dollar by any duty on sugar that it provides shall still remain. This bill, I say, does not propose to increase taxation one dollar beyond the necessary Governmental expenses.

The gentleman from Illinois, in his argument that the tax-payers would be relieved by the payment of a bounty, stated (CONGRESSIONAL RECORD, page 6577) that a bounty in the present stage of the sugar industry would only cost $6,000,000 and free sugar would relieve the people of taxation and trust profits to the extent of $90,000,000. Right here let me say that I am not speaking to-day about the sugar schedules as they exist, but as they are reduced and modified in this bill, in which the trust profits receive a severe blow. And suppose that the bounty did cost only that sum and that the system was put in force, then the Government, instead of being run for $320,000,000 annually, would have to pay out $320,000,000 + $6,000,000, or $326,000,000. Are the tax-payers to be relieved or benefited by paying $326,000,000 when $320,000,000 is all under the sun there is any excuse for their being taxed to pay? And then if the sugar industry should be stimulated by this "plan of salvation"—or rather taxation—if it should grow so as to become as large proportionately to our consumption as it was before the war, this bounty instead of being $6,000,000 will rise to $30,000,000; and the cost of running the Government (if not changed in other ways) would be, not $320,000,000, but $350,000,000, or $30,000,000 beyond the legitimate needs of the Government. How will the tax-payers be relieved or benefited by that? I ask again, where does the tax-payer come in? And echo answers, where?

But the gentleman from Illinois [Mr. CANNON] and many others, in recommending bounties to the sugar producers, cite the example of European nations. Why, sir, Europe does not pay any such bounties as he proposes to adopt in this country. Europe does not pay direct bounties to beet-growers. On the contrary, the beet roots are taxed in Germany and France, the extracted juice in Belgium, the capacity of the diffusing vessels in Austria-Hungary, and the manufactured sugar itself in Russia. For the benefit of these gentlemen, who have held up for our imitation an example which does not exist, I quote from the remarks of the gentleman from Pennsylvania [Mr. KELLEY] (CONGRESSIONAL RECORD, page 6470):

Originally bounties were paid for the production of sugar from the beet—two classes of bounty: a bounty to the farmer who produced the most sugar to the acre, and a bounty to the chemist who produced the most available saccharine matter from the beet. It was only for a short period in the history of beet sugar that either France or Germany paid a bounty for the production of beets or of sugar.

In a few years after the industry was established came the system which prevails now, and to which my friend from Illinois referred, of paying bounty on sugar exported. In order to understand the argument properly the distinction should be borne in mind that bounty on the production of sugar has ceased long ago. It is now a bounty on the export of sugar. There are no bounties except indirect bounties on exports.

On the other hand, the maintenance of high duties has been and is

an essential factor in building up and maintaining the beet-sugar industry in Europe. Mr. Henry A. Brown, the noted expert and ex-Treasury agent, places the average duty levied in eight European countries at 4.17 cents per pound.

The production in excess of home consumption has been stimulated, it is true, by large drawbacks, which operate as bounties on exports. Beets are taxed in Europe as tobacco is taxed in this country. The tax now on beet roots is, I understand, a little over $4 per ton. But on all the sugar that is exported the tax is returned, and a considerably larger amount than was originally paid, operating as indirect bounty on that shipped abroad.

On this question I quote from the report of Mr. James Henry Smith commercial agent at Mayence, January 16, 1888:

In past years they have been very much favored by the sugar tax, and under its stimulation the sugar industry of Germany grew to be a great enterprise, but ultimately a very unprofitable one, through the great stimulus given to it by the export drawback, which brought about excessive overproduction.

It used to be calculated that 12½ cwt. of beet-roots would give 1 cwt. of sugar, and in 1868 a law was passed fixing a tax on the raw material on this basis, by which it was supposed 10 marks ($2.50) would be paid as a tax on each hundredweight of sugar, and to foster exportation a drawback of 9.40 marks on the hundredweight was granted. But improved methods of manufacture and refining obtained 1 cwt. of sugar from 9 cwt. of roots, and even from 8 cwt., and got sugar even from molasses, which the law of 1868 did not tax at all.

The sugar manufacturers, therefore, instead of paying a tax of 10 marks, as contemplated by the law, paid in reality only 7 marks 80 pfennigs a hundredweight, and on exportation got a drawback of 9 marks 40 pfennigs, thus receiving a fine bounty. The large profits realized and rich dividends declared caused lots of people to engage in the industry, and soon great overproduction took place and profits dropped to a minimum, and a general collapse threatened to occur. Germany filled England and other countries with cheap sugars, at the expense of the German imperial exchequer.

Bear in mind that these sugars are sold abroad much cheaper than at home, because shipped abroad the exporter receives the enhanced drawback or incidental bounty, in addition to the price abroad, and sold at home they have to sell for sufficient to pay, at least, the cost of manufacture and the direct tax besides. Mr. Smith continues:

In 1866 the sugar tax was raised from 1 mark 60 pfennigs (40 cents) to 1 mark 70 pfennigs (42½ cents) on each 100 kilograms (220 pounds) of beet-roots, but the export drawback was not touched, because other countries were giving bounties; but the government could not stand the drain made upon it by the drawback, and this year a new tax of 10 marks ($2.50) was levied on each 100 kilograms (220 pounds) of sugar for house consumption, and the tax on raw material reduced by $\frac{1}{7}$, but the export bounty still continues, and, it is thought, will eat up most of the revenue realized by the new tax.

The gross revenues from the direct tax on beets during the fiscal year ending in 1887 was 131,213,410 marks—$31,228,691. The drawbacks on the sugar exported during the same time were 114,181,546 marks—$27,175,286. The Government received from the tax about $31,000,000, and paid back in the shape of drawbacks on what was exported about $27,000,000, and derived as a net revenue from that source something over $4,000,000; so that the total result was not a net bounty, but a net tax.

Mr. CANNON. Will the gentleman yield to me?

Mr. WILKINSON. Yes.

Mr. CANNON. I have it officially from Mr. Adee, in New York, what the bounty on the export of sugar is.

Mr. WILKINSON. We are not talking in this House—none of you have been talking about giving the beet-sugar or the cane-sugar bounty on export. You have been talking about a direct bounty upon what we produce in this country, and that is a part of your amendment. You know for years to come, not in your lifetime probably, or in mine, will we become exporters to any extent of sugar of our own production.

Mr. CANNON. The gentleman is speaking of the bounty paid in Germany.

Mr. WILKINSON. I am speaking of Germany. There is no bounty except the drawback, which acts as bounty on exports. The gentleman, with all respect for his ability, I think is under some misapprehension about certain features of this question.

Mr. CANNON. Thanking the gentleman, I think I do know what I am talking about.

Mr. WILKINSON. Then give the facts and the figures.

Mr. CANNON. I have the facts and figures.

Mr. WILKINSON. I do not know what facts you may have or what figures, but you have not given any figures and you can not give any to sustain your position and that which other gentlemen have assumed in pointing out the example of Europe for us to follow in paying bounties such as you propose. No such example exists. The production of beets there, as I have said, is taxed as tobacco is taxed here. Beets were taxed last year about $31,000,000. On the large quantities that are exported the tax is all paid back, and more too, in the shape of drawbacks, and this is a virtual bounty on exports. But a bounty on exports is no such bounty as has been advocated on this floor. The fact is the sugar interest in Germany has no bounty except in the shape of enhanced drawbacks on exports, and that consumed at home has no bounty of any kind, direct or indirect. The tax was greater than the drawback calculated as a bounty, and in Germany there was a net tax not a net bounty. It looks like a bounty such as he commends, but it is not.

The gentleman's advice for us to imitate the example of beet culture in Europe, when no such system as he recommends in his amendment exists there, reminds me of a little incident such as is no doubt familiar to many members on this floor.

A disciple of Izaak Walton went out the other day among the mountains to indulge in his favorite sport. He took, along with other bait, some prettily-painted artificial flies. Arriving at the babbling brook where the speckled mountain trout leapt and swam and made their home, again and again the skillful cast was made without success. An artificial fly that looked more real than the rest secured, at last, a victim by its life-like appearance. A great big trout, weighing perhaps a pound and three-quarters, lying under the shadow of a rock, saw the fly dart by as if on buzzing wing—saw the fly that looked so tempting, and seized it to his woe. He was a trout of experience. He had been swimming in those waters a long time, and he ought to have known better than to have become a victim of such a delusion. It looked like a fly, but it was not a fly. Just as this bounty that people talk about and read about in the newspapers—this bounty, as you call it, looks like a bounty to the producer—looks like a direct bounty—but it is not a bounty such as you propose. The production of beets has no direct bounty, but on the contrary has a tax.

Mr. CANNON. The gentleman from Louisiana [Mr. WILKINSON] will allow me——

Mr. WILKINSON. Certainly.

Mr. CANNON. I do not pretend to analyze either his wisdom or his information——

Mr. WILKINSON. I make small claims on either score, but the figures and the facts which I have given I have taken a good deal of trouble to look up.

Mr. CANNON. I also ask to acknowledge the gentleman's courtesy, too, yet I hope he will not lay at my door until I have an opportunity to make the remark that I do not undertake to analyze——

Mr. WILKINSON. You cited the European bounties as a precedent for bounties in this country when there is no such precedent in Europe; certainly not in Germany, or France, or Russia, or Austria.

Mr. CANNON. The gentleman will allow me to pay as much tribute to his courtesy as to his knowledge.

Mr. WILKINSON. If my courtesy is to have no larger measure than my knowledge, I will go on with my remarks and not yield further.

Mr. CANNON. Then I merely wish to say that the gentleman misrepresents me. Not intentionally, I suppose.

Mr. WILKINSON. The gentleman certainly knows not intentionally, and I am content to let the RECORD show whether in any other manner.

Mr. Chairman, I now desire to come to another point,

THE DRAWBACK QUESTION,

and ascertain whether any such iniquitous state of affairs is now prevailing as has been claimed by the gentleman from Illinois. On May 10 last (see page 4224, CONGRESSIONAL RECORD) he made certain charges or inferences which seem to have been somewhat modified in his speech of July 6 (page 6523, CONGRESSIONAL RECORD), although I am willing to admit that he can interpret and reconcile his own language better than I can.

In the first speech the gentleman read only one item of a set of drawback regulations, and omitted to read the others in which the rates were lower. I think a consideration of all the items—not of one alone—was necessary to arrive at a just conclusion.

The CHAIRMAN. The gentleman's time has expired.

Mr. CHEADLE. I ask unanimous consent that the gentleman's time be extended for fifteen minutes.

Mr. GEAR. I ask that the time be extended indefinitely to enable him to conclude his remarks.

The CHAIRMAN. Is there objection to extending the gentleman's time as requested by the gentleman from Iowa?

There was no objection.

Mr. WILKINSON. I thank the gentleman from Indiana [Mr. CHEADLE] and the gentleman from Iowa [Mr. GEAR].

Now, before continuing against the point made by the gentleman from Illinois, a few words about the drawback question in general. And right here I wish to say that I think the majority of the Ways and Means Committee did wisely when they receded from the ultra proposition which was first proposed to single out sugar from the general regulation concerning drawbacks. It is not a question that affects sugar alone. It is a law of the United States which I quote (section 3019, Revised Statutes):

There shall be allowed on all articles wholly manufactured of materials imported, on which duties have been paid, when exported, a drawback equal in amount to the duty paid on such materials, and no more, to be ascertained under such regulations as shall be prescribed by the Secretary of the Treasury. * * *

The section further provides for a retention of 10 per cent. by the United States on the amount of the drawback allowed. This retention of 10 per cent. was reduced on refined sugar by act approved March 3, 1875, to 1 per cent. (page 340, section 3, United States Statutes at Large, volume 18, part 3). This law of the United States which permits certain materials that come into this country and have their value enhanced by American labor, and which are then exported, to have

the duty which has been paid on the raw material returned when exported in the way of drawbacks—this general law is in the interest of American laborers and American manufacturers. It gives additional employments to our own people. The general law does not apply to sugar specially, but to a number of articles, something like 40, I believe. Now, tin plates imported into this country and worked up into cans, etc., have the same law applied to them, when the cans are exported, as they are in vast quantities with canned goods, except that a larger percentage is retained by the Government, owing to the cost of collection and the items being in smaller amounts. Out of the sugar drawbacks, 1 per cent. is retained by the Government. So that when you say there is a drawback of 2.60, you mean that it is 2.60 less 1 per cent., or 2.574.

Now, would it be wise to say that

A SYSTEM WHICH ASSISTS IN GIVING OUR PEOPLE MORE WORK TO DO

by manufacturing to ship abroad should be abolished?

After this brief allusion to drawbacks in general, I return to the subject of drawbacks on sugar, which the gentlemen from Illinois has devoted some attention to in two speeches that he has made.

In his speech of May 10th last, he used the following language:

Mr. CANNON. Now, then, the average duty, as I have shown, is 2 cents a pound on the present valuation of sugar. I went to the Treasury Department the other day and said: Under this section of the statute allowing a rebate, where duties have been paid upon articles imported, when they are exported how much do you allow to the refiners? He answered: "Oh, I can answer that question in a minute," and here he hands me a circular, which I have before me, which provides that—

"On and after November 1, 1886, a drawback will be allowed at the rate of 2.60 cents on all refined sugars exported——"

Mr. BUCHANAN. On the pound?

Mr. CANNON. Yes. Now, mark you, 2 cents is what it amounts to when imported; that is the duty; and 2.60 cents is the drawback when exported. I said: "Well, do you not know that they exported eleven millions last year and the same quantity the year before?" He said "Yes." I asked: "How do you explain it; how can they export sugar unless that .60 cent of the drawback rate above the duty amounts to a bounty?" Says he: "I give it up."

In his speech of Friday last, July 6 (CONGRESSIONAL RECORD), he speaks further on this same question. I quote:

Now, one further query. Why did that committee strike from this bill the provision prohibiting the payment of drawbacks upon sugar exported? What is the fact about it? Why, sugar which has 100 per cent. of saccharine matter, instead of 95, brings a duty of 2 cents and 4 mills a pound. The law says that upon being exported they shall have the drawback of the duties paid less 1 per cent. Now, what is the drawback fixed at? Two cents and six mills. Two cents and four mills per pound pay the duty on 100 per cent. of saccharine matter when it comes in. Yet when it passes through the refinery and is exported they get a drawback of the duty paid and 2 mills a pound more. "Well," says somebody, "what is that for?" As I said before, I give it up. I do not know. I tell you what the Treasury experts say. They say that there is no loss of saccharine matter in the refining of this sugar. They reported that they were informed and so believe, and I have the report here.

Why is it that after you deduct the 1 per cent. of the money-duty paid they get 2 cents and 6 mills out of the Treasury, but they only paid 2 cents and 4 mills when it came into the country under the law.

If the gentleman will inquire of these same Treasury experts he will ascertain that no sugars such as he alludes to ever test 100 per cent. of saccharine matter, and any reasoning or any figures based on any such assumption is utterly without value.

I think a fair inference from these two extracts is that his charges of the amount of bounty received by the refiner has been cut down since last May from .60 cent, or 6 mills, per pound to 2 mills per pound, or more than two-thirds; that the imposition was just three times as bad last May as it is now, although the regulations have not been changed one whit since then. This is my inference. He may make his, and a different one if he chooses. Other members are at perfect liberty to make theirs. The language is there to speak for itself. If my inference is just, and the gentleman from Illinois keeps on cutting down the benefits that he charged the sugar refiners have been getting under the drawback system, in two months more he will make them out as a much-abused and victimized set.

The circular that the gentleman mentions, and which he does not even quote entire, is only one item of a number of others relating to the same subject, and the omission of the other items makes a very material difference in the consideration of the justice or injustice of the charges he has made. An enumeration of drawback regulations now existing is as follows:

1. On all refined loaf, cut-loaf, crushed, granulated, and powdered sugar, stove-dried or dried by other equally effective process, exported on and after November 1, 1886, drawback will be allowed at the rate of 2.60 cents per pound, less the legal retention of 1 per cent.

This is, I suppose, the item partially quoted by the gentleman from Illinois. The following items he did not refer to at all:

2. On refined white coffee sugar, undried, and above No. 20, Dutch standard in color, 2.28 cents per pound.

3. On all grades of refined coffee sugar, No. 20, Dutch standard, and below, in color, 1.84 cents per pound.

4. On sirup resulting entirely from the refining of the above-enumerated imported materials, 4 cents per gallon.

The allowance on sugars will be subject to the deduction of 1 per cent., and the allowance on sirup to the deduction of 10 per cent., as prescribed by law.

Also:

On the exportation of sugar refined from imported molasses, upon which the duty of 4 cents per gallon, prescribed by the tariff of March 3, 1883, has been paid, a drawback will be allowed at the rate of fifty-five hundredths of a cent per pound, less the legal retention of 1 per cent.

All of these rates were established after the passage of the existing tariff law in 1883 under a Republican administration, except the first item, which has been reduced 22 mills per pound below the rate established by Mr. Folger. The only one that he mentions or complains of

WAS ESTABLISHED AT A HIGHER RATE THAN IT IS NOW BY MR. FOLGER—

at 2.82 cents by Mr. Folger and reduced to 2.60 cents by Mr. Fairchild. He asked for an explanation of these things, and although the explanation is simple enough, he said: "I give it up." I do not. The first step towards an explanation is to give the entire existing facts as to the regulations. First give all the law, then omit none of the facts or factors in the problem. The gentleman gave less than one-quarter of the existing law, and omitted to mention some of the most important facts. One essential factor the gentleman has entirely omitted, and that is the element of waste or loss in the process of manufacture. Now, none of our manufacturers or refiners possess any magic process by which this refining is carried on. They own no Alladdin's lamp on which to rub and work some miraculous transformation. They can not even take a hundred pounds or a hundred thousand pounds of this pure and sparkling product—this white sugar [exhibiting a sample]—melt it up, boil it in vacuum pans, and dry it in centrifugal machines, and get the same quantity, the hundred or the hundred thousand pounds, back again. The thing is impossible.

Part of it goes into the air of heaven; part of it sticks to the vessels employed in the manufacture; part of the melted sugar will adhere to the bone-black in the process of bleaching; but wherever it goes, a part of it is lost and never comes back again. And if this is so with a pure white sugar, how much more must the loss in manufacture be on a grade like this? Can the gentleman mean to infer that there is any known process of manufacture by which 100 pounds of dark sugar of the grade which I hold in my hand will produce 100 pounds of white granulated sugar? Or, to go further than this, is there any known process by which 100 pounds of this dark sugar, testing 95 per cent. of saccharine strength, will give 95 pounds of pure white sugar? I ask again,

IS ANY SUCH MAGIC TRANSFORMATION POSSIBLE?

If any man living possesses the knowledge to do this commercially—if any man living owns such a secret, it is of such value to the civilized world that the wealth of a Gould or a Vanderbilt is his for the asking. But the gentleman from Illinois says:

I tell you what the Treasury experts say. They say that there is no loss of saccharine matter in the refining of this sugar. They reported that they were informed and so believe, and I have the report here.

Sir, if these Treasury experts possess such a knowledge and can avail themselves of it, then they are sadly neglecting their opportunities. Instead of the dull routine at desk, of ad valorem percentages, polariscopic tests and such—instead of the poorly paid, if important duties of official life, untold wealth is theirs if they choose to avail themselves of the knowledge. I rather think the gentleman misunderstood the Treasury experts, for most people, with all the objections to such a lot, like to be millionaires when they can.

Besides, a part of the product of that refining will be sirup. There is something about that in this same pamphlet of testimony taken before the Committee on Manufactures on the trust investigation.

I repeat, part of this sugar as thus refined is sirup. Part is a low-grade sugar, and a part of it, and a part only, is white sugar.

Mr. COX. What is the proportion of white sugar? Can the gentleman state?

Mr. WILKINSON. I do not know the proportions; but a gentleman who testified before the Committee on Manufactures, Mr. Havemeyer—recollect, now, that a part is lost, part is sirup, and a part of it, and but a part, is white sugar—Mr. Havemeyer testified that of the sugar product of Havemeyer & Elder's refinery 50 per cent. was hard white sugars, and 50 per cent. the grades below that quality. I presume he knows whereof he speaks.

Now, before 1883—you recollect that the tariff was changed in 1883—before that the drawback on the highest grade of sugar was 3.18. Under Mr. Folger's administration the drawback—with the same tariff that we have now, on the same sugar—was 2.82 and not 2.60. The drawback on the other grades, which Mr. Fairchild left untouched, were, as I have shown, on refined white coffee sugar, etc., 2.28; other grades, No. 20, Dutch standard, and below, 1.84, and on sirup 4 cents per gallon, and on refined sugars from molasses, .55, or a little over one-half cent per pound.

The gentleman from Illinois, however, said nothing about the other classifications left in force by that act, but only cited the fact that the present drawback on imported sugar, when refined and exported, was 2.60.

The British refiners protested against this 2.82 drawback, and said it was too much; that it was a bounty that we gave to the refiners. Our exports interfered with their business so much that they made strenuous efforts to have these drawbacks largely reduced. They claimed that the drawback on the highest grades ought to be cut down from 2.82 to 2.40. Even the British refiners whose business was hurt by our exports admitted that this drawback ought to be 2.40, not 2.60 or 2.80.

Mr. Folger sent this subject to a special commission composed of Mr. John Ayer, jr., Mr. George Keyes, and Mr. James Burt. That was in 1883. Their report can be found, beginning at page 33, Bulletin No. 5, Department of Agriculture, chemical division. This commission decided that the drawback of 2.82 should be maintained; that even at 2.82 the refiners were not getting any bounty.

That is to say, these experts reported in one calculation that when the refiners paid 2 cents in duty that the drawback returned at the different rates named amounted also to 2 cents. In another calculation they estimated that where the refiners paid 2 cents they got under the drawback regulations 2.01 cents returned, or the duty back and one-one hundredth of a cent more than they paid, making a bounty to that extent. These experts, appointed under a Republican administration by a Republican Secretary of the highest standing and ability, made a report to that effect, and after their report Mr. Folger made the provisional drawback, which he had put at 2.82, permanent.

But the present Administration was not satisfied with that decision, and the subject was investigated by the Chief Chemist of the Agricultural Department.

Professor Wiley, of whom I have a very high opinion, reported that he did not agree with the British refiners, but that the rate of 2.82 was too much. He thought that 2.50 was about the proper amount. So Mr. Fairchild, the present Secretary of the Treasury, cut that down from 2.82 to 2.60, or 2.57 net, which was almost substantially the recommendation of this expert, and 22 mills below the recommendation of the others. I tell the gentlemen that a commission, appointed by a Republican Secretary of the Treasury under a Republican administration, said that the drawback of 2.82 was not too much, except to give the refiner a virtual bounty, not of 2 mills, not of 6 mills, but of one-tenth of a mill, their highest calculation; and that the present Administration went a great deal further than that, and not only took away the 1 mill, but took away 21 mills on every pound besides. This is another case where it looks like a bounty, but it is not a bounty at this present rate, unless Mr. Folger's experts estimated very wide of the mark. That the falling off of exports can be attributed to that cause, seems to be a reasonable inference.

Under the old drawback of 2.82 established by Mr. Folger, the exports of refined sugars had run up to enormous proportions, reaching in 1885 over 252,000,000 pounds, valued at over $16,000,000. The eventual result of the reduction of 22 mills on the drawback has been that the exports have fallen off enormously. I think, Mr. Chairman, that the facts that I have cited make it evident that whatever bounty might have been given by a drawback at 2.82 under Mr. Folger has been reduced entirely by Mr. Fairchild's reduction to 2.60.

Mr. WEBER. I am sure the gentleman does not want to make a misstatement.

Mr. WILKINSON. Of course not.

Mr. WEBER. I think you certainly have, if you say the amount of drawback has been reduced to comparatively nothing since that change.

Mr. WILKINSON. I did not say anything about the drawback being reduced to comparatively nothing. The drawback on that grade under the existing law still remains at 2.60. I spoke of the large falling off of the exports that was due to the cutting down of the drawback by Mr. Fairchild, which, I think, was in the interest of the refiners before Mr. Fairchild made this reduction. The Republican experts figured that under the old drawback established by Mr. Folger in 1883, of 2.82 cents per pound on certain grades of sugar, there would be a virtual bounty to the refiners, in one estimate of nothing, and in another of one-tenth of a mill, or one one-hundredth of a cent per pound.

Instead of merely cutting off that one hundredth of a cent per pound his administration has cut off 21 mills besides that which this commission thought they were legitimately entitled to, and brought it down from 2.82 to 2.60, lowering it to such a point that the refiners have complained very bitterly about it.

Mr. WEBER. What is the use of speculating as to whether it is a bounty or not when the facts and figures will show?

Mr. WILKINSON. I say it seems to me that if the views of these experts appointed by Mr. Folger are anywhere near correct they can not get any bounty now. I do not know whether they do or not; but I know these experts said in one estimate they got no bounty at 2.82 cents drawback, and in another estimate only one hundredth of a cent per pound bounty, and that this Democratic administration has taken that one hundredth of a cent per pound away and 21 mills per pound besides; and I know that the exports have dropped off enormously and I think it is safe to infer as a result of that action.

Mr. WEBER. You are mistaken about that.

Mr. BUCHANAN. Mr. Havemeyer testified they had ceased entirely.

Mr. WEBER. That is not so.

Mr. BUCHANAN. I am only giving you his statement.

Mr. WEBER. I hope to be able to present the evidence to prove it is not so when I have my time.

Mr. WILKINSON. I do not claim that these exports have ceased entirely. I said they have decreased enormously, and I can substantiate the assertion, and I say that it is a fair inference that these exportations have fallen off so largely on account of the reductions made by Mr. Fairchild in the drawbacks. A witness before the Committee on Manufactures, Mr. Havemeyer, I believe, testified to that effect.

Mr. WEBER. He is not correct. The official statistics directly disprove his assertion.

Mr. WILKINSON. Give your statistics.

Mr. WEBER. I will in due time when I have an opportunity to speak upon the reclassification of the sugar schedule.

Mr. WILKINSON. I will give mine to give conclusive proof of my assertion. The exports of refined sugar increased from 26,815,463 pounds in 1883 to 252,579,077 pounds in 1885, when they were larger than they ever have been before or since. For the fiscal year ending June 30, 1886, they were 164,339,967 pounds; for the year ending June 30, 1887, they were 190,672,154 pounds, but for only part of that year were the exports under the reduced drawback regulation which had gone into effect in the latter part of 1886. The only fiscal year in which exports have been wholly under the reduced regulations was that ending June 30, 1888. For that year, which has just closed, I obtained the figures from the efficient chief clerk of the Bureau of Statistics, Mr. J. N. Whitney.

The exports were only 34,449,613 pounds against nearly six times that much the year before. The amount had decreased from two hundred and fifty million pounds and more in 1885 to a little over thirty million pounds in the year just ended, and the values had decreased from sixteen millions (the highest point) to a little over two millions. I submit, Mr. Chairman, that this was an enormous reduction, and will bear out in the fullest manner the assertions that I have made.

Now, Mr. Chairman, about this enormous profit which it is asserted the refiners get. The gentleman from Illinois said they got about $30,000,000 a year—about a cent a pound on all the sugar imported. In the first place, sir,

ALL THE SUGAR THAT IS IMPORTED IS NOT CONSUMED BY THE PEOPLE.

A part of it is exported, at one time over 10 per cent., but very much less now. But leaving that out of consideration, a considerable part of it, as I have already explained, is lost in the process of manufacture, and the gentleman leaves that out of consideration altogether.

But among the witnesses who testified before the Committee on Manufactures was an ex-refiner whose name is Hugh N. Camp, who had been in the business for sixteen years, and he said that the cost of refining when he was engaged in the business was seven-eighths of a cent a pound. He had been told that this cost had been reduced to about 40 cents per hundred since he quit the business in 1870, or to less than one-half; but he did not give any proof of that or even assert positively his belief in the statements he had heard.

I do not know or pretend to know what these profits are. That they are excessive now I have not the shadow of a doubt. That they are now anything like the amount claimed by the gentleman from Illinois I have heard no reason given to believe. If these profits were anything like the amounts alleged the capitalists of the country would be tumbling over each other in their eagerness to go into the business. But we not talking now about existing schedules or existing law. We are talking about what this bill proposes to do. It proposes to cut the refiner's profits down very largely. It proposes to reduce the margin of tariff rates between raw and refined sugars to far less than it has been since 1861; about 40 per cent. less than in the beginning of 1870. It proposes to cut down the highest duty seven-tenths, nearly three-quarters of a cent a pound, and in its determination to strike at the excessive profits of the trust, without destroying the refining interests of the country, it will furnish a substantial relief from the exactions which they now undoubtedly impose upon the people. [Applause on the Democratic side.]

The margins between raw and refined sugars in the existing tariff rates are in the interest of the refineries, but what are those margins? I will take a grade which comes in in larger quantities than any one grade—a sugar below 13 Dutch standard and testing ninety-five degrees—like this. [Showing a sample.]

The duty on this sugar is 2.20 cents per pound. The highest duty is 3.50. The margin between these two is consequently 1.30. Now, under the Mills bill the same classes of sugar will pay respectively 1.79 and 2.80, so that the margin, instead of being 1.30, as under the present law, between those grades will be 1.01 cents per pound.

Any one who has had any experience in manufacturing on a large scale knows that any such reduction in margins from 1.30 cents per pound to 1.01 cents per pound might mean the difference between enormous profit and utter ruin. Of course I do not mean to say this reduction will have an effect to any such extent as that, but I unhesitatingly say it is a very considerable reduction, and one which, while leaving sufficient profits to the refining industry, ought at the same time to give decided relief to the consumers of sugar.

In conclusion, Mr. Chairman, I have trespassed upon the patience of this committee far longer than I intended to do. I was anxious to clear up, if I could, some of the misapprehensions which seem to surround this question. I wished to meet and refute some of the aspersions which have been cast upon an industry which I feel confident will continue to grow and prosper long after we are gone. I rose to repel with indignation the startling and unwarranted assertion that the sugar trust had

been gotten up for the benefit of the sugar industry of Louisiana. I desired to state that in Louisiana there are two small refineries in the trust, but about 800 or 900 sugar factories outside of it. I desired to show how our 800 or 900 factories

WERE SAFEGUARDS AGAINST MONOPOLISTIC EXACTIONS,

were the friends not the enemies of the consumers, and that the product of Louisiana, belittle it as some gentlemen may, has proven long a factor in cheapened markets, to offset which has been openly declared to be one of the main objects of the combination about which we hear so much.

While doing this I have been drawn into subjects such as the drawback question, in which the sugar-growing industry of Louisiana has no direct interest, other than a desire to see no needless check on the diversity and magnitude of our manufactured products or the employments of any of our people. In doing this I have endeavored to meet the attacks, wherever they were made, regardless that they did not sometimes assail the direct interests of my own people and my own home.

Mr. MILLIKEN. Will the gentleman allow me to ask him a question?

Mr. WILKINSON. Yes; but I dislike to trespass further upon the time of the committee, as I have finished my remarks.

Mr. MILLIKEN. I would like to ask my friend upon what ground he claims that sugar shall be protected by a duty of 68 per cent. or more, an industry which, so far as we know, can produce only a very small proportion of the consumption of this country—how he can claim that protection, and at the same time vote to put on the free-list building-stone, lumber, and starch, articles of which we can produce enough to meet the demands of the country?

Mr. WILKINSON. I do not think that question is very closely allied to the topics which I have been discussing; besides, I can not admit his presentation of the circumstances of the case to start on.

Mr. MILLIKEN. Well it is a question at any rate.

Mr. WILKINSON. I will try to oblige the gentleman. He speaks of the ad valorem rate of duty on sugar. That is a point I expected to refer to, but I did not have the opportunity. I feel sure the ad valorem rate referred to will be reduced to decidedly less than 68 per cent., but the exact rate remains to be seen. The reason the ad valorem rate appears so high on sugar in the statistical reports for the year ending in June, 1887, is that the world's production has so largely increased that the price of sugar has gone down more largely, I believe, than any other great food product, and the ad valorem rate was based on these exceptionally low prices. In 1872 and 1873 the ad valorem rate was only 37 per cent., and yet in 1872 and 1873 the duty on sugar was higher per pound than it is now and decidedly higher than in the Mills bill.

The average specific duty in the Mills bill

IS DECIDEDLY LESS PER POUND THAN THE AVERAGE WILL BE

of all the rates in all the tariff bills of our entire history.

Mr. MILLIKEN. My question is why the gentleman applies one theory to the product of his own section and another theory to our products, especially when his industry is one which produces only a small proportion of the article which is required for consumption in this country?

Mr. WILKINSON. I was coming to that. The gentleman spoke of ad valorem rates, which I wanted to refer to first. I was coming to the rest of his question. My general reply to his question is that it is not a fact that I apply different theories to different sections. But I will go further than that and go into details a little as the gentleman seems to desire. He mentioned three items—starch, building-stone, and lumber. I will not endeavor to explain my vote to put starch on the free-list, as no such proposition is before the House. The duty on starch is largely reduced, but as we have the materials to make it in as abundant supply as any other country, the tariff that will be left on it will still be largely protective. If the gentleman attempts to accuse me of sectionalism in voting to put building-stone and lumber on the free-list, he has been peculiarly unfortunate. He seems to have forgotton that the removal of the tariff on these articles is proposed alike in all the regions and at all the ports of the country These productions are not peculiar to our Northern climes.

The mighty formations of nature, the magic influences of sun and rain and soil, the formation of rocks, the growth of forests did not go on in his end of the country and stop in mine.

THE STATE OF MAINE HAS NO MONOPOLY OF ROCKS AND TREES.

You have only to go to yonder door and 5 miles away lie the blue hills of Virginia, within whose borders building-stone abounds in illimitable quantities. How well do I recollect the magnificent granite beds along the James! Has North Carolina no building-stone, nor Alabama, nor Georgia, nor West Virginia, nor Missouri, nor Kentucky? Why, even Louisiana has her share. And a trip through Tennessee will show it by the hundreds of blocks at the different quarries and at the railway stations awaiting transportation, as fine as any in the world.

And what of lumber?

Is Louisiana a barren waste, or are Mississippi, Alabama, and Florida treeless prairies? Upon your mountain sides rise the spruce and white pine; on our hills and plains rise our yellow pines, and from our swamps our cypresses, not less abundant, not less lofty, not less valuable, not less extensive than yours.

Leaving sections out of consideration, the duty on lumber can not be sustained on the great economic grounds that the duty on sugar can. If the duty on lumber raises the price of the lumber consumed in this country only one-quarter of the tariff rates, it will still make the tax-payer pay $9 for every $1 paid into the Treasury. And in the case of the duty on sugar it is many-fold the reverse.

Sir, this sugar question is a great economic question. On the side of this question which I have advocated are ranged the great mass of the civilized world and the examples of the greatest statesmen that have adorned our history.

IT IS A QUESTION, TOO, IN WHICH PATRIOTISM AND NATIONAL PRIDE SHOULD ENTER IN.

How can we boast of our independence until we can produce our own food? Where is the American with any pride in his land who says we should remit to strange lands for all time to come the production of any article of food necessary to the wants and happiness of our people? Where is the intelligent tax-payer who objects to the payment of a duty which does not increase the contributions that the Government needs from him for its support—which does not cause him to pay out one dollar more for his total taxation than it would if the sugar industry of America were swept out of existence?

What farmer whose agricultural products this industry both diversifies and consumes—what laborer whose sphere of employment it enlarges—what mechanic to whose skill of brain and hand it offers fresh incentives to exertion—what consumer whose markets it cheapens, whose prices it relieves from the exactions and extortions of corporate greed—who of all these, after an intelligent and a thoughtful consideration of this question, will say that its progress shall be arrested, that its steps shall be downward, not upward and onward in its enlarging and beneficent career?

The Surplus a Bugbear!

"The protective system must be maintained."—*Republican platform.*

SPEECH

OF

HON. JOSEPH McKENNA,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 7, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. McKENNA said:

Mr. CHAIRMAN: I, too, am a Republican, as the gentleman from Pennsylvania [Mr. KELLEY] declared he was; and I, too, for that reason rise to oppose the amendment of the gentleman from Illinois [Mr. CANNON]. The amendment, Mr. Chairman, has no true basis of fact or true basis of principle. For the reasons urged in support of the amendment every item of the Mills bill can be supported. For the reasons adduced by the gentleman in favor of putting sugar on the free-list every American product can be put on the free-list. The amendment therefore is opposed to the principle of protection; it is distinctly and accurately opposed to the Chicago platform. That platform declares protection to American industries to be the supremest principle of the party. It concedes necessity of the reduction of the revenue, but it distinctly enumerates the means of reduction. Protection is not to be sacrificed. That is clear. It is sacrificed if it is taken from any American industry. Ingenious gentlemen can find and define nice distinctions, but the platform was not made to be read by subtle disputants or to be interpreted by them or to satisfy them. It certainly was not intended to palter in double senses. In the pithy and apt language of Mr. Depew, of New York, it needs no grammar nor interpreter to read it or understand it. It certainly was not intended to be partial. It was intended to gave assurance, trustful assurance, to every industry, to the little as well as to the big, to the growing as well as to the grown, to those from the South as well as to those from the North. It does not invite a scramble for its favor. It gives justly to all, nor entertains nor expresses preference for any. This thoroughness, this universality, this liberality constitute its excellence, and will make its victory if Republicans will not interpret it by amendments like that proposed by the gentleman from Illinois.

Gentlemen may say that when they give bounty they give protection. I do not deny it. But why the exception and application to sugar, and what assurance can they give us of the stability of that form of protection? Are they prepared to give protection in this form

to other industries? Are they prepared to interpret the Republican platform as authorizing a system of bounties to the industries of the country?

Why, Mr. Chairman, the distinction between protection by tariffs and protection by bounty is not a verbal distinction. It is a substantial distinction, as substantial as the difference between a medium course and an extreme course. A distinction too important to be urged upon experienced men. It is a distinction between what the people are accustomed to and what they are not accustomed to. A distinction, again, too important to be urged upon experienced men. And I ask Republicans of this House, is it wise, when the principle of protection itself is submitted to dispute, when they have cast it into uncertain balance, is it wise to cast in one of the scales an odious and objectionable form of it; a form that never has been adopted in this country except in an extreme case, and which has long since been abandoned—a form which is not expressed in the platform. A silence, sir, that is marked with significance, ay, is marked with command? The gentlemen who draughted that platform and the convention which adopted it knew what had transpired in Congress. They knew what the situation was; they scanned it, and they provided a remedy. We find no bounty in it nor free sugar in it. I send to the Clerk's desk to be read a portion of that Republican platform.

The Clerk read as follows:

The Republican party would effect all needed reduction of the national revenue by repealing the taxes on tobacco, which are an annoyance and burden to agriculture, and the tax upon spirits used in the arts and for mechanical purposes, and by such revision of the tariff laws as will tend to check imports of such articles as are produced by our people, the production of which gives employment to our labor, and release from import duties those articles of foreign production (except luxuries) the like of which can not be produced at home. If there shall still remain a larger revenue than is requisite for the wants of the Government, we favor the entire repeal of internal taxes rather than the surrender of any part of our protective system at the joint behest of the whisky trusts and the agents of foreign manufacturers.

Mr. MCKENNA. I repeat, Mr. Chairman, there is no declaration in favor of bounties. There is no declaration in favor of free sugar. Hence I say that the amendment is distinctly unrepublican, distinctly antagonistic to the last utterance of the party.

But assuming the amendment is justified by the platform, how stands it? Gentlemen, interested gentlemen, may reason themselves into anything. If protection by bounties is identical with protection by tariffs, and either can be indifferently applied as equally good, why the uneasiness and repugnance of Republicans to the amendment? Why, if good to sugar producers, why not to iron, and steel, and wool, and woolen producers? The gentleman from Pennsylvania [Mr. BAYNE] answers, and in so amusing a way, did I not know the sedateness of his mind, I should think he was joking with himself and with the House.

He says the reason why bounties should not be extended to iron and steel producers is that they can supply the home market. If they can do so under tariff protection why not under bounty protection, if the two be identical? The gentleman is not logical or consistent. He has almost floundered into absurdity. If bounties be good, why not take them for the industries he represents? Why refuse them himself, but force them on industries reluctant to receive them because they fear the sense of the country is adverse to them?

The gentleman says the iron and steel producers can supply the home demand.

But Democrats might ask him at what price? And answering for him as they have answered for him and will always answer, using the language of the gentleman from Illinois [Mr. CANNON] against sugar refiners, at a monopoly price—a price that robs—is their fierce declaration, the consumer of $2 to put in the pockets of the manufacturer for every dollar it collects for the Treasury. And, still using the language of the gentleman from Illinois, charging, in addition to the robbery of the tariff the further robbery of a trust.

Mr. Chairman, a gentleman on my right suggests against the gentleman from Pennsylvania his position and speech on tin-plate. A pertinent suggestion, as the House will recognize, but I have not time to elaborate it.

Gentlemen, let us be clear and fair. Adopt bounties for iron as you urge them for sugar. You assert their protection, and there will be no disguise where the burden will fall, if there be burden.

The foreign product will come in free and at its natural price. Your product will be put on the market and at its natural price, and all the world can compare the two, and more and better, every one can buy which product he pleases at such price he pleases, or, rather, at such price only disturbed by impersonal economic forces. If you are candid, gentlemen, you will not refuse trial. To avoid accusation is something, to give content is more. Will you accept bounties, therefore? No; you will not. You know, to use the apt illustration of the gentleman from Illinois [Mr. BAKER], who sits to the right of me, you might as well try to raise a tropical plant on the summit of an iceberg as to hope to introduce bounties and sustain them on any Western product. [Applause.]

I come to the speech of the gentleman from Illinois [Mr. CANNON]. He did not put it in the RECORD, so I will have to trust to my own impressions received yesterday afternoon when he delivered it. I do not think the gentleman was exactly ingenuous with the House. He certainly underrates its intelligence and the intelligence of the country. I do not think the gentleman deceives himself. He is too thoughtful and accurate and discriminating not to know that a vicious administration of the law or vicious evasions of it are not a reproach to the law or the principle of it. He could as wisely advocate that honesty be abolished because there is dishonesty; that all walls be prostrated because there are criminal invasions of our premises; just as wisely throw open the front door and leave the spoons in the hall properly labeled because a burglar might, as burglars sometimes do, enter at the window. I almost doubt the gentleman's sincerity, because I can not doubt his intelligence. Besides, he leaves us in confusion as to the object of his hatred—whether the law or the evasions of it.

Mr. Chairman, the gentleman from Illinois has delivered two other speeches on sugar. He appears to be full of free sugar. He was not quite so full of it in the Forty-ninth Congress, when he voted against the Morrison bill. Since then he has become loaded with it. He has endured the awful iniquity for years, though in place and having function to remove it. It worries him now and makes him restless. He takes walks and has chance or intentional encounters with Treasury officials, in whose eyes wicked sugar refiners, he says, have thrown dust, so that they can not tell sand from sugar, and he receives such information from the officials as they in their pitiable state can give, and then the gentleman rushes to the House and declaims for free sugar. Odd remedy for deceived or corrupt or inefficient officials.

The gentleman, confused and disturbed, wanders to the Treasury Department. The awful sugar-refiners, he finds, have abused the law concerning drawback on exports. The Treasury Department does not know how; the gentleman from Illinois does not know how; and so, in a bewildered state of mind, again he rushes to the House and again demands that sugar be put on the free-list.

If, Mr. Chairman, the matter is worth seriously considering, I dare say the puzzle was not great. I do not think the gentleman from Illinois, acute and penetrating as he is, could have found the puzzle great. But whether he could or could not solve the difficulty and reconcile it with protection to sugar makes no difference. The law itself, nor the principle of the law, was in fault.

Mr. Chairman, the gentleman from Illinois on May 12 addressed the House. His speech is instructive. I hold in my hand a pamphlet copy of it. He has adorned the title-page with a motto and with unconscious and solemn irony has associated protection to American industries and free sugar—an instance of politics making strange bedfellows. At that time he was absolutely in favor of free sugar. He criticised the Mills bill for a reduction of 20 per cent., and on page 4225 of the RECORD he uses this language:

I give you notice now that, like the voice of the prophet crying aloud in the wilderness, I will not cease to cry aloud until I get an opportunity to see that 20 per cent. and go you 80 per cent. better.

The gentleman delivered another speech on the 9th of June. It is in some contrast to the other of May 12. The gentleman from Maryland [Mr. RAYNER] incensed him. He criticised the gentleman from Maryland for "prancing," as he termed it, "like old Goliah pranced before the armies of the Lord," and he felt and resented the accusation that the protective system created or maintained trusts, and he defied the Democratic side of the House, mark you—he defied the Democratic side to show whereby trusts were created or sustained by reason of the tariff. To maintain a feeble consistency with himself and not to explicitly preclude his position on sugar trusts, as surely he did implicitly preclude it, he said in that speech:

If there is any one trust that is sustained by the tariff it is the sugar trust.

Now, mark the inconsistency. What is a trust, Mr. Chairman? It is a combination to keep up prices. What is a sugar trust? It is a combination to keep up prices. Then the steel trust and the other trusts are com inations also to keep up prices. What was the gentleman's remedy for the steel and the other trusts? Penal legislation, criminal courts, and criminal judges. What is his remedy for the sugar trust? To let in the foreign sugar free. Why, Mr. Chairman, this is simply trifling with the subject. What difference is there between a sugar trust and any other kind of a trust? If the remedy of one trust be the free importation of foreign articles, the remedy for the other must be the free importation of foreign articles. So the gentleman argues as Democrats argue, and must always do so when he tries to put any American product on the free-list. Of course he convicts Democrats of inconsistency, as they are inconsistent when they pursue a course in declared opposition to steel trusts and other trusts and pursue another course which condones or encourages the sugar trust, and that far I concur with the gentleman from Illinois. What I do protest against is the frantic effort to turn the indignation which should be felt and is felt against the sugar trust also against the protection of sugar, and through sugar against the protective system.

Now, sir, I have not anything to do with trusts, and I do not care anything about them as far as the debate goes. If I should express an opinion about them, I should reiterate the philosophical and thoughtful language of the gentleman from Maine. I would not prance with the gentleman from Maryland, nor would I prance with the gentleman from Illinois, in idle and showy denunciation of them; I should feel

confident that whatever the trust be, the steel trust or the sugar trust, that our sovereign power is perfectly competent to handle it, or to destroy it if necessary, and allow fair and free competition in the American market under the beneficent sway of the protective system. I would not attack that system or any part of it, or doubt it or any part of it.

But, Mr. Chairman, I repeat, I have no concern for the sugar trust or interest in it or anything but indignation for it. I would not silence the gentleman's thunder against it. I fear, however, his reckless, random striking. It was because of this fear I rose. I rose in behalf of the beet-sugar industry—an industry which has become important in California; an industry no longer doubtful, as some gentlemen affect to believe, no longer a possibility, no longer a probability, but a fact. Within my district there is a successful beet-sugar factory; within the district of my colleague [Mr. FELTON] there is another and a new one. Others will follow.

The sugar industry never to be a success! Why, sir, the prospect in my State is so splendidly alluring, and the results will be so magnificent, that standing here, one of the representatives of my State, if I could entertain a local or discriminating interest, and could secure the barter, I could almost afford to trade every schedule in the Mills bill to save protection for the beet-sugar industry of California. [Applause.] There is no one industry that has such possibilities of advantage in as the production of beet sugar. One year as another may be selected to illustrate its advantage, and therefore as the figures for the year ending June 30, 1885, are handy to me I shall use them.

The quantity of sugar consumed in the United States for the year ending June 30, 1885, was as follows:

	Pounds.
Foreign sugar	2,442,357,448
Domestic cane	211,402,963
Domestic maple	55,000,000
Domestic beet (refined)	2,134,273

This makes the consumption per capita to be about 50 pounds. The consumption I think has increased to 53 pounds per capita.

The foregoing statement shows the total amount of sugar consumed in the United States to be about 1,355,447 tons of 2,000 pounds.

Germany produced in 1884, from beets, 1,150,000 tons of 2,240 pounds, being only 67,447 tons less than the total amount of sugar consumed in the United States.

This large quantity of sugar was produced from beets raised on about 860,000 acres of land. To produce the 1,355,447 tons consumed in the United States the past year, from beets, would only require 903,630 acres.

California alone, according to the agricultural map of the State prepared under the direction of E. W. Hilgard, Ph. D., professor of agriculture of the State University, has land fit for the cultivation of the sugar-beet greatly in excess of that amount, not taking into consideration Oregon and Washington Territory, whose lands are as well adapted to the production of beets as those in California.

It is evident that a very small portion of the land in the United States that is suitable for raising beets would be required to produce our own sugar.

The following statement will show to some extent the immense benefits to be derived in producing our own sugar from the soil of our country:

In consequence of the natural increase of population, it would undoubtedly require, before the year 1890, 1,500,000 tons of sugar to meet the requirements of the United States. To produce this quantity of sugar from beets would require 1,000,000 acres of land; an average yield of 15 tons per acre would produce 15,000,000 tons of beets, which, at $4 per ton, would amount to $60,000,000. To manufacture and refine the sugar contained in these beets, including all expense incurred in converting this sugar into money, would cost, say, $90,000,000 more, making the total cost of the 1,500,000 tons of sugar to be $150,000,000. This large sum of money would be distributed among the industrial classes in about the following proportions, namely:

Rent of land, at $20 per acre	$20,000,000
Labor, $40 per acre	40,000,000
Cost of manufacture, etc	90,000,000
Total	150,000,000

California's advantages over other beet-sugar-producing countries—and maybe other States of the Union have like advantages—may be summed up as follows:

Beets raised are as rich in saccharine and the yield per acre as large as in Europe.

We have a longer season in which to plant and harvest our crop.

The crop after it is harvested needs no protection from frost.

The climate permits us to work beets fresh from the fields for a period of four months, thus saving the expense of storing and rehandling.

In Europe their crops must all be harvested and stored in cellars within a few weeks after they are matured.

Beets yield the largest percentage of sugar when worked taken fresh from the ground.

In California we plant beets from the 1st of March to the 1st of June; in Europe all the planting has to be done in a few weeks. In Europe, in consequence of frequent rains in summer, great expense is incurred in keeping the beets free from weeds; in California, on account of the absence of rains during the summer months, weeds do not grow. In Europe farmers are put to great expense for fertilizers; in California that expense for many years will be nominal. But the cheap labor in Europe offsets to a great extent the advantages enumerated, and may perhaps enable them to manufacture sugar at a less cost than in this country. The farmers of Europe have had, also, many years of experience in cultivating beets for sugar; our farmers, none.

This enumeration, Mr. Chairman, displays not only the ability of California to produce beet-sugar, but the advantages of California over Europe in producing beet-sugar. But besides, sir, there are dependent industries and advantages on beet-sugar production. Millions of money will be kept at home and spent at home which is now sent abroad and spent abroad. We have capital enough in the country to build a thousand factories, and these can supply all the sugar we can consume.

The local effect of a factory is immense. It gives the following results:

A cheap and abundant supply of butter, milk, cheese, and meat, as well as sugar and grain. It gives employment to a large number of people, requiring both skilled and common labor. A large amount of money is kept in the country and distributed among the producing and manufacturing classes of our own country, instead of being sent to foreign countries to enrich foreign sugar planters. The greater wealth resulting to any community where a beet-sugar factory is located and the beet is grown, instead of the usual cereal crops, will be readily apparent by comparing the relative values of the product of beets and grain. A low average yield of beets is 15 tons per acre, and these beets manufactured into sugar will yield 3,000 pounds, which at 7 cents is worth $210.

An acre of wheat will produce 15 centals, which at $1.75 is worth $26.25; now add one-tenth to manufacture the same into flour, makes a value of $28.87 as the product of one acre of wheat.

Placing the yield of barley at 20 centals, at $1.30 per cental makes a value of $26 to the acre.

A beet-sugar factory of 200 tons daily capacity will require 2,000 acres of land to grow sufficient beets to supply it. Now, as each acre of land, if planted in beets, will produce a value to the community of $210, the 2,000 acres will add to its wealth to the extent of $420,000 annually.

The highest value produced from cereals, as above, is $28.87 for each acre, and for the 2,000 acres it would be $57,740, a difference of $362,260 in favor of growing the beets on that small quantity of land, to say nothing of the increased production from alternating the beets with other crops.

In connection with this subject, I desire to say a word in relation to the relative value of cane and beets as sugar-producing plants:

For centuries mankind has looked to the sugar-cane as the source from which to obtain their sugar; and, until about the first of the present century, that has been almost the only source from which sugar was obtained. It remained for the present century to utilize the beet as an additional source of supply. The quality of the sugar from both these plants is nearly identical; what little difference there is is in favor of the beet. Cane sugar contains more or less glucose—a weak reducing sugar; the beet, when in good, fresh condition, none. An acre of beets will produce as many pounds of sugar as an acre of cane, and can be cultivated at as little cost. It requires over a year for cane to mature; beets mature in five months, consequently yielding quicker returns. The cane has this advantage over the beet: molasses from the cane is valuable for domestic use; that obtained from the beet is not.

For the purpose of reference I name the sugar-producing countries and the quantity of sugar produced by each in 1884 and 1885, compiled from latest authorities:

BEET SUGAR.

	Tons.
Germany	1,150,000
France	315,000
Austria	540,000
Russia	380,000
Belgium	90,000
Holland	50,000
California	1,250
Total product beet sugar	2,526,250

CANE SUGAR.

	Tons.
Cuba	570,000
Porto Rico	60,000
Trinidad	55,000
Barbadoes	60,000
Jamaica	80,000
Martinique	42,000
Guadeloupe	41,000
Demerara	90,000
Reunion	36,000
Mauritius	128,000
Java	380,000
British India exports	45,000
Brazils	220,000
Manila	175,000
Louisiana	94,000
Peru exports	30,000
Egypt	30,000
Hawaiian Islands	80,000
Total cane sugar	2,080,000

From this it appears that there were 446,250 tons more of beet sugar used in the markets of the civilized world during these years than sugar produced from cane.

I have said, Mr. Chairman, other industries are dependent on the production of beet sugar, and will rise with it and flourish with it. I will not tire the House with the enumeration. The prospect might be fabulous if success had not been realized in Europe as it can be realized in California. This, sir, is the brilliant prospect to the country from the sugar industry and protection to it. The gentlemen ought to know it. Why, then, so much shuffling and contradiction. The gentlemen can not believe their proposition can be a settled and permanent policy. I think, sir, they are urged to action from an impulse to do something—a mischievous impulse when not directed or subdued by judgment.

The surplus is the bugbear. This it is that is impelling everybody. But is not there heedlessness somewhere? In the Forty-ninth Congress it was nobody's fear. In the Fiftieth Congress it is everybody's fear or everybody's excuse. It can not be everybody's excuse. Somebody is mistaken. It is just as well to find out now and here who is the somebody that is mistaken.

From whence does the surplus come? Democrats say from taxes wrung from the consumer compensated by no good to him, and every dollar of it represents a robbery. If so, then indeed is the surplus an evil; then indeed is it a sign of great wrong, of unconscionable governmental rapine. But Republicans say that the surplus comes from taxes on foreign producers, and every dollar of it represents prosperity. If so, it is beneficence, not robbery, and why be concerned about it? Why be concerned even though it is accumulating vaults full and mountains high? Why be concerned even if it be a tax on the consumer, if wages are sustained by it, industries protected by it, and the country made happy and prosperous by it? These are the two views; and if we Republicans believe what we say, we can afford to collect and accumulate the surplus even though we should have to shovel it into the sea. We weaken our position; we concede the Democratic position when we whine about the surplus; when we make it a cause to abandon protection to any industry.

In this consideration of the surplus, Mr. Chairman, I have disregarded the internal-revenue taxes as not now concerned in inquiry.

But, Mr Chairman, there is still another bugbear, another "painted devil," which is frightening us from our propriety. The President calls it "a condition." Catastrophe hid in an auger hole may rush on us at any moment, is the Presidential wail. The prediction was made over six months ago and we still survive. The delay should dissipate our fears.

And what, sir, is the great bugbear? It is a depleted circulation. Has any one thought to inquire if there is a depleted circulation? The gentleman from New Jersey [Mr. BUCHANAN] intimated a doubt of it, but it fell on unheeding ears. This is not surprising. Facts are often ignored or taken for granted by even great men. The ancient scientific world once wondered why it was that a bucket full of ashes held as much water as a bucket without ashes in it. No one tried it and it was accepted as true, and attributed to the absorbing power of the ashes. So with the Presidential fact. No one tries it and it is accepted by the absorbing gullibility of the interested, the ignorant, and the thoughtless.

We no doubt all remember the celebrated problem submitted by Benjamin Franklin to the scientists of Europe, why it was that a 5-pound fish put in a bucket brimful of water would not make the water flow over. That was an awful question to the scientists of Europe; fully as awful as the President's "situation" is to us to-day. They thought about it; they meditated about it; they wrangled about it. They at last got into quarrels about it, and angry disputes spread all over the country. The University of Paris took it up and hurled it across the Channel to London. London hurled it back again; and all Europe engaged in the fiery dispute until some fellow with a Yankee turn tried it and found that the water sloshed over on every side.

Now, sir, that is the case with this depleted circulation. There is not one word of truth in it. Now, mark you, Democrats and Republicans, until you deny the fact I am about to show, roar no more about the danger of the "situation." I hold in my hand a statement of the circulation of this country from July 1, 1881, showing a steady increase up to 1885. From 1885 to 1886 there was decrease but only of $27,000,000. From thence to July, 1887, there was the magnificent spring and advance of $185,000,000. Not a very alarming situation! Allowing, sir, for the addition by reason of deposits in the national banks by the Administration, there was an increase of the circulation of over $45,000,000 from July, 1886, to July, 1887.

The following table will show the amount of the circulation and the yearly increase:

July 1, 1878	$770,211,448
July 1, 1879	802,247,256
July 1, 1880	972,040,739
July 1, 1881	1,117,594,829
July 1, 1882	1,176,441,683
July 1, 1883	1,231,126,497
July 1, 1884	1,238,669,375
July 1, 1885	1,269,615,396
July 1, 1886	1,241,813,607
July 1, 1887	1,326,748,747
January, 1888	1,395,786,698

It will be seen that from July, 1887, to January, 1888, the increase in the circulation was $68,920,119. At the time the President's prediction was made, and while the country was waiting in alarmed expectation for bankruptcy and catastrophe from a depleted circulation the circulation increased over $68,000,000. Presidential predictions ought to be in disfavor. It is very certain if money is flowing into the Treasury through the custom-house, money is also flowing into the circulation through the custom-honse, or from some source; I do not care from where. It is only the situation I am stating and the alarm of it.

I think, Mr. Chairman, this disposes of the "condition" as a terror. The other form of it, the surplus, I have also disposed of for Republicans, at least, if they are sincere. There is no reason to apprehend danger from either surplus or "condition," and no reason to be hurried by either into disproportioned thought or act.

In conclusion, sir, I am sorry—sincerely sorry—that the gentleman from Illinois [Mr. CANNON] offered his amendment. I think it is a blunder. Better judgments than mine think it is a blunder. It assimilates by eminent Republican authority the bounty system to the protective system, or it will be claimed to do so. It mars the fair evenness of Republican policy—a policy only honorable when universal; a policy only respectable when universal; a policy which becomes contemptible when used to build up some industries and destroy others. I hope the amendment, therefore, will not receive even the gentleman's own vote. If it should receive any substantial Republican vote I should go from this House to-day disappointed in my party, disappointed in its sincerity, disappointed in its sincerity in the belief it has always affirmed that the principle of protection must be universal and is as beneficent as universal. As we have affirmed this, let us adhere to it. Let us leave to the Democrats the bad distinction of personal and local politics. Let us declare impersonal and universal principles, and believe me, gentlemen, we shall succeed—better than that, we shall deserve to succeed. [Applause.]

The Tariff.

The tariff question is the labor question.
Free raw materials.
The effect of protection on the production of domestic salt.
Free foreign salt means dear salt for the consumer.

SPEECH

OF

HON. BYRON M. CUTCHEON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 17, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. CUTCHEON said:

Mr. CHAIRMAN: The President of the United States, in his remarkable message to the Fiftieth Congress, in which he treats but one topic as worthy of his consideration and which he confines entirely to a discussion of revenue and the means of its collection, very wisely observes that—

> Our progress toward a wise conclusion will not be improved by dwelling upon theories of protection and free trade. * * *
> It is a condition which confronts us, not a theory.

I agree with the President, with a modification. It is a condition and a theory.

The condition is that in the United States exists a state of prosperity and progress wholly unknown in other lands. That here labor is more fully employed at more remunerative wages; that here the condition of the laboring class is more comfortable and more advanced; that capital is better invested at a more profitable return, and that all the machinery of social and political order moves with less friction than in any of the older countries of the world. No possible question of legislation could more seriously affect this "condition" than the "theory," of which this bill is the embodiment.

It is a theory which proposes to substitute national dependence for national independence; to substitute the productions of foreign labor for the handicraft of the American workingman; to substitute a distant, foreign, and uncertain market for a near, domestic, and stable market.

In considering the question of the tariff, and whether it shall be adjusted "for revenue only," or for the purpose of revenue and protection, it is quite impossible to separate it from the question of labor; and, in its ultimate analysis, the tariff question is the labor question.

That we shall always require as a nation a large and ever-increasing revenue is certain. That such revenue will continue, in the future as in the past, to be most largely derived from duties upon imports, from a "tariff," seems to be equally certain.

The question is not, therefore, between a tariff and no tariff—that is settled. Nor is it mainly a question between high tariff and low tariff. There will always be high duties and low duties. Nor is it a question of a tariff for revenue. The total amount of revenue to be raised should be sufficient to meet all the obligations of the Government, whether for the funded debt, pensions, internal improvements, or current expenses, and also to maintain an adequate fund for the redemption of all its demand obligations and certificates.

While we shall always require a tariff it will not affect all imports. There should always be, and will always be, a list of non-dutiable articles, or what is more commonly known as a "free-list." The first question that presents itself in this connection is the division of imports into dutiable and non-dutiable; and here the consideration of the labor question begins.

To my mind the main consideration that should govern in the arrangement of a tariff, as between dutiable and non-dutiable, or between high duties and low duties, is the creation of an adequate demand for American labor, and as a consequence, the creation of adequate wages for the working men and women of America.

In using this expression, "the working men and women," I do not mean, Mr. Chairman, to raise any class distinction between the "working class" and the "employer class," or "the capitalist class." I think that the less we have of these distinctions the better it will be for the American Republic. Such distinctions smell too much of the aristocratic and feudal systems of the Old World, and are neither to be imitated or tolerated on our free American soil. If such distinctions already exist, it is one of the highest duties of American statesmen to see that in so far as legislation can do it, all such lines are blotted out.

I mean by the working men and women of America all who gain their living by their work from year to year, whether that work is strictly manual, or partly manual and partly intellectual, or strictly the labor of the brain, like teaching, or literature, or invention. A laborer is a laborer whether he works with brain or hand, and I know of no law, either God-ordained or man-created that makes one kind of labor more honorable than the other or more worthy of our protection and recognition.

One may be more potent and more far-reaching than the other, and so more valuable to the world.

The brain work of a Watt or a Fulton may equal in productive power the handicraft of millions of common manual laborers.

Brain work always creates hand work. It is impossible to create a new demand for manual labor without at the same time creating a new demand for the use of capital, and for all the concomitants of a new industry, and a new industry always creates a new demand for every kind of labor. Wherever men are to be employed, there will be employers, superintendents, book-keepers, foremen, and laborers; there, too, will be work for farmers and gardeners to supply food, and artisans of all kinds to supply shelter and clothing.

Thus one field of employment creates and multiplies other fields of employment, and a new industrial system arises.

New industries are a boon to every form of labor. Now, in the adjustment of the dutiable and non-dutiable commodities it should be a paramount consideration to foster and create as many new industries as possible, which shall give new employments to American workers.

When, therefore, we find an article which is not and can not be produced in this country, and the production of which in this country can not be fostered or stimulated to an extent somewhat approximating the demand by any amount of tariff, that article should be put upon the free-list, because it can create no labor; unless, being an article of luxury only, it be put upon the dutiable list for revenue only.

No protective tariff upon such articles can give increased employment to labor, or create new industries or make the import duty anything but a tax. Upon all such articles a tariff is a tax.

In this class would come tea, coffee, spices, and many raw materials for manufactures which can not be produced in this country, but which employ a large amount of labor in their preparation and fabrication for use.

It may be stated as a general proposition that we ought not to go abroad for any article which, having regard to the general good of the greatest number, can be equally well produced at home, and the foundation of this proposition is the necessity of affording work for American workers. The workers are always the greatest number, and their interests are entitled to first consideration.

The law of supply and demand is the law of gravitation in the industrial world, and the reward of labor will depend upon the demand for labor. While this is true at all times and everywhere, it is especially important at the present time, when there is a surplus of labor seeking employment in this country. We are passing through a critical and trying period in the history of our industrial system. The great difficulty arises from the fact that under the existing conditions of our modern civilization the supply of days' work is largely in excess of the demand.

This comes about from various causes, but more especially from four, all of which have arisen to magnitude within a single generation. These are, first, the great increase in labor-saving machinery; second, the application of steam to transportation and manufactures; third, the use of electricity in the transmission of intelligence, and fourth, and greatest of all, the abnormal growth of our industrial population through immigration.

While, therefore, a given amount of production or transportation can be accomplished with a third or a quarter of the living hands that would have been requisite fifty years ago, and for that reason the demand has greatly diminished pro rata, at the same time the supply of labor has increased in an unnatural ratio, and a double divergence has taken place.

To aggravate this evil, during the period of recuperation following the civil war a false and hurtful policy was pursued. Instead of discouraging this abnormal influx of the laboring class, we made efforts to increase and stimulate it.

Many of our States sent abroad emigration commissioners to entice and persuade immigrants from almost every country of Europe.

This immigration at another time or under other circumstances might have been a very desirable addition to our population, but coming as it did at the very time when the introduction of machinery, steam transportation, and electricity were making such gigantic inroads upon the demand for labor, it only added to the dislocation of our industrial system.

This heterogeneous and multitudinous immigration was almost wholly from the laboring class. They brought with them no wealth but their boundless brawn and prolific progeny. They brought with them the greatest possible supply of day's work and the least possible demand therefor.

I suppose that there are to-day in the United States not less than twelve millions of people who have themselves emigrated or whose immediate ancestors have emigrated to this country since 1846.

These, as a rule, have been in the highest degree producers and in the lowest degree consumers.

While they offer the maximum of days work in the labor market, they require the minimum of days work from the rest of the great industrial body. Thus the equilibrium of production and consumption, which constitutes true prosperity, when every man is employed at living wages, when there is neither distress from surplus of unemployed labor, nor stagnation from surplus of unemployed capital—this industrial balance was destroyed and the evil doubly aggravated by the simultaneous reduction in demand and increase in supply of labor. Therefore men are idle, wages depressed, strikes are common, and socialism and anarchism flourish. What is wanted are new industries for this new labor—more work and not less. Capital is the employer of labor.

When the supply of days work is in excess of the demand, then labor bids against labor and wages go down and capital commands the situation. If the demand for days work were in excess of the supply, then capital would bid against capital to secure the labor and labor would command the terms of its employment.

The evil then is that production—using the word in its largest and broadest sense—has outrun consumption; that labor is in excess, and something must be done to reduce the dislocation and restore the equilibrium.

The giant Labor, conscious that he is hurt, gropes blindly for the hand that has wounded him, not knowing that the injury is self-inflicted.

Here, as everywhere, the sufferer turns to legislation for relief, as if legislation could change the divinely appointed law of supply and demand or could restore the lost scepter to labor so long as labor must solicit capital for employment rather than capital seek labor for its own utilization. As the evil has arisen through the disturbance of the industrial equilibrium, so the evil must be remedied by the restoration of that equilibrium. This can be done in either one of two ways—first by increasing the amount of work to be done in our country, or, second, by diminishing the supply of workers, or both.

The second is impracticable, for labor, like everything else, will go where it can command the best price, and emigration will not set in from this country to Europe until wages, or rather the net savings of labor in this country have fallen below the corresponding earnings of the like grades of labor in Europe. This, I trust, will never happen.

We may perhaps mitigate the evil by checking the immigration of the most objectionable forms of labor—the Chinese, who do not come to us with the intention of becoming citizens nor to build homes, but simply to gather what they can and return to their distant country; the comparatively degraded laborers of Southern Europe, who are closely allied to the Chinese in that they do not come to this country to remain, but come under contracts previously made to work for a short term of years, with no purpose of becoming American citizens, and therefore not coming in families, but rather in herds, to depress and disastrously compete with real American laborers, with no intention of bearing the burdens as well as to reap the profits of our American institutions. And to these may be added convict and pauper laborers deported by foreign states—people who have "left their country for their country's good." The coming hither of these classes should be prohibited entirely.

We can not afford, nor can our institutions endure, that we should be made the dumping-ground of the refuse populations of Asia and Europe, and especially of the criminal and defective classes, or of pau-

pers and "assisted emigrants," or the dynamiters and nihilists who have sprung up like rank weeds at the foot of despotic thrones and come here to scatter the seeds of social and political disorder and make a chaos of our fair and prosperous country.

But even if we could check or prohibit the ingress of all these classes there would still remain an excess, and the problem recurs, how shall the most employment and the greatest immunity from distress be assured to the working people?

The answer to this is, by the greatest possible diversification of industries and by refusing to employ foreign labor to do anything that can be as well done by American labor.

It is, in a certain sense, a crime against American labor to drive any industry out of this country that might be developed and fostered here.

The American system of protection is based upon a few fundamental propositions, all of which have relation either directly or remotely to the question of the diversification of industries and the more equal distribution of wealth by the payment of liberal wages and otherwise. These propositions may be stated thus:

First. That America is possessed of certain natural advantages which have tended to create a larger demand for labor, and therefore a greater compensation for labor, than exists in the older countries of the world.

Second. That chief among these are the great extent and cheapness of unoccupied lands and the vast extent and variety of natural resources—that is, of raw materials—of the mine, forest, field, and water, to supply almost every possible want of man.

Third. That with these great natural resources we possess superior intelligence and inventive faculty among the people to be applied to the extracting of the raw materials and their manufacture into articles for the use of man.

In brief, it may be summed up that we have a great, new continent to be developed, and a demand for labor correspondingly great, which has established a scale of wages in this country far in advance of that of the countries with which we have to compete in production. The question now is, how shall we maintain the advantage which by the law of position and nature we already have?

That the American laborer is more fortunately circumstanced than his competitors in other lands needs no other proof than the vast influx of immigration, to which I have already alluded. Of course this tends constantly to equalize population, work, and wages, and unless we guard what we already have, those who come after us will witness, in the coming century, that such an equilibrium will have to be established between our people and the people of Europe in the matters of work, wages, and wealth; that we shall have lost all the advantage that nature gave us, and men will be just as likely to emigrate from America to Europe as from Europe to America.

How shall this loss be prevented?

First. By the conservation of the public domain for the people.

Heretofore we have acted as though there were literally no end to our public lands. We have given them away with utter prodigality. We have made it so easy to acquire lands that almost any one could acquire almost any amount. We must reverse this policy.

1. Prohibit by law the acquisition of public lands by aliens.

2. Prohibit every form of acquisition of public lands adapted to agriculture, except by actual settlement.

3. Increase the minimum price at which lands can be taken for cash to something near their actual value.

4. Limit the amount which any one person can take from the public domain, by purchase, to a reasonable amount.

5. At once forfeit and return to the public domain every acre of land granted by the United States in aid of railroads and other public works, which have not been earned in good faith, in accordance with the terms of the grant. This will make a good beginning toward a new land policy.

Second. We must develop and utilize our own raw materials in preference to using the raw materials of other countries. And here, Mr. Chairman, I desire to direct attention to the matter of "free raw material."

The President, in the message already referred to, holds the following language in regard to raw material:

> The radical reduction of the duties imposed upon raw material used in manufactures or its free importation is of course an important factor in any effort to reduce the price of these necessaries; it would not only relieve them from the increased cost caused by the tariff on such material, but the manufactured product being thus cheapened, that part of the tariff now laid upon such product as compensation to our manufacturers for the present price of raw material could be accordingly modified. Such reduction or free importation would serve beside to largely reduce the revenue. It is not apparent how such a change can have any injurious effect upon our manufactures. On the contrary, it would appear to give them a better chance in foreign markets with the manufacturers of other countries who cheapen their wares by free material.

So "free raw material" is to be the panacea of our commercial and industrial ills.

Mr. Chairman, I have the honor to represent in part a State that lives by the production of raw materials.

In the production of iron and copper ore, lumber, and salt, Michigan leads all the States, and in wool and wheat is among the foremost.

Of her two million population more than one-half are engaged either directly in the production of the so-called raw material or in the transportation and distribution of such materials, or in supplying and caring for those who are so engaged. Without these industries the greater part of her population would be left without employment.

These vast industries have grown up under a system directly intended and calculated to develop and foster them, and to reverse which would threaten with bankruptcy this great and prosperous Commonwealth.

Upon a former occasion I called the attention of the House to the fact that there is nothing more delusive and misleading than the free-trade idea of raw material. There is no raw material but Mother Earth. All other so-called raw material is simply embodied labor. Lumber and salt are classed by the advocates of free trade as raw materials. With reference to the use to be made of them they are crude materials, but with reference to their present condition their whole value is in the labor that has produced them.

I desire to illustrate this with an actual example. The entire section of Michigan in which I reside is underlaid, at a depth of about 2,000 feet, with a deposit of rock salt about 40 feet in thickness. It is undoubtedly the same deposit that is reached at a much less depth on the St. Clair River and at Goderich, in Canada. I think it fairly certain that a large portion of the lower peninsula of Michigan is underlaid with this rich and valuable saline deposit. And yet it adds no appreciable amount to the value or price of the acreage of the surface.

Men buy and sell thousands of acres of this surface land, which carries with it all the underlying deposits, without so much as a thought of the millions upon millions of tons of salt that they are buying and selling. It has no greater value than if it were ordinary clay or loam or sand.

But labor comes and prepares to reach and utilize this buried wealth. It gets out the lumber for a drill-house and erects it, and furnishes it with the necessary tools for piercing to the salt. Labor constructs engines and implements for drilling; labor reaches down through the superincumbent rock till it finds the crystalline deposit; labor takes the crude ore from the mine from which the pipe is made through which the brine is raised; labor constructs the salt block in which the brine is evaporated; labor lifts the crystallized salt from the vats and places it in the barrels which labor has constructed; and then it is ready for labor to transport it to the market, and every cent of its value is the representative of just so much embodied labor. And yet we are told that it is "raw material."

It may be said that the plant represents a large amount of capital invested. But that capital only represents a certain number of days' work.

Mr. Chairman, it is estimated by Hon. George Hill, our State salt inspector, that this industry in the State of Michigan affords employment to from fifteen to eighteen thousand people and gives a living to not less than 60,000 people. Our annual output is now more than 4,000,000 barrels or upwards of 20,000,000 bushels of salt. Now, Mr. Chairman, I desire to know, if the labor employed in the production of Louisiana sugar and Alabama rice and Kentucky tobacco are worthy of the fostering care of the Government, why is not the labor engaged in the production of Michigan salt equally worthy?

It is no more a necessary of life than sugar. Its consumption is less. There can be no monopoly in salt. It is the most abundant raw material (in its native deposits) that the earth affords. Kansas has salt enough to feed the world for a hundred years. Louisiana has literal mountains of it. Texas, Utah, and California have unlimited supplies. We have labor and to spare waiting to take it from the matrix of the earth and prepare it for the use of man.

Why shall this labor be driven from its employment and this work be given to foreigners and its wages disbursed on foreign shores to English, Spanish, Portuguese, and Swedish laborers?

Mr. Chairman, this is one of the industries selected for assassination. Salt is selected by this bill for the free-list. That is to say, it is proposed to bring the labor which is engaged in the production of this article upon American soil into direct and unprotected competition with the product of the foreign labor engaged in its production in other lands.

There can be no cry of "free raw material" here, for the material is so abundant that it is almost as free as air.

This industry is so interlaced and interlocked with other industries, especially lumber, that the destruction of the one would mean to a very great extent the destruction of the others.

The tariff upon foreign salt since 1873 has been 8 cents per 100 pounds in bulk and 12 cents per 100 pounds in packages.

In spite of this protective duty foreign salt to-day has possession of fully one-third of the American market.

Then, I ask, if we have this material in such boundless quantity and an overplus of labor for its production, how does it happen that English salt-makers can drive American salt out of one-third of the American market? As the entire value of the salt consists, as I have said, in the labor embodied in it, it becomes a question of labor only.

The cheapest labor will make the cheapest salt. The number of days' work embodied in the imported salt will be just so many subtracted from the days' work to be performed by American workingmen, and consequently just so much deducted from the wages to be paid them.

That we may see just what that means I append the following table showing the importation of salt by decades since 1830:

Imported salt.

Year.	Bushels.	Price at port of departure.
		Cents.
1830	5,574,046	12.504
1840	8,183,203	12.409
1850	11,224,185	11.023
1860	14,094,227	10.154
1870	13,340,258	10.816
1880	17,213,762	10.674
1881	19,651,971	11.08

I also append the following table, showing the importation of salt, by years, since 1863, with the price per bushel at point of shipment:

Foreign salt imported into the United States.

Years ending June 30—	Number of bushels.	Price, per bushel, at point of invoice.
		Cents.
1863	10,800,189	.0945
1864	8,126,565	10.00
1865	7,319,092	10.36
1866	11,411,780	09.58
1867	8,534,268	11.94
1868	11,134,495	12.42
1869	10,574,494	11.99
1870	13,340,258	10.81
1871	11,388,440	11.01
1872	11,032,226	11.01
July, 1873 (one month)	723,277	

Tariff, 18 cents per 100 pounds in bulk, 24 cents in packages.

In this connection I desire to call attention to the relation of the a riff to the price of salt.

In 1866 the home price of salt was $1.80 per barrel. In 1873, without any change in the tariff, and by force of home competition alone, the price had fallen to $1.37 per barrel, although the price of foreign salt at point of invoice had actually increased. Without a tariff adjusted to protection of our own industry this development of the home competition would have been absolutely impossible, and we would have been dependent entirely upon our commercial rivals for this prime necessity of life, and they would have fixed the price.

In 1873, August 1, the tariff was changed on salt in bulk from 18 cents per 100 pounds to 8 cents per hundred.

The following table exhibits the amount imported each year from 1873 to 1882, the price at point of shipment, the duty, and the price at Saginaw.

Foreign salt imported into the United States.

Years ending June 30—	Quantity.	Price per bushel at point of invoice.	Price in United States at Saginaw, Mich.
	Bushels.	*Cents.*	*Cents.*
1873 (eleven months)	13,174,469	13.06	27.4
1874	16,595,956	14.09	23.8
1875	14,735,320	12.26	22.0
1876	15,483,703	11.45	21.0
1877	16,093,033	10.31	17.0
1878	15,367,664	10.62	17.0
1879	16,189,559	10.97	20.4
1880	17,213,762	10.67	13.0
1881	19,651,971	10.63	16.6
1882	15,103,141	11.08	14.0

Tariff 8 cents per 100 pounds, or 4.48 cents per bushel.

For purpose of ready comparison I offer the following:

Table of salt produced in the United States.

Year.	Quantity.	Average price.
	Bushels.	*Cents.*
1830	4,447,929	21.031
1840	6,179,174	20.002
1850	9,763,840	22.760
1860	12,717,198	18.007
1870	17,606,105	27.830
1880	29,800,298	16.505
1885	33,501,515	14.003

Average price of salt in bulk at Saginaw, Mich., in 1885, $3.15 per net ton, 44 cents per barrel, 8.8 cents per bushel.

English salt in bulk at works near Liverpool in 1885, $1.22 per net ton, about 3½ cents per bushel.

Turk's Island salt, in bulk at island, in 1885, $2.20 per ton, about 6 cents per bushel.

At the beginning of this period the price of foreign salt at point of shipment was 13.06 cents; duty, 4.48 cents; total, 17.54 cents. Home price 27.20 cents. At the end of this period we find the price at point of shipment 11.08 cents; duty, 4.48 cents; total, 15.56 cents. Home price, as result of domestic competition, 14 cents. Reduction to consumer, as result of home competition, 13⅜ cents per bushel.

A comparison of this table with the last one will show that the reduction of tariff in 1873 from 18 cents per hundred in bulk to 8 cents per hundred made very little difference in the home price of salt, and actually increased the price of foreign salt at the point of invoice.

The average price of foreign salt at point of invoice for the five years prior to July, 1873, was 11.45 per bushel. The average price at same point for the five years following was 12.23.

Without any change of duty the average price per bushel for five years, from 1873 to 1877, was 22.24 cents; for the five years from 1878 to 1882 it was 16.20 cents.

At the end of the ten years from 1873 to 1882, with no change in the duty, the home price at Saginaw was within four-tenths of a cent of the foreign invoice price at point of shipment at the beginning of the ten years.

In order that we may see how little the rate of duty has had to do with the price of salt to the consumer I append the following table, showing the rate of duty from 1807 to 1886:

Duty on salt 1807 *to* 1861.

Dates.	Duty per bushel.	Remarks.
	Cents.	
1807—1813	Free.	
1813—1830	20	
1830—1832	15	
1832—1834	10	
1834—1841	10—7.6	Sliding scale under compromise tariff.
1841—1846	8	
1846—1857	2.43	20 per cent. ad valorem.
1857—1861	1.58	15 per cent. ad valorem.

Duty on salt and average price, 1861 *to* 1873.

Dates.	Duty per bushel.		Duty per 100 pounds.		Price per barrel.	Price per bushel.
	Bulk.	Package.	Bulk.	Package.		
	Cents.	*Cents.*	*Cents.*	*Cents.*		*Cents.*
1861–1862	6.22	10.08	12	18		
1862–1866	10.08	13.44	18	24		
1866	10.08	13.44	18	24	$1.80	36
1867	10.08	13.44	18	24	1.77	35⅜

1887	4.48	6.12	8	12	55	11

The bulk price of salt at Saginaw during 1887 has been $2.75 to $3.15 per ton, or 6.8 to 7.9 cents per bushel.

An inspection of these tables will show that under the tariff of 1866–1873, with the duty at 18 cents and 24 cents, the price of salt fell from 36 cents to 29½ cents per bushel, at which latter price it stood at the time of the change of the duty.

In 1873 the duty was reduced to 8 cents and 12 cents respectively, being less than one-half the former rate, and at the end of the year the price remained at 27½, and without further change in the duty between 1873 and 1887 the price steadily fell from 27½ cents to 14 cents in 1885, and about 8 cents in 1887.

Such has been the force of domestic competition that in 1885 and 1886 bulk salt at Saginaw was less than 9 cents per bushel, or 45 cents for a barrel of 280 pounds.

PRODUCTION OF SALT IN MICHIGAN.

To show the extent to which the industry has grown in the State of Michigan under the system of protection I here append the following tables. The manufacture of salt in Michigan commenced in East Saginaw in 1860. The quantity produced previous to the inspection law was:

Years.	Barrels.	Years.	Barrels.
1860 (ungraded)	4,000	1866 (ungraded)	407,077
1861 (ungraded)	125,000	1867 (ungraded)	474,721
1862 (ungraded)	243,000	1868 (ungraded)	555,690
1863 (ungraded)	466,356		
1864 (ungraded)	529,073	Total (ungraded)	3,282,117
1865 (ungraded)	477,200		

The following table shows the amount of salt inspected in Michigan since 1869, the first year of the establishment of the State salt inspection:

Years.	Barrels.	Years.	Barrels.
1869	561,288	1880	2,676,588
1870	621,352	1881	2,750,299
1871	728,175	1882	3,037,317
1872	724,481	1883	2,894,672
1873	323,346	1884	3,161,806
1874	1,026,979	1885	3,297,403
1875	1,081,856	1886	3,677,257
1876	1,462,729	1887	3,944,309
1877	1,660,997		
1878	1,855,884	Total amount to date	41,322,895
1879	2,058,040		

It will be seen, therefore, that home competition and not tariff is the great regulator of the price of salt.

From a careful examination of statistics we find that the total consumption of salt in the United States in 1885 was as follows:

	Pounds.
Imported from foreign countries	3,298,994
Produced in Michigan	3,279,403
Produced in all other States	3,402,900
Aggregate consumption	9,999,297

If we estimate the population of the United States in 1885 at 56,000,000 the average consumption of salt would be 50 pounds per capita. If we estimate the population at 60,000,000 the consumption of salt would average 46⅔ pounds per capita. At the latter figure 1 barrel of salt of 280 pounds would exactly supply a family of six persons with all the salt they consume, directly and indirectly, in a year.

As the duty is 8 cents per hundred pounds the entire duty on a barrel of salt is 22.4 cents. If this entire duty were a tax upon the consumer it would amount to 3.4 cents per capita per year. But as less than one-third of the salt consumed is imported, the duty would in no case constitute a tax to more than one-third of that amount, or about 1 cent per capita a year, or about 7 cents per year for a family of six persons—about the price of a glass of beer or a poor cigar.

And this is the awful tax under which the American farmer groans, and to escape which he is adjured to rise up and put salt on the free-list, and crush this terrible monopoly.

To corroborate the view which I have taken on the effect of the duty on the price of salt I here quote from a statement of Hon. John L. Hayes, late chairman of the Tariff Commission of 1883.

It is said that the cost of salt to the consumer will be diminished by free trade or reduction. This is contradicted by American experience. In 1807 the duty of 20 cents a bushel which had before been imposed was repealed, and salt was admitted free of duty for six years. Consequently our home works were abandoned, or greatly reduced in production. Domestic competition being withdrawn, the prices of foreign salt which then flooded the markets advanced, being as high as $2 per bushel. When the war of 1812 arrived the foreign supply from England and her colonies was cut off. We had to depend upon the few establishments of our own which had not been driven out of business by foreign rivalry; and it is recorded as a historical fact that "salt was sold in quantities in more than one of our States at $4 per bushel."

While writing this article we were informed by a merchant of Portsmouth, N. H., that a cargo of salt was held in that town during the war of 1812 by speculators, though not actually sold, at $8 per bushel.

In 1872 Congress reduced the duty on salt in bags from 24 cents per 100 pounds to 12 cents, and on salt in bulk from 18 cents per 100 pounds to 8 cents, that is, reduced the duty more than one-half. What was the result? The foreign producers put up the price immediately, and in forty-seven months after the reduction of the duty took effect the average increase in the foreign invoice value amounted to over 8 cents per 100 pounds, or to more than two-thirds of the duty taken off; and the expected benefit of reduction, instead of inuring to our consumers, went into the pockets of foreign manufacturers of salt.

The rise of prices attracted attention everywhere in this country; and the New York Chamber of Commerce, in a report upon this subject in 1873, declared:

"The reduction of duty on foreign salt has not had that effect upon the price of salt that was anticipated by those who advocated its passage. The cost of both ground and fine salt is higher than it was before the duty was reduced."

These facts establish what the American salt producers maintain, that any legislation which would break the growing force of the American competition against the foreigner would be sure to strengthen the foreigner and enable him to exact higher prices, and that the tendency to cheaper salt, now in operation, can be sustained only by maintaining those circumstances which strengthen the power of American competition.

There are at present in operation in Michigan 142 salt blocks, with a capacity of 5,265,000 barrels per year.

The question now is, can this great industry survive under free trade in salt?

As I have said, foreign salt already has full possession of one-third of our entire market, and the cost of freights, added to the duty, prevents it from taking possession of the whole.

The figures will easily decide the question. These figures were obtained during this session from a Baltimore salt importer:

Liverpool common salt, at works, per ton	$0.75
Expense to Liverpool and put on board vessel	1.00
Freight to Atlantic seaboard United States	$1.49 to 1.50
Cost, less duty in port	3.25
Michigan salt at works per ton	2.75
Railroad freight from works to seaboard	$2.75 / 3.90 to 4.50
Cost of Michigan (common) salt at seaboard	6.65 to 7.25
Advantage of English common salt over Michigan common salt at seaboard free of duty	3.40
Deduct duty (8 cents per 100 pounds)	1.79
Advantage of foreign salt with duty paid, per ton	1.61

Which gives English salt control of the market as far inland as $1.61 will carry it at the present time.

Take off the duty of $1.79 per ton and you add a belt of territory to the supremacy of foreign salt as broad as a freight rate of $1.79 per ton will carry it.

That takes away fully one-half of all the market that now remains to American salt, and the American consumer will not get his salt 1 cent on a barrel cheaper than he does now.

The foreigner is going to get the best price he can for his salt, and when once domestic salt is driven out, and our works have fallen to decay, then look out for high-priced salt.

From 1857 to 1861 we had practically free trade in salt, and yet in 1860 the price of salt was 18 cents per bushel, more than twice the price to-day.

We have never had such cheap salt as under the present protective tariff. It is a good maxim to let well enough alone.

Much has been said in condemnation of the rebate on salt used in preserving meats and fish for exportation.

That provision was enacted for the purpose of building up an export trade in meats and other products, when we were bending our energies to turning the balance of trade in our favor, and preparing for the resumption of specie payments. Undoubtedly it had much to do with building up our export trade. It was founded upon the idea that English salt was much better for packing and dairy purposes than domestic salt. But now, when Michigan is producing a dairy salt fully equal, if not superior, to the best English salt, there is no reason why this rebate should be continued, and its repeal would add greatly to the demand for the higher grades of domestic salt.

My colleague [Mr. TARSNEY] in the course of the debate, spoke as if the Saginaw valley was the only salt-producing section of Michigan. But within the last five or six years this industry has grown up at Manistee and Ludington, on Lake Michigan, until now they are turning out nearly a million barrels annually of as good salt as is made anywhere.

The passage of this bill may not destroy this industry entirely, but it will very greatly curtail its production and leave thousands of people without employment.

The "diamond crystal" salt made by my colleague, Mr. WHITING, at St. Clair, under a strictly patented process, and which is a little salt monopoly, is no criterion of the ability of common domestic salt to compete with the cheaper foreign product. Protection has stimulated the manufacture of domestic salt until it has given us the cheapest, the most abundant, and the best salt that this country has ever known.

I have selected this commodity, Mr. Chairman, for the purpose of illustration, because, first, it is one of the great staples of my State and district; second, because it is a raw material that is composed wholly of labor; and third, because the beneficial effects of protection in first developing and then cheapening the product are so manifest.

Mr. Chairman, "free salt" is not a new thing in this country. We had free salt in 1807, and we had it practically free under the tariff of 1857; and free salt has always meant dear salt for the consumer and low wages for the workingmen. You may insist upon trying the old experiment again, but it will not result differently. We have salt enough to salt the world. We have the labor to produce it. It is a crime against American labor to deprive it of its employment, and it is a crime against American nationality to make it dependent upon foreign labor.

The Tariff.

SPEECH

OF

HON. A. J. HOLMES,

OF IOWA

IN THE HOUSE OF REPRESENTATIVES,

May 17, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. HOLMES said:

Mr. CHAIRMAN: During the progress of this debate I have been impressed by the absence of well-founded objections or meritorious criticism of the policy of protection.

The champions of free trade aver that we are paying too much for our blankets, our clothing, and a large proportion of the articles that make up the necessaries of life; also, that the excessive price is caused solely by protection. While a portion of the people of this country may be of that opinion, a majority of them are not, and for twenty-five years have not been, so that the issue and the doubt was long ago decided in favor of protection. In this, reduction in price has always been favored and steadily accomplished by building up our own industries.

In the hostility of the representatives of the Democratic party to labor—and they come mostly from the South—they represent their constituents. They offer no inducements to labor; it is ill paid, and as a consequence, while many of the colored people move out owing to insufficient pay or from intimidation and a denial of political rights, few Northern or foreign laborers seek its borders.

Where does the ceaseless stream of immigration that comes to our shores point upon its arrival? Not to the beautiful valleys of Tennessee, with its salubrious climate; not to Georgia, Alabama, and Louisiana, with their conditions of soil and location almost perfect; but rather to the home of the blizzard, to the more inhospitable regions of Minnesota, Iowa, Nebraska, and Dakota. Capitalists from the North and elsewhere have attempted to set in motion the wheels of industry, but it is an indisputable fact that for the honest and poor laboring man the great body of the party representing the Mills bill has no inducements to offer, no encouragement to give. Is it a wonder, then, that in its governmental policy it should no more be friendly to labor than in its home policy?

The Democratic party seems to have resolved to make the country homogeneous by striking down industries where they flourish so that regions that have none may not suffer by comparison.

And here I wish to point out briefly and analyze the reasons thae seem to influence the opponents of a protective policy, not in a spirit of derogation, but that we may, if possible, trace the relation of caust and effect.

Mr. Chairman, I affirm that the desire for free trade is influenced mainly—

First. By indifference to the welfare of the laboring classes.

Second. Its advocates come largely from portions of the country not in the highest degree prosperous. Five-sixths of the supporters of the Mills tariff bill come from the Southern States. The curse of slavery was upon that region in the memory of the men of this generation, and to-day, while the condition of the colored race which forms by far the great majority of the laboring class there is better than in slavery, there is yet a great gulf between their condition and that of the laboring classes of the country elsewhere, both in the wages received and the material comforts surrounding them. Could anything better be hoped for in view of the utterance of one of the greatest leaders of the South that capital should own labor, and whose representative men thirty years ago sneered at laboring men of the North as greasy mechanics and Northern mudsills?

When did the Democratic party of the South become the friend of the laboring man, about whom we have heard so much during this debate? Was it in jealously guarding his right to a free ballot and an honest count as a citizen of the Republic? Was it when as a party you opposed to the end the passage of the homestead law; or when in the Forty-ninth Congress, upon the passage of the labor bills, as in the bill to prohibit contracting for convict labor, free-trade Democratic votes were the only ones recorded in opposition?

I have stated, Mr. Chairman, that free-trade advocates are not usually found in the most prosperous sections of the country. It almost invariably happens that when an individual, a section, or a nation is not prosperous a change is sought in existing conditions. Such a change may embrace anything from a slight modification to revolution.

In this desire for change, sir, I do not allude simply to the reduction of the tariff which Republicans and Democrats alike agree is necessary, but to the attempt to strike down the standard of wages, to degrade labor, and destroy our manufacturing and agricultural prosperity. It is all embraced in the difference between "protection to American industries" and "a tariff for revenue only." Where does the cry for free trade emanate from? Is it from the skilled workmen who night and day toil by the furnace fires of Pennsylvania? Is it heard from the countless spindles, the factories, and workshops of New England? Has it been demanded by the Northwest, with its many-handed industries and sleepless energy, whose watchword is progress and whose march is always forward? No, Mr. Chairman; it is from none of these sources.

But, my free-trade friends, do you say that the sections of the country I have named have advantages that you have not? Let us see. Like Pennsylvania you have iron, coal, and limestone. For the rocky soil of New England you have alluvial plains and greatly superior advantages in navigable water ways, While the Northwestern agriculturist and stock-raiser is locked for a large portion of the year in ice and snow, you enjoy a mild and equable climate in which the care of your herds is little more in winter than in summer.

The present Chief Executive is quoted with the statement that Iowa is nothing but an agricultural State; without denying that assertion now, I want to call attention to the fact that although the act admitting Iowa into the Union did not take effect until 1846, and long after the admission of every other State I shall refer to in this connection, yet her development occurred almost wholly since the protective policy was adopted, and since the war.

In 1850 Iowa had 522 manufactures; at the same time Georgia had 1,522; Mississippi, 947; Louisiana, 1,008. In 1880 the manufactures of Iowa numbered 6,921; Georgia, 3,593; Mississippi, 1,479; Louisiana, 1,553. So that Iowa in 1850 having less than one-sixth of the manufactures of the three States I have named, yet in 1880 had more than all of them combined.

But I think I hear my free-trade friend say, "You do not take into account the losses of the war nor how our fortunes were retarded by that calamity."

On the contrary, I have expressly selected Iowa as a State whose practical development began with the close of the war. If the improvements and manufactures of the South had been totally destroyed (which they were not), she would still have commenced the race in 1865 practically even with the extreme Northwestern States.

I am led in part to institute these comparisons because the gentleman from Missouri [Mr. BLAND] and others from time to time have dilated with apparent gusto upon the alleged mortgaged indebtedness of the individual citizens of Iowa. No reports are rendered of the individual indebtedness of the State, nor am I aware of any attempt having been made to secure such data at any time. Doubtless it is large enough to satisfy the payors. Whatever it may be it will be paid.

But let us turn from the indefinite to that which is fixed and certain and see how the account stands. The Tenth Census shows the following State indebtedness by the States named in 1880:

Iowa	$245,435
Missouri	10,537,000
Alabama	9,133,000
Arkansas	5,108,043
Georgia	8,733,500
Louisiana	11,982,621
North Carolina	13,179,045
South Carolina	6,399,742
Texas	4,237,730
Virginia	29,095,967

The apparent small indebtedness of Iowa was due to the school-fund of the State, on which by law only the interest was payable, and which would doubtless have been paid long prior to that time could it have been accepted. The Republican party has controlled the State government for the last twenty-five years without any interlude of Democratic reforms and mistakes. The State of Iowa never scaled or repudiated her indebtedness. I wish that encomium could be pronounced on all the States of this Union. I commend this showing to the friends of the opposition, and when they have extinguished their millions of indebtedness by absolute payment Iowa may accept commiseration if not advice.

In 1880 the population of the five States of Alabama, Arkansas, Florida, Mississippi, and North Carolina, was 4,865,870; that of Iowa at the same time was 1,624,615. Yet the aggregate wages paid that year by the five States first mentioned was but $8,630,150; during the same period Iowa paid in wages $9,725,962. The number of hands employed during that time by the group of States referred to was 43,016, while Iowa employed 28,372.

From the data given it is plain that if one Northwestern State, which is but a fair sample of the rest, pays over a million dollars more per annum to 28,000-odd wage-workers than five of the older Southern States pay to 43,000, then there must exist among those States an indifference to labor shown in the failure to pay it just or adequate wages and which are easily doubled in other parts of the Union under no more favorable conditions.

Another unavoidable conclusion in this connection is that no people with a moderate valuation in property can be prosperous with but 43,016 wage-workers in a population of nearly 5,000,000 people, most

of whom are alleged to be poor. It is because of this lack of material resources that we are asked to pass the Blair bill.

If I were to show that my Congressional district in 1880 raised more Irish potatoes by 150,000 bushels than the four States of South Carolina, Louisiana, Florida, and Texas, you might reply that that crop was not an especial product of those States. Of orchard products, however, in which the Southern States might be supposad to excel with their superior climate and advantages, Iowa produced in 1880 more than four times as much as Alabama. So that the matter of peculiar adaptation in the products named, as well as in others, does not seem to govern. What I should emphasize in this connection is that these Democratic States, which I have already charged as being unfriendly to labor, and whose industries are in a dilapidated condition, do not improve their opportunities and are not willing that other sections of the country which do should thrive and enjoy the protection that their industry has merited.

Democrats complain that protection is the principal cause of their troubles; on the contrary, legislation can not remedy their unfortunate condition. When our free-trade friends shall pay labor fair and living wages, pay it in cash and not largely in truck, when instead of less than 1 per cent. of her population being engaged as wage-workers in skilled and unskilled labor, they shall employ 4 or 5 per cent., then the new era of the South which we all hope for will come.

THE PRESENT TARIFF BILL SECTIONAL.

Staple products of the Northern portion of the Union go to the wall in favor of the productions of the South. Thus timber, hewn and sawed, sawed boards, planks, staves, pickets, lath shingles, logs, etc., are put on the free-list. Now, as a matter of fact, although the South has a great deal of timber and lumber material in its forests, which it utilizes to but a limited extent, yet it makes little difference to her whether timber is protected or not. She has no competitor near her southern boundary, and none that can cause her uneasiness. Not so with our Northern frontier, however. An industrious and aggressive foreign power, rich in interminable forests that stretch away to the frozen ocean, competes with our people for their own market from the Atlantic to the Pacific. Under these circumstances, therefore, lumber has been placed on the free-list.

Flax seed, flax, and linseed-oil, products of the Northwestern and Middle States largely, have also been put upon the free-list. Iowa, which in the number of its linseed-oil mills ranks third among the States, will be a considerable sufferer should the pending bill become a law. Already a large oil mill in the city of my residence has been obliged to go out of business there on account of the unprofitable condition of the industry, and which will be followed by many others, if not all, in the Northwest should this bill become a law.

The placing of wool upon the free-list is another striking illustration of the manner in which this bill has been made up. The monster petitions from New England, Ohio, Pennsylvania, Colorado, and the great Northwest were as dust in the balance. Not one of them was heard by the Committee on Ways and Means. The majority of that committee alone constructed and formed the present bill. As the bill was to be constructed on a sectional basis, it was not deemed necessary to even consult once with the minority of the committee respecting its provisions; to have done so might have jeopardized its sectional character.

The majority of that committee—composed of the following members, namely: Messrs. MILLS of Texas, MCMILLIN of Tennessee, BRECKINRIDGE of Arkansas, BRECKINRIDGE of Kentucky, TURNER of Georgia, WILSON of West Virginia, SCOTT of Pennsylvania, and BYNUM of Indiana—shows in its formation the interests that were to be considered; six of the eight members are from Southern States. As the Mills bill is the production of the majority of the committee alone, it is evident that the gentlemen from the South, who composed three-fourths of the majority of the committee, could and did dominate its construction. Meanwhile the regions in which are centered the great industries that have given the United States pre-eminence among the nations were ignored, and they were taken under guardianship by the Representatives of States quite guileless of manufacturing industries, with the gentleman from Pennsylvania [Mr. SCOTT] and the gentleman from Indiana [Mr. BYNUM] following the tail of the committee's hand-wagon.

Notwithstanding the necessity of reducing the duties under the "robber tariff law," important products of the South, like sugar and rice, are still protected with a high rate of duty by the Mills bill—much higher, indeed, than the average rate of duty on other protected articles. Every argument applicable to the justice and propriety of maintaining a protective duty on sugar and rice is appropriate in a still greater degree to its continuance on wool, flax, and other commodities.

This championship of free trade was the same in the South in the days of slavery as now; at that time certainly it did not arrogate to itself the title of defender and protector of free labor; its position ever since the abolition of slavery is the same as before. Indeed, I have heard Southern gentlemen allege that considering the care of their chattels and the expenses and various losses incident to slavery, the labor of the freedmen was now procured at a considerable less cost than in the days of the patriarchal institution.

As illustrating the attitude of the South upon free trade, I here give the votes by section of Northern and Southern Representatives under the different tariff bills that have been enacted since 1841:

Year.	Northern.		Southern.	
	Protection.	Free trade.	Protection.	Free trade.
1842	93	30	10	69
1846	73	56	20	58
1857	70	58	2	60
1861	95	21	7	21
1866	94	48	1	6
1883	137	59	15	57
1884	144	80	15	75
1886, June	146	61	11	79
1886, December	140	62	14	87

I might continue adducing reasons showing the sectional character of the pending tariff bill, but the fact is so apparent that extended argument is unnecessary.

TRUSTS.

The sugar trust and certain other monopolies have, through their representatives, been given audience in a semi-informal manner, and, to use the language of some gentleman on the committee, "matters have been talked over by some of the representatives of trusts with members of the committee." As a memorable coincidence of the sugar trusts' representatives being heard before the committee, and the fact that the great body of the people have not been heard, we find a high protective duty on sugar; this, notwithstanding the fact that after more than a hundred and twenty-five years of experiment it is far from producing any adequate benefits to the people of the country in proportion to the cost of the duty levied to support it; notwithstanding, too, that the gigantic sugar trust and combine have the country by the throat and are masters of the price of that commodity. Since last December, when the sugar trust went into operation, the price of sugar has gone up nearly or quite a cent a pound on the average, which, although simple apparently, results in an aggregate increase on the staple of $30,000,000.

By the operations of the trust some mills are closed altogether, and others are run on a limited capacity, so that there may be only such a supply upon the market that the trust can control the price as well as the output. It has already appeared in evidence before the committee of this House that a sugar trust can not be maintained that seeks to take in the sugar refineries of both this country and Europe. Mr. Havemeyer, the head of the sugar trust, has explicitly testified in that investigation that his firm could probably succeed and make money if sugar were at once placed upon the free-list, although it is fair to say that he affects to doubt whether other firms in that business could do so; but certainly the art of successfully conducting this business in the United States can not, it is reasonable to suppose, be confined to one firm. It is charged, and I think successfully shown, in the investigations before this Congressional committee, that the sugar trust has already in its brief existence controlled, and can in the future control, the price of raw sugar brought here from abroad for refining purposes; while the average duty is high enough upon refined imported sugar to protect the trust and leave it a handsome margin. This trust has refused to answer interrogatories propounded to it by the duly appointed committee authorized by this House to investigate it.

No contempt proceedings were instituted against the gentleman who declined to testify, which renders it quite conclusive that the organization is already above the law. In view of all these facts, it was eminently proper and consistent that the Democratic party should be determined to maintain a high import duty on sugar and thus aid and foster the trust that has and will put so many millions into its pocket at the expense of the American people. More trusts, by several hundred per cent., have been organized and placed upon a successful basis, and corporations and monopolies of all kinds seem to have acquired a firmer grip upon the Democratic party in its three years' administration of public affairs than in a quarter of a century of Republican rule.

SUGAR.

Now, Mr. Chairman, let us examine sugar with reference to this bill, and which may appropriately be termed, if such a comparison is possible, a corresponding industry in the South. Louisiana is the only State in the Union that produces sugar to any considerable extent. In 1861–'62 the sugar product of that State was 459,419 hogsheads, while in 1886–'67 there were produced but 145,986 hogsheads, or little more than one-fourth as much, showing that the industry is not advancing with others in the country, and that there is little development to be expected from it in Louisiana. One great object in the protective policy is to favor industries until they are developed and can sustain themselves; to that end they ought to show enlargement and progress during a series of years, yet this is the picture presented by the sugar planters of Louisiana in their memorial to Congress:

Notwithstanding the hazard, men already engaged in the business have in the last few years invested large amounts of capital in plantation improve-

ments. Yet no sugar property in the State will bring one-half the cost of its buildings and machinery.

Plantations that make annual crops of $100,000 to $150,000 will not sell for one-half the value of the yearly product. This abnormal condition of affairs is not because sugar-planting is unprofitable, for the contrary is the case; but it is because capital is afraid of the tariff menace and unwilling to invest in plantation property on any terms. One of the surest methods of developing the sugar industry would be the establishment of central factories and the cultivation of cane on the small-farm system. But the capital necessary for this purpose can not be secured so long as the threat of a reduction of duties hangs suspended like the sword of Damocles above the sugar industries.

Again say the planters:

Capital is timid. The riches of the East seek investment in the bleak regions of Dakota and in the alkali deserts of Arizona. Capital pierces mountains and digs down into the bowels of the earth. It wars with the elements and conquers nature, content with a small interest as the price of victory.

Is anything stronger needed to enforce my statement? These gentlemen tell us this condition of affairs exists "because capital is afraid of the tariff menace." Undoubtedly that is one reason. But is it not remarkable that these gentlemen should year after year send a Democratic delegation to Congress committed to the free-trade policy of destroying American industries, and while they slaughter all around them demand a high protective tariff on sugar in the interest of Louisiana?

On the item of sugar there is collected more import duty than on any other commodity save one. The tariff tax on sugar amounts to $58,000,000 per annum. This country produces about one-tenth of what we consume. This tax is levied on the theory that we are supporting a home industry; but where such an industry steadily declines and the people are called upon to put their hands in their pockets and pay out $52,000,000 annually to encourage it, besides paying for all their sugar, the Democratic party seems to think it has found the proper industry to protect. One hundred and sixty years ago the growing of sugar cane was commenced in Louisiana, to which State sugar-cane growing is almost exclusively confined in the United States.

In the crop year 1853–'54 she produced 495,000,000 pounds. In 1861–'62 her production was 528,321,000 pounds; in 1883–'84, 287,712,230 pounds.

In the year 1884–'85 she produced 211,402,963 pounds, thus showing a decline in the industry of about 50 per cent. between the crop years of 1853–'54 and 1884–'85. In the crop year 1883–'84 that State had in cultivation 172,420 acres of cane, while in the crop year 1884–'85 she had in cultivation but 118,656 acres. Taking the planting of the largest year even, and we find the aggregate planting of the State to be no greater number of acres than are contained in one ordinary county.

In 1886 the State of Louisiana produced 286,625,920 pounds of sugar. The average specific duty then was 2 cents per pound. The United States that year would have received as duty for the importation of the same number of pounds of sugar $5,732,518. Therefore in order to give Louisiana $5,732,518 worth of encouragement we paid to the importers of foreign sugar $58,000,000. No such costly experiment in favor of protection has been known in the history of the country, none that has proved so stupendous a failure considering the amount expended upon and the encouragement given to it. Estimating the cost of this sugar at 3 cents a pound for the same year, which is of course beyond the cost of foreign sugars, we find the cost of the crop to be $8,598,777.

Evidently, in view of the failure that has attended the culture of the sugar-cane in Louisiana, it would be more economical to maintain that industry "in the Parthenon at the public expense." In other words, to pay annually the amount of three-quarters of a million nearly that the State would be benefited by the tariff, and let it go out of business, saving thereby to the people of the United States $52,000,000 yearly.

So long as there is improvement in any of our industries, or hope for improvement, they should be protected by the fostering hand of the Government; that has always been the policy of the Republican party. The reverse has been the policy of the Democratic party, save where the industry has been in Democratic hands or such a policy has been necessary to Democratic success.

Yet, in view of all these facts, and in spite of the clamor of free-traders against the "robber tariff," as they are pleased to term it, notwithstanding their outcry against protection, they propose to still retain a high duty on the Democratic products, sugar and rice, while they place salt, lumber, flax, wool, and other products of the North and West on the free-list, and would undoubtedly have placed iron in the same class but for the fact that a number of Southern States that were interested would not consent.

But gentlemen supporting the Mills bill plead that the war ruined the sugar industry, and that it will require a still longer time to achieve success. I hardly know what the gentlemen's idea may be of a reasonable time.

I know that in the twenty-three years elapsing since that time the great Northwest has developed from an almost illimitable and uninhabitable waste to be the peer of any portion of this grand Republic—peer in progress, in patriotism, in education, and more than peer in industry. The magic cities that sprang from its plains, the wheels of industry that drove its countless manufactories, the wilderness of nature exchanged for the garden of civilization, wealth created where none existed, agriculture and art supplanting the home of the savage; these are some of the conquests of the West in the twenty-three years since the close of the war.

If the South had had every vestige of her agricultural advancement swept from her soil she would still have been ahead of the West in the era that commenced with the close of the war. Yet the gentlemen on the other side of the Chamber affect to think the West very miserable and have with hilarity alluded to the mortgages that cover her agricultural regions, and have promised great relief if she would bow down and worship the Democratic calf. It is true that with bare hands she has rescued the wilderness to civilization, and in so doing she has been obliged to mortgage her farms; not only so, but she pays them. With no system of peonage in which her laborers can compete with the peasantry of Europe, she, on the contrary, treats them as intelligent freemen and pays them the highest wages paid on earth to laboring men.

For herself she demands no Blair bill, because she mortgaged her farms and educated her children, even when she was without money. This is the Western idea of the rights of labor, which has been and always will be at variance with the practice of the Democratic party where that party dominates affairs.

Sir, I have watched with some interest the course and arguments of the distinguished gentlemen from Louisiana, who, while seeking to protect their own industries, are busily engaged in trying to wreck those of others; in short, are the ardent champions of the Mills bill.

Said one of the distinguished Representatives from that State [Mr. WILKINSON] in his remarks on the pending tariff bill as affecting sugar:

I frankly confess, Mr. Chairman, that I am not an impartial judge in this matter. I go further and frankly confess that I take more interest in the maintenance of these duties because under their encouragement so many of my people earn their bread than because they give such revenues to the Government. That is human nature, and human nature is the same in Louisiana as it is elsewhere. My views may be biased by a regard for the welfare of my people before any other considerations; but, sir, before I finish I shall call in the testimony of other witnesses whose judgments have not been biased by such reasons as mine may have been.

The gentleman is frank enough to say that he wants sugar excepted and protected in the general war on industries, because it assists his people to earn their bread; no better reason can be offered by the most eminent protectionist. In brief, he has an industry which he thinks worth preserving. Now, if he had enough Democratic associates in this House with constituencies that had industries they thought worth preserving we should have no trouble with free trade in this country.

But again says the gentleman from Louisiana:

Sir, the gentlemen that I have mentioned, and others of that school as honest, as sincere, as patriotic as they, have been animated by no selfish desire—as I am pardonable in having—to benefit the State of Louisiana. They recognized the fact that sugar duties furnish a greater ratio of revenue to the Government and a less ratio of tribute to the industry than any other article such as is produced in this country which is upon the whole dutiable list. The economists of that school remember the fact that while the Government received $58,000,000 in revenue it increased the price on an amount of home production only one-ninth of the quantity imported under the tariff; that is to say, that for every $9 of revenue it gave only $1 of protection. It certainly did not come within that category which has just been denounced by a State convention in Wisconsin, which creates a dangerous surplus and "at the same time indirectly taxes the producer of the West for the sole benefit of protected manufacturers $9 for every $1 that goes into the Treasury."

Here the gentleman offers as an inducement to maintain a high tariff on sugar and sacrifice other American industries the unblushing proposition that his State produces so little sugar in proportion to the whole amount necessary to supply this country, and the tariff of $58,000,000 is so large that for every $9 of revenue there is only $1 of protection; in other words, the more taxes and revenue and the less protection to an American industry the better.

That our home industries are aided by protection the gentleman admits in behalf of sugar. In view of the fact that we are trying to reduce the revenue instead of increasing it the gentleman's argument means nothing except the destruction of all industries that his constituents and colleagues are not interested in promoting.

If the gentleman's State produced but one-tenth the sugar it now does, and the duty still remained fifty-eight million, the merit of the tariff system he advocates would, according to his statement, be still greater.

No such selfish and vicious political policy can find favor in this country.

The gentleman from Louisiana [Mr. WILKINSON] in further continuance of his remarks upon the pending bill, and very unfortunately, I think for his consistency, saw fit to urge the continuance of the tariff on sugar for the purpose of having something with which to pay the country's obligations to

THE DEFENDERS OF THE UNION.

The gentleman said:

Sir, the war has indeed gone, and its angry thunders have been hushed I trust for all time to come, but the obligations of its plighted faith are here to its creditors on the one hand and to its valiant defenders on the other.

Why, Mr. Chairman, with an overflowing Treasury, and the surplus constantly increasing, the Democratic party in the Forty-ninth Congress through its leader, William R. Morrison, was so hostile to Union soldiers and to the policy of granting them pensions, that it proposed to pass the infamous enactment providing that whenever a bill was introduced having for its object the granting of money in aid of pensions,

provision should be made in the same bill for levying a tax whereby the money should be raised.

This attempt to bring the soldiers and sailors of the Union into disagreeable prominence and emphasize before the country the amount of money that was being paid them, as well as the annoyance of submitting to an income tax, as was proposed by the gentleman on the other side of the House, in order to exasperate the moneyed and business interests of the country, was so apparent and was met with such determined opposition by the Republicans of the House that that infamous project was abandoned.

The intent of the Democratic party of preventing any legislation in the future was here so fairly proved, not only in the provisions sought to be incorporated in the proposed law, but in the further fact that it was extraordinary and beyond the pale of usual legislation, that no argument could make it clearer.

Notwithstanding we had more money in the Treasury than we could use, the Democratic party proposed to bring into being an internal-revenue system with its assessors, collectors, detectives, and other paraphernalia wherewith to raise the amount of money called for by each pension bill.

In view of the fact that gentlemen on the other side of the Chamber have so often and so bitterly denounced the internal-revenue system in all its forms, it is quite evident that in devising this scheme against Union soldiers they supposed they were dealing them a most damaging and fatal blow in connection with pensions.

The gentleman's suggestion of meeting our obligations to the disabled defenders of the Union has, I think, been nowhere more thoroughly repudiated than by representatives of his own State during the last five years that I have had the honor of being a member of this House. During that time at the special evening sessions for the consideration of private pension bills members from the gentleman's own State have been very active in their opposition to many bills, demanding the continuous reading of reports in others, and in such other "constitutional safeguards" as tended in effect to keep down "pauper pension legislation" have exhibited their hostility to the pensioning of Union soldiers. I think, therefore, I may be pardoned, for saying, and I put it in the mildest form, that the gentleman is in error about the desire or willingness of his party either in Louisiana or in the country at large to maintain tariff duties for the purpose of canceling our obligations to Union soldiers.

Sir, if the present Chief Executive be renominated by the Democratic party South, it will be largely on account of his hostility to Union soldiers and his vetoes of their pension bills. When in addition to that it was proposed by him to return the rebel flags captured during the war, he became the idol of the late Confederate States, and even his Democratic opponents in Kentucky affect the kiss of reconciliation.

The platforms of that party have contained some allusion to the soldier until this year, and feeling that it is now firm in the saddle, it proposes to throw off the mask. Thus far it has not been possible at this session to secure any action by this House on general pension legislation. While by indirection and often directly the Democratic party strangles and defeats pension legislation, its press and stump speakers loudly protest their love for the old soldiers. Thousands of soldiers in this country are to-day supported in poor-houses or at home as objects of charity, yet it seems impossble to secure any action for their relief in the present House of Representatives.

The present Secretary of the Treasury, presumably with the assent of the Chief Executive, has loaned out to the banks of the country without any warrant or authority of law whatever, $60,000,000 of the people's money; nor is there any denial of this fact, yet the system of revenue taxation is invoked by the Democratic party for such pension legislation as may be passed in order to procure money for amounts so appropriated.

THE DEMOCRATIC PARTY A FREE-TRADE PARTY.

It is but a short time since, Mr. Chairman, that the Democratic party did not know which side of the tariff it was on. In its national platform of 1884 it formulated a deceptive and hypocritical utterance that even deceived itself; in a prior Congress and recently we heard the gentleman from Pennsylvania [Mr. RANDALL] and the gentleman from Illinois [Mr. Morrison] discuss with apparent feeling the question of whether the Democratic national platform of 1884 was for or against the policy of protection. That was the picture then. To-day we have the Mills tariff bill, a bill partisan in its origin and sectional in its ends.

Last Congress quite a different bill was proposed by the gentlemen who are supporting the Mills bill. Then the present law was considered practically correct, except that it was 20 per cent. too high. Many of the industries that were protected by that bill, are now put on the free-list, or reduced so nearly to that condition as to be practically unprotected. What remarkable changes in condition have taken place which make both of these bills proper and right within little more than a year?

There is no change, Mr. Chairman, save the change of front of the Democratic party, made to obtain political power; the variance in these tariff bills is no greater than the altered policy expressed in the tarift plank of the Democratic platform of 1884 and the President's message at the opening of the present Congress.

The present bill seems to have originated under the delusion that the Democratic party is now the whole country.

During the debate upon the pending question several gentlemen on the other side have attempted to deny that the object and purpose of the Democratic party is free trade. Let us examine its record and the utterances of some of its leaders in response to this extraordinary denial.

The following resolution was a part of the Democratic platform in 1848:

Resolved, That the fruits of the great political triumph of 1844 have fulfilled the hopes of the Democracy of the Union in the noble impulse given to the cause of free trade by the repeal of the tariff of 1842 and the creation of the more equal, honest, and protective tariff of 1846, and that in our opinion it would be a fatal error to weaken the bands of a political organization by which these great reforms have been achieved and risk them in the hands of their known adversaries, with whatever delusive appeals they may solicit our surrender of that vigilance which is the only safeguard of liberty.

The Democratic platform of 1856 contained the following resolution:

Resolved, That justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another, or to cherish the interests of one portion of our common country.

Resolved, finally, The time has come for the people of the United States to declare themselves in favor of free seas and progressive free trade throughout the world.

Said the present Speaker of the House in the Forty-eighth Congress, in speaking upon the bill providing for the appointment of a commission to investigate the question of the tariff and internal-revenue laws:

Mr. KASSON. Let me ask the gentlemen from Kentucky, then, whether he admits the policy of protection is a legitimate one in the adjustment of the tariff?

Mr. CARLISLE. I say that the duty and the power of the Government extend only so far as to impose a tax for the purpose of raising revenue for public purposes. But I hold at the same time that no tax or duty can be possibly imposed without affecting to a greater or less extent some or all of the industries of the country; and for my part I would rather help them than hurt them.

Mr. KASSON. I think the gentleman hardly appreciates my point, which was whether he admitted the principle of protection as right in the adjustment of the tariff to any extent.

Mr. CARLISLE. If the gentleman means to ask whether I recognize a principle that would impose a duty above the revenue point merely for the purpose of giving what is called protection, my answer is in the negative. If we were called upon now for the first time to declare a principle or inaugurate a policy upon the subject, I should not hesitate to announce my adherence to that creed which demands the largest liberty in trade, that doctrine which opens the channels of commerce in all parts of the world and invites the producer and consumer to meet on equal terms in a free market for the exchange of their commodities, for I sincerely believe that all commercial restrictions are in the end injurious to the interests of the people. I believe that prohibitions and embargoes in times of peace, whatever may be their avowed purposes, are inconsistent not only with the first principles of political economy, but with the spirit of the age in which we live.

Said the distinguished gentleman from Texas [DAVID B. CULBERSON], in the Forty-eighth Congress, speaking upon the tariff:

It is the policy of the Democratic party, as I understand it, to cut out by the roots the protective system and substitute in its stead a tariff for revenue as contradistinguished from a tariff for protection.

In the same speech he further said:

Considerations of a just public policy stay the work of reconstruction of the tariff at the limit fixed by this bill, but the demand of the people who have been so long oppressed by tariff taxation will not be wholly satisfied until the work of reconstruction shall be complete by the substitution of a tariff for revenue for the protective system. This measure, therefore, must serve as notice to all interested that the Democratic party means to advance step by step to the only just and constitutional mode of raising revenue by a tariff.

Said the distinguished gentleman from Mississippi [Mr. Van Eaton], in the Forty-eighth Congress, in his remarks upon the bill to reduce import duties:

But we are told that we have other industries in the South that demand and must have protection. Mr. Chairman, I glory in our Southern industries, factories, mines, and so on, but I undertake to say that in our genial climate they are not the puling infants it seems they are, and must ever remain on the arid hills and under the bleak skies of New England. I have no fears but our people will so adapt themselves to the situation that, as the artificial stimulus of protection is withdrawn, they will grow all the stronger in the natural and healthy air of approximate free trade, and building up their industries, untrammeled by restrictive laws and repressive enactments, allowed to buy, sell, and trade where they will, and according to the great and unchanging laws of commerce, all their industries will not only survive but flourish, and possibly illustrate the doctrine of "the survival of the fittest."

During the present debate the gentleman from Missouri [Mr. BLAND], while speaking to the pending bill, said:

I am not here for the purpose of voting for a tariff on lead or a tariff on flax or a tariff on anything; but I am here to get the tariff off everything I can. [Applause.]

This, in addition to the utterances of Mr. MILLS in his opening speech upon the tariff and the statements of numerous other gentlemen upon the other side of the Chamber, will hardly require further attention to prove their free-trade animus. When closely pressed the gentlemen attempt to hedge, and seem ashamed to admit what they have frequently stated that the present tariff bill is, to use their own expression, but a step in the right direction. Certainly the present bill is not to remove the barriers and restrictions to trade except in a degree, and the present action is but a forerunner, as some of the gentlemen have remarked, of tearing down the barriers and the inauguration of a system of absolute free trade.

The usual custom of the committees of this House to give the people interested in legislation a hearing has been invaded, and all hearings have been denied by the committee as such. The petitions sent before

the committee have not even been read, nor has respectful consideration been given to the interests that are so materially affected.

Numerous industries have protested in vain that the legislation proposed would destroy or materially cripple them; yet with a sublime indifference to both people and industries, arguments and protests have been denied consideration by a majority of the Committee on Ways and Means.

While the reform part of the Committee on Ways and Means was declaiming against the robbery of New England manufacturers, it was seeking with a step steady as time and relentless as fate to protect its own Democratic strongholds.

It had placed on the free-list flax and the manufactures therefrom, wool, tallow, beans, garden seeds, and potatoes, while a strong protective duty is maintained on sugar, rice, and oranges.

Now the raising of flax is one of the great industries of the Northwest and the State in which I live. Iowa has more linseed-oil mills than any State in the Union save two; the placing on the free-list of flax and linseed-oil will seriously injure these interests.

In locality we are nearer the British possessions on the north than to New York City. With no protective tariff freight rates to the Atlantic seaboard will render it impossible for Western farmers to compete successfully with Canadian and other foreign importers of linseed-oil, flax, and its manufactures. This because not only is labor to produce the raw material here higher than in foreign countries, but the wages paid operatives employed in manufacturing the raw material here are from two to six times as much as in Europe.

The following table shows the wages paid in this country and European countries in the flax-spinning trade:

Average rates of wages paid in the flax-spinning trade, Europe and America.

Flax and Hemp Spinners and Growers' Association, 1886.

It requires no argument to show that with this great difference in wages paid, business in the flax-spinning trade in the United States must practically cease or else the wage-workers employed in it must accept the same compensation as continental workers.

The same remark holds true of those engaged in growing the raw material. American labor at $1 to $1.50 a day can not compete with labor in the countries referred to paid but from 25 to 40 cents a day.

Notwithstanding these facts and the protests of those engaged in raising flax, as well as those manufacturing its products, the committee has placed it upon the free-list.

In attacking a party or financial policy it is customary to point out the abuses under that policy—the suffering, the distress. If the theory of protection to American industries is a vicious and false one, what is more proper and logical, and indeed what is easier, than to show its effects; to point to ruined credit, to the general bankruptcy of the mercantile classes, to the decline in values, to the starving poor willing to work but without bread?

I had expected, Mr. Chairman, that our free-trade friends would attempt to show in the course of this debate the destroying effect of protection upon the country politically, financially, and possibly morally. They have shown nothing of the kind. On the contrary, we have as a result of protection and Republican rule the most astonishing success in government that the world ever saw.

In 1860 the wealth of the United States, embracing every kind of property, was $16,150,000,000, and we had been three hundred and fifty years in accumulating it. In 1882 the total property valuation of this country was $64,636,000,000; thus in the first twenty-two years' rule of the Republican party the national wealth was quadrupled. Under the same protective policy the wages of laborers nearly doubled over those paid in the last preceding Democratic administration of James Buchanan.

While poor people and poverty will continue to exist in every nation to a greater or less extent throughout all time, yet I affirm without fear of successful contradiction that the condition of the poorer classes was never so prosperous as under the policy referred to; I could hardly impanel a jury of honest Democrats who would deny this proposition. With a gigantic war forced upon us and the great debt it necessarily entailed we yet find our bonds, although drawing a very low rate of interest, commanding from 25 to 30 per cent. premium, and difficult to get at that.

For this and other magnificent results, too numerous to mention, the gentlemen upon the other side ask us to accept the Democratic dogma of free trade, with its stagnation, its pauper wages, and its sacrifice of everything American to everything foreign. There was a time when some gentlemen of the opposition affected to deny that the wages of skilled and unskilled labor were higher in this country than in Europe; that time has long since passed, and yet they assert as a part of their theory that with raw material of almost every kind as low as or lower in the Old World than it is here, we can nevertheless take off all protective duties, allow foreign goods to be imported without restriction, and that the wages of our laborers will still be as good as or better than they were before, notwithstanding they are competing with men who put their labor into competition for one-half the wages paid here.

Does not the absurdity of the proposition defeat itself, and is it not confessed in the arguments of the gentlemen who support in the Mills bill a protective tariff on sugar, rice, and other Southern products?

But two items enter into the production of either agricultural or manufactured products, namely, labor and material; as a rule labor is about 90 per cent. in value of the entire cost; and the remaining 10 per cent. represents the raw material.

The advocates of free trade never have been and never will be able to explain why it is that with raw material as high or higher than in continental countries, with wages there but one-half the standard paid here, we can yet pay as good or higher wages under free trade to our laborers, and at the same time can get our goods cheaper and maintain our own industries.

The effect of free trade, whenever it has had an opportunity to experiment upon the country, should alone end the argument. Ruined industries, bankruptcy, and business prostration everywhere have marked the adoption of that policy. Facts, however, are better than theories, and I here give data taken from reports of the Bureau of Statistics, giving gold values of the imports and exports of merchandise, the balances against the United States and the average percentage of the tariff to the total imports of merchandise entered for consumption. The average per year is given for the three years preceding each reduction of the tariff.

I also submit a carefully prepared table, taken from a recent compilation, showing the precise wages paid in various industries in this country and in England, and which is more eloquent than any mere theories in showing the relative difference between protection and free trade.

1836	16			
1837	14.5			

STATISTICS PRECEDING THE REVULSION OF 1857.

[The revulsion commenced in September, 1857, less than six months after the reduction.]

Before the reduction of the tariff.	*Per cent.*			
1854	22.7	$267,764,352	$224,391,807	$43,372,545
1855	22.7			
1856	22.7			
After the reduction of the tariff.				
1857	15.6	†183,733,038	†105,420,659	†78,312,379

STATISTICS PRECEDING THE REVULSION OF 1873.

[The revulsion commenced in September, 1873.]

Before the reduction of the tariff.	*Per cent.*			
1868	42.7	$390,410,644	$307,057,690	$83,352,954
1869	42.7			
1870	42.7			
After the reduction of the tariff.				
1871	38.5	580,247,372	453,973,159	126,274,713
1872	38.5			
1873	26.9			

* The reduction commenced January 1, 1834; the Government financial year ends September 30. In the absence of steam-ship and telegraph there was but little addition to the imports during the nine months of that year; therefore it is classed with the years before the reduction.

† For six months only.

NOTE 1. The revulsions of 1837, 1857, and 1873 were the only revulsions in fifty years, and each one was preceded by the only large reductions of the tariff during the fifty years.

NOTE 2. Large tariff reductions have always been followed by a large increase in imports of merchandise, without a corresponding increase in exports of merchandise, thus resulting in large trade balances against the United States.

NOTE 3. "Balances of trade" against the United States become a debt owed to a foreign country, and have to be paid in coin.

NOTE 4. The gold and silver mines of California were discovered in 1847. From that time to the revisions of 1857, the exports of these metals exceeded their imports by over $270,000,000, and from 1857 to the revulsions of 1873 by over $800,000,000, making a total of over $1,070,000,000, in twenty-six years.

NOTE 5. Even these large payments of coin did not equal the trade balances against us during the years mentioned, consequently there is a foreign debt, estimated by the Chief of the Bureau of Statistics in 1873 to be $1,200,000,000.

Occupations.	England.	United States.
Book-binders	$6.00	$15.00 to $18.00
Brush-makers	6.00	15.00 to 20.00
Boiler-makers	7.75	16.50

Tax Reduction.

SPEECH

OF

HON. SAMUEL W. PEEL,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 21, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. PEEL said:

Mr. CHAIRMAN: Governments, like individuals, must have money upon which to live. Individuals accumulate means in various ways. Governments, unlike individuals, obtain theirs by levying taxes or contributions upon their people and their property. All governments provide for levying and collecting taxes from their people in some way, generally in their organic law. Some adopt a direct tax upon persons and property, others an indirect tax. A direct tax means to collect annually from the citizen his or her lawful share to support the government, and is paid directly to the government.

This system is admitted to be the most economic, and has been adopted by all the States of this Union for the maintenance of their respective State governments. Each citizen knows to a certainty that once a year he will be compelled to contribute his share of the taxes to run and support his county and State government. This all understand. But how, where, and when he pays his share of the tax to maintain and support the Government of the United States with its vast governmental machinery and army of officers, many do not understand; and that is the subject under discussion—and for a perfect understanding of this vexed and important question it is necessary to understand the organization of the Government itself.

The several States in convention assembled adopted a written Constitution, frequently termed the organic law of the land. This written Constitution was ratified by the several States and thereby became binding upon them as States and upon the people. In this Constitution we find the Government created by it divided into three divisions called the three co-ordinate branches of Government; one is termed the executive, one the judicial, and one the legislative; the latter branch is the Senate and House of Representatives—called Congress. This branch of Government is intrusted with the power to levy and collect taxes from the people to support and maintain the entire Government in all its varied machinery. This power is in the following language:

SEC. 8. The Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

From this language of the Constitution we see that Congress may legally levy duties on imports, which means an indirect tax, or it may levy excise or internal tax, meaning a direct tax, or both. The debates in the constitutional convention show clearly that it was not expected that internal-revenue taxes would be levied and collected for ordinary governmental purposes, and was only intended to be used in cases of emergency; and that revenue for ordinary public purposes was to be collected on imported wares and merchandise, notwithstanding this system is more extravagant and expensive to the people. Our country being weak and poor, it was thought by our fathers to be the best mode, it being a tax levied by Congress upon goods, wares, and merchandise bought and shipped by other countries into our own to be sold to the people; that it would be paid at first by the importer to our collecting officers, and by him added to the selling price of each article sold, and therefore ultimately paid by the man or woman that bought and used the goods in this country.

This is called an indirect tax, a tax that everybody pays that consumes, but whether much or little he does not know, because he can not tell whether the importer who paid the Government duty in the first place collected from his customers when he resold just what he paid out. Or less, or more, however, he can safely guess that he collected more, in many instances three times and often ten times more. Therefore the innocent and unsuspecting consumer is often and most generally imposed upon, and the worst is, he does not know when or how. But when he goes to pay his State and county tax, which is a direct tax, he can look for himself, the books are opened wide, the figures show for themselves, and he knows to a cent what he pays and what it is for.

At the commencement of our Government we had no manufactures in this country, therefore no protectionist; and as long as our lawmakers had no manufactures in their districts to bias and influence their judgment, all duties laid were for revenue only. No one thought of perverting the Constitution and betraying the trust reposed in them by advocating high duties or taxes on imports for the purpose of giving our local manufactures an advantage over those in other countries at the expense of the people. Those who understood our Constitution best knew and declared that Congress had no power to levy a tax on imports for other than for revenue.

As late as 1824 the voice of Daniel Webster, one of the ablest constitutional lawyers that ever lived, was heard in the Senate of the United States to say that a tax levied on imports by Congress for the purpose of protecting home manufactures was unconstitutional and void, yet four years thereafter we find the Massachusetts statesman on the side of protection; the local interest of his own State had seduced him, and so others changed one by one as their local interest became important until it became a great party issue.

Mr. Chairman, I here assert and charge, in the language of Webster, that Congress has no power under the Constitution to levy a tax on the people of this country for any purpose whatever other than for revenue to defray the necessary expenses of Government economically administered, and a tax levied for the purpose of protecting the private business of any one citizen is unconstitutional and void, and a legal robbery of all who are not protected.

This question of constitutional power is not a new one by any means. Old-fashioned, sound Democrats have always said that the Constitution conferred no power upon Congress to levy taxes on imports for the sole purpose of protecting manufacturers in this country against their foreign competitor. True Democracy is to levy taxes for revenue, giving home manufacturers such incidental protection as would necessarily flow from it. Republican or high-tariff doctrine is: levy taxes on foreign imports with an eye single to protecting the home manufacturer, with revenue incidental or secondary.

If the latter theory is the true interpretation of our Constitution Webster had not found it out in 1824, and if correct let some learned protectionist tell the country why did not our fathers, the framers of that sacred instrument, make it speak out and say so. If that had been their object and meaning, why did they not use words to the effect "That Congress shall have power to levy and collect taxes on imports and excise for the purpose of paying the public debt, for the public defense, and to protect our domestic manufactures against foreign competition."

From such language all could see and understand their meaning, and as they did not employ any such language, is within itself sufficient and unanswerable argument that they intended no such thing. Again, Mr. Chairman, stop and think. Is it reasonable to suppose that such grand old patriots as composed the convention that framed the Constitution would confer powers upon any one branch of the Government greater than was necessary to perform the functions of Government?

No one has ever contended that extra power or power beyond what was necessary to perform the legitimate functions of Government was conferred by the Constitution upon either the executive or judicial arm of the Government; then, why upon the legislative? To have done so would have unbalanced the grand machine.

One of the beauties of our political system is its symmetry and equilibrium; in other words that each of the three great co-ordinate branches or arms of Government are perfect within themselves as a component part of the whole, and when operated and executed together, each performing its own share, constitute a perfect governmental machine—neither arm being too short or too long. Then let me ask the profound constitutional lawyer where does he find place in the legislative branch of our political structure for tariff to protect one avocation or business against another—in short, to pull money out of the pockets of the agricultural classes of this country and put into the pocket of the manufacturer?

Sir, it is constitutionally wrong, politically wrong, morally wrong, a sin, a crime. Sir, the very word "protection," when used in a business sense between man and man in the great race of life, implies discrimination and wrong. It is odious. Another unanswerable argument against the doctrine of high taxes, or tariff for protection sake, as authorized by the Constitution, is found in the history of tariff legislation itself, and to reach a proper conclusion on this point we only have to adopt the well-known and well-established rule of construction.

When we desire to reach a correct interpretation of the Constitution we must endeavor to find out the intent and object of its framers, the object sought to be accomplished, and in doing that the history of the country at the time, or, in other words, the condition of the country at the time is a proper fact to consider. If this be correct, then let us see. When the Constitution was framed we had no manufactures in this country to protect; the minds of its framers were not biased and blinded by local interest, and their whole object was to make a good and just government; one giving equal protection to life, liberty, and property, and imposing equal burdens upon the people, and it is a slander upon their good name to say that they intended to confer on Congress a power to tax the great mass of the people to enrich a few, and thereby destroy the very object of good government. Again, let us look at the early interpretation of this power of Congress under the Constitution even by the advocates of high tariff or protective tariff. We have already given the declarations of the God-like Daniel, when he said in 1824 that no such power existed. Yet the hum and whirl of Massachusetts spindles, or, more correctly speaking, the local interest of his own State so biased and warped his great brain that in 1828, only four years later, he found it, not as now taught by our Republican friends, but as advocated by Mr. Clay, "for temporary purposes."

Now, if such great minds as those of Clay and Webster and their compeers in those better days could only find warrant in the Constitution to levy taxes on imports for the purpose of protecting our infant industries, and only contended for the execution of such extraordinary power by Congress for temporary purposes and for a limited time, does that not within itself contradict the present theory; in other words, is it not an admission that no such power existed in the Constitution to continue the system for all time to come until all the wealth of the country was concentrated in the protected industries of the country?

If they were right our present protectionist are wrong. And, Mr. Chairman, I defy all New England and each advocate of the protective system to show where either Webster or Clay, or any other man in public life, ever advocated or uttered a word in favor of a tariff for protection purposes as a lasting and permanent system before the late civil war. Sir, it is not to be found. The present Republican party is the first and only political party that has ever existed in this country that inaugurated and advocated protection as a permanent system.

Now, were the statesmen of *ante bellum* days, such as Clay and Webster, more short-sighted or less loyal to American labor and American institutions than those who founded and practice Republican views upon this question? Mr. Chairman, the doctrine of the Democratic party upon this great question is well known and well understood.

The first Democratic platform was made by the members of this House from the various States and promulgated in 1800. In that they speak, and they speak plainly, upon this question; and, sir, in each and every succeeding platform of that grand old party in which allusion has been made to the tariff the same elementary and constitutional principles have been maintained; that is, taxes for revenue to defray the public expenses of the Government, and no more, and the people, who are always right when thoroughly informed, have on more occasions than one sustained this sound and economic doctrine.

In 1832 the issue was squarely made. The issue then, as now, was, shall the taxing power of this Government stop at the limit prescribed by the Constitution, that is, collect only sufficient money from the people by way of taxes to run the Government economically administered, or shall the taxing power be used in the interest of private corporations located in certain places in this country to the detriment of the masses of the people; in other words, shall high taxes be imposed on imported goods, wares, and merchandise to enable the manufacturers of this country to extort from the people large profits and amass colossal and overgrown fortunes?

The people, true to themselves and in the interest of equal rights and good government, spoke in thunder tones for low taxes. They did so again in 1846, and again in 1856, and, sir, unless combined capital and close corporations, pools, and trusts have captured the country, with Grover Cleveland at the head, they will be found on the right side in 1888. The issue is now squarely made.

What farmer would vote for a candidate to his State Legislature that would advocate high taxes on the people, much higher than was necessary to defray the public expenses of his State and county government, with a heavy surplus already in the treasury? I imagine

there are but few sane men of any kind that would do so. Then why vote for candidates for Congress and President who are in favor of more taxes being collected from you than is needed for public purposes, and especially now, when we have near a hundred and fifty million dollars surplus in the Treasury lying dead and idle. The reason is the same. If good in the first instance it is good in the last. Voter, what are you going to do, rob or protect yourself? You will soon have a chance to say.

But our patriotic friends on the other side of the House say that a protective tariff such as we have now helps the laboring people of this country; that it enables the different manufacturers in this country to pay higher wages to their employés. I admit, Mr. Chairman, that it enables them to do it; but do they do it? If they do, then the daily laborer is benefited; but if they do not, then he is not benefited, and the extra profits that the tariff affords go into the private pocket of the manufacturer. Let us see. The statistics furnished Hon. ROGER Q. MILLS, the honored chairman of the Committee on Ways and Means, which I take from his speech, show clearly and conclusively that the tariff or import duty goes into the pocket of the manufacturer.

Mr. MILLS says:

Now, another thing. I want to show that the tariff is not for the benefit of the workingman. We will have many appeals made to us for sympathy on account of the workingman. I have taken from the first annual report of the Commissioner of Labor and the report of the census on wages some figures given by manufacturers themselves of the total cost of the product and the labor cost of the articles they are making. I have put the tariff duty by the side of them to show whether in the little reduction we are asking in this bill we have gone beyond that pledge we as a party have made, that we would not reduce taxation so low as to injure our laborers or as not to cover the difference in cost of labor between American and foreign products.

This will show, and I ask your attention to it, that the tariff is not intended to and does not benefit labor. It will show that the benefit of the tariff never passes beyond the pocket of the manufacturer, and to the pockets of his workmen.

I find in this report one pair of 5-pound blankets. The whole cost as stated by the manufacturer is $2.51. The labor cost he paid for making them is 35 cents. The present tariff is $1.90. Now, here is $1.55 in this tariff over and above the entire labor cost of these blankets. Why did not that manufacturer go and give that money to the laborer? He is able to do it. Here is a tariff that gives him $1.90 on that pair of blankets for the benefit of his laborer, but notwithstanding that the tariff was imposed for the benefit of American labor and to preserve high wages, every dollar of that tariff went into the manufacturer's pocket. The poor fellow who made the blankets got 35 cents and the manufacturer kept the $1.90.

Mr. CRAIN. Will the gentleman please state how much the committee has reduced that duty?

Mr. MILLS. To $1 from $1.90.

Take another pair of 5-pound blankets. The total cost is $2.70. The labor cost is 70 cents. The tariff is $1.98. Now, how strange it is that none of these sums that were intended for the laborer ever get beyond the pocket of the manufacturer. Why is it, when the American Congress enacted this legislation for the benefit of our labor, that every dollar of this aid intended for labor stops in the pockets of the manufacturer, who goes into the highways and hedges and hires his laborer at the lowest price for which he can get him in the market and then pockets the tariff benefits that we are told every day is intended for the laborer alone—for the benefit of labor?

Here is another pair of 5-pound blankets. The cost is $3.39. The labor cost paid by this manufacturer, he says himself, is 61 cents. The tariff is $2.55. In the pending bill we have left him $1.35, and we have left the other man $1.08. And we have left all along not only enough to cover the difference, if there was any difference, between the labor cost of production in Europe and the labor cost of production in this country, but we have left enough to pay for all the labor and a bonus besides.

Let us go on a little further. Here is 1 yard of flannel, weighing 4 ounces; it cost 18 cents, of which the laborer got 3 cents; the tariff on it is 8 cents. How is it that the whole 8 cents did not get into the pockets of the laborer? Is it not strange that those who made the tariff and fastened upon the people these war rates in a time of profound peace, and who are now constantly assailing the Democratic party because it is untrue to the workingman, did not make some provision by which the generous bounty they gave should reach the pocket of him for whom they said it was intended? They charge that we are trying to strike down the labor of the country. Why do they not see that the money they are taking out of the hard earnings of the people is delivered in good faith to the workman?

One yard of cassimere weighing 16 ounces costs $1.38; the labor cost is 29 cents; the tariff duty is 80 cents. One pound of sewing silk costs $5.66; the cost for labor is 85 cents; the tariff is $1.69. One gallon of linseed-oil costs 46 cents; the labor cost is 2 cents; the tariff cost is 25 cents. One ton of bar-iron costs $31; the labor cost is $10; the tariff fixes several rates for bar-iron. I give the lowest rate, $17.92. One ton of foundry pig-iron costs $11; the labor costs $1.64; the tariff is $6.72.

From this all can see where the tax goes, and it is this unjust and unequal system of taxation that enriches the manufacturers of this country and impoverishes the consumers. No wonder they and their representatives oppose any and all reduction of tax. They have feasted and fattened on it for years and years until they begin to feel that it is the duty of the Government to tax the balance of the people for their exclusive benefit; they cling to it like grim death. Sir, they are like a big calf in the fall of the year, the longer they suck the harder they are to wean; but the people are aroused upon this question and they intend to wean them, or at least take off a little of their extra milk.

And again our friends upon the other side of the Chamber allege that the farmer is benefited by high taxes. Great God! What assumption, to tell a farmer that it is better for him to pay high for the necessaries of life than to get them cheap is an insult to common sense. But they argue that high tariff on imported goods does not increase the price of goods made in this country; in other words, that our manufacturers do not take advantage of this tax when they go upon the markets with their goods; if not, how in God's name, can they pay higher wages to their workmen that make the goods, if the tariff does not aid them in getting betterprices?

And again, if the tariff has nothing to do with the prices or profits on American goods, why do you gentlemen who represent them oppose a reduction of the tariff? If it does not hurt the manufacturers you represent, why not stop your opposition and let the bill pass, for you all know the Government does not need the money? We have too much now. Our Treasury is overflowing with a large surplus.

Mr. Chairman, such argument is unsound and a mere pretense. The truth is, and the country well understands it, that the tariff is and has been the source of large and powerful profits to the manufacturers of this country at the expense of our farmers. I know of no more clear or forcible way to illustrate how this tariff works between the manufacturer and the consumer than the one given by Bill Arp, the great Georgia humorist.

Bill says that he does not know much about this tariff business, but that it did look to him like a fellow ought to be allowed to buy where he could buy the cheapest and sell where he could get the biggest price; says it works like his old friend's boy's shoe-shop; says there was an old man living in his country that had seven boys and then he had just lots of grandchildren, and all his boys were farmers but one and he was a boot and shoe maker—his name was Bill. When Bill first talked of going into the boot and shoe business his father opposed it; said to him: "William, you are poor; you can not compete with these large boot and shoe factories around you; they are rich and powerful; with their fine machinery and skilled labor they will undersell you and break you down." Well, Bill thought that looked very reasonable, but a boot and shoe maker he was bound to be.

So one day the old man, while reading one of Mr. Clay's speeches on infant industries in this country, solved the question for his son Bill. So he said to Bill, "Now wait until I go round and see all the other boys and all the grandchilden, and if they will all agree to buy shoes from you and no one else and stick to you, then I think you can start and hold up until you grow strong, and then you can compete with the big factories." So Bill waited, and the old man succeeded in getting them all to agree to buy from Bill; so Bill commenced business and they stuck to him faithfully. So in a few years after our humorist (Bill Arp) met the old man and asked him about his son William's boot and shoe business.

Well, the old man said that Bill's kin all stuck to him; that Bill made a right good shoe, but charged $2 a pair for every pair of them, while those big factories sold the same shoe at a dollar and a half; but the kin stuck, and the result was that Bill got rich, but it was h—l-fired hard on the balance of the family. So this protective business is splendid on the manufacturers of this country, but it is terrible hard on the balance of the great American family (the consumers).

Now, Mr. Chairman, this is a serious question, one that involves great economic principles. It is one that every American voter ought to understand, and one that he ought to consider well before he votes. To them I desire to say that high tariff or high taxes means political slavery; in other words, it means unbounded wealth to a few and poverty to the many. It means the toiling millions shall continue to pay tribute to aggregated capital.

It means that through this infamous system all the money of this country is to be piled up in the vaults of the Treasury and into the pockets of our manufacturers. Then let me ask you what will you do? How can you prosper without money, or how could you live with all the blood in your body drawn out? One is as possible as the other.

Why, Mr. Chairman, the financial condition of our country is simply astounding. Here we are with the same high war taxes upon our statute-books that were levied to carry on the late civil war, with twenty years of peace and war debt all paid that is due and over a hundred million dollars surplus in the Treasury and over one million a day daily collected from the people.

Such tax oppression was never known to man, and no other people on earth would stand it a moment. Sir, it is a fact that the surplus in our Treasury is greater than the aggregate surplus of all the civilized countries with whom we deal. What farmer is it that would support his county government or indorse the policy of his county court in collecting from the tax-payers of the county almost twice as much money as was needed to defray the county expenses, and especially with thousands of dollars of surplus money in the treasury?

Suppose your county was out of debt and had $1,000,000 idle money in the county treasury—that much that was not needed to pay county expenses—still your county court or tax-levying court would continue year after year to levy and collect from you several thousand dollars extra over what was needed, and thereby add to and annually increase your idle surplus, would you not think such a court insane? Would you not with one voice cry out against such an insane policy, and demand that your taxes be reduced until no more was collected from you than your county needed for county purposes?

Then if you would, upon the same principle you should stand by President Cleveland and the great reform Democratic party, and help reduce our taxes down to what is needed to defray the expenses of our Government economically administered. No Government has the right to demand or collect more from its people, and when they do it is robbery.

This issue, Mr. Chairman, is squarely before the people; they are the great jury that is to hear and determine this matter, and if they remain true to themselves and render their verdict in November accord-

ing to the law and evidence, high taxes will go down, and go down forever. Sir, the American people are too intelligent, too brave, and too true to themselves and their own children to allow unnecessary millions to be longer forced from them by taxation.

Sir, they will join the great salvation army of reform, and fight on and on under the Cleveland and Thurman flag, until the last cent of unnecessary taxes is removed from their already tired shoulders. In this great battle for economic and honest government we trust in God and the honor and wisdom of the people we represent.

The Tariff—Wool and Woolens.

SPEECH

OF

HON. JOSEPH D. TAYLOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 12, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the revenue—

Mr. JOSEPH D. TAYLOR said:

Mr. CHAIRMAN: At no time since the war has there been introduced into the American Congress a bill affecting disastrously so many industries as the present measure; and certainly no industry can be more disastrously affected than the one now under consideration. The motion now pending is to strike out of the bill the paragraph which places wool on the free-list. If this motion prevails the law will remain as it is now; but this motion will not prevail.

The decree of the Democratic caucus which ratified the dark-lantern conspiracy to overthrow American protection and inaugurate an era of free trade is more omnipotent in this House than reason or argument.

In all of these weeks of discussion no motion to amend which came from the Republican side of the House or from the Republican side of the Ways and Means Committee has ever been adopted. Reasons have been given why certain amendments should prevail which no man can answer. Arguments have been made to which no human being can make intelligent reply, and yet every single change proposed by a Republican has been rejected by a dominant, persistent Democratic majority. But we propose to do our duty; we propose to place on record the principles which control the Republican party, and await the decision of a higher tribunal, the congress of the American people, as they gather around the voting precincts in November next.

THE PRICE OF WOOL.

The first inquiry is, what effect will it have on the price of wool to place it on the free-list? The President in his message, the majority of the Ways and Means Committee in their report, and nine-tenths of the Democrats in this House in their speeches declare that wool is to be placed on the free-list for the purpose of giving to the American manufacturer cheaper wool, and to the American people cheaper clothing. This is the admitted object of the present bill by Mr. MILLS, the chairman of the committee, and by all the leaders of the Democratic side of this House. But the Democratic papers of my State and some of the gentlemen who have spoken on this floor say that the effect of placing wool on the free-list will be to increase the price of wool, and that the price of wool will go up instead of going down, in case the duty is removed. If this be true, what becomes of the President's message? What becomes of the report of the Ways and Means Committee? What becomes, Mr. Chairman, of the great cloud of Democratic speeches that have been made on this floor in favor of cheap wool and cheap blankets and cheap clothing? I honor the Committee of Ways and Mean for its frankness in stating to this House and to the country that the object is to reduce the price of wool. This was the object of the President's message, and this is the aim of the tariff committee, and this will be its effect

The assumption of the demagogue that protection does not affect the price of wool because the price went down constantly after the passage of the law of 1867, vanishes in mid air in face of the fact that from 1867 to 1888 the price of wool in the United States has always been as much higher than it was in London as the duty and the cost of transportation, including also the premium on gold prior to resumption. No matter how low the price of wool went down in this country, the reduction in London was just the same, and you can always get the London price of wool by subtracting the duty and cost of transportation from the American price; or you can get the American price by adding to the London price the duty and the cost of transportation. The only exception to this rule is in cases where importers have defrauded the Government out of the lawful revenue, or where the Treasury Department has permitted undervaluation or unjust classification.

The price of wool, like all other prices, was high during the war and for a long time after the war. Inflation affected everything. Finally war prices gave way to peace prices. When resumption came, lower prices came. But the price of wool was affected by an additional cause, the same cause that now affects the price of wheat. The wool product of the world greatly increased, as the wheat crop of the world has greatly increased, and the law of supply and demand had its natural effect. The wool clip in India in 1870 was 30,000,000 pounds and in 1880 it was over 50,000,000 pounds. The wool clip in Australia in 1860 was 55,000,000 pounds and in 1885 it was over 455,000,000 pounds. Several other countries have increased their flocks in about the same ratio, and it is the increase of the world's product that reduced the price of wool in this country as it did all over the world, and if we had no protective tariff wool would go down in price in this country substantially as low as it is abroad. I shall quote a paragraph of the speech that I made on the general discussion of this bill, on the 8th of May, in regard to this claim that the law of 1867 reduced the price of wool:

The answer to this is found in the fact that the prices of wool in London fix the prices of wool all over the world, including the United States. And when the prices of the world fell the prices of wool in the United States fell also, and the prices of wool in the United States would have fallen as low as the price in the markets of the world but for our tariff and the premium on gold. It was because wool declined in London that the American price of wool declined from 70 to 50 cents, and but for the tariff of 1867 and the premium on gold our wool would have gone down from 70 cents currency to 18 cents gold, as it did in London. It was not protection that reduced the price of wool, but the enormous increase of sheep in the Argentine Republic and in Australia, where sheep have increased from 40,000,000 in 1858 to 320,000,000 in 1887; and as this increase of wool progressed the price of wool in the markets of the world declined, the supply of wool rising and the price of wool falling, and in this way the price of wool all over the world, including the United States, was brought down, and but for the tariff and the premium on gold it would have gone still lower.

This is true. Every time the price of wool has gone down in this country it went down because the price had gone down in London; and the only reason that the prices do not go down in this country as low as they do in London is because of the tariff and cost of transportation. London has become the greatest wool market in the world, and the bulk of all the wool grown in the world is shipped there, and the wool markets of the world are largely influenced by the price in London. You may follow these prices all along during all these years and you will see that one is the counterpart of the other and controls it, and if wool is placed on the free-list why should a man pay 25 cents for American wool when he can buy precisely the same kind at 14 or 15 cents a pound in London? All this talk about free wool increasing the price of wool to the farmer is utter nonsense.

I am frank to admit, Mr. Chairman, that my object in opposing this provision of the bill is that we shall not have low-priced wool. I want the price of wool to be increased. I want the law of 1867 restored. I want the price to be higher than it is now. I want it to be commensurate with the labor, capital, and expense in producing it. And I want to say in this connection that the main object of life is not to have things cheap; that the object of a protective tariff is to build up industries, to give prosperity to the country, to equalize values and prices, and to give a just and liberal compensation to all men, and not to grind them down to penury and want. We can not grow wool in this country in competition with the people in Australia, South America, Asia, Africa, Turkey, and other parts of the world, where they have broad acres of cheap lands, where they have pastures which last all the year through, where labor costs but little, and where the masses of the people are only a little more than half civilized. We only grow about one-sixth of the wool grown in the world, and in order to show how utterly impossible it will be for us to compete with the other countries if wool is placed on the free-list I want to call the attention of the House to the following table showing the number of sheep and quantity of wool produced in the principal wool-growing countries of the world. This table shows that unless our wool-growing industry is amply protected it will be destroyed.

Table showing the number of sheep and the quantity of wool produced in the principal wool-growing countries of the world.

Countries.	Sheep.		Quantity of wool produced.	
	Year.	Number.	Year.	Pounds.
Russia in Europe	1882	47,508,966	1884	262,966,000
United Kingdom	1886	28,955,240	1885	135,936,000
France	1885	22,616,547	1882	80,138,000
Spain	1878	16,939,288	1878	66,138,000
Germany	1883	19,189,715	1881	54,894,000
Hungary	1884	10,594,831	1885	43,146,000
United States	1887	43,544,755	1887	265,000,000
Argentine Republic	1885	75,000,000	1885	283,047,000
Uruguay	1884	15,921,069	1884	59,084,000
Australia	1884 1885	78,888,710	1885 1886	455,470,000
British East Indies Turkey and Persia	1877 1878	17,140,757	.....	36,354,000
Cape Colony and Natal	1875 1885	11,815,225	1885	46,605,000

Some of these countries are as highly civilized as our own, but they have cheap labor and do not furnish to their people the comforts of life that every American expects. In the other countries land costs but a few shillings a league and labor but a few cents a day. No vote of mine shall ever be given to place the American wool-grower in competition with the barbarians of the world, where homes and families, schools and churches, comforts and luxuries have no place in the provisions of the shepherd.

The talk that we need foreign wools to mix with ours in order to improve the value of both is the merest twaddle. There is no article worn by the sons or daughters of Adam that can not be made of American wool, as has been shown by manufacturers on this floor. We can grow any kind of wool that can be produced in any part of the world, and we will have no need whatever of imported wool as soon as we are permitted to supply the American demand.

The fact is that American wool, such as is grown in Ohio and in other Northern States where sheep are housed and fed, is the best wool grown anywhere in the world, and it is only mixed with foreign wools as good flour is mixed with bad—to cheapen the product and not to improve the quality. The fiber is stronger and cloth made of it is better and will wear better, and I have no hesitation in saying that our best Ohio wool is worth fully one-third more per pound than the great bulk of imported wool, and if used in carpets even the wear of the carpets would be as much greater as the cost would be greater than the cost of common carpet-wool. The fineness, the softness, and the strength of the fiber of American wool is admitted to be equal, for any and all purposes, to any wool grown anywhere beneath the sun.

CHEAP CLOTHING.

The friends of cheap raw materials profess to have a deep interest in poor people, and to be very anxious that they shall have cheap clothing. They seem to forget that cheap wool is only one, and a very small, factor in the cost of clothing or in the cost of blankets or in the cost of any kind of woolen goods. A suit of clothes will contain from 3 to 5 pounds of wool, and many of the ordinary suits contain much less. At 10 cents per pound the duty on wool could only increase the cost of an ordinary suit of clothes from 30 to 50 cents. The cost of a pair of 5-pound blankets could only be increased 50 cents. But experience proves that while the wool costs a trifle more, clothing has grown cheaper and better as the wool industry has been more and more developed in our midst. Woolen goods were never so cheap as they are now. No people in the world are as well clothed as the people of the United States. What we pay for wool in excess of the price of wool in other countries is more than made up by the superior quality of our wool, by the superior quality of our goods, and in savings made in other directions.

The consumer and producer are brought face to face, agents and middle men are dispensed with, the cost of making is diminished, the use of shoddy and poor materials is prevented, and no fact is better established than the one I have just stated, that clothing has grown cheaper and better as we have increased our production and manufacture of wool.

If gentlemen on the other side want to give to the masses of the people cheaper clothing, why do they not pass the Breckinridge resolution, which was introduced on the 16th day January last, compelling the Secretary of the Treasury to reverse his unjust ruling that worsted goods worn by the rich, made of the finest and best wool in the world, can come in at a less duty than the poor man's blanket, or the day laborers' clothing? If they want to give cheaper clothing to the laboring people, why do they not reverse the ruling of the Secretary of the Treasury that permits, as I shall hereafter show, the poor man's wool to be taxed more than three times as much as the finer qualities of combing wool worn only by the wealthier classes?

The persistent refusal of the present Secretary of the Treasury to require importers to pay the same duty on combed wool that is paid on carded wool makes the poor man, who wears a cheap suit of clothes, pay more than three times as much duty as is paid by the rich man who wears a fine worsted suit, made of the finest combed wool. This is a discrimination against the poor man as well as a discrimination against the wool-grower; and yet the present Secretary of the Treasury has persisted in this ruling in the face of repeated argument and urgent solicitation.

If the consumer complains that he is taxed to the extent of the duty on wool, which is about 10 cents a pound, he should be reminded that the destruction of the American wool industry will not only diminish the wool product of the world, which would increase the price by lessening the product, but it would place the wool trade in the hands of London syndicates and enable them to make the price of wool higher than it has been in this country within the last ten or twenty years.

We would then be entirely dependent on foreigners for our wool and for our clothing, and as soon as the American wool industry would go down the price of wool and clothing would as certainly go up. This is the way it always has been and it will be so again. And it should be remembered that the same amount of labor will buy more clothing in this country than in any other part of the world, which after all is the great matter to be considered. Besides, no American should want cheap clothing at the expense of the independence of his country. Imagine the suffering of our people in case we should be involved in war, by having our wool supply cut off, in case we depend on foreign countries for our wool. James G. Blaine, from whom our friends on the other side quote occasionally, said:

> To break down wool-growing and be dependent on foreign countries for the blankets under which we sleep, and coats that cover our backs, is not wise policy for the National Government to enforce.

Other statesmen no less distinguished have said the same.

THE EXTENT OF THE WRECK.

It seems incredible to me that any party can seriously contemplate such a destruction as is embraced in this scheme to put wool on the free-list. When the idea of free raw materials was first presented to Congress it embraced free coal, free iron ore, and other materials that this bill leaves on the dutiable list. This strange anomaly has not been explained. It is supposed to be based on a political reason. When this bill was first printed and placed on the Calendar it had some things on the free-list that have since been restored to the dutiable list. This has not been explained. It is supposed that this had to be done to get votes enough to pass the bill. Whether this is a proper method of buying votes is somewhat questionable, but it has been done. The amendments agreed upon in the midnight caucus, before any arguments had been made and before any explanations had been given, have been sustained by the automatic machine, and all else has been thrown aside. The vote that now awaits us, like all the others, is recorded in the archives of King Caucus, and when this discussion closes the conductor will pull the rope, the bell will ring, and the train will move ahead on the usual track. The House is entirely innocent of any virtue or vice which this bill contains or shall contain when it is signed by the Speaker.

But I want to call the attention of the House to the extent of the disaster which this bill will entail upon the country if it ever becomes a law. It will destroy an industry in which two millions of people are employed, counting those who handle sheep and wool, and a business in which $500,000,000 are invested. It is an industry that furnishes annually $75,000,000 in wool and $15,000,000 in cheap and healthful food, in addition to the skins and pelts which enter into other industries. It is an industry that improves the soil and enables the farmer to utilize his rough and cheap lands. It is the farmers' money crop, upon which he depends for his taxes, his family expenses, his comforts and luxuries.

One of the best methods, Mr. Chairman, of determining the effect of placing wool on the free-list is to ascertain the effect of the law of 1883, which reduced the duty on wool a little over 2 cents per pound. If reducing the duty on wool this much was harmful what will be the effect of reducing the duty 10 or 12 cents per pound? This is a fair question and an important one. In the campaign in Ohio in 1883 the Democratic State convention denounced the reduction of this duty as "iniquitous legislation," and promised to correct the blunder. In the same year the Democratic State committee flooded every wool-growing county in the State with a pamphlet giving facts and figures showing the loss in each county on account of the diminished value of the wool, the diminished value of the sheep, the diminished value of the land, the loss of employment, the reduction in the price of labor, and divers other losses, occasioned by lowering the duty on wool, which was estimated in this pamphlet at many millions of dollars. The pamphlet promised that the Democratic party would restore the duty.

The result was that the Republican party of Ohio was defeated on account of this reduction of the duty on wool, and the Democrats elected the State ticket, the Legislature, and a United States Senator. In 1884 the Ohio Legislature, which was Democratic, adopted resolutions condemning the reduction of the duty on wool, and requested the Ohio Senators and Representatives to use all honorable means to restore it as it existed prior to 1883. The Ohio Democratic State convention in 1884 that elected delegates to the national convention that nominated Grover Cleveland, and the convention held in 1885, after his inauguration, continued to cry aloud for the restoration of the duty on wool. And in none of these Democratic conventions nor in the Democratic Legislature was there a single Democrat who voted against the demand for the restoration of the duty on wool. In a few months all is changed. The Ohio Democrats who so bitterly denounced what they called the "infamy of the Forty-seventh Congress," the "fleecing of the flock-masters out of $6,000,000 in Ohio," are now keeping step to the music of Grover Cleveland's free-trade message.

LOSS IN ONE CONGRESSIONAL DISTRICT.

The pamphlet to which I have referred was issued by the Ohio Democratic committee, and indorsed by the Democratic press and by the Democratic speakers of Ohio in the campaign of 1883, and it contained the following estimate of losses on the wool and sheep of the district which I have the honor to represent. This is the estimated loss on the wool clip of 1883, the year following the reduction of the duty, which was made March 3, 1883:

Table showing wool product, loss in value of wool, and loss in value of sheep in the seventeenth Ohio district resulting from the reduction of duty March 3, 1883, as estimated by the Democratic party of Ohio in 1883.

County.	Wool product.	Loss in value of wool.	Loss in value of sheep.
	Pounds.		
Belmont	737,798	$21,145.30	$163,509.00
Guernsey	864,232	43,211.60	182,431.00
Harrison	953,339	47,666.95	189,116.00
Jefferson	620,069	31,003.45	122,974.00
Noble	418,130	20,906.50	97,929.00
Total	3,594,568	163,934.80	755,959.00

Under the law of 1867, which was in force till March 3, 1883, the duty on all imported wools of class No. 1, valued at 32 cents per pound or less, was 10 cents per pound and 11 per cent. ad valorem, and on all wools valued at over 32 cents per pound at the port of shipment 12 cents per pound and 10 per cent. ad valorem. The law of 1883 simply dropped the ad valorem duties and made the line of division between the two rates 30 cents per pound instead of 32. Hence the law of 1883 was intended to reduce the duty on the wools imported for clothing and like purposes 11 per cent. This, on wool costing at that time in London 20 cents per pound, would only be a little over 2 cents a pound. But in order to make a liberal calculation let us call it 2½ cents per pound; and if the reduction of the law of 1883, which I am placing at 2½ cents per pound, entailed a loss on these counties shown in this table, it is fair to suppose that placing wool on the free-list, which will reduce the duty four times as much by removing the present duty of 10 cents per pound, will make the losses four times as much, and I have prepared the following table, supposing the number of sheep to be the same now as then:

Table showing losses in the value of wool and sheep in the Seventeenth Ohio district which will result from placing wool on the free-list, based on the estimates made by the Ohio Democracy in 1883.

County.	Loss in value of wool.	Loss in value of sheep.
Belmont	$84,585.20	$654,036.00
Guernsey	172,846.40	729,724.00
Harrison	190,667.80	756,464.00
Jefferson	124,013.80	491,896.00
Noble	83,625.00	391,716.00
Total	655,739.20	3,023,836.00

Here is an estimate of losses which no Ohio Democrat dare deny, as it is based on a calculation which seemed to have the approval of every Ohio Democrat in the State in 1883. A loss in a single Congressional district on wool and sheep alone of over $3,000,000. And yet in the face of their own figures, in the face of these enormous losses, and in the face of their own record, the Ohio Democracy immediately change front at the bidding of the President and indorse the Mills bill, free wool and all. And some of the gentlemen who voted for the Converse bill to restore the duty are still members of this House, and how they will explain to their constituents their sudden conversion is more than I can conjecture. They propose in this bill to remove the present duty of 10 and 12 cents per pound when they know that the reduction of the duty 2½ cents per pound in 1883 reduced the number of sheep in the United States from 51,000,000 to 44,000,000, and the wool product from 300,000,000 pounds to 260,000,000, and that if no reduction of duty had been made in 1883, and the increase had gone on as before, we would now have 64,000,000 sheep instead of 44,000,000.

In this last table I have only estimated the loss on the value of wool and on the value of sheep. The loss on the value of land and other losses could be estimated in the same manner. These are the losses which were estimated by the Ohio Democracy in 1883.

While I do not estimate the destruction of the wool industry in any unreasonable manner, I fully concur in the estimates of certain eminent gentlemen who put the actual loss to the wool industry of the United States which will follow the passage of this bill at $350,000,000. The possibility of its passage has already entailed an immense loss. A few years ago the Congressional district which I have the honor to represent had in it 770,000 sheep. The law of 1883 has so crippled the industry that the number now is not nearly so great. Estimate the diminution at 15 per cent. and that would leave the present number about 650,000. Count the loss on the wool and the sheep at the present prices compared with last year's prices, and the loss on wool will be about 50 cents per head, and the loss on sheep will be about $1 per head, and the aggregate loss will be $1,000,000 in this district, an average of over $200,000 to each county. If the possibility of the passage of this bill entails upon the people such a loss as this, what will be the loss if the bill shall actually pass? This is the loss that will be borne by those who sell under the present depressed condition of the market, and if this bill shall succeed it will be borne by all, with all the other losses which it will carry to a million homes and to at least five millions of people.

WHY IS WOOL MADE FREE?

As wool has had a tariff on it continuously for sixty-five years, ever since 1824, is it not very strange that there should come a proposition just now to put it on the free-list? Has President Cleveland more wisdom than all the statesmen of the last two generations? The reduction of the duty in 1883 was made to reduce the revenue, and yet the imports of wool sprang from 64,000,000 pounds to 114,000,000, and the revenue increased accordingly. The increase of the revenue on worsted cloths, yarns, knit goods, ladies and children's wearing-apparel, and on raw wools (on these six articles) for three years after March 3, 1883, as compared with the three preceding years, was $11,465,503. The object therefore can not be to reduce the revenue, for the whole of the revenue derived from imported wool even now is less than $6,000,000, and the reduction of duties on woolen goods, based on placing wool on the free-list, will so increase the imports of woolen goods that this amount, and more too, will be added to the revenues. Nor is it in the interest of the woolen manufacturers, for they oppose it; and I agree with my friend from Maine [Mr. DINGLEY] that the wool-manufacturer and the wool-grower must go hand in hand, and that whatever fate befalls the one will most certainly befall the other. The small reduction of duty in 1883 increased the imports of woolen goods more than it did the imports of wool, and swelled the importation of woolen goods this last year to the enormous sum of $45,000,000, and this measure would swell the amount still more.

The only explanation that can be given for placing wool on the free-list is that given by Mr. BUCKALEW, of Pennsylvania, in his reply to my speech in the general discussion, and that is that wool-growing must be abandoned in this country, and that we must buy our wool abroad, because we can buy it cheaper than we can raise it. I admire his argument for its candor and consistency, but I despise the arguments of these men who are neither for one thing nor the other, and never know whether to cry "Good Lord or good devil." A man should either be for protection or against it, and not try how near the wind he can sail on one side or the other. In 1884 certain Democrats saved Connecticut, New York, and New Jersey by insisting that the Democratic platform was for protection, while their brethren in other States construed it to mean full-blooded free trade. This can not be done this year, as the issue is too well defined.

A DANGEROUS CONSPIRACY.

The abolition of the duty on raw wool means the destruction of the industry, and the Mills bill is nothing more or less than a great conspiracy to inaugurate free trade. The framers of this bill must know that it will not reduce the revenue. If this bill should become law the next Congress will be "confronted" with the same "condition" and would be called upon to apply the same remedy.

This bill puts on the free-list wool and various other articles, and gentlemen on the other side expect that in their next effort to reduce the surplus they will have the support of the class they now eliminate. What they have accomplished in this Congress will be used as a lever in the next. This is only the entering wedge, and from step to step they expect to go along until they ultimately reach a revenue or free-trade tariff. This is admitted by the leading members on the other side. Mr. Chairman, I said before and I say again that this bill is a conspiracy to secure ultimate free trade.

The present Administration is a party to it, and is co-operating with the Democratic majority of this House. There is no reason why there should be any surplus in the Treasury to-day. There is no need of it. If the dependent pension bill had not been vetoed, if the river and harbor bill of the last Congress had been permitted to become law, if the Blair bill had been considered, if the appropriation bills had been as large as they ought to have been, if the national debt had been reduced as the President was authorized by law to do, there would now be no surplus in the Treasury.

The President permitted eleven months to pass by after his inauguration before he paid a single dollar of the overdue indebtedness of the country. Why did he hoard that money when there was an overdue national debt? Why did he refuse to pay when creditors were knocking at the doors of the Treasury, until forced by Congress to do so? There was an object, Mr. Chairman. There was then and there is now an object in hoarding this money in the Treasury. The object has been to create an excuse for breaking down our great protective system.

Mr. Chairman, I hold in my hand a sample of wool of which there has been imported into this country during the last year as much as all the wool crop of Pennsylvania. It is called lap waste, and yet it is the finest wool that can be grown anywhere in the world. It is the choice of the fleece, the very best portions of it, with all the rough, coarse wool thrown out; besides, it is partly manufactured, and yet it comes in as waste at 10 cents a pound, and takes the place of Ohio, Pennsylvania, and Michigan wool, and the other wools of the country, which, if scoured as this is, would have to pay a duty of 30 cents per pound. I also have here what is called tops, the very finest wool that can be grown, and

it is also partly manufactured. It is equal to the best wool that can be grown in any country. And the present Secretary of the Treasury rules that this wool can come in as waste at 10 cents a pound, while it takes 3½ pounds of the best Ohio wool to make 1 pound of these tops which they call waste. What is the effect of these rulings? It largely diminishes the protection that the wool-grower has heretofore had; it reduces his protection from 10 cents, that which he is supposed to have under the law of 1883, to 2½ or 3 cents a pound. That is one of the methods in which the destruction of our protective system is being accomplished.

The Administration is contributing to it in this way, and is laying the foundation for the utter annihilation of the wool industry and the destruction of a protective tariff. There is a wheel within a wheel, and the whole system of Democratic machinery is set to run in this direction. The Democratic members of this House, the President of the United States, and the Government officials all aim toward the same object.

I have here half a dozen other kinds of wool known as garnetted waste, ring waste, etc., which are made in London, and in various other places in Europe, expressly for import. This wool is partly manufactured also, and under the present law some of it ought to pay a duty of 60 cents per pound. I want to read a paragraph from the present law:

The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of all classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed. The duty upon wool of the sheep or hair of the alpaca, goat, and other like animals, which shall be imported in any other than ordinary condition, as now and heretofore practiced, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be twice the duty to which it would be otherwise subject.

This law provides that wool imported in any other than the ordinary condition shall pay twice the price of scoured wool, which should be 60 cents per pound, as scoured wool pays 30 cents per pound. If we had an honest administration of the present law this waste and these tops would be charged 60 cents a pound instead of 10 cents a pound.

Mr. BRECKINRIDGE, of Kentucky. Does the gentleman from Ohio know that that decision by which such wool comes in at 10 cents is a decision of the Federal court at Philadelphia?

Mr. JOSEPH D. TAYLOR. I am aware that some judge at Philadelphia, to whom the matter was referred, made a decision as to waste; but he did not decide that waste like like this was not obliged to pay 60 cents a pound. That decision does not apply to this provision of the law. The samples I have in my hand ought to pay 60 cents a pound under the last clause of this paragraph I have read. It is not waste as a matter of fact, but is disguised wool. You know and I know, and every man on this floor knows, that this is not the ordinary condition of wool prepared for market, and under the law it ought to be charged a duty of 60 cents a pound.

Mr. BRECKINRIDGE, of Kentucky. If it does not interrupt the gentleman, I will tell him that the very question that was in issue in the case in Philadelphia between the United States and the importer was that the United States appraisers fixed the duty at 60 cents, while the importer claimed that the article was entitled to pay only 10 cents; and upon the trial, under the charge of the judge, the jury found that it was "waste," which should come under the 10-cent clause.

Mr. JOSEPH D. TAYLOR. I have seen the case to which you refer. The wool was entered as "waste" at 10 cents per pound, and the duty was paid at this rate. Afterward the collector classified the wool as scoured wool of class 1, and collected 30 cents per pound. The importer sued for the difference and collected it, on the ground that it was waste, because it was "cast off in the different processes through which the wool passes in the manufacture of woolen or worsted goods." The samples I have were never cast off in making any kind of goods, but were made from the best fleece wool.

Mr. BRECKINRIDGE, of Kentucky. I will take pleasure in furnishing the gentleman with a copy of the judge's charge, and the testimony also, if he desires it.

Mr. JOSEPH D. TAYLOR. I shall be very much obliged to you, but I think I have a correct statement of the case. And now, as the gentleman from Kentucky has interposed here, I wish to ask him what objection there was to having passed by this House what was called the Breckinridge resolution, which was introduced on the 16th of last January by the gentleman from Arkansas [Mr. BRECKINRIDGE]? That resolution was so manifestly just and in the interest of the wool-growers that nobody disputed its propriety. It provided that from the date of its passage, worsted and woolen goods should be considered the same product, and should pay the same duty. It was expected by the country that that resolution would pass immediately without opposition, but somehow or other, notwithstanding the expectations of the people, the resolution seems never to have come before this House for consideration; at least I have never heard of it since it was introduced and referred.

Mr. BRECKINRIDGE, of Kentucky. If the gentleman will permit me, the substance of that resolution is a part of the woolen schedule in the Mills bill.

Mr. JOSEPH D. TAYLOR. I am aware of that; but that does not answer my question. The resolution was introduced six months ago; and if it had been adopted it would have protected the farmers for half a year at any rate, and that much good would have been done if no more. It would have saved him the loss on the wool clip of this year, which is very large.

Mr. BRECKINRIDGE, of Kentucky. The committee were of the impression that the schedule which the worsted men themselves obtained in 1883, and which turned out to be a misfortune for them, but for which nobody else was to blame, ought to stand until the tariff generally was revised. In other words, the committee believed that the worsted men had no greater right to have the inequalities of the tariff corrected for their benefit than other people who complained of other inequalities had to have those corrected. So we determined to put all the corrections together and embody them in this bill.

Mr. JOSEPH D. TAYLOR. But the evil which that resolution was intended to correct resulted from a false construction of the law made by the Secretary of the Treasury. The resolution was manifestly just, and when you concede that this much was due to the wool-growers, it seems to me that the correction ought to have been made, and made promptly, and if that had been done it would have saved to the wool-grower the immense loss that is now being sustained on this year's product.

Of course the Committee of Ways and Means must have known that this bill would not pass. I do not suppose that any gentleman on that side of the House expects that this bill will ever become a law, but if any gentleman does indulge in that delusion, I take this occasion to tell him that he may rest assured that the Mills bill will never become a law, and that that resolution for the benefit of wool-growers, which was so easily laid aside by the committee, will never do the wool-growers any good as a part of this bill.

Mr. BRECKENRIDGE, of Kentucky. We were under the impression that this bill would pass the House of Representatives, and if it did pass the House of Representatives, that was presumptive evidence that it ought to pass the Senate of the United States; and we thought that the worsted men ought to take "pot luck" with all the other persons who were injured by the present tariff, so we put them all in the same bill.

Mr. JOSEPH D. TAYLOR. Did you think this bill would pass the Senate?

Mr. BRECKENRIDGE, of Kentucky. I can not say that I did, because the Senate is Republican, and I could hardly hope that such good would come out of a Republican Senate. [Laughter.] I only hoped that they would see the error of their ways and would do this good thing to the disappointment of both sides of the House. [Laughter.]

Mr. JOSEPH D. TAYLOR. If the passage of a bill by the House of Representatives is, as the gentleman says, presumptive evidence that it ought to pass the Senate, then I will ask him whether the fact that a bill passes both Houses of Congress, a pension bill for instance, is not presumptive evidence that it ought to be signed by the President of the United States. [Laughter.]

Mr. BRECKINRIDGE, of Kentucky. It is presumptive evidence, but I am sorry to say that so many of the pension bills passed are so bad that the presumption is getting to be an exceedingly small one as to this Congress.

A MEMBER. With a Democratic President.

Mr. BRECKINRIDGE, of Kentucky. Yes; with a Democratic President who is so dutiful that he actually reads the records and decides according to the facts of the case, and not according to the number of votes.

Mr. JOSEPH D. TAYLOR. Do you think the President knows what ought to be done after he reads the records? Is he a better lawyer than all the members of this House, and better than all of the members of the Senate? Has he more brains and more ability than the aggregate wisdom of the members of both Houses of Congress?

Mr. BRECKINRIDGE, of Kentucky. That is a question that I hardly feel like answering so long as the gentleman from Ohio [Mr. JOSEPH D. TAYLOR] is a member of Congress, because it might seem invidious to say that our President is a better lawyer than the gentleman [laughter]; but were the gentleman from Ohio not in Congress I would say that the vetoes of the President which I have read seem to me to be better and more carefully drawn than many of the acts which have passed this Congress.

Mr. JOSEPH D. TAYLOR. One other question. Is it your judgment, then, that the President of the United States ought to be allowed to suppress such legislation as the dependent pension bill, and that the Speaker of this House should eternally refuse to recognize anybody to put it on its passage?

Mr. BRECKINRIDGE, of Kentucky. I am not sure that I caught the gentleman's question [illegible] I did understand it, I will say that I know of no [illegible] of Representatives or the Congress of the United [illegible] use the word "allow" with reference to the Pres[illegible] States in the exercise of his constitutional power of [illegible] to refuse his approval to bills passed by Congress is constitutional; our power to pass bills over his head is constitutional. I know of no mode by which we can prevent him from vetoing any bill; and I know of no mode by which he can

prevent us from passing any bill over his veto. In regard to the Speaker——

Mr. JOSEPH D. TAYLOR. I simply inquired the gentleman's opinion because I have so much respect for it.

Mr. BRECKINRIDGE, of Kentucky. Let me finish my statement. So far as concerns the Speaker of this House, I have only to say that, in my acquaintance with him, here and elsewhere, I have seen nothing to diminish the perfect confidence I have always had in his entire and absolute impartiality and integrity.

Mr. JOSEPH D. TAYLOR. While I admit the Speaker's impartiality in the main, it is well known in this House that he will not recognize any member who desires to bring up for consideration the dependent pension bill which passed the Senate early in this session. All general pension legislation is systematically throttled and the cause of the Union soldier is persistently and permanently ignored.

But I want to speak of another thing which this Administration is doing or permitting to be done. There seems to be, as I have said, a conspiracy to break down our protective system, to destroy it, to bring it into disgrace, to defeat and thwart its objects, and I will cite one more instance. Here is what is called carpet wool, and there is no doubt that 30,000,000 or 40,000,000 pounds of this wool are being imported into this country each year, at a duty of 2½ to 5 cents a pound, to be used for purposes other than making carpets.

While this wool can not be used for all purposes, it can be used for many, and when used it comes in competition with goods made from high-priced wool. In this way the woolen manufacturers who do not buy this wool or use it in their business are cheated and wronged and are not permitted the same advantages granted to others, and hence are not allowed a fair chance for the trade of the country. And some of them are to-day on the verge of ruin and bankruptcy on account of these frauds upon the Government and these rulings of the Treasury Department, which are destroying our protective system by letting in cargoes of foreign wool at a mere nominal duty.

I will say to the gentleman from Kentucky [Mr. BRECKINRIDGE] that right in his own State, in the city of Louisville, there are several woolen mills engaged in the manufacture of Kentucky jeans that are using imported wool.

Seven or eight years ago they used American wool bought in Kentucky, Missouri, Illinois, and Indiana. At that time they did not use a pound of imported wool. I am informed that substantially all of the wool now used in these mills is imported. They, of course, buy where they can buy the cheapest, and I am satisfied that the importers of this wool do not pay over 2½ cents a pound duty on it. There is smuggling going on somewhere under the shadow of the United States custom-houses. Importers are flooding the country with what they call carpet wools, and it is used for other purposes and takes the place of wool that ought to pay a duty of 10 cents a pound or more. The rule that washed wool pays double and scoured wool triple duty does not apply under the present law to combing wool or carpet wools, and hence scoured carpet wool only pays a duty of 2½ to 5 cents a pound, and it may not be carpet wool at all when it gets out of the custom house.

The gentleman from New Hampshire [Mr. MCKINNEY], who made a speech to-day in which he declared that, in spite of the admission of free wool, the price of wool will be kept up, did not explain how he could reconcile that statement with the other argument which he made, that free wool would enable the American manufacturer to compete successfully with the European manufacturer; would place the foreign and American manufacturer upon an equal footing, giving them both the same opportunities. The one proposition is a contradiction of the other; but I want to say to the gentleman that he is mistaken. The mere fact that a man can buy free wool, the mere fact that the American manufacturer can get his raw material free of duty does not place him on an equal footing with the European manufacturer.

If every wool manufacturer in this country had free wool, they could not compete with the foreign manufacturer. The American manufacturer has got to pay a higher price for his labor, for his plant, and for everything else that he uses. Free wool is only one of the manufacturer's many expenses, and it does not place him on an equality with the foreign manufacturers who have cheaper materials, cheaper labor, and cheaper supplies of every kind.

The chairman of the committee [Mr. MILLS] said with great emphasis, that if we could only get free raw materials, that our labor was so much more intelligent and our machinery was so much better handled, we could compete with the world in the sale of our goods. This is good rhetoric but bad logic. If this were true why do we not manufacture our own tin-plates? We have the iron-ore, the tin, the lime-stone, and the coal, all free, and yet we do not make tin enough in this country to make a dinner horn.

According to Mr. MILLS we ought not only to make our own tin-plates, but we ought to send them out into the markets of the world. Why can we not make tin-plates? Simply because the labor in this country costs more. The same is true of cotton. The cotton manufacturer gets his raw material free, and yet we import a large quantity of our cotton goods, and there is no manufacturing that involves so little labor as the manufacture of cotton. This beautiful theory will not bear the light of fact.

We need protection as an impregnable barrier against the importation of the products of impoverished labor more than we do forts or fortifications to protect us against the armies of the world. It is the center, the life, the heart of our prosperity, the hope of the Republic and the glory of the American people. It lifts up the downtrodden, elevates the lowly, distributes comforts to the poor, and lays untold blessings at the door of the sons of toil.

Besides, it should be remembered that the United States is the world's great dumping-ground, where all foreign countries bring their surplus and sell it at any price they can get. We do not expect to make a profit on all the manufactured goods that we export. A factory has to run full, and at the end of the year it often has a surplus of goods which it is willing to convert into money at a loss. Some manufacturers pay a bonus to any one engaged in the same business who exports his goods so as to keep down overproduction. A woolen mill can better afford to run full and lose a large per cent. on the value of its product than to stop, as its machinery deteriorates rapidly when not running.

The Government encourages exports by allowing drawbacks and bearing other losses. So it is with exports and imports. They are often sold at a loss. Hence every business needs protection as a shield to prevent this sort of competition. The people of other countries are now sending their surplus here and selling it in our market without regard to price, and if we had no tariff they could sell low enough to stop manufacturing in this country and to wipe these industries out of existence. And when this was once accomplished prices would be higher than they are now.

A member asked a question to-day which he seemed to be anxious to have answered. He wanted to know, if the farmer gets 10 cents per pound more for his wool, whether the man who wears the wool does not have to pay the 10 cents.

Certainly he does if he has it. But suppose the man who was to wear the coat did not have the 10 cents, what advantage could it be to him to have cheap wool? If bread is worth only 4 cents a loaf, what good is that to the hungry man who has no 4 cents to pay for it? What good does it do the half-clad woman, whose naked feet are upon the ground, to know that she can buy calico for 4 cents a yard, or shoes for $1 a pair, if she has no money and can not purchase them?

Mr. OUTHWAITE. Will you answer the question?

Mr. JOSEPH D. TAYLOR. I will when I come to it. The gentleman from Massachusetts [Mr. MORSE] made one of the best tariff speeches that I have heard on this floor, though he professed to speak in favor of the Mills bill, and it should be printed largely and distributed all over this country as a campaign document. He said he was making money now because he could buy his goods directly from the manufacturer, thereby getting rid of middlemen and commissionmen, and he also says that he is able to sell cheaper for this reason. Why, sir, this is the theory of protection. This is the great American idea of encouraging home industries. Producers and consumers are brought together. Each helps and supports the other. The manufacturer supplies his home market with his goods, and in turn he becomes part of the home market for our agricultural products. The reason the consumer in this country has to pay more than in some other countries for some things is because the manufacturer and the producer have to pay more for wages and for everything else they buy, than is paid in other countries, and the man who pays the 10 cents gets his full share of these increased wages, and is able to pay not only the extra 10 cents, but much more, for he gets employment, and has the money in his pocket with which to pay. If the farmer gets more for his wool and more for his cattle, he buys more of the manufacturer, which enables him to pay higher wages, and in this way one helps the other and they all prosper.

As a result of this policy this country has grown with a rapidity that has no parallel in the world's history. And if a policy like this has, during a period of nearly thirty years, given to this country greater wealth, greater growth, and greater prosperity than was ever given to this or any other country in the same time, it seems to me that we ought to tremble at the thought of such a signal change as is now proposed. Our protective system has made us the greatest producer of agricultural and manufactured products in the world. Our national credit and financial standing are not excelled, if equaled, by any people on the globe. The masses of the people are better housed and clothed and fed and educated than the people of any other country beneath the circle of the sun. They have more money, use more, handle more, and spend more than any other people who live, move, or have a being.

I hope, Mr. Chairman, that the question is now satisfactorily answered.

The gentleman from Massachusetts also said that he lost five times as much in his business twenty-five years ago as he does now. This is another result of the protective tariff. We have brought back by our protective system the eight hundred millions of gold that were mined and minted in California and carried out of the country for foreign goods by a Democratic revenue tariff. When the war came on we had no money; our Treasury was empty. Our gold and silver, under a revenue tariff, had gone abroad for foreign goods, but our protective system has brought it back and given stability and prosperity to our people. Free trade had distributed it among European and Oriental na-

tions, but protection has brought it back. The balance of trade has been in our favor instead of against us, as it was before, and we have grown richer as well as wiser, and to-day our nation is at the head of all the nations of the earth by reason of this policy.

The gentleman from Massachusetts also said that when he came to this country he had nothing, and I infer from what he says that he has grown rich. He has done so under a protective tariff established by the Republican party. He says further that he had to pay when he first went into business from 8 to 12 per cent. interest for money. That is free trade. When I was a boy the lender of money took his 10 per cent. out of the head of the heap and turned the remainder over to the borrower. I remember this very well, for I belonged to the class who had interest to pay. I recently met a New England Mugwump, who said to me: "I am a free-trader." I said: Why are you a free-trader? The answer was, "I have two reasons; one is because it will give me a higher rate of interest for my money, and the other is because it will give me cheaper labor; the help I now employ costs me too much."

These are both valid reasons, and they tell the whole story. If you put wool on the free-list, in a few years you will be sending a hundred millions a year out of the country for wool and woolens, and in this way the bulk of the gold we now have will go abroad, and our wealth will be diminished as rapidly as we accumulated it, and instead of our having a surplus in the Treasury, and the banks of the country, and in the pockets of the people, we will be paying 10 per cent. interest again on money and selling the bonds of the Government at 10 or 11 per cent. discount as we did before the war. And men will labor for 40 or 50 cents a day, as they did under Democratic revenue tariffs. This is the legitimate result of buying more than we sell and thereby diminishing the circulating medium of the country.

The gentleman from Pennsylvania [Mr. SCOTT] says that political economy is a science and that the true principles of taxation are as definitely ascertained as are any truths not susceptible of mathematical demonstration. If this be true, what becomes of the Mills bill? It must be a very strange science that puts wool on the free-list, a product that is grown in every State and Territory in the Union, and which, if adequately protected, can be grown in sufficient quantities to supply our entire demand, while it leaves sugar, which is only grown in one or two States, and which produces less than one-tenth of the sugar we use in this country, on the dutiable list, to pay 100 per cent. duty, and also leaves rice, that is grown in only two or three States, on the dutiable list, to pay a duty of 68 per cent.

Sugar and rice, which are necessaries of life, and constitute a large part of every man's food, are left on the dutiable list, sugar to pay 100 per cent. ad valorem and rice 68 per cent. ad valorem. And he is anxious to have tin-plate on the free-list in order to reduce the cost of six tin cups 1 cent, and to have salt on the free-list in order that the salt that salts 25 pounds of butter shall be lessened in price a half cent, but is willing to let the people pay $58,000,000 a year to protect the sugar plantations of the South, and he calls this science. He is very much afraid of free whisky, and yet this scientific bill is framed for the express purpose of giving immunity to the moonshiners of the South. A bill that protects the South and punishes the North, a bill that crushes the farmer and enriches the planter, is scientific in his judgment and worthy of support.

If the gentleman's science had been a little more perfect he would have noticed that the bad effects which he says are resulting from the accumulation of a surplus in the Treasury are neutralized by the fact that while a surplus is accumulating inside the Treasury, money is increasing outside the Treasury in equal proportions.

And if the President will pay out what is inside, and let our tariff system alone, which increases the quantity outside, we will get along with the greatest satisfaction. But the Democracy of the House are just as careful not to mention the fact that money is increasing outside as they are not to say a word about "incidental protection," an expression much used formerly, but now entirely obsolete in Democratic parlance. There are Democrats, however, who will not forget the events of this session, and though you may count that you lose nothing in Ohio, or in Pennsylvania, or in Michigan, or in Wisconsin, or in Iowa, or in other States, because they are Republican States, or in Texas, because the flocks are large and the voting flock-masters few, the wool-growers will mark an era by their votes this year that will show you that they have not been shorn of their power as completely as you imagine.

THE MARKETS OF THE WORLD.

The argument that we must have free trade in order to build up our commerce with other countries has been repeated over and over again. The Democratic party is offering this country the markets of the world if it will only tear down its protection walls and let all nations bring in their products free of duty. Eighteen hundred years ago the devil made an offer very much like this. He took the Saviour up into an exceeding high mountain and showed him all the kingdoms of the world, and the glory of them, and said unto him, "All these things will I give thee, if thou wilt fall down and worship me." The poor devil did not own a foot of land, and yet he had as much to do with the kingdoms of the world as Democratic free-traders have with the markets of the world. The reply was, "Get thee behind me, Satan." So say we to the Democratic party, get thee hence, for you have nothing to do with the markets of the world.

If protection should disappear to-morrow we could not export a bushel of wheat more than we do now, as the tariff has nothing whatever to do with our exports of wheat, or our exports of any other product. If we should repeal every tariff law on our statutes that would not repeal the tariff laws of Germany, or France, or Italy, or Russia, or Spain, or any other country, and give us access to their ports without paying the usual duty. Do gentlemen suppose that because we adopt free trade that all the other countries of the world will do the same? We tried a few years ago to influence foreign countries in relation to the ratio of gold and silver, but we did not succeed. The fact is, foreign countries will buy of us just when they actually need what we have to sell, and when they can get it no other place in the world cheaper. That is what the markets of the world means, and no more.

Mr. Chairman, there are a good many other things that I would like to say, but inasmuch as the House was kind enough to give me unlimited time I do not feel like occupying but a few moments more. I want to answer an inquiry made by the gentleman from Missouri [Mr. DOCKERY] in the course of his remarks to-day. The gentleman inquires why we on this side of the House are unwilling to give the Democratic party the credit which he claims it is entitled to, and he pointed out, as the foundation for this claim, the fact that we are indebted to the Democratic party for carrying the Mexican war to a successful termination, and for the vast areas of land that were given to the country under a Democratic administration. He pointed out with earnestness and eloquence the glories of the Democratic party, and wanted to know why we could not give it proper credit. I want to say that in all justice he ought to balance accounts before he declares the result. He stated one side of the account, but did not state the other. He pointed out the glories of the Democratic party and called attention to the monuments it had reared, and to the institutions it had fostered, and to its many other great achievements, but he did not present the other side.

I simply want the other side of the account stated and no more. He did not give you the opportunity to make a comparison. I would like to know what political party in this country brought on the war. Is there any difficulty in answering this question? What party in this country is chargeable with the enormous sacrifice of money, and of human life, in the long and bloody civil war from which we came out victorious only after four years of strife and suffering? Why should not this be taken into account in this calculation? Will not this more than offset any claim the Democratic party may have for what it did in carrying on the Mexican war? What about the Democratic convention held in Chicago in 1864, which declared the war a failure, demanded peace on any terms, wanted the Union army called home, and the Southern brethren allowed to depart in peace? What about the propositions made in Congress by Democratic leaders to divide the Union, and the opposition of the Democratic party to all measures which were intended to suppress the rebellion?

You tread on dangerous ground when you speak of the record of the Democratic party. I should not call this up except as an offset to what has been said on the other side. I want the gentleman to strike a balance. I want to place on one side the statement of my friend from Missouri [Mr. DOCKERY] with all his eloquence, and on the other side I want to place a few suggestions only as to Democratic history. The Democratic party is responsible, and must ever be held responsible for inaugurating the war of the rebellion, and will be so held as long as a monument shall mark the resting place of a fallen hero. As long as history lives it will be remembered that the Democratic party sympathized with rebellion and opposed the Government in its great struggle for union and liberty. I make no charge whatever against the great body of men who vote the Democratic ticket. The masses of all parties are honest and true men. I refer to the leadership of the Democratic party, to the men who hold the reins and crack the whip, and who have so often trailed the banners of their party in defeat and disgrace. I am willing to give to the Democratic party all the honor it is entitled to for anything good that it has ever done. It has done some good things, I suppose. But I do not want gentlemen to forget when they are glorifying the Democratic party that there are still, dark shadows which creep around the homes of widows at sunset, unmarked graves in the wilderness where the scars of war are still seen, deserted homes on the hill side where sorrow still lingers, that ought to remind them of the past, and teach them a lesson of humility if nothing more.

A PLACE FOR THE SURPLUS.

They talk of the surplus. A single remark in regard to that question and I will have done. I am not troubled as much about the surplus as some gentlemen seem to be. Some of them have an apprehension that a full Treasury may lead to liberal pensions, and are anxious to make this impossible by reducing the revenue. They would not admit this, but I believe it nevertheless. I do not want the revenue so reduced as to interfere with liberal pension legislation. I want to see every honorably discharged soldier pensioned, as the Mexican soldiers have been, and every widow whose husband helped put down the rebellion, and every old father and mother who sent their brave boys out to defend the

old flag, never to return. I believe there is no higher obligation resting upon the Government to-day. I believe in liberal pensions because it is right and just and wise, to make ample provision for the brave men who fought the battles of the war, and saved the life of the Republic. The suppression of the rebellion and the restoration of the Union, upon a broad and deep foundation, was the greatest triumph known to civilization in all the ages. And we should not forget how or by whom this grand result was achieved.

Some gentlemen are wont to say when a pension measure is proposed that we have done more for our soldiers than any other nation in the world. I deny it. There are thousands of as good soldiers as ever followed the country's flag who are to-day poor and helpless, who are not receiving a farthing from the Government. One-third of the claims rejected are as deserving as one-third of those which have been allowed. Thousands of the widows of the heroic dead support themselves and their children, by their incessant toil, without any aid from the Government. Two thousand years ago the armies of Pompey and Julius Cæsar were better paid and better cared for than are many of the Union soldiers of the late war. Their pay was doubled in the field, and on their return they were given lands and homes and the trophies of war. They did not have to wait for age or poverty or want. A Roman soldier was a hero and a patriot, deserving of honor and emoluments, and not an object of charity.

The time has not come yet for any great reduction of the tariff. Let part of the revenue be given to the soldiers and we will not be troubled with the surplus. Pay the honest obligations of the Government and it will come back in increased prosperity. Save from stain the nation's honor, and widows and orphans will rejoice. Do justice to the tried and true, and the stars of the old flag will shine out brighter. Gladden the hearts and homes that were in sorrow and sadness during the long years of war, and our country will be stronger and greater. In the name of God and country and home let us do our duty toward the thousands of brave and true patriots whose eyes are turned toward this national Capitol to-day, praying and waiting for a just and generous recognition of their long-neglected rights. [Applause.]

The Tariff.

SPEECH

OF

HON. EDWARD LANE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

July 16, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. LANE said:

Mr. CHAIRMAN: For nearly three months we have been engaged in the debate on the tariff bill. Much has been said pro and con, and I am truly glad that the time for action is now at hand. From the other side of the Chamber it has been one unceasing wail to protect first one American industry and then another until one would be led to believe that American manufacturers were paupers and afraid of the whole world, and therefore must be protected by law. The pretext for all this, Mr. Chairman, these gentlemen would have us to believe is the protection of American labor. The paragraph of the bill under consideration, as well as other paragraphs, develops this feature of the debate. Our Republican friends constitute themselves the champion of labor and constantly insist that labor is benefited by high tariff. It has been proven to them time and time again by this side of the House that tariff has nothing to do whatever with raising wages; that wages are governed by other and different causes, and yet on almost every paragraph of this bill we hear the same falsehood asserted that we must have a high tariff in order to keep up the price of labor. Nay, more than this; it has been proven to those on the other side of the House that a high tariff is a direct cause of low wages, and that wages only raise as the clutch of the tariff is taken off.

Every high tariff cuts down wages, and the higher the tariff the more the wages are reduced. Wages are always highest when importations are largest. Wages, as the figures show them, follow the fluctuations of imported merchandise, rising with the rise of imports and falling with the fall. There is no authority for the statement that the tariff of itself alone has the power to raise wages. The reason assigned for its so doing is always that it excludes foreign products and so keeps our work for the home workman. This simply means, if it means anything, that if we exclude importation, wages will rise; while the very reverse is true. The advance in wages has always been more rapid under low tariff than under a high one. Statistics show that the average rate of wages of manufacturers in 1850 was $247, and in 1860, after ten years of low tariff, $289; in 1870, after ten years of high tariff, it was only $302. So you can see that wages do not range with the high tariff. If the tariff affected the price of wages, then wages would be the same in all the States as the tariff is in all the States. But the fact is that the West pays better wages than the East, nearly one-third more.

A tariff is simply a barrier to exchange, and the effect of all such barriers is to reduce the price of wages. If we purchase a large quantity of foreign goods we must sell a large quantity of goods to pay for them; and as a consequence we must pay labor for producing such goods. If the tariff stops them from coming in it will stop them from going out, and thus stop us from producing these goods. The only excuse here, as our Republican friends assert, is because these goods can be produced somewhere else cheaper than here. Why is this? Simply because our labor can earn more at some other business. What we want most in this country is a flood of goods to come in so that our laborers can buy cheaper, and that they may be employed at good wages manufacturing a flood of goods to be sent out to pay for the goods that come here. If a high tariff makes high wages, then certainly after twenty-seven years of high tariff our laborers should be happy, rich, and prosperous. Is this the fact? No. The third annual report of Hon. Carroll D. Wright, United States Commissioner of Labor, shows that in six years ending with 1886 there were strikes in 22,336 establishments in this country. Of these 18,342, or 82.12 per cent., were ordered by labor organizations. During the same period there were lockouts in 2,182 establishments. Of these 1,753, or 80.34 per cent., were ordered by combinations of managers. Of the strikes 16,692, or 74.74 per cent., and of the lockouts 1,981, or 90.8 per cent., were in the States of Massachusetts, New York, Pennsylvania, Ohio, and Illinois, where protection is said to have showered its blessings on the laboring man.

Sir, it is notorious that it is in the protected districts of Pennsylvania that occur our frequent carnivals of strikes, lockouts, reduction of wages, and insolent and brutal treatment of labor. It is from there that the red prophecies of danger come to our industrial horizon. It is there that the laborer and his family are housed in a tenement not fit for a brute, and are clothed in rags, and their food such as to insure disease and hasten death. It is there the State militia is called into requisition to imprison labor. It is there that the Pinkerton murderers ply their trade in terrorizing American labor and drive it to starvation.

Now, sir, there is no truth in the statement that protection protects American labor, or that the Republican party is the friend of labor. It is an admitted fact that labor alone creates all wealth. Law does not and can not create wealth. But it does and can under a Republican rule rob the laborer of the fruits of his toil under an iniquitous tariff law and equally wicked monetary system. The wages of labor are transferred from the toiling masses to the rich, the banker and the manufacturer. If labor is the source of all wealth, why is not the labor permitted to enjoy the fruitage of its earnings? Labor creates all wealth. It builds all our magnificent palace cars and Pullman sleepers. But does the laborer ride in them? No. And why not? Labor builds all our palatial residences and stone fronts, but do our laborer and his family reside in them? No. And why not? Labor manufactures all our silks and satins, but do the laborer's wife and daughter wear the silks and satins? No. And why not? There must be some reason for this state of things, and if so what is it? This is the question that now confronts the laboring people and which they are trying to solve.

We are assured that there is great wealth in this country. In 1880 more than $43,000,000,000, we are told by the census, does not express the wealth of the country; and we are equally assured that nearly one-third of this vast sum is held by twenty families in Wall street alone. How did this happen? Is it the result of the labor, of brain, or muscle? No. Our Republican friends tell us it was done by "trade regulation." We say not; but rather by trade robbery. These twenty families neither toil nor spin, but yet, like Solomon, they are arrayed in scarlet and in fine linen every day.

I am willing to admit that they manipulate, intrigue, and contrive and are connected with the national Capitol by a golden wire, where their emissaries and agents (the would-be servants of the people) are, but they produce no wealth and under no system of just laws could they ever acquire the colossal fortunes they possess. Every just man should be willing that labor of head or hand should receive its just reward. But it is neither fair nor equity to allow under the forms of law one man or set of men to become rich and opulent at the expense of the toiling masses. And this is what Republican rule is doing now and has done for the past twenty years, and all the time claiming that they are the friend of the laborer. The Republican party on this floor insist that high tariff makes high wages. But this has been proven false time and time again, and yet the falsehood is reiterated. What are the facts? I quote from the statistician:

Wages paid for weaving 58 yards cotton cloth.

ENGLAND.	Cents.	AMERICA.	Cents.
Ashtop	24.68	Rhode Island	16.82
Blackburn	25.05	Providence	17.26
Stockport	25.04	Fall River	19.96
Hyde	25.28	Lowell	19.96
Average	25.00	Average	18.50

Mule spinners in English cotton mills are paid $1.57 per day; in New York $1.32; in New Jersey, $1.40; in Massachusetts, $1.25; in Vermont, $1.20.

Wool sorters in England are paid $1.20 per day; in North Carolina, $1 per day; in New Jersey they get only 80 cents per day.

Wages, in cents, paid for weaving 1 pound cotton cloth: Fall River, 6.907; Lowell, 6.882; Providence, 6.44; England, 6.962.

Again, I quote from the table of wages found on page 2388, volume 2, of the report of the United States Tariff Commission, which I think conclusively proves that countries which have a high protected tariff do not pay high wages:

Occupations.	Germany. Protection.	France. Protection.	Belgium. Free trade.	England. Free trade.
Bricklayers	$3.45	$4.00	$6.00	$8.12
Masons	4.00	5.00	6.00	8.16
Carpenters	4.18	5.42	5.40	8.25
Painters	4.60	4.90	4.20	7.25
Plasterers	4.35	.....	5.40	8.10
Blacksmiths	3.90	.....	4.40	8.12
Cabinet-makers	4.95	.....	4.80	7.70
Dyers	3.30	.....	.....	7.00
Weavers	3.00	.....	.....	5.40
Grinders in glass-work	4.87	.....	.....	10.92
Common laborers	2.60	.....	3.00	5.00

It is a fact that Germany has a higher tariff than France, yet she pays less wages. France has a protected tariff, yet she pays lower wages than free-trade Belgium. England furnishes the best example in proof that the protective policy is rather injurious than beneficial to labor. Fifty years ago, when England had a high protective policy, her laborers did not receive two-thirds the wages that are paid to-day. If we want more evidence on this point eminent Republicans will furnish it. I submit the following:

As Secretary of State Mr. Blaine made a report on English and American labor, and thus summed up his conclusions:

"Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor. If this should prove to be a fact in practice, as it seems to be proven from official statistics, it would be a very important element in the establishment of our ability to compete with England for our share of the cotton-goods trade of the world."

Hon. WILLIAM M. EVARTS, another Republican Secretary of State, examined the same subject and reached the same conclusion (Report on labor, Forty-sixth Congress, page 37):

"One workman in the United States, as will be seen from the foregoing extracts, does as much work as two workmen in most of the countries of Europe. Even the immigrant from Europe attains this progressive spirit by a few years' association with American workmen."

Finally, Secretary Frelinghuysen, under the Arthur administration, collected and arranged statistics which fully demonstrated the soundness and correctness of the conclusions reached by Messrs. Blaine and EVARTS.

These statistics show that American labor is cheaper and worse paid than the labor of England.

Mr. EVARTS and Mr. Blaine had shown that by exercising greater skill and working longer hours our operatives do "from one-and-a-half to twice as much work as the average European workman." (EVARTS's Report, May 1879, page 36.) Mr. Frelinghuysen declared that "in the matter of wages America is as cheap as Eng and." We quote one of the tables on which he based this conclusion. It gives the amount of wages in cents paid for manufacturing a certain quantity of cloth:

Fall River	6.907
Lowell	6.882
Rhode Island	6.422
Pennsylvania	6.440
England	6.962

This table shows that the average wage paid in England for producing any fixed quantity of cloth is higher than the average wage paid in the manufacturing centers of the United States for doing the same amount of the same work.

Mr. Frelinghuysen also shows that the total cost of manufacturing this fixed quantity of cloth is actually less in Rhode Island than in England, the proportion being Rhode Island 11.99 to England 12.16.

Why, then, can not we compete with England? Why does England shut us out from foreign markets and hold the trade of the world against us? Let General Grant answer the question. (Seventh annual message.)

"I would mention (for freedom from taxation) those articles which enter into manufactures of all sorts. All duty paid upon such articles goes directly to the cost of such articles when manufactured here, and must be paid for by the consumers. These duties not only come from consumers at home but act as a protection to foreign manufacturers of the same completed articles in our own and distant markets."

What could be plainer than this elucidation of the case? We have Messrs. Blaine, EVARTS, and Frelinghuysen to show that our labor is as cheap or cheaper than the labor of England. Then we have President Grant to show that we are protecting English manufacturers by taxing the raw materials used by our own.

But grant that wages are some higher here than in Great Britain. What avail is that when the cost of living here is much higher? We find from the report of the Commissioner of Labor that the average expense of a family of mechanics (family of five workers, including children) in Massachusetts is $754.42. In Great Britain for the same family it is $508.35, or nearly one-third less. What advantage can it be to the laborer to raise wages 10 per cent. when at the same time you raise the expense of living 20 per cent.? No one is insisting that the wages in America are not higher nominally than they are in Great Britain, but the result is what we are looking to. What does the laborer have left at the end of his year's service? is the question to be answered. I submit the following compiled report of the United States consul abroad to be found in the Department of State at Washington, which reads as follows:

Conditions.	United States.	Great Britain.	France.	Germany.	Italy.
	Twelfths.	*Twelfths.*	*Twelfths.*	*Twelfths.*	*Twelfths.*
Ratio of potent food	10	7	5	5	5
Ratio of cost of living	6	12	10	9	8
Ratio of cost of clothing	9	4	3½	3	3½
Ratio in mode of living	6	2	4	2	1½
Ratio in thrift of saving	6	5	6	10	6½

It will be seen by this table that the cost of living in the United States is higher than in either of the other four countries named. These are the facts and figures in the case, and they can not be gainsaid or impeached, but are absolute verities. Now what is the matter with your pauper labor of Europe? But the question is asked, "Why, then, does the foreign labor come to this country if the wages are not higher here than in Europe?" Robert G. Ingersoll, who has a trifle more faith in the Republican party than he has in Christianity, asked this question at a public meeting in New York lately, and the papers stated that the audience cheered.

The following table, taken from the census, shows the number of inhabitants to the square mile in various countries, and will to some extent answer this question:

	Inhabitants to the square mile.
Belgium	482
France	187
Germany	216
Great Britain and Ireland	290
Italy	262
Netherlands	313
Portugal	124
Switzerland	183
United States	14

The crowded condition of Europe as we see by these figures renders it impossible for people to secure homes in the Old World. But I suppose our friends will insist that the tariff is the cause of all this. But the question of immigration can be answered in another way, in the same manner the Irishman answered the question, by "asking another." Why have the thousands of people in the last eight or ten years removed from the East and from the great States of Iowa, Illinois, and Ohio to still other States and Territories farther West? The following figures, taken from the census of 1880, I think will fully answer the question:

	Inhabitants to the square mile.
Connecticut	128.5
Illinois	55.0
Indiana	55.1
Iowa	29.3
Massachusetts	221.8
New Jersey	151.7
New York	106.7
Rhode Island	254.9

The following are the figures in the Western States:

Colorado	1.9
Dakota	0.9
Idaho	0.4
Montana	0.3
Nebraska	5.9
Nevada	0.6
New Mexico	1.0
Oregon	1.8
Washington	1.1
Wyoming	0.2

The very same reason exists for the foreigner coming to our shores that there is for our people to leave the more densely populated States and go further West. "The course of empire westward takes its way," where the mountains are full of mineral wealth and where there are millions of acres of productive land waiting for the plow, and where the homes for homeless millions are to be had for the taking. But I suppose this will all be attributed to the beneficent tariff law. Away with such nonsense; the people are tired of it, and will no longer be deceived. The difference of wages between United States and England is not so great as between States of the Union. Colorado pays wages three times as high as North Carolina, Dakota twice as high as Alabama, California twice as high as Massachusetts, Illinois higher than Virginia.

If there is any truth in the complaint of our Republican friends about high wages, it seems to me that it is time for some of our most prosperous and highly respected States to raise the cry against their less fortunate sisters. The fact is that it is the condition of low wages and not high that needs protection. High-priced labor is often the cheapest, and an industry employing it can take care of itself. Although common labor in India costs only 10 cents a day, yet the cash outlay for constructing a railway is as great as it is in the United States. The iron mines of Russia are worked by serfs at 7 cents a day, and yet it costs as much to make a ton of pig-iron in Russia as in England. In India it takes one day with wages at 10 cents to make by hand one yard of gunny cloth, but in England a loom will make 100 yards in a day, and though the wages there should be $2 a day the cost of labor there is only one-half as great as it is in India.

The fact is that American labor is the most productive in the world and is really as cheap as any labor in the world. The argument then that a high tariff makes high wages and therefore that foreign labor comes to this country is no argument at all, unless you believe in Tom Corwin's axiom in support of protection, "The bigger the fool the better the argument." But I can tell the gentlemen why some of the foreign labor comes to this country. A Republican Congress in 1864 enacted what is known as the "contract labor law," which legalized importation of pauper labor from Europe to compete with American labor and authorized a specie of servitude in our free Republic which was as disgraceful as it was despicable. I read the second section of the act:

SEC. 2. *And be it further enacted*, That all contracts that shall be made by emigrants to the United States in foreign countries, in conformity to regulations that may be established by the said commissioner, whereby emigrants shall pledge the wages of their labor for a term not exceeding twelve months, to repay the expenses of their emigration, shall be held to be valid in law, and may be enforced in the courts of the United States or of the several States and Territories; and such advances, if so stipulated in the contract, and the contract be recorded in the recorder's office in the county where the emigrant shall settle, shall operate as a lien upon any land thereafter acquired by the emigrant, whether under the homestead law when the title is consummated or on property otherwise acquired until liquidated by the emigrant; but nothing herein contained shall be deemed to authorize any contract contravening the Constitution of the United States or creating in any way the relation of slavery or servitude. (United States Statutes at Large, volume 15, 1863-'65.)

A Democratic House of Representatives repealed this entire act in 1885, and a Democratic President approved an amendment to the act repealing it, which made the repealing act more effective in prohibiting the importation of the pauper labor of Europe under contract to perform labor in the United States. But not only this, sir, but when our Republican friends secured protection from foreign competition they at once entered into the free-trade markets of the world to buy their labor. This is proven by the sworn testimony of Gilbert B. Whitman, agent of the Amory Manufacturing Company of Manchester, N. H., an establishment engaged extensively in the manufacture of cotton cloth. These works at the time the testimony was given, in 1883, had only been running three years. This was started as a protected industry. Let me read from the examination as contained in the report entitled Labor and Capital:

Q. What is the character of your employés?
A. About one-third of our help are Canadians; the remainder are of mixed nationalities, the Irish element preponderating. Then come the English, the Scotch, and the German.
Q. What proportion of them are Americans?
A. Out of the eight hundred operatives, probably we have eighty Americans.—*Labor and Capital*, volume 3, page 28.

Volumes of testimony to the same effect can be produced, but I deem this sufficient to silence the hypocrisy of the Republican leaders, who claim that they are the friends of the laborer. No, they are not honest in their claims in favor of American labor, but are in favor of a high protective policy so that a certain class of manufacturers, who generally vote the Republican ticket and contribute liberally to the campaign funds of that party may become rich at the expense of American labor.

Do these protective manufacturers pay better wages for labor than other industries which are not protected. Who ever heard of a manufacturer going out and hunting a high-priced laborer when he could get a low-priced one who would perform the same work as promptly and as skillfully? Have you ever heard of a protective manufacturer calling his laborers around him at the end of the year and dividing with them his enormous profits? No, the millionaire gets his labor in the open markets of the country as cheap as possible, and then spends his ill-gathered gains hobnobbing in Europe, aping the nobility of that country. Yes, these protected manufacturers under this famous tariff law enrich themselves at the cost of labor. But our Republican friends on this floor do not mention this fact. They do not care to tell the other side of the story. They are like the Pennsylvania justice of the peace who said "he only wanted to hear one side of the case as the other side always bothered him."

All manner of subterfuge and argumentation is resorted to by the learned men on the other side of the Chamber to prove that protection makes high wages. They even put their sophistry into a syllogistic form and attempt to prove in that way that protection is the cause of high wages in this country. They put it in this way: "We have protection in America; we also have high wages: therefore protection is the cause of high wages. England has free trade; England has low wages: therefore free trade is the cause of low wages." By this form of logic these gentlemen can prove anything. It is neither philosophy nor logic. I will state a syllogism that will prove the absurdity of it, which I find in one of the old books on logic: "A cat can climb a tree; a squirrel can climb a tree: therefore a cat is a squirrel." Is this true? No, and yet it is as literally true as the two first propositions put by our Republican friends. But I will state it in another form. England has an established church; England has low wages: therefore an established church is the cause of low wages. America has no established church; America has high wages: therefore the absence of an established church is the cause of high wages. This is not true, and yet this is the kind of sophistry these gentlemen are resorting to in order to bolster up the scheme of legalized plunder.

By the census of 1880 we find the number of hands employed in manufacturing and mechanical industries of the whole country was 2,735,595, and the amount of wages paid them $947,953,795, an average of $346 each. Now, it will be remembered that this is under a high protective policy of 47 per cent. The man who gets $346 a year has a wife and family and is obliged to pay out that sum for the support of himself, wife, and family. It is fair to say that the duty on the necessaries of life is 33⅓ per cent. The man, then, who earns $346 a year is obliged to pay out for the support of himself and family $115.33, or one-third of his earnings a year by force of the tariff law. That is, because of the tariff law he is compelled to pay more for the necessaries of life than he would if there was no tariff on the necessaries of life. Yet our Republican protectionists pretend to be the friends of the laborer. And yet they are willing to take from him by an unjust law $115.33 each year. What does this mean to the laboring man? It means robbing him of one-third of his time. He has been a slave in bondage to the law one hundred and four days in the year as much as the criminal serving out his term by breaking stone on the "rock pile."

For that period of time each year he is held in bondage to the law, as much so as ever was a slave in the South. The slave was held by law and was compelled to labor for his master. The tariff law now compels the enslaved laborer each year to work 104 days or till he earns $115.33, and to whom does it go? Why, to the manufacturer. One-third of the laborer's life is not his own. What does the loss each year of $115.33 to the laborer mean? It means so much taken from the support of his family; so much of his life and time owned by others. How much of the comforts of life would this sum buy for his family! How far would it go to educate his children! If he was not robbed of his money—I say robbed, and I mean it—how much better food and clothing could he furnish himself and family! How much better care could he take of himself and his people, and perhaps lay up something for a rainy day! But high tariff, instead of raising wages, pauperizes labor.

Under its benign influence year by year the laborer is compelled to toil on without being able to save a dollar, until old age settles down upon him, when he becomes a pauper, and finally charity furnishes him with a grave and bankruptcy for his winding-sheet. And yet under all this the Republican party is the friend of labor. Sir, I have not overstated this matter. The facts and figures that I give warrant the conclusion. Ah, when will the scales fall from the eyes of the laborer so that he will see his own interest? When will the laborer discover that a protective policy and the Republican party are not his friends? General Harrison, the candidate of the Republican party for President, it is said by the public press, declared in a speech at Indianapolis, when he was assisting the railroad companies in their efforts to pauperize labor, that "A dollar a day is sufficient compensation for a laborer." I do not know whether this is true or not, but as a matter of fact this is all that is paid to a great many laborers in this country. Now, is it possible for a laborer to live on a dollar a day? I assert that it is not, and I know what I am talking about.

I am myself from and of the laboring classes and I have a right to speak in behalf of labor, not of any organized body of labor, but the man who holds the plow and the man who swings the ax and the shovel. For more than a decade I was engaged in these pursuits myself. And I will truthfully say that I have a profound feeling of respect and sympathy for the toiler in the field, on the road, in the mine, and in the shop, and I hope I may never outlive that feeling. And I am now and here in the Congress of the United States prepared to state and to prove that a dollar a day is not a just compensation for labor, General Harrison to the contrary notwithstanding. Mr. Chairman, let us for a moment consider this proposition of General Harrison, if he said it: A dollar a day, three hundred and twelve working days in the year, of which perhaps forty days are rainy or unfit for work. Now, this would leave two hundred and seventy-two days in the year, and if the laborer should be sick it would still make it less. But we will say two hundred and seventy-two days, which would make $272 to support a man, his wife, and children.

As I have above shown, the average tax on the necessaries of live is at least 33⅓ per cent., so here is one-third of his $272, or $90.66, which he is deprived of to protect American industries. This will leave $181.34 for his year's work. Now, he must pay $5 a month rent, or $60 a year. Add to this his fuel and light, which would be $25 a year; meat for himself and family, say at 15 cents per day, would be $54.75 a year. This would make $159.75 per year, leaving him $21.59 to buy clothing for himself and family, all his groceries and provisions, to buy books to educate his children, and other necessaries, all for $21.59.

This sum would not support a pauper in an almshouse or winter a Fiji Islander. Yet this is the condition of things in proud America, where the Republican party on this floor claim that the wages are higher than in any other country in the world, and General Harrison fixes it at a dollar a day, and says that is enough for a laborer. He is now a

candidate for President and asking laborers to vote for him so that he can enact a law that there shall be no strike by laborers and that their wages can be fixed by law. Will the laborers of the country support him? We will see. General Harrison clearly favors pauper labor of Europe that we hear so much about. When he was Senator of the United States, in 1882, he voted fourteen times in one form or another in favor of the immigration of Chinese pauper slave-labor to this country. The wages of labor in this country was too high for him. He voted in favor of the immigration of Chinese labor to this country to compete with our free-trade labor. That Chinese race which is irrevocably devoted to their paganish idolatry, superstition, and practices. They are entirely unassimulated with our people; blind to the progressive spirit of our race; unappreciated of our institutions, and deaf to the demands and influence of Christianity, and their presence among us is only a corruption of society, debasing to morals, and degrading to our labor.

General Harrison tries to explain his vote now on the ground that the act was in violation of existing treaties, and President Arthur vetoed the first act passed by Congress on this question prohibiting the immigration of Chinese labor, which was mainly the cause of his failure to receive the nomination for President at the hands of his party in 1884. And after November that party will wish that they had defeated the nomination of General Harrison on the same ground. On May 6, 1882, the act prohibiting Chinese immigration was approved, which is the law to-day, and we have not yet discovered that it has been in conflict with "existing treaty." General Harrison voted against this act in all stages of its proceedings when present, the history of which will be found in the CONGRESSIONAL RECORD of April, 1882. What was the effect of that act for the passage of which all Democratic Senators voted and a few Republicans? The following table, compiled from the report of the Bureau of Statistics, will show the extent of Chinese immigration to the United States:

	Number.
1881	20,727
1882	35,614
1883	28,381
1884	53
1885	17
1887	3

It will be seen by this table that after the act was passed immigration almost ceased at once. Yet General Harrison opposed the passage of this act so that they might have immigration of this slave race into this country in order to reduce the price of labor, and thus keep the "contract-labor law" of 1864 in force. The Republican party have always favored the immigration of pauper labor to our shores; and when I speak of the Republican party in this connection and other connections I do not mean the rank and file of that party, for I am glad to say that among them I have many warm personal friends whom I hold in the highest esteem and who I personally know are good and true men, and I believe they would not by their vote advance this system of iniquity that I have mentioned, but they are like the person mentioned by the blessed Master in the good book, "they know not what they do." But what I mean by the Republican party is the machine that is trying now and has heretofore run the Government in the interest of monopoly, wealth, and the "favored class." But to return to what the late Republican platform at Chicago calls the "American system of protection." It declares that "the protective system must be maintained." I suppose the Republican party will try to maintain this system, which is the most unjust and nefarious system that could possibly be devised by the mischievous ingenuity of man; a system borrowed from the robber Moorish pirates who lived at a town called Tarifa in the Strait of Gibraltar, which leads into the Mediterranean Sea; a system that can be used for the enrichment of the few and the impoverishment of the many; a system provocative of the crimes of fraud, theft, bribery, and perjury; a system corruptive of officials and debauching to business men, and a system under which the present tariff has degenerated into a mere disgraceful squabble for protected pelf.

The iron lords of Pennsylvania join hands with the merchant princes of Massachusetts, and they with the lumber barons of Michigan, and they with other protected pilferers for the conjoined robbery of labor and all unprotected industries of the country. If there was not a felonious combination between aggregate protected interest, no tariff bill would ever become a law.

It is a system by which wealth, which, as is shown by the last census, amounts to the enormous sum of $43,000,000,000, does not pay one cent for the support of the Federal Government; and a system that a man worth a million of dollars pays no more for the support of the General Government than a man worth $200, provided both eat and dress equally well. And this is what they are pleased to call the "American system." Now, what is the consequence of non-contribution of the countless wealth for the support of the General Government? The result is that the tax for such support falls with unusual severity on the laborer and the farmer. It is a more grievous hardship than any of which our Revolutionary fathers complained. It is an injustice that no other country of the civilized world is guilty of. It is iniquitous, and should be removed. At one time we had a tax on the wealth of this country. The following table will show the character of the tax, the amount collected, and when:

Year.	Character of tax.	Amount.
1866	Income tax	$72,982,159.03
1868	Gross receipts, express companies	671,949.62
1866	Gross receipts, railroad companies	7,614,449.13
1867	On gross receipts of premiums or assessments made by insurance companies	1,326,014.38
1866	Gross receipts other than express, railroad, and insurance companies	1,832,490.00
1882	On deposits of State banks and private banks and bankers	4,096,102.45
1882	On capital of State banks and private banks and bankers	1,138,340.87
1882	On deposits of national banks	5,521,927.47
1877	On capital of national banks	660,784.90
1870	On legacies and successions	3,091,825.00
1867	On articles of luxury	2,116,674.00
1870	Stamp taxes	16,544,043.00
1866	Special taxes other than those relating to spirits, beer, and tobacco	14,144,418.00
1870	Sales other than those of spirits, tobacco, wines, etc	8,837,395.00
1866	Passports	31,149.00
1866	Tax on manufacturers, which was paid by capital	64,827,165.70
	Total	205,436,886.55

These figures are official and the tax was laid on those who could best bear it. But what has become of all this tax? Repealed by a Republican Congress long ago, while the same Congress retains a tax of 104 per cent. on the poor man's blanket; a tax of 91 per cent. on the common cloth that the laborer wears, and an average of 47 per cent. on the necessaries of life. And yet the Republican party claim to be the friends of the laborer. Can any one tell why the taxes mentioned in this table were repealed? Can any good reason be assigned for it, and still retain the tax on labor? The laborer will answer it next November.

I will mention another instance to show that the Republican party is not a friend to the laborer. In the Chicago platform they say "We demand a reduction of letter postage to 1 cent per ounce." What would this mean if it should become a law? The mail service is scarcely self-supporting now, and if such a law were enacted there would be a shortage of nearly a million of dollars to be made up by taxes, that is, by tariff tax and under this tariff system. The putting of $1 in the United States Treasury means the people must pay $6. In other words, the people would have to pay $6,000,000 in order to get $1,000,000 in the Treasury. I have explained how this is done in my former remarks on tariff in the present session of Congress, and have given the figures, and I will not repeat them here. If the postage was reduced who would be benefited by it? The laborer or farmer? No; the manufacturer, the princely merchant, and the banker. Many merchants and bankers send out fifty letters a day each, and the postage at 1 cent each on fifty letters would amount to $182.50 per year, or that much saved to each of them. How many letters does the laborer and the farmer send through the mail? Fifty cents would pay the whole bill for a year. In other words, the farmer would save 25 cents a year while the banker and merchant would save $182.50. But when the tax-collector comes to make up the shortage under the tariff system the farmer and laborer would have to pay just as much as the merchant and banker if they lived and dressed as well. And yet the Republican party is the friend to the farmer and the laborer. Go tell this story to the marines.

Again, the Chicago platform calls this tariff system an "American system of protection." I deny that it is American, and I appeal to history for the truth of what I say. I have neither the time nor inclination to trace the entire history of protection as it has existed among men and nations during all the past. But in some form or other it is as old as civilization itself, generally increasing in amount in every country as it has in this. The first tariff that we had in this country was in 1789, and the average duty was only 8 per cent. to protect our infant industries. In 1789 it was raised to 11 per cent., and two years later to 14 per cent., and now after ninety-nine years of repeated increases we have an average of 47 per cent. to protect our still infant industries. This dear tariff system of ours always takes but never gives; always levies but never contributes.

The first great industry of Great Britain was the wool industry and the chief article of export. The seat of highest dignity in the House of Lords is the "wool-sack," the seat being originally a sack of wool. In 1275 Parliament levied a tax on each sack of wool exported. A later act followed that no wool should be exported or cloth imported, and this continued to 1825. To help this infant industry, in 1678 an act was passed that every corpse should be buried in a woolen shroud. In 1651 the navigation act was passed, by which foreign commodities could only be imported into England in British ships, and prior to that time the law applied to exports. This was to build up the infant industries. In 1824 foreign wheat was totally prohibited from entering the United Kingdom until the price had reached 70 shillings per quarter. In 1815 the corn law was passed, and so indignant were the people that they had to be dispersed by armed force, and the House of

Commons itself had to be protected by soldiery when the bill was passed. I quote from the history of Europe as it is recorded at that time:

In 1817 hundreds of thousands of the working classes were brought to the brink of starvation by wheat at 112 shillings per quarter. In 1821 thousands of farmers were brought to absolute ruin by wheat at 39 shillings per quarter, their rents having been fixed on the basis of high prices.

Yes, sir, you will notice the two classes that suffered then under a high protective tariff of England. The working classes were brought to the brink of starvation and the farmers to absolute ruin. These are the same two classes that suffer here to-day because of high tariff. The historian further says:

Up to the year 1824 our system had been strictly protective. We had all but prohibited the admission of foreign articles of food; we had by excessive import duties discouraged and curtailed the importation of all other foreign commodities; and we had practically by our navigation laws restricted our foreign trade to the use of British ships. By the close of the year 1849 we had adopted a diametrically opposite policy. We had admitted foreign grain free of duty, except a small nominal one for registration purposes; we had abolished import duties on nearly every foreign article; and we had repealed those old navigation laws on which our maritime prosperity had so long been supposed to depend.

The historian further says:

In 1824 the fiscal regulations by which our commerce with the world was controlled and restricted stood as follows: 1. There was hardly an article obtainable from abroad that was admissible here without the payment of import duties, always heavy, sometimes excessive, and in certain cases all but prohibitory. It mattered not whether it was a raw material or a manufactured product, whether it was an article of luxury or of universal consumption, whether it came in masses, like cotton, or in driblets, like orchilla, everything foreign which an Englishman might use was withheld from him till its cost had been enhanced by a customs duty. The tariff-list of the United Kingdom formed a tolerably complete dictionary of all the products of human industry. Under this high protective policy in England at that time—

The historian further states—

the laboring population was reduced to the greatest extremity between the upper millstone of high-priced food and the nether one of diminished employment and falling wages. There were heard riots in both the agricultural districts and the manufacturing centers. One person in every twenty was a pauper, and the annual expense of pauperism, which was paid from the public purse, was very heavy. So hard were the conditions of a livelihood that thousands of children were taken from the sports and occupations proper for youth and driven to exhausting labor for a pittance in the mines and factories. The people refused further to endure these oppressive laws, and under the leadership of Richard Cobden and John Bright in 1846 the corn laws were repealed, and this was the removal of the keystone in the arch of the protective policy.

England to-day has a tariff for revenue only—not free trade—which has existed for thirty years. All duties are collected on sixteen articles only and 98 per cent. of it is derived from only five—fruit, spirits, tea, tobacco, and wine. This tariff yields a revenue of about $100,000,000 annually. Added to this is an excise tax which makes up the total of what the people of England pay in tariff taxes. Thus it will be seen that Great Britain had a protective system that almost amounted to prohibition for hundreds of years, and yet we are told that the protective system is an "American system." This is not the truth. The Revolutionary war was brought to get rid of this system. The soul of war was purely commercial.

In 1651 the navigation laws imposed upon the colonies, requiring both imports and exports to be carried in British ships, and they were compelled to trade with England. That is, they were prohibited from going into the open markets of the world where they could buy the cheapest and sell where they could sell the dearest. This with the stamp act and other matters brought on the Revolutionary war which resulted in American independence, and now, after more than a hundred years, the Republican party in this Government is attempting to enact similar laws. No, sir, this system of legalized plunder is older than our Government. The student of history will find it recorded in the written annals of France previous to the great revolution that for the time being carried the government down in blood.

The royal sovereigns of that oppressed country, in their desperate efforts to raise means to support a corrupt court and wanton wars, were wont to farm out, as it was called, all moneyed interests to certain favorites, made such, generally, by the king's prostitutes. To one man was given the sale of a certain article, and while this creature paid a small percentage to the King, he kept to himself millions wrung from the unhappy consumers. We have precisely the same thing with a difference or variation in our present system. The difference seems to be that the King gave the right to plunder the individual; we give it to a class. In other words, our system is not so much a protective system as it is a system to raise and collect $1 for the Government and $6 for the favored classes, labor always having to pay the tax. The farmer and the laborer are especially the victims of the protective system. The Republican party deceives the one by the words "home market" and terrorizes the other by the words "pauper labor of Europe." Does not the farmer know, if he will think at all, that there can be no home market for all his products? Does he not know that the manufacturing States produce all the breadstuffs they consume? These States do not now, and never have furnished a home market.

Does a single one of these States pay a cent more for a bushel of wheat than it can be sold for at Liverpool? The fact is, and it can not be denied by any one in this House, that the price at Liverpool fixes the price in this country, at San Francisco, New York and Chicago; and strange to say, Liverpool is in "free-trade" England. The morning dispatch from Liverpool to New York fixes the price of every bushel of wheat sold in America that day. These are suggestive facts. We have had a high protection for twenty-seven years. Yet free-trade England fixes the price of the farmer's surplus and that furnishes him the price in the home market. Last year the farmers of this country sold in Europe of their farming products $525,000,000.

Now, suppose these farmers would wish to invest this sum in flannel in England, and bring the goods home with them to be used to clothe their families; what would be the result? When they would return to New York and reach the custom-houses the Government official would meet them and say, "There is a law of the United States which imposes a duty at the rate of 72 per cent. on these goods, and before you can pass through this port, it must be paid." What then? Why, they would have to pay the officer 72 per cent., which would amount to the snug sum of $378,000,000, or would return with the goods to England. It is true, if they paid that amount to the officer, the money would go into the United States Treasury and be used to defray the expenses of the Government. But now suppose, in place of purchasing the goods in England, they bring the money back with them to this country, and then they will be compelled to purchase their flannels here.

But what is the result? Because of high tariff they must pay 72 per cent. for the flannels here more than what they could purchase them in England for, less, of course, the freight. They are compelled to purchase here, for their families must be clothed; and in that case who gets the 72 per cent., or $378,000,000? Not the Government, if they are domestic manufactured goods, but the protected manufacturer—the favored class. Let me prove this in another way: The census of 1880 shows that the manufactured products of this country in 1880 amounted to $5,369,579,191; about 10 per cent. of this amount was exported, leaving $4,832,621,722 to be consumed at home. About 80 per cent. of this was dutiable goods, and 20 per cent. on the free-list. The dutiable then would be $3,866,097,017. The value of dutiable merchandise imported in this country, as shown in the census of 1880, was $419,506,091. Therefore the amount of dutiable goods consumed in this country that year was $4,285,603,108. Now, according to the report of the Bureau of Statistics, the average rate of duty on imported goods consumed by the farmer is 43⅓ per cent., and there was $4,285,683,108 worth of goods. The amount extorted from the consumers by the tariff was $1,299,120,000. Our population is about one-third farmer, so the farmers and their families consume one-third of these goods, which would be $433,340,000.

Any schoolboy can take the report of the Bureau of Statistics, which are official, and figure out the results and show how the farming community is being robbed by this nefarious system which our Republican friends are pleased to call the "American system." By the census of 1880 it is shown that there are about 2,623,089 persons engaged in this country in manufacturing and benefited by the tariff law, and it would be better for the farmers to support these persons in idleness than to submit to the present robber tax. To board this number of persons at $3 a week, country prices, would only amount to $409,201,874, while the way it is now the farmer has to pay to the manufacturer, as I have shown above. The trouble with our farmers is they work too much and think too little. The poet has said what I regard as a truism:

For just experience tells, in every soil,
That those that think must govern those that toil.

In the present case while the farmer and wage-worker are toiling to better their condition, the vampire of wealth is thinking and devising some plans under a cunningly formal tariff to rob them of the fruits of their labor, and by sophistry and false philosophy to delude the one class with the hope of a home market and the other with the threats of pauper labor of Europe, and thus throw sand in the eyes of both classes to induce them to support the protective policy. The home-market idea as addressed to our farmers is purely a myth, and has no foundation in fact whatever. And the pauper labor of Europe is simply a scarecrow, for paupers do not labor here or in Europe, but are kept in almshouses. It is time that the American farmer and wage-worker should say with emphasis that these outrages on their respective callings should no longer exist. That there was neither reason nor justice in the fact that only 2,623,089 people, the pets of protection, should be favored at the expense of 57,376,911, the balance of the people.

I wish now, Mr. Chairman, to speak of certain special industries in the light of official statistics and facts, and see how a high tariff has affected the farmer and wage-worker for the past twenty-seven years.

LUMBER.

We will take lumber, for example. We have had for a long time a protective tax on lumber of $2 per thousand feet. (In the Mills bill it is placed on the free-list.) Now, when we remember the various uses to which lumber is put, to build houses for the poor laborers, barns

and corn-cribs and fences for the farmer, and in various other ways to administer to the comfort of the common people, the iniquity of this tax will be seen. Let us take the figures in the saw-mill business, for example. By the census report of 1880 we find that there were 170,956 hands employed in this industry. The total amount paid in wages was $31,845,000, or an average of $215 per hand, or $1 per day. The cost of material was $146,155,000; the capital invested was $181,100,000, and the total product was $233,268,000. Now let us see what was the net profit to the mill-owner.

Wages paid	$31,845,000
Cost of material	146,155,000
Interest at 6 per cent. on capital	10,866,000
Total	188,866,000

This is the total expense. Let us deduct this from the total product, which was $233,688,000, and we have left a net profit of $44,802,000, or nearly 25 per cent. on the capital invested per annum for the mill-owners. In other words, 147,956 hands employed get $31,845,000 or $215 per year or $1 per day, while the 26,911 mill-owners get $44,802,000, or 25 per cent. A very fair division of capital and labor I suppose our Republican friends will insist. No wonder the mill-owners live in palaces and the laborers in hovels. This shows the enormous profits the favored class get and the pittance paid the laborer. What a beautiful thing this high tariff is to raise the price of wages, and how gloriously it sustains the assertion of the Republican party that high tariff raises the price of labor. But the chief iniquity of this protective industry is not the tax, but it is the premium it pays to destroy our forests. It is a well-known fact that the destruction of forests reduces rainfall and causes drought at one season of the year, and leads to devastating freshets at others, and induces excessive cold in winter and heat in summer. But the Republican party forgets every interest but the interest of the capitalists. They look to great return for capital, as in this case nearly 25 per cent. per annum, and keep the laborer at starving wages, $215 per annum.

IRON AND STEEL.

I will give some figures on this industry, and we will see to what conclusion they lead. In 1879 the duty on pig-iron was $7 per ton. There was manufactured in this country that year 2,301,215 tons. The importation of that year was 87,576 tons. The Treasury of the United States received on this 87,576 tons of pig-iron imported $7 per ton, or the sum of $613,032. But the Pennsylvania iron lord, because of the $7 per ton tariff, sold his 2,301,215 tons of pig-iron for $7 per ton more than he would if there was no tariff, so his bounty was $16,108,505. Will the farmer and laborer see this? And they certainly will if they open their eyes and let the light come in. Here are actual facts given. The Government gets $1 and the Pennsylvania lord $26; and who pays this vast sum to the Pennsylvania manufacturer? Clearly the farmer and the laborer. It might be interesting to know what wages these persons pay for labor who receive this bounty of $16,108,505, for bounty it was. By turning to the census of that year we find the wages paid was $455 per year, or if they would work every working day in the year it would amount to $1.45 per day. Glorious wages! especially so when he was compelled to pay about one-third of it back by reason of the tariff law to the protective industry or some other persons. But I will try another industry.

In 1880 there were 805 iron-ore producing companies in the United States, and their output was 7,006,000 tons, five-sevenths of it in the four States of Michigan, New Jersey, New York, and Pennsylvania. The value of the output was $20,470,000; the value of materials used in producing it was $2,896,000. It took 31,668 men and boys to produce this net value of output, the average being $554 to each laborer. But the total wages paid was only $9,538,000, or an average of $300 to the man; so that the companies made a profit of $254 of the year's labor of every man and boy in their employ. The laborers actually produced each $554 a year, but their protected employers took $254 of it for their share and allowed each man $300, or less than $1 a day, to live on. Now let us see how it was with iron and steel makers. There were 1,005 steel companies in the country, having an aggregate capital of $230,971,000. Their total product was $296,557,000; the value of all material consumed, including ore, was $191,297,000; the number of hands employed was 141,000, and the aggregate wages paid out was $55,476,000. Deduct the cost of materials used from the value of the gross product of 141,000 hands. This is $746 per hand. But the total amount of wages paid was only $55,476,000, or $393 per hand. Each hand actually earned $746, but got only $393, and the companies made, therefore, $353 on the labor of each of their 141,000 hands, and their net profits over all expenses were 19½ per cent. on their total capital of $230,971,000. While the production of iron ore under a protective tariff of 40 per cent. is a good business, therefore the making of iron and steel under a protective duty of 48 per cent. is still better.

I will give one more year. In 1887 the tariff on steel rail was $17 a ton. The price of steel rail in Pennsylvania at that time was $39.50 a ton. In Liverpool it was worth $21.10 a ton, and the charge for freight and insurance between Liverpool and New York would be $2.50 a ton, and to this add the tariff and in New York the price of English rail would be $40.60 a ton. Had it not been for the tariff the English rail could have been sold for $17 less than this in New York, or for $23.60 a ton; so, because of the tariff the home manufacturer made the difference between $39.50, the price it sold for, and $23.60, the price it should have sold for. On an average it would have increased the price $13.53 a ton. The statistics of 1887 show the production of steel rail in that year was 2,049,638. The consumers therefore of steel rail for the year 1887 paid $37,731,602 more for steel rail than they would if there was no tariff, and this vast sum went into the pockets of the protectionists and as a bounty from the labor of the country, for labor pays all taxes. I have not time to give further figures, but you may take any one of the favored industries of this country and then go to the statisticians' reports and find the number of hands employed, the amount of wages paid, the capital invested, the cost of material and the value of the product, and by a simple process of figuring you will readily see that the manufacturer on the investment makes from 20 to 80 per cent., and even more than 100 per cent. in some of them; while the wages paid will average from $280 to $480 per year, just sufficient to keep soul and body together. Is this a fair division by capital with labor? No, I say, a thousand times no; but it is not a question of capital against labor, but a question of labor against robbery; labor against a vicious system that robs labor of its earnings, and the parties so engaged in robbery evade a prosecution under the criminal code of the State under the flimsy plea that it was done under "our American protective system." Away with such a system.

I will mention one other item in the Mills bill, namely, that of wool, which is placed by this bill on the free-list. This is the very soul of the bill, and if it becomes a law its author will be entitled to the everlasting gratitude of the American people. When the President called attention to this matter in his message, the "cry" of free-trade was at once raised. The person who raised this cry knew that it was an unmitigated falsehood.

Neither the President nor any member of the Democratic party in Congress or out of Congress has advocated free trade. Such a thing is impossible as long as we must raise over $200,000,000 per annum as tariff tax to support the Government, and no person has proposed, for the present at least, to change this system. But the most wicked, impudent, and lying statement of our Republican brothers is that a reduction of 40 per cent. will reduce the wages of the hands in the woolen mills. Let us look at the census report again. By the census report of 1880 there were employed in the United States the following number of hands in the woolen manufacture and the duty was 40 per cent.:

Males (above sixteen years)	75,459
Females (above sixteen years)	66,814
Children	19,284
Total	161,557

The wages paid during the year to these laborers were $47,389,087, or $295 each per year, or 91 cents per day. The value of material used was $164,371,551; capital invested, $96,000,000. The total value of the finished products was $267,252,913. Now deduct the wages paid, $47,389,087, from the value of the finished goods, and the labor is $219,863,826, and it is found that the wages are a little over 22 pert cent., while the manufacturer gets over 50 per cent. Let us state it in another form:

Wages paid	$47,389,087
Cost of material	164,371,551
Interest at 6 per cent. on capital invested	5,760,000
Total	217,520,638

This would be the total outlay. Let us deduct this from the value of the finished product, which we see is $267,252,913, and we have as the net profit to the manufacturer the sum of $49,732,275—a little over 50 per cent. clear gain, while they only paid their laborers the enormous sum of 91 cents per day, or $235 per year. Yes, high protection raises the price of wages with a vengeance. Will the farmer and the laborer understand how this favored class of manufacturers make $49,732,275 net in a single year, while the hands employed by them are struggling against starvation at 91 cents a day to support themselves and families? And not only this, but the tariff still robs the wage-worker of the one-third of the 91 cents so earned by having an average tariff duty of 33⅓ per cent. on the necessaries of life, as I have before shown. Nor will there be a decrease in the number of sheep in this country if wool is put on the free-list, as is claimed by protectionists.

By turning to the statistics compiled by Mr. Spofford, Librarian of Congress, we find the highest and lowest prices of wool from 1825 to 1886, inclusive. These figures show the lowest for wool reached since 1849 was 21 cents in 1881 under the highest wool tariff the country has ever known. The lowest price for 1879 was 27 cents; for 1880, 25 cents; for 1881, 21 cents; 1882, 37 cents; 1884, 33 cents; 1885, 28 cents; 1886, 30 cents. It is an incontestable fact that every time the tax on

wool has been lowered a rise in the price of wool has followed. In 1856 the lowest price of wool was 30 cents, and the highest 38 cents. The passage of the free-wool clause in the act of 1857 was followed in 1859 by an increase of the lowest price to 34 cents and of the highest to 45 cents. And as the lowest price since 1849 was reached under the exorbitant tariff of 1868, so after the change in 1883 the highest price in ten years (54 cents) was reached in 1885. Why should not wool be placed on the free-list? It would cheapen clothes, carpets, and blankets and give our mills work, as they have a capacity for 600,000,000 pounds, while we only produce in this country 240,000,000. It would give employment to our laborers and bread to their children. And what would free wool mean to my people in my district whom I have the honor to represent?

In 1880 we had in Illinois 1,037,073 sheep, or about 50,000 sheep to each Congressional district. Under the present high duty (43 per cent. on wool) we could not gain more than 50 cents a sheep because of the high tariff, or $25,000. My people will consume annually at least $5 worth of woolen goods per capita, and assuming that there are 180,000 in my district, which is a low estimate, we pay annually for woolen goods $900,000. Now, free wool would reduce these necessary articles of clothing at least 30 per cent. on an average, which would be $270,000. Now, take from this what the farmer may lose by putting wool on the free-list, as above shown, $25,000, and it leaves a net gain in the pockets of my people of $245,000 per annum. This is much below rather than above the correct amount. Now, who gets this vast sum of money? Any person in my district? No! The manufacturer in the East gets it, and it is supposed by some that they return a part of it to the Republican party for campaign purposes to still keep up this robber tax. No wonder that the farms in Illinois are mortgaged to the enormous sum of $620,000,000; no wonder that industrial paralysis threatens the whole country. One hundred and twenty-nine million dollars of idle money in the Treasury, extorted from the people by unjust laws for purposes of protecting our infant industries, among them the infant industry of wool, which is as old as the world itself!

Moses gives an account of its existence as an industry before his time, and in Exodus (xxii, 1) he says that the penalty for stealing sheep was the restoration to the owner four sheep for each one stolen; but under our tariff law there is a bounty of 43 per cent. offered for stealing wool and no penalties. Now, the account of Moses is not entitled to much consideration with our Republican friends, for their leader, Mr. Ingersoll, speaks to them of the "mistake of Moses;" so they have lost faith in that lawgiver and prophet; but profane history should teach them the antiquity of the wool industry. No, Mr. Chairman, this will not do. This iniquitous law that draws $129,000,000 from the channels of trade and business and holds it idle in the Treasury while the laborers are out of employment and their children are crying for bread should not remain on our statute-books a single day longer, and the party who inaugurated such a system should never be restored to power in this country. We want this system repealed, and in the future we want no Chinese wall placed around this country. In the Bible we find that Israel was most prosperous under King Solomon when he "traded with all nations."

I am for a free and unrestricted interchange of commodities with the whole world (with a tariff for revenue only); and in this way the nations of the earth will become friends and brothers instead, as now, pirates on the commerce of each other, and certain favored classes, by unholy laws, enriching themselves and oppressing the people. I wish to rise to that higher standpoint of the brotherhood of men where labor shall have an open field and a fair fight; where the robbery of the wage-worker by a high protective tariff will be unworthy of any member of the human family. I hope we will see the dawning of that day next November.

Aid the dawning, tongue and pen;
Aid it, hopes of honest men;
Aid it, paper; aid it, type;
Aid it, for the hour is ripe,
And our earnest must not slacken into play.

Mr. Chairman, if this is free trade then I am a free-trader from the topmost hair of my head to the lowest extremity of my feet, in every nerve and fiber of my being, and I will not be driven from it by the taunts of any set of men or party.

Now, Mr. Chairman, I have given fact and "official figures," so that a "wayfaring man though a fool may not err therein." And confronting this condition what is to be done? Is it not inevitable serfdom? Must we not change our laws? Let us be careful and make no mistake. The cause of liberty is the same the world over. It is the cause of humanity, and wherever enslaved humanity is to be found there we will have an ally. The man or set of men who command my labor by a cunningly devised law enslaves me; they rob me of my time and labor, and there is no escape from it but by a repeal of the law; and all patriotic hearts and thoughtful minds should seek the accomplishment of this end. And the exalted mission of triumphant democracy, which laid the foundations of this vast Republic, acquired every acre of its public domain, will not be accomplished until it secures to the farmer and wage-worker equal rights with all other classes under the law. [Applause.]

Protection or Free Trade—Which?

SPEECH

OF

HON. NELSON DINGLEY, JR.,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 21, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. DINGLEY said:

Mr. SPEAKER: In summing up his argument for the passage of the revenue bill which bears his name, the distinguished chairman of the Ways and Means Committee [Mr. MILLS] has laid great stress on the claim that it meets "a condition which confronts us," to wit, a surplus in the Treasury, and will reduce the revenues about $75,000,000, of which $19,758,845 will be on the additions to the free-list, $30,832,791 (it is claimed) on the reductions on the dutiable list, and the balance in the abolition of the tax on tobacco and on dealers.

THE SURPLUS.

There is no difference of opinion as to the desirability of reducing the revenue, although in view of the fact that the present annual surplus of revenue, excluding the amount required to be set apart for the sinking fund, will not exceed $60,000,000, the reduction should not go beyond that amount—especially when it is remembered that in three years nearly $222,000,000 of the 4½ per cent. bonded debt will become due—a debt which the Government should begin to anticipate by purchase while it has abundant means to do so. With a bonded debt of over $1,000,000,000 bearing interest at the rate of 4½ and 4 per cent., there has not been in the past, and there certainly is no excuse now for the Administration to keep a large surplus idle in the Treasury, or to loan it to pet banks without interest, as it is doing, when this debt can be purchased on terms that will yield the Treasury 2½ per cent. for its idle money. Certainly if the Treasury is withdrawing money from the channels of circulation with as great injury to business as the gentleman from Texas asserts, the Administration is to blame for not releasing the surplus by using it in paying the debts of the Government by purchasing its bonds.

MONEY FOR PENSIONS.

There is another reason why the reduction of revenue should not exceed $60,000,000, and that is the just demand for an increased expenditure for pensions for the survivors of the brave men who took their lives in their hands and went forth to defend the flag and the Union; a demand which, I regret to say, has been studiously resisted by President Cleveland and the Democratic majority of the House partly for the reason that they desired the surplus to be as large as possible in order to remain as a lever to overthrow our protective policy. But although President Cleveland by his veto power and the majority who control the House by their supremacy in the committees who practically determine what shall come before this body, may be able during the remainder of this session, and they have thus far, to prevent needed amendments to our general pension legislation, so as to deal more liberally and justly by the veterans who have a right to recognition at the hands of the Government which they saved, yet the time is not far distant when the people of this country by their votes will place at the head of the Government, and in the majority in this Hall, men who will recognize their claims.

THE SURPLUS EXCUSE.

Mr. Speaker, in view of the fact that the Administration has unnecessarily retained a surplus in the Treasury when we have outstanding interest-bearing bonds that can be purchased at a saving of 2½ per cent. of interest; in view of the fact that more than a year ago nearly all the Republicans and many Democrats desired to pass a bill abolishing the tax on tobacco, thereby reducing the revenue to the extent of $24,000,000, and Speaker CARLISLE refused to recognize any one for that purpose; and in view of the fact that such a bill could have been passed on any day since the present Congress assembled last December, it is evident that the Democratic leaders who control the House are not so anxious to get rid of the surplus as they are to use it as a lever to overthrow the protective policy of the United States.

While it is true that the bill which bears the name of the gentleman from Texas [Mr. MILLS] will reduce the revenue to the extent that it abolishes internal-revenue taxes and places articles on the free-list, yet it is certain that the $30,832,791 reduction claimed as the result of this lowering of duties will be largely offset by an increase of importations in consequence of the partial removal of the barrier which keeps out foreign importations and holds our markets for our own industries. I think it may be safely predicted that even if the Mills bill were enacted into law it would not reduce the revenues $60,000,000. And nearly every dollar of the reduction, outside of the amount secured by the abolition of the tobacco tax and the small re-

duction of the duty on sugar, would be obtained at the price of serious injury to our own industries and our own labor.

TWO METHODS OF REDUCTION OF REVENUE.

Mr. Speaker, this brings me to the exact point in issue between the two great parties in reference to revenue reduction. It is not, as the gentleman from Texas seeks to represent, whether there shall be a reduction of the revenue to the amount of about sixty millions—for both parties are in agreement on that—but as to the methods of reduction. On methods of reduction there is only one point of agreement, and that is as to the abolition of the tobacco tax; and if the Democratic leaders had been half as anxious to reduce the revenue as they pretend, they would have seized upon that point of agreement and presented and secured the unanimous passage of a bill reducing the revenue to that extent ($24,000,000) at the opening of this session.

THE REPUBLICAN PLAN.

In general, the Republican or protection plan of reducing the revenue, as indicated by the propositions which have received the almost unanimous support of the Republicans of the House while the bill has been under consideration in committee, embodies these points:

First. Abolition of internal-revenue tax on tobacco and dealers in tobacco, with perhaps the exception of cigars.

Second. Abolition of internal-revenue tax on alcohol used in the arts, manufactures, and medicine, without any reduction of tax on whisky or alcoholic liquors used for other purposes; for it should be remembered that on a motion made by a Democratic member to abolish the tax on whisky every affirmative vote came from the Democratic side.

Third. Such a revision of the tariff as will correct the inequalities which have arisen from decisions, errors in the act of 1883, or changed conditions; such as will place on the free-list articles that can not be produced in this country; and will maintain the American system of protection to home industries and labor, the more important points of which revision should include—

a. The reduction of the duties on sugar one-half, so as to make the duty on raw sugar about 41 per cent. the average of the dutiable lists, instead of 68 per cent. as proposed by the Mills bill.

b. The transfer of wool from the free-list, where it is placed by the Mills bill, to the dutiable lists.

c. The transfer of all other articles which can be produced in this country to the extent of our wants from the free-list, where they have been placed in the Mills bill, to the dutiable lists.

d. The adoption of specific instead of ad valorem duties, so far as practicable; the reduction of duties so far as it can be done without interfering with home industries; and the raising of duties where in any particular case it is found that home industries and labor are being injured by foreign competition.

Unquestionably a bill constructed on this plan of protecting home industry would secure a reduction of the revenue to the extent of $60,000,000—certainly as much as the Mills bill—and would give a dutiable list with an average duty as low as the 42½ per cent. which the gentleman from Texas [Mr. MILLS] informs us is the average of the dutiable list of the bill which bears his name, and which has received the almost united support of the Democrats of the House; because while the average duty on manufactured articles would be higher in a bill constructed on a protective plan than the average duty on such articles is in the Mills bill, yet this would be offset by the exclusion from the free-list of articles produced here and now bearing a low duty, and by the fact that the protective bill would impose no higher duty on sugar and rice—two articles of food as necessary as flour, of which we produce only a small part of our consumption—than on other articles, instead of the enormous duties of 68 and 100 per cent. provided by the Mills bill.

THE MILLS BILL.

Mr. Speaker, what I have said anticipates in part the serious objections to the Mills bill, which may be properly described as the Democratic plan of reducing the revenue.

The gentleman from Texas protests that it is not a free-trade bill—indeed actually claims that it is a "protective" bill, notwithstanding he and his Democratic associates have stigmatized protection as "robbery" all through the debate,—because the "average" duty of the protective lists is 42½ per cent. He even undertakes to hold up the fact, that the "average" duty which his bill proposes is only 4½ per cent. less than the 47 per cent. of the present law, as a convincing reason why the bill should be accepted as just and wise.

THE "ROBBERY" THEORY.

The distinguished chairman of the Ways and Means Committee [Mr. MILLS], like the versatile gentleman from Illinois [Mr. SPRINGER], whose figures as to the extent of the "robbery" wrought by the duty on imported woolen goods I had occasion to comment on a few days ago, seems to have forgotten that President Cleveland in his message, and he and his associates have been all through this debate denouncing the 47 per cent. duty of the present "tariff" as a tax which increases the burdens of the people to the extent of the duty on both imported and domestic articles. Indeed, I think my friend from Texas has more frequently stigmatized it as "robbery." And now the gentleman from Texas commends his bill to the country because it will "tax," or, to use his more common descriptive word, will "rob" the people within 4½ per cent. as much as the present law does.

The gentleman from Illinois, in an article in the North American Review which has been extensively copied, and which I think the gentleman from Texas has indorsed as a moderate estimate, placed the "robbery" of the present "average" 47 per cent. tariff at $600,000,000 per annum, or $2,000,000 for each secular day. But it seems that the Mills bill, when enacted into law, according to the gentleman's theory, is to continue to "rob" only 4½ per cent. less, or $574,000,000 per annum or $1,910,000 per day.

And yet the gentleman from Texas tells us that his bill, which "robs" the people to the tune of $574,000,000 per annum, is a triumphant response to the "appeals" which came up to him and his Democratic associates of the Ways and Means Committee from the masses "to take the hand of the robbers out of their pockets and let them have the benefits of their own labor and enjoy the rewards of their own toil," an announcement which received loud and prolonged applause on the Democratic side.

And this bill is what the gentleman from Texas sonorously described as a triumphant response to a demand for the stopping of "robbery" in the following glowing language:

> We stand here to-day in the eyes of the American people, and in their name, and demand that the Government shall stop taking their property and giving it to others. * * * And, Mr. Speaker, we intend to do it.

Intend to stop "robbing" by substituting a bill that robs 42½ per cent. for one that robs 47 per cent., one that robs $574,000,000 per annum for one that robs $600,000,000.

Really, gentlemen of the other side, from your point of view of the effect of protective duties, does your achievement justify the loud cheers which greeted its birth?

Do not such figures lead some of you in your reflecting hours to entertain the suspicion that your theory that a duty on an article which can be made here to the extent of our wants, is a tax which increases the burden of the consumer of both the imported and the domestic article to the extent of the duty, is all wrong.

REDUCTION OF TAXATION.

Mr. Speaker, the one argument to which the gentleman from Texas, to which all the advocates of the Mills bill finally come in support of their propositions to place on the free-list, or to reduce the duty on imported articles which can be produced here, is that they embody a measure to reduce tariff "taxation." This is the title which the framers of the bill have lovingly applied to it.

Whenever during this debate the suggestion has been made that the reduction of a duty on this or that imported article would increase the revenue, or the placing of it on the free-list would seriously injure the industry and the labor producing or making such article in this country, the stereotyped reply has always been forthcoming from some one of the Democratic members of the Ways and Means Committee, "Well, the reduction or change will reduce the burden of taxation imposed on the people." Looking at the bill to the extent that it touches the tariff solely as a "tax-reduction" measure, it strikes me as rather a small achievement to justify the cheers with which its passage was honored on the Democratic side.

The gentleman from Texas said—and he said it with the air of a young father proudly contemplating his first-born—that his bill reduced "taxation" from 47 per cent. to 42½ per cent. Or to use the euphonious phrase of the gentleman from Illinois [Mr. SPRINGER], that it reduced a $600,000,000 "robbery" under the present law to a $574,000,000 "robbery."

Indeed, looking upon a tariff bill simply as a measure imposing a "tax" upon the people to the extent of the average duty, as the "tax" argument implies, there is no advantage in the Mills bill, which imposes an "average" duty of 42½ per cent., as the gentleman from Texas imforms us, over the protective bill which the Republican votes in the House forecast; for certainly such a bill as the Republicans propose would not give an "average" duty or "tax" exceeding the 42½ per cent. of the Mills bill, and perhaps a little lower. The difference between the two bills is not in the "average" of the dutiable list, but in the distribution of the average.

REVENUE AND PROTECTIVE DUTIES.

The gentleman from Texas, anticipating that the average of the dutiable list of the proposed protective bill will be no higher than his bill, proceeds to argue that the method of reduction carried out in the Mills bill, namely, by reducing the duties on articles which can be produced or made here to the extent of our wants or by placing them on the free-list, diminishes the burdens of the people much more than the protective plan of placing on the free-list articles which can not be produced here, like tea, coffee, jute, etc., and by reducing the duty on articles which can be made here only to a small extent as compared with our consumption, like sugar and rice, especially where such articles are of common necessity.

Defending the sugar schedule of the Mills bill, which imposes a duty of 68 per cent. on raw sugar, the only kind imported, and antagonizing

the amendment nearly unanimously supported by the Republicans of the House to reduce the duty to 41 per cent. (which is about the average of the remainder of the dutiable list), the gentleman from Texas argues that the higher duty should be retained on sugar, and the reduction made on cottons, woolens, and iron manufactures, because nine-tenths of our sugar is imported and the Government receives the revenue from most of the duty imposed on this nine-tenths, whereas in the case of manufactured goods nine-tenths are made at home, and the Government receives the revenue from only one-tenth, while the people (as he contends) pay the duty in increased prices on the domestic product as well as the imports.

This argument of the gentleman from Texas in support of high duties on sugar and rice because we produce so little here (and the same argument would impose duties on coffee and tea) and low duties on articles which we can produce here to the extent of our wants, is the central point of dispute between protectionists and free-traders; for whether those who maintain this view call themselves free-traders, revenue-tariff men, or revenue reformers, whether they move by slow slow steps or at one bound, they accept the free-trade theory.

There is no difference of opinion on either side that a duty on an article not produced here is a tax which increases the cost of the article imported to the extent of the duty.

There is also no difference of opinion that a duty on an article produced here to a slight extent as compared with our consumption, like sugar and rice, is also a tax which increases the cost of the article nearly to the extent of the duty, as the slight production here has little effect on the price.

PROTECTIVE DUTIES NOT A TAX.

But as to the effect of duties on articles which are produced here to the extent of our wants, or which would be readily produced here to that extent with a sufficient duty, there arises the difference of opinion which makes one man a free-trader and another a protectionist.

The free-trader claims that in such cases the duty is added to the foreign cost of not only the imported article, but also the similar domestic product, and that the burden of the consumer is increased to the extent of the duty. This was the claim of President Cleveland in his tariff message. It has been the claim of nearly every speaker on this subject on the Democratic side.

The protectionist maintains that in such cases the price is not the foreign cost plus the duty, but that it is determined by competition among home producers and manufacturers, and is as low as it can be made and pay the wages given labor in this country; and he further maintains that the effect of such protective duties is to so encourage home industries and to so increase the opportunities for labor as to increase the rewards of the wage-earner and all producers, to enlarge the demand for products, and in general to increase the prosperity of all classes and lessen their burdens.

It must be admitted by the candid free-trader that his assumption is in many cases clearly disproved by the facts. On a former occasion I exhibited in the House a sample of common print purchased in Manchester, England, at a cost of 5 cents per yard, and another sample identical with it purchased in Washington at 5 cents per yard. Now the duty on imported prints is 4½ cents per yard, and if the free trade assumption of the effect of a duty on the price of an article made here is correct, then such prints could not have been bought in our market for less than 9½ cents. But they are bought at the Manchester price; so are standard sheetings, so are any common coarse article into which but little labor enters.

The surface method of meeting such facts as these militating against the fundamental free-trade assumption is to ask, "What good, then, does the duty do?" I might answer that it does a valuable service in showing that economic facts are much more reliable than economic theories. But the true answer is that the adequate protection which the manufacturers of cotton have received since 1824 has enabled them to go forward in confidence and perfect their mills and improve their machinery at any cost with the certainty that they would ever have the whole of our markets, and the result has been not only a reduction of 30 per cent. in the cost, but also the ability to make the price as low as such goods can be purchased anywhere in the world. Undoubtedly if the duty should even now be removed, the first effect would be to subject our manufacturers of these goods to disastrous competition, resulting ultimately in a stoppage of many of our mills, discharge of our workmen, and higher prices of goods.

But what about articles that can readily be made in this country to the extent of our wants, into which a large proportion of labor enters, where the price is higher here than abroad—not to the extent of the duty, yet generally higher? In such case, it is asked, "Is not the burden of the consumer increased to the extent, or nearly to the extent, of the duty? If the duty were partly or entirely removed would not the consumer have his burden lightened nearly to the extent of the removal or reduction of duty?"

PRODUCERS AS WELL AS CONSUMERS.

These, Mr. Speaker, are the queries confidently propounded by gentlemen who have spoken upon the other side; aye, triumphantly shouted in effect by the distinguished chairman of the Ways and Means Committee, as if the concession of the fact that in such cases the money price is higher in this country than abroad settles another and the only really important fact, that the labor price is also greater.

Our friends on the other side who have touched upon this vital point seem to have assumed that our citizens are "consumers" only, and have forgotten that they are "producers" to even a larger extent than they are consumers, for if this were not so there would be no increase of wealth. They seem to have overlooked the fact that all our citizens, except a few men who have fixed incomes, ultimately pay for whatever they buy in labor, service, or the products of labor, and therefore that their real interest lies in the question as to how many days' work, how many weeks' service, how many pounds, bushels or yards of this or that product will buy this or that article, rather than how many dollars may be required.

When, therefore, the gentleman from Texas tells the laborer that a protective duty of 40 per cent. on imported cloth "taxes" him 40 per cent. on his clothing because, forsooth, the money price may be 30 or 40 per cent. higher than in London, he overlooks the real point of interest to the workingman, and that is, whether it takes more days' labor to buy this coat in this country than it does in London. Judged by this test, every laborer knows that he can buy his clothing, his food, and everything else he requires for less days' labor in this country than in any other country on the face of the earth. Coats and many other articles into which labor largely enters cost more here in money because the labor costs more than it does in Great Britain, for the simple reason that our workingmen who make these articles receive higher wages than British workingmen. We can have cheaper coats if we are content to have cheaper laborers under the coats and cheaper manhood.

A CASE IN POINT.

As illustrating this point I recall an incident which came under my own observation. A bright Hibernian, who had been in this country many years and greatly improved his condition, returned to Ireland to visit old friends, and while absent bought a coat. A free-trade friend who had learned that Mike paid $8 for his coat, and that a similar coat would cost $10 here, took occasion to rally him on this purchase, and asked him, as undoubtedly my friend from Texas would if he had been here on the occasion of his glowing speech, if he did not see that our protective policy taxed him $2 on that coat. "I don't see it," quickly replied Mike, "for that coat cost me ten and a half days' work in Cork, and it would cost me but eight days' work here."

I have no doubt that my friend from Texas would reply, "But if the duty on cloth and coats should be removed, Mike could take the ten-dollar proceeds of his eight days' labor here and send to Cork and buy his coat, and have $2 left."

The difficulty with that programme, Mr. Speaker, is the same that the school-boy found—he could not eat his cake and have it to eat at the same time. The workingman would not receive his $10 for his eight days' work in this country if we should adopt the general policy of sending to Europe for our cloth, coats, and other articles now made here, and give up the industries which now furnish remunerative employment to so many laborers. And more than that, if we should give up making these goods, the prices of cloth, coats, etc., would advance in England. Of course we could allow one man or one city or a small class of men to purchase abroad and bring in their purchases free of duty to their advantage, without disturbing wages in this country. But when we allow all persons to do it, then home conditions are changed and wages leveled down to the foreign standard.

But, say our free-trade friends, "We do not propose to give up making these goods here; we propose to simply abolish or reduce the duties on such imported goods, and compel our manufacturers to make them at European prices."

The obvious reply to this proposition is that if our manufacturers are to make these goods at European prices, then, of course, they must employ their labor at British wages. If "Mike" and all other laborers in this country will work for 75 cents per day, instead of $1.25, their coats can be made here so as to be sold at $8 instead of $10; but, unfortunately for the laborers, it will then require ten and one-half days' work to pay for the coat which each now buys for eight days' work.

"But," says my friend from Texas, "supply and demand, and not a protective tariff, make wages, and the conditions here which cause a large demand for labor will maintain wages without regard to tariffs."

It is true that supply and demand have much to do in making wages, and it is for this reason that the increased demand for labor in consequence of the encouragement given manufacturing enterprises by protection tends to increase wages. Close up manufacturing industries (as they must be closed under free trade, unless our laborers work at foreign wages), and send the millions of workmen engaged in them into agricultural pursuits, and we should find wages rapidly coming down, and such a gorged condition of our produce markets as would make farming unprofitable.

In other words, under our protective system, which diversifies industries and provides new employments, the demand for labor is largely increased and wages in every department of industry increased. It

will be noticed that in States where industry is most diversified and advanced wages are highest.

HOW PROTECTION WORKS.

It may be said, it has been said, that a "tax" imposed on any individual can not increase the prosperity of that individual or of the country! It is always a burden.

That is true, and that is why protectionists have constantly urged that a protective duty is not a tax in this sense. In effect, by a protective duty we simply say to the foreign producer or manufacturer, "We propose to impose a duty on goods exported by you to this country which we can produce here, in order to give our own industries and our labor our markets as far as possible, and for the purpose of securing this result we have made this duty so as at all times to cover fully the difference in cost of producing these articles in this country and abroad—a difference mainly produced by the higher wages received by our labor."

Now, what is gained by such a policy on the supposition that it is faithfully carried out. Obviously the articles to which protective duties are applied will be mainly made in this country by our own better-paid labor rather than abroad by cheaper labor. Is there not a gain to the whole country by this? A gain in employing labor which would otherwise be idle? A gain in the saving cost of transportation of materials to Europe and manufactured articles back again? A gain in the fact that our workingmen and other citizens have more money to spend, and are thus larger purchasers of products of the farm and of the workshop? A gain in the fact that in the long run we secure cheaper products? A gain resulting from the increased prosperity which diversified industries bring to any country or State?

Why, to-day the people are purchasing every protected article, from a yard of calico to a steel rail, from 25 to 50 per cent. cheaper than they did under a revenue tariff before the war.

And now, will our free-trade friends tell us what is lost? The gentleman from Illinois will reply that the people have been "robbed" of $600,000,000. How? Has the workingman been "robbed" by a condition of the country under our protective policy whereby he can obtain a coat for eight days' work which would cost him ten and a half days' work in Great Britain? Has the mechanic been "robbed" who can buy 25 per cent. more of anything for a day's service than he can buy in England or than he could buy here under the low tariff before the war? No one has been "robbed," but the whole country has enjoyed such prosperity as never before.

THE FARMER BENEFITED.

Mr. Speaker, it has been frequently asserted that the farmer is not benefited by the protective policy, because, as it is alleged, he must sell his products at foreign prices, as his surplus is shipped abroad.

Outside of cotton and wheat only 8 per cent. of the agricultural products of this country are exported. Obviously the prices of all the agricultural products outside of cotton and wheat are determined almost entirely by the home demand and supply, and the demand is largely dependent on the introduction of manufacturing industries. Farmers always prosper when a home demand is created by the building of mills and workshops.

Farm products are bulky, and when they have to be moved long distances the producer finds the cost of transportation deducted from his receipts. What the Western and Southern farmer needs is to have a home demand for his crops increased by the establishment of manufacturing industries at his doors in order that he may not be obliged to raise so much wheat and cotton, and lose so much of his crops by the cost of transportation.

By raising less wheat and cotton proportionately the surplus for export will be smaller and the prices obtained abroad better; for it must be borne in mind that the price of cotton in Liverpool and of wheat in Mark Lane is determined largely by the extent of the surplus we have to export.

Beyond this the farmer is directly interested in preserving protection against the South American wool and the Canadian general farm products produced by cheaper labor and on cheaper land, which would come into ruinous competition with him if the duties on these articles should be removed, as proposed by the Mills bill.

IS THE MILLS BILL PROTECTIVE?

Surprising as it may seem, Mr. Speaker, after demonstrating to his satisfaction that duties laid on imported articles which can be produced here to the extent of our wants—*i. e.*, protective duties intended to restrict importations and hold our markets for our own industries are doubly burdensome taxes or duties—the chairman of the Ways and Means Committee [Mr. MILLS] has devoted a considerable part of his argument for the Mills bill to prove that the rates of duty provided are "protective"—*i. e.*, that they actually have been purposely left so as to provide a very "high Chinese wall" around our country. As I listened to the bristling figures of "average" duties as stated by my friend from Texas and heard him ask, "If an average duty of 42½ per cent. was not enough protection?" I looked twice to be sure that my venerable friend from Pennsylvania [Judge KELLEY] had not exchanged seats with the distinguished chairman, for previously I had been accustomed to hear from the place where the speaker stood nothing but condemnation of protection or of any duties which restricted imports.

Evidently either the gentleman from Texas has become a convert to protective views or else his figures are marshaled to conceal the real character of his bill and make some voters believe that it is a measure designed to protect American industries. But no one who knows the gentleman from Texas will for one moment suppose that he has deserted the free-trade standard which he has waved for so many years in this Chamber.

How many times during this debate has the point been pressed by gentlemen on the other side that inasmuch as everybody concedes that free trade between the inhabitants of the several States of the Union has worked advantageously therefore free trade between this country and foreign countries would also prove beneficial. To be sure, the conclusive answer has been often given that a nation is organized on the supposition that its people are homogeneous, with substantially identical economical conditions either actually existing or to be brought about, while nations widely differ. This difference is especially wide between the old monarchies of Europe where labor receives so poor reward and a young republic ours, built on manhood suffrage, where it is essential to maintain the highest possible conditions of manhood. This can be maintained only by erecting a tariff barrier to prevent the products of the cheaper labor of foreign countries from coming in and crowding down the wages of our own labor, and if undesirable immigration comes in so as to affect the wages of labor, by legislation looking to the exclusion of elements which are vicious or degraded or ill-calculated to become honored American citizens.

Why, Mr. Speaker, from the beginning to the end of this tariff debate, outside of the utterances of three or four protection Democrats, the scope and basis of every speech on the other side has been the right of every citizen to buy where he can buy cheapest and bring his purchase into this country without the obstruction of tariff duties, imposed to hold our own markets for our own industries, which is the central idea of free trade. The suggestion that a duty should be imposed on an imported article which protects our own industries and labor has been scouted. Only the other day the following dialogue took place in this Hall between Mr. MCCOMAS, of Maryland (Republican), and General HOOKER, of Mississippi (Democrat):

Mr. MCCOMAS. Has any friend of this bill in this debate uttered one sentence in favor of the American tariff system which discriminates in favor of the home producer and laborer?

Mr. HOOKER. No; there was no one, and you will not find any Democrat to utter one.

And no Democratic member expressed any dissent.

COMPARISON OF MILLS BILL AND PRESENT TARIFF.

Yet in the face of the uniform condemnation of the protective duties on the Democratic side, the chairman of the Ways and Means Committee tells us that the Mills bill is protective because it reduces the "average" duties on the chemical schedule only 4¾ per cent.; on the earthen and glassware schedule only 7½ per cent.; on the metal schedule only 2½ per cent.; on the cotton schedule only 1 per cent.; on the provision schedule 1 per cent., etc.; and then triumphantly flaunts these figures in the face of the House, and asks if there is any "free trade" in that.

Evidently, Mr. Speaker, these figures are being used to mislead either free-traders or protectionists, and I am sure free-traders are not mistaken in accepting them as a firm step towards free trade.

One needs to be not very deeply versed in tariff legislation to understand that a comparison of two tariffs by the "average" of their dutiable lists, without information as to the distribution of the rates or the extent of the free-list, affords very little information as to the actual character of either. Indeed, to any person who has carefully studied the subject such a comparison between tariffs framed on different bases, entirely ignoring any comparison of the free-lists, or modes of distribution, or extent of specific duties of both, can not fail to create the impression that it is designed to deceive.

THE METAL SCHEDULE.

I can illustrate what I mean by reference to the metal schedules of the tariff of 1883 and the Mills bill. The gentleman from Texas says that the "average" rate of duty of the present tariff is 40.77 per cent., and under the Mills bill 38.47 per cent. Now, if one looks at the free list of the Mills bill he will find there tin-plates, immense quantities of which are imported, cotton-ties, and some other articles which are on the dutiable list and bear a very low rate of duty under the present tariff. Bearing a low rate of duty, they make the "average" rate of duty of the metal schedule of the present tariff at least 2 or 3 per cent. less than it would be if tin-plates, cotton-ties, etc., were not there. So that taking into consideration the effect on the "average" duty of the transfer of these articles from the dutiable to the free list, the actual reduction of "average" duty of the metal schedule is at least 5 per cent., not taking into account further reductions that will ensue through changes from specific to ad valorem duties.

But when it is said that the "average" reduction on hundreds of articles in a schedule is only a small per cent., we get very little idea of the effect until we know on what articles the reduction has been made,

because the "average" may have been preserved by making slight reductions on unimportant articles and heavy reductions on important articles, as has been the case in the Mills bill.

On some articles, and those very important, the changes in the metal schedule mean destruction to the industry, and in nearly all an increase of importations. The placing of hoop-iron in the form of ties on the free-list will inevitably lead to the importation of immense quantities of hoop-iron for all uses. The placing of tin-plates on the free-list will at once bring sheet-iron slightly coated with tin or lead into scores of uses for which domestic iron is now employed, seriously injure establishments in this country making sheet-iron, and deprive many laborers of work.

THE COTTON SCHEDULE.

What I have said relative to the injurious effects of the wholesale substitution in the Mills bill of ad valorem for existing specific duties, a result which does not appear in the comparisons instituted by the gentleman from Texas, will be wrought out by the cotton schedule of the Mills bill, if it should ever go into effect. The tables submitted by the gentleman show less than 1 per cent. reduction of "average" duty in this schedule; and yet at the points where foreign competition comes in, namely, on fine goods, where an increase of duty was needed, the reduction is considerably more; while on the coarse goods used by the masses, where a large reduction might have been made, the reduction is almost nothing. "Average" duty gives us no practical information. The Mills bill will make it almost impossible to make fine cottons, especially printed cottons of fine finish, and will have the effect to largely increase importations of such goods. The duty on coarse cottons is still more than enough to be prohibitory.

"AVERAGE" OF DUTIABLE LISTS.

These illustrations show how misleading is any comparison of tariffs by "average" dutiable lists, especially without a comparison of free-lists at the same time, and a further comparison of the extent of specific duties of each; for it is well understood that in consequence of wholesale undervaluations a specific duty of 32 per cent. affords as much protection in textiles as an ad valorem duty of 40 per cent.

Thus the statement of the gentleman from Texas that the Mills bill gives an "average" of 42½ per cent. for the dutiable schedules, against 47 per cent. for the present tariff, affords little information as to the real character of the former bill.

If sugar and rice alone should be reduced to 40 per cent. in the Mills bill it would carry the whole average down to 40 instead of 42½. And if sugar should be similarly reduced in the present tariff it would carry the "average" of the dutiable lists down to 41 per cent. instead of 47. There are one hundred articles which bear light duties in the present tariff that have been transferred to the free-list. I venture to affirm that if due credit shall be given to these articles, and due allowance made for changes from specific to ad valorem duties, and due deductions made for the fact that the Mills bill places a duty of 68 per cent. on raw sugar and 100 per cent. on rice, thus forcing down the average of other articles, it will be found that the average of the dutiable schedules of the Mills bill is at least 10 per cent. (not relatively, but absolutely) less than the present tariff, and that this reduction comes at points where they will largely increase importations.

Such a practical reduction as this, when even under the present tariff, in consequence of undervaluations, we had last year importations of cotton goods to the value of $28,940,353, $49,293,163 of iron and steel, $44,902,718 of woolen goods, $21,933,028 in linen and jute goods, $11,199,945 of leather and leather goods, and $7,319,895 of glass-ware, ought to make legislators hesitate and ask themselves whether they are doing their duty to these industries, to the large number of workmen interested in them, and to the country at large in reducing duties and encouraging importations by substituting ad valorem for specific duties. For it must be borne in mind that every dollar's worth of imported goods which we can readily produce or make here deprives some laborer of work here in our midst.

The true character of the Mills bill, Mr. Speaker, is to be learned, however, more clearly from its free-list than from its dutiable schedules. This is the central point which its framers kept in view, and to which they have delighted to turn throughout the debate. The bill places fifty-three industries, protected by the present tariff, on the free-list. The farmer's wool, his beans, his pease, his vegetables (except potatoes), his cucumbers for pickles, his mutton, his beef, his veal, his lamb, his milk—all are placed in free, open competition with the products of Canada. Brick, undressed building stone, manufactured lumber, shingles, etc., jute bags, salt, and eighty other articles made by our labor are placed in free competition with similar imported products of cheaper foreign labor. And we were told in the progress of the debate that this is only the beginning. When these industries are committed to free trade then others are to follow. And on all articles placed on the free-list, the reduction of the duty is 100 per cent. instead of the 4½ per cent. heralded by the gentleman from Texas.

And yet there are gentlemen who are trying to make the country believe that there is no "free trade" in this bill.

A PROTECTIVE BILL.

Mr. Speaker, to show still more clearly how misleading any such comparison of tariffs by the "average" of the dutiable list of each, without regard to the free-lists, I have only to say that a thoroughly protective tariff can be framed on the lines which I have indicated as the basis of Republican policy, which shall give no higher "average" of dutiable list than is given by the Mills bill. Yet such a bill would give at least 10 per cent. more protection at the points where most of our importations come in, without making the average higher. This would be brought about by reducing the duty on sugar and rice from the enormous rates fixed by the Mills bill to the average protective rates; by restoring to the dutiable lists all articles placed on the free-list in the Mills bill, when they can be produced or made here; by transferring to the free-list everything that we can not produce or make here; by reducing duties where they can be reduced without inviting importations; by correcting inequalities however they have arisen; and, in general, substituting specific for ad valorem duties.

THE CONTRAST.

This would give us two bills having substantially the same "average" of the dutiable lists; but the one, the Mills bill, so lowering the duties, or substituting ad valorem for specific duties at vital points, and so removing all duties at other points, as to encourage importations, injure or destroy industries, throw laborers out of employment and reduce wages, but at the same time keeping the duty on sugar at 68 per cent. and rice at 100 per cent.; and the other, a thoroughly protective bill, giving all our industries adequate protection, discouraging importations of articles which we can make or produce to the extent of our wants, holding our own markets for our own industries and labor, and furnishing employment for all our people at wages that make them liberal purchasers of our products, and at the same time placing a duty of only 41 per cent. on the sugar and rice which they consume, articles produced in this country to a comparatively slight extent.

The great issue in the present campaign is which kind of a tariff will the people have?

THE CLAIM THAT THE MILLS BILL WILL INCREASE WAGES.

Mr. Speaker, one of the surprising claims put forth by the framers of the Mills bill is that "it will better the condition and increase the wages of our laborers." The gentleman from Texas [Mr. MILLS] loudly asserts that this is the main object, "the central feature of the bill." I am puzzled to understand how the reduction of duties on imported cotton goods or iron, for example, so as to make it easier and cheaper for the foreign manufacturer of these articles to send them here to compete with similar goods made in this country, will "better the condition and increase the wages of our laborers" engaged in these industries.

I listened intently while the distinguished chairman of the Ways and Means Committee was rolling from his tongue the assurance to our workmen engaged in cotton and iron manufacturing that their wages would be increased by reducing the duties imposed on the foreign-made goods which compete with them, for some explanation of a result so contrary to logic and experience; and I was somewhat amused to hear him give two contradictory reasons.

THE FREE RAW MATERIAL.

First, the gentleman from Texas said that the Mills bill would increase wages because it would give the manufacturer "free raw materials," *i. e.*, cheaper "raw materials" to work with, and thus enlarge the margin between cost of materials and selling price of product from which the wage earner is paid, and so cheapen the product as to increase our exports and enlarge the demand for labor.

This was said in connection with the abolition of the duty on wool. But inasmuch as wool is a part of the "raw materials" of only one industry, while coal is one of the "raw materials" of all industries, and "iron ore" the "raw materials" of the most important industry we have in this country—iron manufacture—I have been wondering why the distinguished chairman of the Ways and Means Committee and his Democratic associates should have confined their search for "raw materials" to the farmers' wool, lumber, and agricultural products, and should have failed to discover the much more important "raw materials" of all kinds of manufacturing industries in the shape of coal and iron ore. I am afraid the distinguished gentlemen were searching for "raw materials" for votes rather than "raw materials" for manufactures.

But why, may I ask my friend from Texas, will the free admission of any so-called "raw materials," when produced here to the extent of our wants, cheapen their cost? Now, all "raw materials" not produced in this country are on the free-list. But really "raw materials," *i. e.*, materials as they are found in nature, are as cheap and abundant here as anywhere in the world. When labor is added to these "raw materials" to prepare them for advanced manufactures or for other uses of man, their cost is increased in proportion to the labor employed. Now, if this labor cost is no more in this country than abroad, as the gentleman from Texas has argued, I should be pleased to have him explain how he will cheapen the cost of such "raw materials" by having them imported free of duty?

Is not the argument of my friend that the free importation of "raw materials" which we can readily produce here will cheapen their money

cost, a confession that the labor cost of preparing these materials is greater here than abroad? And is not what he proposes really a plan of cheapening the product by having part of the work done abroad because the labor cost there is not so much as here, and thus turning out of employment all the laborers engaged in producing or making the articles called "raw materials" by the gentleman from Texas, but really completed products of certain industries?

Not to be too inquisitive, Mr. Speaker, will it disturb my friend from Texas if I also inquire why, if it is a good thing to have free trade in wool, manufactured lumber, farmers' products, etc., in order "to cheapen the product" to that extent, it would not be better to have the wholly completed instead of partly completed article made abroad by cheaper labor, in order to save more?

In other words, why should the farmer and laborer who produce wool, lumber, beans, meat, etc., be called upon to make the whole sacrifice for the blessing of cheaper products under the plea that they are "materials," when the iron manufacturer's iron and the cotton and woolen manufacturer's cloth are the "materials" which the grower of wool, the manufacturer of lumber, and the producer of farm products require? Indeed, is not a part of the free-trade plan, after they have placed fifty-three industries on the free-list, to come forward again at the first opportunity and ask the friends of these industries to help put fifty-three more on the free-list? And so on, until free trade is applied to all?

More than this, what reason is there to suppose that free wool, for example, would enlarge our exports of woolen goods to any considerable extent, so long as our labor in manufacturing receives higher wages, when our cotton manufacturers, notwithstanding they have cheaper cotton than English manufacturers, have never been able to export over fifteen millions of cotton goods annually?

So much for "the central feature" of the Mills bill, looking to an increase of wages from "free raw materials."

THE MEDDLING HAND OF GOVERNMENT.

Mr. Speaker, I remarked a short time ago that the gentleman from Texas, in advancing the claim that the Mills bill would increase wages, advanced two contradictory reasons for this surprising result. One, which I have already discussed, was that we would reduce the cost of and the market for our manufactures by having our "materials" prepared by the cheaper labor of other countries and come in free of duty; and the other, which I now wish to consider, that "we are the smartest people on the face of the earth," doing everything at the "lowest labor cost," and "all we want is for our Government to take its meddling hand out of our business," an assertion which so fully met the aspirations of the Democratic side that it was received with rounds of applause and cries of "That's it!"

There are two suggestions, Mr. Chairman, that I will venture to make before considering the main argument involved in this point.

First. If the labor cost of doing anything in this country is as low as it is abroad, how then does it happen that something can be saved by importing free of duty materials prepared by labor abroad?

Second. If a duty on imported articles which can be made here to the extent of our wants cripples our industries and our labor—for this is the only way in which "our Government lays its meddling hand on our business"—then I should be pleased to have my friend from Texas tell the House how the 42½ per cent. of "meddlesomeness" proposed by his bill is to work such blessings when, according to the gentleman, the 47 per cent. of "meddlesomeness" of the existing law has worked such evils in the past, and the 42 per cent. of "meddlesomeness" of a proposed Republican protective measure would work such evils for the future?

I take it for granted, Mr. Speaker, that when the distinguished gentleman from Texas called upon "our Government to take its meddling hand out of our business," in order to allow our "smartest people," who, according to the gentleman, do things at a lower "labor cost than any other workmen," to spring forward to free, open, triumphant competition with the labor of the world, he meant not simply "pass the Mills bill," but "also follow up the free-trade step therein inaugurated until we have abolished all duties on articles that we can readily make here to the extent of our wants"—for any other explanation of his meaning would make nonsense of his utterance and reflect on the discernment of our Democratic friends who so unanimously and loudly shouted "That's so,"—"and then our labor can compete in free, open competition with the labor of Europe."

LABOR-COST IN THIS COUNTRY AND EUROPE.

This, Mr. Speaker, is an assertion which the gentleman from Texas has frequently made as the basis of the whole free-trade argument, and it may be summed up in his oft-repeated statement that the labor-cost of production is no more—he has often stated less—than in Europe.

Before careful official statistics were collected it was frequently asserted by free-traders that wages are as high abroad as in this country. But since Col. Carroll D. Wright, now chief of the United States Labor Bureau, carefully investigated the subject in this country and Great Britain in 1884 the assertion has taken another form. Colonel Wright's comparison of the average wages in Massachusetts and Great Britain, in the industries investigated, was as follows:

Industries, 1884.	General average weekly wages paid to all employés.	
	Massachusetts.	Great Britain.
Agricultural industries	$10.25	$8.45
Artisans' tools	11.80	4.89
Boots and shoes	11.63	4.37
Brick	8.53	4.16
Building trades	14.99	7.21
Carpetings	6.08	4.11
Carriages and wagons	13.30	4.89
Clothing	10.01	6.71
Cotton goods	6.45	4.66
Flax and jute goods	6.46	2.85
Food preparations	9.81	2.72
Furniture	11.04	7.96
Glass	12.28	6.94
Hats—fur, wool, and silk	11.01	5.51
Hosiery	6.49	4.67
Liquors, malt and distilled	12.87	12.66
Machines and machinery	11.75	6.93
Metals and metallic goods	11.25	7.40
Printing and publishing	11.37	5.52
Printing, dyeing, bleaching, and finishing cotton textiles	8.67	4.94
Stone	14.39	8.58
Wooden goods	12.19	5.67
Woolen goods	6.90	4.86
Worsted goods	7.32	3.60
All industries	10.31	5.86

Since this official showing that the average weekly wages are 77 per cent. higher in Massachusetts than in Great Britain, while the cost of living on the same scale in this country, outside of rent, is only 6 per cent. more than in England, the free-trade claim has changed its form, and it now appears in the assertion that notwithstanding the weekly wages are higher, yet that the workman works so many hours more here than in Great Britain and works with so much more energy and hope that the labor cost of production in this country per unit of production is no more than in Great Britain.

This is an assertion so contrary to the observation of practical manufacturers who have carefully investigated the subject in both countries, so contrary to the great mass of statistics which have been collected, and so contrary to the every-day experience of workingmen who have labored in both countries, that it was certainly incumbent on the gentleman from Texas to give us something besides theories—something besides the familiar fact that a skilled workman is cheaper at high wages than an unskilled one at low wages—to sustain his position that the labor cost of production per unit is no more in this country than in foreign countries. But we have had nothing but assertions.

It must be admitted that the claim that labor receives no more in this country than in Great Britain for a given quantity of equally skilled labor is contrary to the universal testimony of the tens of thousands of immigrants—laborers skilled and unskilled, cotton and woolen operatives and iron-workers and workers in every department of industry—all of whom have borne evidence by their coming and never returning, by sending for friends, and by their rapidly improving condition that labor receives a much higher reward in this country than abroad.

It is contrary to the testimony of ex-Congressman Abram S. Hewitt, of New York, a Democrat of prominence and fully acquainted with the subject, who stated on this floor a few years ago that the labor cost of production in advanced manufactures in this country is about 50 per cent. higher than in Great Britain.

I am aware, sir, that there have recently appeared what purport to be statistics gathered by a partisan free-trade writer named Schoenhof, who was appointed a United States consul at some place in England, with a roving commission, in which it is claimed that the labor cost of making woolen dress goods in Leeds is greater than in Massachusetts. But unfortunately for that gentleman he gave the details from which he drew this remarkable result, from which it appeared that he represented the cost of dyeing as four times as great at Leeds as in Massachusetts, when the fact is that it costs more in the latter State than in Leeds. Already the complete unreliability of the consul's figures has been shown, and all the returns are not in yet. Gentlemen thoroughly versed in woolen manufactures state that the labor cost of manufacturing woolens, as well as everything else in which labor is an important element, is considerably more here than in Great Britain.

A remark by Secretary of State Blaine, in transmitting, in 1881, a report of United States Consul Shaw, apparently showing that the labor cost of manufacturing coarse cottons was no more in Massachusetts at that time than in Yorkshire, is often quoted as evidence that in this class of goods, in which the labor is a very small percentage of the cost, we had reached the British standard of labor cost. But if as

a matter of fact this was true at that time—which probably a more careful investigation would have shown it was not—more thorough and general inquiries have shown that it is not true now. Indeed, the fact that notwithstanding our cotton manufactures have cheaper raw material than their British competitors, yet we have not been able to increase our exports of coarse cottons above fifteen millions, affords evidence that even in coarse cottons, requiring but little labor and that but partially skilled, our labor cost is not down to the English standard of cheapness; and if not in coarse cottons, certainly not in goods where the labor is a much larger percentage the labor cost is much more.

I had occasion not long since to obtain the labor cost of manufacturing lime at Rockland, Me., and on the St. John's, in New Brunswick—two points scarcely 200 miles separated, although in different countries. The statistics which were furnished me showed that it cost 50 cents per cask to manufacture lime on the St. John's and 73 cents at Rockland, although 10 cents of this difference was made up by the superior quality of the Rockland limestone. I found that it required the same number of men to burn and barrel one hundred casks of lime at Rockland as at St. John, thus showing equal efficiency of labor, but that the Rockland men received $2 and $1.57 per day and the St. John's men $1.25 and $1 per day of equal hours. I also found that the labor cost of quarrying, transporting, burning, and barreling the lime was 10 cents per cask more in Rockland than on the St. John's.

Why is it, sir, that our coastwise shipping, which is absolutely protected by our navigation laws against foreign competition, is prosperous, while our shipping in the foreign trade, which since 1850 has been in free competition with foreign vessels in carrying our exports and imports, has been almost driven from the ocean by this competition since the revolution from wood to iron and sails to steam lost us the advantage we once possessed with our cheap timber?

Is there any other reason than the fact that our labor receives higher compensation for mining ore, making iron, building steam-ships from this iron, and running these steam-ships after they are built than English labor receives for precisely the same work? Allow me to read the following testimony of United States Consul Russell, at Liverpool, published in the February Consular Report:

British vessels in domestic ports can procure crews for from 37 to 32 per cent. lower than those paid on American vessels, which is a serious item in the disbursement account. Then, again, the cost of maintenance on American ships is about 40 cents per day per man against the English 29 cents, or a difference of 27 per cent. in favor of the latter. When it is considered that provisions, such as beef, pork, and flour, which are the principal articles of food consumed, can be obtained in the United States, if anything, at a lower price than in England, it seems remarkable that the crews of our vessels should cost 27 per cent. more per man for maintenance; yet such appears to be the case. It is an acknowledged fact that the living on board our vessels is superior to that of other nations, and it is generally asserted that larger quantities of food are supplied to the crew, the scale of provisions laid down by Congress being rarely, if ever, resorted to.

Now, does the gentleman from Texas pretend to argue, in the face of such facts as these, that the wages received by labor, or the labor cost of producing manufactured articles in the United States, is no more than in Great Britain or Canada, and that if "the Government will only take its meddling hands out of our business," *i. e.*, if it will only abolish duties on such imported articles as we can make here—lime, for instance—then "the condition and wages of our laboring people will be improved?"

Such nonsense is unworthy of intelligent men—to say nothing of legislators.

DOES THE MILLS BILL PROTECT LABOR?

Mr. Speaker, the distinguished chairman of the Ways and Means Committee, as if conscious of the utter failure of all attempts to establish the fundamental free trade assumption that a protective duty is a "tax" which increases the burdens of the consumer, or the truth of the assertion that the labor cost of production is no more here than in Great Britain, has attempted to show that his bill gives ample duties to offset the difference in labor cost of products between this country and foreign countries, and therefore is really a protective measure. To prove this he gives us the "average" percentage of labor in the total cost of various manufactured products in this country, and shows that this percentage of labor cost is less than the "average" duty of the dutiable schedules which the Mills bill leaves on such articles when imported.

Even if this were true in the case of the dutiable schedules it would still remain that in the fifty-three industries from which the Mills bill removes all duties, like the growing of wool and the production of beans, pease, milk, vegetables, and meat, and the manufacture of lumber, bricks, building-stone, iron ties, jute bags, etc., there is left no protection for American labor and no barrier against the free, open competition of such products of cheap foreign labor with the labor of the workingmen of this country. Certainly as to the workmen engaged in every industry in this country whose products are placed on the free-list it must be confessed that, if the Mills bill should become a law, there can be no pretense that they have any protection against the destructive competition of similar products of cheaper foreign labor. And it is well understood that the free-list is the distinguishing feature of this bill.

But an examination of the dutiable schedules of the Mills bill will show that the reduction of duties must be largely at the expense of our labor. It is well understood that the present prices of all articles that can be readily made in this country to the extent of our wants are as low as they can be made, and in some cases lower, and pay the high wages properly given our labor. Fierce competition prevents on the average anything more than the lowest profits requisite to maintain the business. If there is to be any reduction of cost of such products it must come from a reduction of the labor cost. Cheaper goods means lower wages. Such a reduction of duties on imported articles which we can produce here, as will increase importations and reduce prices, must inevitably displace goods made here, deprive workmen of employment, and tend to reduce wages, in the effort of our manufacturers to resist the successful competition of foreign goods.

ILLUSTRATED BY COTTON GOODS.

The gentleman from Texas says that the present "average" duty on manufactures of cotton, for example, is 40 per cent.; that his bill leaves this "average" 39 per cent.; and that the average "percentage" of labor in cottons is only 21½ per cent. And he triumphantly asks if it is not an imposition for any one to pretend that the reduction proposed by his bill, or even a reduction of 15 per cent. more, would hurt labor when the average duty is left more than the whole cost of the labor!

Now such a conclusion as this may be accepted as a demonstration by persons unacquainted with the subject, but to any one familiar with it the misleading character of the whole argument is apparent.

It is misleading because an ad valorem duty is not laid on the value of the article in this country, as the gentleman's language implies, but on the invoiced value abroad. And the gentleman well knows that this invoiced value is much below even the actual cost abroad.

That is, the 39 cents duty imposed by the Mills bill on every dollar's worth of cotton goods, or any other kind of goods imported, is not imposed on a dollar's worth of goods as valued here, but on a foreign invoice value whereby from one and one-half to two dollars' worth of goods (as valued here) come in on paying 39 cents duty, making the real protection on each dollar of value here not exceeding 25 cents, or at most 30 cents. So that practically under the Mills bill, which substitutes ad valorem for specific duties, the reduction of duties will prove to be nearer 10 or 15 per cent. than 1 per cent., as claimed by Mr. MILLS.

It is misleading, also, because in using the "average" percentage of labor of the whole cotton schedule as a basis the fact is concealed that in the class of fine goods which are imported—and none others are imported—the percentage of labor in the total cost of manufacturing is about 30 to 35 per cent. In averaging the labor cost of all cottons the 14 per cent. of labor in coarse goods is joined to the 35 per cent. in fine cottons and "averaged" as 21½ per cent.

It is misleading, also, because in giving the labor cost of making cottons, or any article, it includes only the cost of the labor in the processes of manufacture of the materials after they have reached the mill and after the mill and machinery are constructed. It ignores entirely the labor cost of preparing the materials, supplies, and dyes for the mill and machinery, of constructing mill and machinery from the prepared materials, of the labor cost of repairs, renovation, and depreciation, and of freighting materials to the mill and goods from the mill to the market. When all these items are added to the labor cost in the processes of manufacture in the mill they more than double, and in many cases treble and quadruple, the percentage of actual labor cost represented in any article.

Take for example a completed machine or ship. The gentleman from Texas, who is in favor of placing completed ships on the free-list, looking simply at the processes in the ship-yard or machine-shop, would say that the labor cost is only 30 per cent. of the aggregate cost of the ship or machine. Yet if he will look further at the labor in preparing the materials and building the shop and its tools, the labor in mining the ore, smelting and making the iron and steel, transporting it to the shop, and the labor in repairs and renovation, and in preparing supplies, he will find that the labor cost is swelled to 90 per cent. of the value of the ship or machine.

So that the excess of labor cost in this country to be protected against the cheaper labor of foreign countries in any industry is not simply the labor in the immediate process of manufacture, but labor all along the line, from the materials in their natural condition to the highly advanced product.

One has but to glance at the official statistics of our imports in the last fiscal year, and to read that even with the present duties there were imported fine cotton goods to the value of $28,940,353, iron goods to the value of $49,293,163, and woolen goods to the value of $44,902,718, to see that even the present duties on these imports are down near to the danger point, and that the reduction proposed by the Mills bill, substituting, as it does, ad valorem for specific duties, will cross the danger point, make large inroads on the protection now given to our laborers, and increase importations in every one of the dutiable schedules, and seriously cripple every industry carried on here which has been placed on the free-list.

INEQUALITY OF MILLS BILL.

Not the least objectionable feature of the Mills bill, Mr. Speaker, is its glaring inequalities and inconsistencies. Some industries are

amply protected and others given up to free trade, or inadequate duties. I have already commented on the glaring injustice of placing on the free-list the completed products of one class of industries on the plea that these products are the "raw materials" of other industries, but omitting such "crude articles" as iron ore and coal, which would be articles naturally selected if the "free raw material" theory has any sound basis to rest on.

The "raw materials" which the Mills bill places on the free-list are such products of farm labor as wool, pease, beans, vegetables, milk, beef, lamb, mutton, veal, etc.; and such products of human industry as brick, undressed building stone, tin-plate, salt, jute bags, hoop-iron, manufactured lumber, boards, shingles, clapboards, etc. When the bill was first reported lime, wood-pulp, glue, etc., were also included in the list of "free raw materials."

What is the defense of the policy which places the farmer's wool on the free-list and gives a duty of 40 per cent. on woolen goods?

Notice the discriminations made in equally advanced industries for political or partisan reasons. Wood-screws, the very article concerning which there has been the most howl about a wrongful "combination," were first reduced to 35 per cent. with other articles; but when it was ascertained that the reduction might defeat a Democratic representative the rate was restored to 45 per cent., while cotton-ties and tin-plate were placed on the free-list.

The bill as reported placed rough marble on the free-list. The gentleman from Texas declared that "a tax on marble was a tax on the decent burial of the dead." But it was discovered that marble was a Georgia product, and marble was withdrawn from the free-list, while Maine undressed granite was placed on the free-list.

The Mills bill as first draughted left the margin for sugar refiners so small that it would have broken the great sugar trust which has been advancing the price of sugar. But Mr. Havemeyer, the head of the sugar trust and a liberal contributor to Democratic campaign funds, was taken into the inner circles of the Democratic members of the Ways and Means Committee, notwithstanding hearings had been refused to manufacturers and laborers, and immediately the sugar schedule was changed so as to save the sugar trust. Strange proceeding in the face of the Democratic platform condemning trusts!

No wonder the farmers of the North are inquiring why their wool, lumber, beans, pease, vegetables, milk, meats, etc., are placed on the free-list, when Louisiana sugar is given a duty of 68 per cent. and South Carolina rice 100 per cent., and both specific duties giving 10 per cent more protection than apparently equivalent ad valorem duties.

And the chairman of the Ways and Means Committee points to the 42½ per cent. "average" of the Mills bill—raised to that figure by such enormous duties on articles of food like sugar and rice—and asks the country if such an "average" isn't sufficient protection to the industries of the North placed on the free-list or given lower duties, and ad valorem at that?

Now I doubt not that many of the unjust discriminations in the Mills bill are due in part to the fact that the framers of the measure were obliged to "secure" some Democratic votes for the bill by giving adequate protection to various interests in the districts represented by these gentlemen; and that these framers excuse their indefensible discrimination on the ground that after having applied absolute free trade to fifty-three industries, they will next time have the aid of the friends of these destroyed industries to apply the same policy to the other industries saved this time by the short-sighted selfishness of men who are willing to destroy other interests in order to save their own. It would indeed be retributive justice if some of the gentlemen who are supporting the Mills bill because it protects their industries and slaughters some other industries in order to give the former free "raw materials," whether wool or lumber, if this first free-trade step should succeed, should find in the next step that will surely follow that their industries come next in order for sacrifice on the altar of free trade.

THE CASE SUMMED UP.

Mr. Speaker, the points in dispute may be thus summed up:

First. Two measures for reducing the revenue, each for about $60,000,000, are to be before the American people.

Second. So far as the reduction is accomplished by abolition of internal-revenue taxes, both will agree in abolishing the tax on tobacco. The Republican proposition includes also the abolition of the tax on alcohol used in the arts, manufactures, and in medicine.

Third. So far as the reduction is accomplished by a reduction and revision of the tariff the Republican proposition will reduce the revenue as much as the Democratic proposition contained in the Mills bill, and the reduction of the "average" rate of duty of the dutiable lists will be in each bill about 4½ per cent., leaving the average 42½ per cent. in the Mills bill and substantially the same in the Republican bill; but the method of the revision and distribution of the reduction in the two bills will be based on antagonistic principles.

Fourth. The Republican and protection basis of tariff revision makes the reductions mainly on articles which can not be made or produced here (placing such articles on the free-list) and on articles like sugar and rice, which can not be produced here to any considerable extent, and to the foreign cost of which for this reason the duty is added as a tax, and maintains the duties on articles which can be readily made or produced here to the extent of our wants, because they hold that such duties encourage home industry and labor, and lessen rather than increase the burdens of the people.

Fifth. The Democratic and free-trade basis of tariff revision makes the reductions mainly on articles which can be produced here to the extent of our wants, transferring one hundred such articles to the free-list, and in order to give an opportunity to transfer as many such articles as possible to the free-list or reduce the duties on them it maintains the duty on raw sugar at 68 per cent. and rice at 100 per cent., proceeding on the theory that there should be as little restriction as possible on importations.

Mr. Speaker, it is evident that with the Democratic majority of the House insisting on the latter, and the Republican majority of the Senate on the former method of revising the tariff there can be no agreement this session. If the Democratic majority of the House would consent there could be a bill passed at this session embodying the abolition of the tobacco tax, on which both Houses are agreed, but the indications are that the Democratic majority of the House prefer to keep the surplus as large as possible in order to use it as a lever to overthrow the policy of protection.

In this situation the appeal must be to the people in the approaching elections of Congressmen and electors of President and Vice-President. Unquestionably the decision of the people in the approaching elections, made with the full understanding that the issue is between the maintenance of our American system of protection and the overthrow of that system and the adoption of the Mills bill as the first step towards a free-trade or revenue policy, will determine the economic policy of the American people for the next quarter of a century.

Mr. Speaker, I welcome the issue. On the one side, Harrison stands as the standard-bearer of the American system of protection; on the other, Cleveland stands as the standard-bearer of the free-trade or revenue system which must take the place of the protective system when it falls. Let the issue be met squarely without evasion. As an earnest friend of that economic policy which holds that the system of protecting American industries and labor is wisest and best for the United States and the American people, I confidently appeal from the vote to overthrow it, which is already determined in this House, to that larger, safer, and, in the long run, wiser court of last resort—the American people.

Indian Depredation Claims.

SPEECH

OF

HON. BINGER HERMANN,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 21, 1888,

On the bill (H. R. 8990) to provide for the adjudication and payment of claims arising from Indian depredations.

Mr. HERMANN said:

Mr. SPEAKER: No State can unite more cordially, earnestly, and gratefully in the passage of the pending measure than the State of Oregon. None of all the States of the Union in their early settlement can claim for their pioneers more critical moments, more intense suffering, more proportionate loss and sacrifice, or more heroic endurance and patience in their conflicts with the hostile savages, while undertaking the peaceful settlement and occupancy of the country, than the Pacific Northwest for those who risked thier lives and fortunes in the then Territory of Oregon and in subsequent Indian wars and hostilities on the frontiers of the present State and the Territories once a part of it. With equal verity it may be asserted that no single people of our country ever acquired so much for the nation through their undaunted courage, patriotism, and privation as these same people.

With further confidence it may be said that none ever contended with more treacherous, stubborn, and unrelenting savages than those of the Oregon territory, and these traits were rendered the more terrible as these savages were all well supplied and disciplined in the latest improved fire-arms, and were provided with abundant ammunition. Later hostilities, as those of 1878 and previously on the Harney, Klamath, John Day, Crooked River, the Umatilla, the Klikitat, the Weiser, the Humboldt, and other portions of Oregon, Nevada, Washington, and Idaho Territories, were only subdued after great loss of precious lives, and much valuable property.

NATIONAL COMPENSATION FOR PIONEER SACRIFICES.

The Government as a political body and posterity as individuals are the gainers through these sacrifices and sufferings. That which was once the frontier is now the rich State and the splendid metropolis. Those who blazed the way for civilization safely to follow, and who

bore the heat and burden of the day, were invariably the last to reap the benefits. But the mission of the pioneer is ended. The frontier itself has disappeared. The war-whoop and the massacre are only read of in romance and history. Though justice has been long delayed to those who have been the heroes in the fight, it is still not too late for a great and generous nation to recognize the inestimable services of these sturdy pathfinders of the past, at least by indemnifying them for their well-earned property destroyed or wrested from them by the merciless savage. We can now well afford to do this. Indeed, the moment may never be so propitious as the present. A portion of the overflowing richness of the country has accumulated in the Treasury until we behold there an almost fabulous sum of gold, silver, and currency in excess of the legitimate needs of the Government. As representatives of the people—as just men, and in grateful remembrance of those who periled their lives and lost their homes and property in the settlement of the frontier of our nation—we are appealed to now for simple justice.

APPEALS LONG MADE TO CONGRESS.

For years and years this same appeal has been heard before successive Congresses.

Texas, Kansas, Nebraska, Minnesota, Colorado, Oregon, Nevada, California, Arkansas, Missouri, Iowa, and the Territories of Washington, Idaho, Montana, Wyoming, Utah, New Mexico, Arizona, and Dakota, have been earnestly memorializing the Government to adjust and make compensation for losses by their citizens sustained through Indian depredations within their respective limits.

Bills are introduced in great numbers proposing relief, and petitions are submitted from the people interested asking for it. Members of Congress are constantly importuned, but with all their efforts there is no avail. In the Forty-ninth Congress not one claim of this class could be reached. A like result is experienced during the session of the Fiftieth Congress.

Over six thousand Indian depredation claims are now on file for consideration of the Interior Department as per reports of the Commissioner of Indian Affairs.

TOO MANY CLAIMS FOR CONGRESSIONAL ACTION.

As Congress is at present organized three hundred years must elapse before a minimum can be considered by this body. The fact is that our legislative machinery has become so cumbersome by reason of the immense and varied interests before it as to render it practically ineffectual for transaction of all of the public business before it. Sixty millions of people are to be considered. Three hundred and twenty-five Representatives in one Chamber struggle to be heard. Fifty-seven committees report their conclusions upon a multitude of interests and exact a share of the time and attention. Appropriation committees and the Committee on Ways and Means, with sufficient business alone to consume most of the time, have a right of way to the exclusion of others. Every bill must be considered by committee. Often an entire week is occupied in committee on one bill. The Calendar is loaded down today with measures of vital importance both to the public as well as to individuals. Many bills have been there for twenty-five years. Each term they die, and are resurrected in the following Congress, going through the farce each time of another committee examination and report, and incurring vast expense for the printing of bills and reports. Obligations of high and undoubted claim are thus repudiated. Moneys erroneously paid to the Government and covered into the Treasury are wrongfully and inexcusably retained from its own citizens, to whom they belong, for no other reason than that Congress can not be moved to enact a restitution.

GREAT INJUSTICE.

Property furnished and services rendered the Government are likewise ignored. Claimants appear at the Capitol from year to year vainly supplicating for justice. An associate member long in Congress informs me that he has recognized the face of one claimant in the galleries for sixteen years. He comes and he goes as Congress comes and goes. Patiently he watches and waits. From the vigor of middle age he is now in the decline of life. None deny the justness of his claim, for indeed the biennial reports of committees affirm its righteousness. Infinitely more satisfactory would it be for a creditor to hold an honest bankrupt for his debtor than the rich Government of the United States. How long shall this travesty and this denial of justice be continued? Congress can provide a remedy. It can relieve itself of this great responsibility and at the same time amply protect the Government while doing equal and exact justice to its own citizens.

A SPECIAL TRIBUNAL DEMANDED.

The exigencies of the public business have from time to time suggested and indeed at last compelled a resort to auxiliary tribunals and departments. The Court of Claims is the outgrowth of this demand, and while it is unreasonably circumscribed in its jurisdiction, still it has relieved Congress of much labor, and blessed many a just and patient creditor. It has proven highly satisfactory. A like resort is now imperatively required for the consideration of Indian depredation claims. If not soon provided and relief afforded, not one of the long-waiting sufferers will survive to receive the promised aid. Let it come soon or not at all.

By repeated acts of Congress and with annual appropriations the Interior Department has been authorized and required to receive and file all this class of claims and to examine and investigate them and report them to Congress. This has been done. Agents have been sent into the field, have taken evidence, and submitted their findings, and at each Congress there is submitted to us a volume bearing on these claims, and the usual letter accompanying, as follows:

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,
Washington, D. C., January 2, 1888.

SIR: I have the honor, in compliance with the provisions of an act entitled "An act making appropriations for the current and contingent expenses of the Indian Department, etc., for the year ending June 30, 1888" (24 Stat., p. 464), to transmit herewith a schedule of Indian depredation claims, in favor of citizens of the United States, and against Indians holding treaty relations with the Government, whose investigations in pursuance of said act were completed on the 1st instant.

Said schedule contains the numbers of the claims, name, and post-office address of each claimant, character of the property stolen or destroyed, the Indians charged with the depredation, when committed, date of presentation, amount claimed, amount allowed, date of action, whether barred, and the "date and clause of the treaty creating the obligation for payment, and also what funds now existing by reason of treaty or other obligation out of which the same should be paid."

Each claim herewith is accompanied by the original testimony, former action had, post-office address of the witnesses, together with a letter, with full abstracts of the whole record in the case, embodying "my opinions and conclusions upon all material facts, and all the evidence and papers pertaining thereto."

Very respectfully,

J. D. C. ATKINS, *Commissioner.*

To the Hon. SECRETARY OF INTERIOR.

But we proceed no further. One volume of reported claims follows another. Claim after claim is recommended for payment, and now the aggregate reported of claims filed amounts to fifteen millions of dollars, and only a small portion considered.

How long shall this farce continue? Even the Interior Department is aroused to the absurdity of this inaction. Its reports and recommendations are ignored by Congress, and no remedy results from careful investigation. Still the claims pile up, and the idle ceremony of filing and considering and reporting goes on. At last the Department in its report to Congress for 1887 is prompted to speak as follows:

Many of these depredation claims have been pending for so long a time that a large number of the claimants are dead and can be represented only by heirs or administrators. The witnesses are scattered and many of them are also dead, and in a few more years, in the ordinary course of events, both claimants and witnesses will have passed away. It has, therefore, occurred to me that if it is the intention of Congress ever to pay these claims—very many of which after investigation I believe are just and should be paid—it should take steps at an early day looking toward their final arbitration and settlement. With that view I would suggest a plan of action which would probably prove effective in disposing of them. If it should be deemed wise and proper the House of Representatives might, by an amendment to its rules, organize a new committee on Indian depredation claims, which committee could investigate and report upon such cases as are recommended by the Interior Department for payment, just as the Committee on War Claims examines and reports with reference to what are known as the 4th of July claims. Every one familiar with the immense pressure on Congress for time to transact the public business knows that these Indian claims can never be considered by Congress *seriatim* except in some such manner as above indicated.

Congress is also awakened to the situation, and in the organization of this the Fiftieth Congress a committee on Indian depredations is provided for with power to "consider all Indian depredation claims."

A COURT FOR INDIAN DEPREDATION CLAIMS.

Within sixty days after the formation of the committee one hundred and sixty-four bills which had been introduced in Congress were referred to it, together with six thousand claims reported from the Department. The committee soon found itself utterly unable to consider them as their merits required, and unanimously concurred in the necessity for the creation of a special tribunal, and with the powers of a court, to consider and adjudicate all Indian depredation claims.

Upon frequent consultations with the Secretary of the Interior and the Commissioner of Indian Affairs, and upon mature deliberation among themselves, the full committee, upon various concessions being made, agreed upon a measure, and then without a dissenting voice and with the hearty concurrence of the Department, reported their bill to this Congress.

That the conclusions shall be as little delayed as possible and reached without the technical restraint of the higher courts, it is provided that:

Such regulations of practice shall be so prescribed as to provide for the expeditious, just, and fair disposition of such claims as may come before the court, without unnecessary technicalities, according to the rights of claimants upon the merits. No claimant shall be required to appear by attorney, and every case submitted by the claimant in person shall receive prompt and careful consideration in its order. But if any claim shall be prosecuted by attorney, notice shall be given by the court, in such form as it may prescribe, to the Attorney-General of the United States, and it shall thereupon be his duty to cause his appearance to be entered on behalf of the Government or of the Indians charged with liability, and thereafter properly to represent and defend the interests involved.

All papers, reports, evidence, and proceedings of record or on file in any division of the Interior Department or in the Department of War relating to any Indian depredation claims shall be at once delivered to this court upon its organization, and shall be considered by it—

And such value awarded thereto as in its judgment is right and proper without limitation by the technical rules of evidence in courts of law.

In addition to this the commission may, where the proofs are deficient or doubtful, send out persons specially appointed to make further investigations.

The amounts so adjudged by the said court shall be a final and conclusive determination of the full and true amounts due the several claimants, respectively, on account of such claims.

The Secretary of the Treasury shall annually submit to Congress an estimate for the payment of the amounts allowed against the United States.

PENDING APPROVED CLAIMS.

The representatives from the West insisted for some measure of relief which should provide for the direct payment of all claims allowed and favorably reported to Congress by the Department.

The Commissioner of Indian Affairs, in his last report, was in harmony with this demand. At much expense of the Government each claim has been carefully investigated. It is sworn to by the claimant and corroborated by affidavits of witnesses. The depredating Indians in most if not all cases have been called on by their agents and interrogated as to the facts alleged by the claimant. In many instances parties, to furnish proof as to losses, have traveled long distances to obtain the testimony of widely-separated witnesses, and often have employed attorneys to aid in formulating the proof so as to cover all material points of inquiry as far as possible. With all this, in some cases special agents of the Department have made examinations in the field, as they are still doing in many cases, so as to provide against fraud, collusion, or mistake of fact, and their findings are also on file to add further light in aid of the Department recommendations. Still more. Many of these claims have been carefully considered by either Senate or House committees—often by both—on bills pending and favorably reported on the Calendar. Claimants confidently expected, as they had a right to expect, that the next progress would be the payment and final settlement of claims so examined and reported. The law itself justified them in this belief, when by act of March 3, 1885, and subsequent acts, the Secretary of the Interior was directed to examine and report upon claims filed in his Department.

Still further back the authority was more explicit. By act of Congress approved May 29, 1872, it was enacted—

That it shall be the duty of the Secretary of the Interior to prepare and cause to be published such rules and regulations as he may deem necessary or proper, prescribing the manner of presenting claims arising under existing laws or treaty stipulations for compensation for depredations committed by the Indians and the degree and character of the evidence necessary to support such claims. He shall carefully investigate all such claims as may be presented, subject to the rules and regulations prepared by him, and report to Congress at each session thereof the nature, character, and amount of such claims, whether allowed by him or not, and the evidence upon which his action was based.

Why do this if payment is not intended? Pursuant to requirement of such regulations, claimants have submitted the facts upon which they rely for their just compensation.

CONGRESS SHOULD PAY DIRECT.

In view of all this on the part of the Government, amounting to a virtual promise to pay the claims found due and favorably reported, the only honest and just course now is for Congress to make the appropriation. Should an individual debtor do less than this society would brand him as a scoundrel, and all honorable men would avoid him on the roadside. But, instead of this straightforward course, it is now proposed to remit these long-waiting people to a commission, and there require a reinvestigation, as to claims favorably reported. In many cases not only the claimant is dead, but his witnesses as well. They can never be recalled. In other cases the parties are scattered hither and thither, and can not be found. Long periods of time have elapsed as to many claims since the original proofs were submitted. These proofs were accepted, and were found so full and uncontroverted as to warrant their allowance and favorable report. To resubmit these is to trifle with the honor of the Government, as well as the rights and just expectations of the people. But fortunately the present bill may avoid much of this trouble.

A COURT FOR CLAIMS YET UNALLOWED.

It is argued on the other hand, that at the best this testimony is chiefly but *ex parte*, that great frauds have been detected, little as the Government is provided in machinery for investigation. The cupidity of some claimants and the systematic dishonesty of others have led to extortionate charges on the one hand and to false claims on the other. The commissioner himself asserts that "but few of these claims are so prepared as to admit of fair and satisfactory determination in the office without the aid of further inquiry through special agents or otherwise." Wherever there shall exist this class of imperfect claims, we concede the necessity for further or continued investigation, but our protest reaches to that class which bear no indications of fraud, or even doubt, but which have been carefully and clearly proven by credible persons, and thereupon allowed and submitted to Congress for appropriation. These, while they may be adjusted on review of the present testimony, still they should not be resubmitted to any tribunal, but should all be included in an omnibus bill, and payment provided for.

THE PROPOSED RELIEF.

In the judgment of the Department, however, the pending bill was the best measure in the interest of all parties it could recommend. It was also found the only practical adjustment upon which the various members of the committee could unite, and hence it is in the nature of a compromise.

The arguments in its favor are:

First. It assures the adjudication of these claims within a fixed period.

Second. The amounts adjudged shall be a final and conclusive determination.

Third. The judgments are included in estimates and submitted through the Secretary of the Treasury to Congress for direct payment.

Fourth. As to all claims on file, whether allowed and favorably reported heretofore to Congress or not, wherein the testimony already or now on hand is sufficient, the commission is authorized to review that, and therefore neither cost, further trouble, or more testimony should be required from such claimant, and it may be assumed will not be required.

Fifth. As to all claims hereafter presented or now awaiting examination, or heretofore disallowed, the present measure is the most perfect, fair, and conclusive mode of adjudication. It is within the reach of all. It may be said to be the poor man's court. In view of the practical impossibility of considering all these claims *seriatim* through Congress, it will be a subject for congratulation among all claimants should they obtain this recognition of their rights, and receive this assurance of a relief close at hand, however much we may have labored and longed for an immediate and outright payment.

THE NATION LIABLE FOR INDIAN DEPREDATIONS.

But, sir, even this measure is opposed by some gentlemen in this Chamber on the ground that the Government is neither legally nor morally under obligation to make compensation to the settlers of our frontiers for property destroyed by depredating Indians.

A brief reference to past legislation will effectually dispose of these objections. Almost coeval with the adoption of our present Constitution our Government has positively and continuously recognized its liability in these cases. Under Washington's administration the law provided: "And in the mean while, in respect to the property taken, stolen, or destroyed, the United States guaranties to the party injured an eventual indemnification." It continues to do so. It has done more. From May 19, 1796, the date of the act of Congress, until February 28, 1859, a period of sixty-three years, these claims were paid directly from the Treasury without any special legislation through Congress.

By act of Congress June 30, 1834 (4 Statutes, page 731), the following provision in the law gave further certainty and emphasis to the liability as well as the mode of payment:

And if the nation or tribe to which such Indian may belong receives an annuity from the United States, such claim shall at the next payment of the annuity be deducted therefrom and paid to the party injured; and if no annuity is payable to such nation or tribe, then the amount of the claim shall be paid from the Treasury of the United States.

Congress was entirely relieved from this legislation. Application was made direct to the Department, and payment made by warrant from the Treasury. There was no supplicating from father to son at the doors of Congress until time itself destroyed both claim and claimants. The Government then adjusted its obligations as an honest and prompt man would do in his own business affairs.

The first change from this policy and just practice was made in the act of Congress of February 28, 1859 (section 8). It did not repeal the existing guaranty of indemnification, but denied the remedy by payment from the Treasury—only allowing this to be made, as usual, by Department when annuities existed, and from this fund alone. A resort to Congress in all other cases then for the first time became necessary. This repeal has been argued by some as a repeal of the original guaranty of the Government, and as a repudiation of any obligations not adjusted, or such as might arise on future claims. But this construction is set at rest by a reference to the joint resolution of Congress of June 25, 1860 (12 Statutes, page 120), which provides that said act of repeal—

shall not be construed to destroy or impair any right to indemnity which existed at the date of said repeal.

The effect was to shift the indemnity from the Department to Congress in the first instance, but not destroying or affecting the legal right to indemnity which had previously been guarantied.

The practice of paying claimants through the Department, where annuity funds existed, continued until the act of Congress of July 15, 1870 (section 4, Revised Statutes), when even this was prohibited, and it was then further enacted as to each class of claims: "And no claim for Indian depredations shall hereafter be paid until Congress shall make special appropriation therefor." This still recognized the liability, but referred the claims to Congress for payment. Following this, and in the act of Congress of May 29, 1872, there was provided the authority in the Department to receive, examine, and report to Congress all depredation claims. At each session Congress makes an appropriation in the Indian bill to defray the expenses of these examinations.

Under the new order committees have reported various private bills to Congress recommending payment for Indian depredations. A few have passed and become laws, but the great number can never be considered in view of the difficulties which I have before mentioned. It is thus perceived that for nearly one hundred years there has been a uniform and uninterrupted acknowledgment on the part of the Government of its liability to these claimants.

We are met with this inquiry: "As a matter of abstract right, is it just and proper that these claimants should receive the relief heretofore guarantied while the same is not conceded nor afforded to another class of sufferers who sustain damages in a time of war by the marauding enemy?" Why, it is asked by the opponents of this measure, should not another class of our own citizens be likewise indemnified? Why, they ask, create a distinction without a difference? The answer is, that

there is a difference, and a most radical one. There is no possible similarity. The relation of the Government of the United States to the Indian tribes is a pecular one. It is that of a guardian to the ward. Recognizing certain rights in the Indians, the Government has assumed certain duties and obligations toward them in consideration for certain relinquishments on their part. It undertakes to protect, as well as to guard them. It places them in an exclusive territory, and draws around the boundary a bold line. Beyond this no Indian can have exit without license, and within it no citizen can have legal access without a permit from the same authority. This is, at least, the assumption of the law, although often relaxed in both instances. These reservations are often termed "cities of refuge." Within their exclusive precincts the municipal law can not enter. It can neither be heard nor felt. Judicial process, so omnipotent and fleet of foot elsewhere in the State, stands dumb and powerless before these mystic gates. Reservations, though in a State, are not subject to its jurisdiction. The United States Government in exempting the Indian ward from the operation of the law assumes all responsibility. It subrogates itself for him, and becomes the security to the citizens whom it deprives of every security afforded by law in other cases.

It is therefore under a continuing obligation to answer for any negligence following its undertaking. It assumes not only the custody of the Indian, but a right to his property also. It renders him incapable either to incur a liability or to discharge one. Against the individual Indian the white man is remediless. He can neither compel him to answer for an honest debt nor punish him for an injury done. The maxim: "For every wrong there is a remedy" is meaningless here. The reservation walls are statutes of limitations. They constitute a bar. An injured citizen under the law can obtain redress for injuries even by a mob or a riot. He can pursue the rioters individually or collectively, or can seek in most cases indemnity from the State. The strong arm of the law can at once be invoked. The Constitution itself provides that—

The United States shall guaranty to every State in the Union a republican form of government, and shall protect each of them against invasion * * * against domestic violence, etc.

That which was once the property of the Indians, whether a mere right of occupancy or a higher tenure, has been appropriated to the exclusive holding of the Government, or is still held in trust for them; and hence it can well afford to devote a small portion of these immense funds as indemnity for the wicked depredations caused by these Indians. We have the precedent in the last session of this Congress in which the Government appropriated $147,000 for depredations upon Chinese property in Wyoming by a mob. And yet when our own brave pioneers, honest, law-abiding, and nation-loving citizens of the West ask Congress for compensation for their homes burned and their property destroyed and carried off by Indian savages at the time in custody of the Government, then it is that every delay is experienced, every excuse made, every legal quibble offered in the denial of the just claims!

The Government owes protection to its citizens and their property, and when through its neglect this protection is unavailable and the citizen sustains injury its consequent liability for indemnity is undeniable. The citizen having engaged himself in the social compact to render allegiance to the State, he has earned the reciprocal obligation of protection from the State. This is a fudamental law.

AN INJURED AND NEGLECTED PEOPLE COMPLAIN.

In the case of the Indian depredators the Government takes them into its care—as one would cage up wild animals—and makes it unlawful for any citizen to pursue them for private satisfaction or redress. It negligently permits them to escape from its official agents and from the designated reservations, and they rush madly and with bloody hands into peaceful communities, massacre their unresisting inhabitants, and pillage and destroy everything of value in their wake. Yet our own suffering people under these circumstances must stand and beg at the doors of Congress like cringing suppliants for a quarter of a century for a poor indemnity for their homes in ashes, while to compensate a few Chinamen we are unwilling that even months shall elapse until we can pay them for their dingy shanties the prices of castles! How much longer shall this halting, begrudging, and ungenerous conduct be practiced toward our own people? It is sad to read the plaintive letters which come to us from old claimants in the Western States and Territories, from the Pacific coast in particular, urging Congressional action on their claims. They chiefly recite their pioneer services, their advanced age, their infirmities, and personal needs. Most of them are without homes of their own and many are penniless. Some will write, "What little the Government owes me I shall not want long;" another will say, "Have the people of the United States forgotten the sacrifices which it cost us on the frontier to drive back the savage foe, and will they continue to deny us the small sums asked in compensation for our destroyed homes?"

Many a constituent after years of letter-writing regarding his claim and its prospects is finally heard from no more. We miss his familiar hand-writing among our mails. He has died. Thus one by one, discouraged, heart-sick, in old age and distress, they drop out of the still waiting but diminishing ranks, and their just claims remain neglected, dishonored, and ignored by the very Government for whose interest their greatest sacrifices were made. We say "Westward the course of empire takes its way," but forget in our boast that this way for the grand march of empire has been found too often in the light of the blazing frontier cabin, in the cries of its massacred inmates, and by the fragments of their scattered and destroyed property.

A SPECIAL LIABILITY—OREGON SAVED FROM ENGLAND.

To those claimants who form a part of the early emigration to what was termed the Oregon Territory, that great area west of the Rocky Mountains and north of California, the Government is under special obligations. These people it expressly invited to go to that most remote and comparatively unknown section of the nation. There was a national policy in this. The country north of the forty-second parallel was still a subject of dispute. It was known to be rich in resources and great water ways, its fish and its fur-bearing animals and its advantage as a part of the nation. The contest was between the English nation and its people who had originally gathered around the Hudson Bay Company's posts and the American Government and its emigrants. The diplomats of the two governments being unable to agree, proposed a truce. A treaty with England of joint occupancy was entered into October 20, 1818, whereby it was agreed—

That any country that may be claimed by either party on the Northwest coast of America, westward of the Stony Mountains, shall, together with its harbors, bays, and creeks, and the navigation of all rivers within the same, be free, and for the term of ten years * * * to the vessels, citizens, and subjects of the two powers; * * * nor shall it be taken to affect the claims of any other power or state to any part of said country.

This period was, on August 6, 1827, by convention between the two governments, "indefinitely extended and continued in force." This treaty was unfortunate for us, as it indicated a doubt on our part. In 1842 the whole controversy was revived. Each government expressed an earnest desire for a final adjustment. A war of diplomacy was inaugurated. The British plenipotentiary insisted that the boundary should be drawn—

due west along the forty-ninth parallel of north latitude to the point where that parallel strikes the great northeasternmost branch of the Oregon or Columbia River, thence down along the middle thereof to its junction with the Pacific Ocean.

This was declined by the American plenipotentiary, who, however, would have accepted the forty-ninth parallel westward to the Pacific.

Proposals were again renewed on July 12, 1845, by the United States Government, which then insisted on its title to that portion of Oregon lying between the valley of the Columbia and the Russian line, in 54° 40′ north latitude, which was ceded in the Florida treaty, whereby Spain made over to the United States "all her rights, claims, and pretensions" to any territory west of the Rocky Mountains and north of the forty-second parallel of latitude. Finally, our Government, "with a desire to cultivate the most friendly relations between the two countries," offered in compromise the forty-ninth degree of latitude as a permanent boundary. With much spirit the British minister declined this proposal. The result was that great excitement pervaded the minds of the people of both countries. Public meetings of indignation were held in many of the large cities, and America's claims were asserted with warlike emphasis.

Diplomacy had failed, and war seemed now the only alternative. In the Presidential campaign the Oregon question was made a battle-cry. Everywhere was heard in hostile tones "fifty-four forty or fight." The rights of our nation were discussed in Congress and in the canvass. France had relinquished all her rights in the Louisiana purchase; and the claims of Russia as far north as 54° 40′ was ceded to the United States, and this left Britain as our only competitor. The feeling in England had been previously aroused upon the declaration of President Monroe:

That henceforth the American continents are not be considered as subjects for colonization by any European powers.

An attempt was made in Congress in 1843—

To extend the laws of the United States over the Oregon Territory.

Previously a resolution passed the Senate—

To give notice to Great Britain of our intention to annul the treaty of joint occupancy.

A bill was finally reported to the House which provided—

For taking possession of the whole region west of the Rocky Mountains from latitude 42° to 54° 40′, and extending over it our laws and jurisdiction.

This, had it passed, would have been equivalent to a declaration of war, as the treaty of joint occupancy had not been abrogated.

Senator Benton, that great friend of Oregon, in an able speech in the Senate June 3, 1844, encouraged the peopling of the country as one means of defense. He said:

It is the genius of our people to go ahead, and is the practice of our Government to follow and eventually to protect and reward the bold pioneers who open the way to new countries and subdue the wilderness for their country. They will get protection, both civil, military, and naval, for a government will be established for them, a military force will be sent to them, and ships of war will visit their coast and enter their river. * * * Let the emigrants go on and carry their rifles. We want thirty thousand rifles in the valley of the Oregon; they will make all quiet there in the event of a war with Great Britain for the dominion of that country.

The newly elected President, as we are told, to the delight of all parties, declared positively from the portico of the Capitol, surrounded by thousands of his fellow-citizens, "that our title to this territory is clear and indisputable."

THE NATION INDUCES AMERICAN SETTLEMENT.

During all this agitation and discussion both nations were quietly encouraging the settling of the country by their respective peoples. It was a race for preponderance. An eminent writer, and close with the administration, wrote an address on the "Condition of the Oregon Territory," in which he says:

Emigration should take place instanter; we should people this land * * * and any foreign attack should meet with our prompt and united resistance. We should allow no nation to invade our rights.

On Senator Linn's bill, "To authorize the adoption of measures for the occupation and settlement of the Territory of Oregon," Senator Benton said he was "for inducing men with families to go to that country, because it would give the strongest bonds which could be given for the faithful defense of the country." He favored giving a greater quantity of land to a man as an inducement, for he said:

That to the man having a family it was the most costly and hazardous to emigrate.

Senator Sevier said:

Strike out the land clause and you would have no settlers there, but on the contrary the country would remain in the possession of the British henceforth and forever.

Senator Henderson said:

The object of the bill is to settle the country, and no settlement can be obtained without this inducement.

While this proposed legislation was not consummated until seven years after, yet it gave an assurance of an ultimate certainty, and with this promise thousands of people emigrated; and it was this promise earnestly pressed which aided largely in securing the donation act of 1850.

Mr. Hugh Burns, in a letter dated Multnomah City, Oregon, October 29, 1844, writes a glowing description of the country, of the Americans already there, and of their prosperity, and urges the importance of the Government acting promptly to save the country to the nation, and therefore the urgency for American emigration. He concludes by saying:

But one thing is wanting, and this our Government should long since have extended to us; I mean its protection.

These appeals all produced the desired result. An American population soon settled the Oregon country and outnumbered the British, and then the Americans demanded the prompt action of the Government in their defense, as well as for the entire country south of the forty-ninth degree of latitude. This aroused the Government at Washington to greater vigilance, and gave it a better knowledge of the great prize at stake, and stimulated it to maintain and assert its claim in defiance of Britain. A treaty was at last concluded; and thus victory was achieved without war, and this immense empire happily preserved to our country. In a memorial to this Congress the Oregon Legislature says of the early pioneers:

That they demonstrated to our Government the value of the country and the practicability of its becoming a part of the American Union of States at a time when the problem was much doubted by officers high in the authority of the Government.

THE DONATION ACT. TO REWARD SETTLEMENT.

As a further inducement to the settlement of that immense region on the Pacific, and especially to encourage American families to emigrate thither, and to reward them for their endurance, privations, and dangers in braving that toilsome and perilous journey of six months over the plains and across the Rocky Mountains, Congress again proposed the land bounty and offered those who settled there prior to September 1, 1850, one section, or 640 acres of land, to husband and wife, one-half in the wife's own right, and 320 acres to a single man; and those who were or should become settlers between the 1st of December, 1850, and the 1st of December, 1853, were granted 160 acres to a single man, and if married, 320 acres, one-half to the wife in her own right. By act of February 14, 1853, the time for settlement was extended to December 1, 1855, when the act expired by limitation. This law is commonly called the "donation act." It was passed September 27, 1850. It was succeeded by the pre-emption act of 1841, which was extended to Oregon July 7, 1854.

When the donation act was under consideration and debated in the Senate in September, 1850, Benton said:

Of all the settlers of new countries that we have had, none have been entitled to so much as the people of Oregon. They went to the country and began the good work when we were contending with a powerful foreign nation for the title to the country. It was their occupancy which forced the decision of the question from which diplomats and statesmen had been shrinking. For more than a quarter of a century diplomats and statesmen had been staving off the question from year to year, but the pioneers of the West went and took possession, and their taking possession forced the decision of the question upon the country. They conquered it from the savage. We may say they conquered it from Great Britain. They conquered it from the supineness and timidity of legislators and diplomats.

Senator Dickinson said:

They went and reclaimed it. They brought it under law and civilization and to the United States. They braved all the dangers of border life, and if there are any people entitled to consideration, and a very liberal one, it is the people of this Territory.

Senator Sam Houston said:

I recollect that when I first came into this Chamber Oregon was then a bone of contention.

Some there were who contended that aid should be extended to Oregon, while others opposed it, and through that or some other cause the Territory has been almost entirely neglected. And at a time when she was most seriously threatened by Indians a regiment raised for her necessary defense was diverted from the object of its creation and marched to Mexico. Thus Oregon has been for years without the benefit of protection from the Government.

The results accomplished by the donation law justified in one sense the policy which prompted it. A great tide of emigration, far exceeding any which had preceded it, poured into the entire Pacific Northwest. Missouri, Ohio, Indiana, Iowa, and Illinois were the great mother States. The emigrants at once sought for and occupied the fairest localities, the fertile lowlands and lovely valleys, the grassy foothills, and even the mill sites, town sites, ferry and bridge locations of importance were selected and all covered under the "donation" grants. In five years' time over 2,500,000 acres were claimed under its provisions, and 7,317 certificates issued for Oregon alone. In Washington Territory, which was part of Oregon until the act of March 2, 1853, when it was detached and the donation act continued as to it, there were 290,215 acres covered by donation claims.

THE DONATION ACT A BLESSING AND A CURSE.

While this great transformation and appropriation was in progress another people were looking on in sullenness and anger. These were the Indians, the original occupants of the country. Nor were they without advisers. The Hudson's Bay Company, that rich corporation of British interests, which had been doing for England in Oregon what the East India Company had been doing for England in India, held and governed the country with imperious sovereignty and with uninterrupted power over the Indians, realized that soon their own sway in Oregon must cease and their exclusive monopoly of the rich commerce with the Indian tribes and the fur-traders must come to an end. The gloomy prospect aroused in them feelings of disappointment, opposition, and animosity. Our Government afforded them unconsciously the occasion whereby they could create disaffection among the Indians, for by appealing to the donation law itself they could convince these people that their rights were ignored by the Government, and thus they could arouse their worst passions.

THE RIGHT OF INDIANS TO COMPENSATION.

The policy of the Government toward the Indian tribes had uniformly been to treat them as occupants of the soil. Before attempting any survey or disposal for occupancy it has always negotiated with them through treaty for a cession of the right of occupancy, and then compensated them. They are never recognized as the owners of their lands, hence they are powerless to transfer any rights to the soil. This was early held to be the law by the Supreme Court of the United States. The sovereignty of the United States over and its fee to much of the territory in possession of the Indians was originally acquired from the crown. It held its title by conquest, and transferred its rights to the United States, subject only to the right of occupancy as before, but as to this the transfer also included the absolute right of extinguishment. The British Government constantly asserted this right and title as to all the lands occupied by Indians in the American colonies. In speaking generally on this subject Chancellor Kent says:

It is a settled doctrine with us that all valid individual title to land within the United States is derived from grants from or under the authority of the Governments of England, Sweden, Holland, France, Spain, Russia, Mexico, the chartered and crown colonies, or the Government of the United States and the several States of the Union. (3 Kent, 5; note *a*.)

This right nations originally acquired by the power of the sword. While it is true that a more humanitarian policy appertains in the conduct of the conqueror to the conquered in general with a recognition of certain former property rights, and often of customs and local or municipal laws, yet it was found that as to the Indians, with their savage modes, their wild, untrained, and nomadic life, and their unyielding indisposition to commingle with and be governed by the new society, a different policy was unavoidable. The right, therefore, of eminent domain in the Government, as well as right to the soil, is no longer disputed as to the Indian lands.

With equal authority there is conceded for the Indians the right to compensation for lands peaceably taken, by which we mean for their occupation right.

EXTINGUISH INDIAN TITLE BEFORE SETTLEMENT.

It is thus seen that the right of occupancy in the Indians is not indefeasible, but can be extinguished. This can be done either by conquest or purchase. To divest the Indians of their right of occupancy, and to deprive them of their homes and hunting grounds without either a peaceable purchase in the interest of civilization and the necessities of society and civil government or through the hostile and warring conduct of the Indians themselves, would call upon any government the severe condemnation of the world. The pre-emption act, that first great law of the disposal of the public domain by settlement and purchase, sacredly reserved its operation "from lands to which the Indian title had not been extinguished."

THE DONATION LAW CONFLICTS WITH INDIAN RIGHTS.

In the case of the donation law no such exception was retained, and it marks the first formal deviation of the Government from its old and well established rule and policy. It even authorized under it the settlement of unsurveyed lands, which under the old pre-emption law was not recognized. It was therefore a violation of all precedent, usage, and law, and an evasion of a conceded right of occupancy, and the Government thus by its own act invited the conflict which ensued.

In the ordinance of 1787 for the government of the territory northwest of the Ohio River it was, even at that early period, provided that—

The utmost good faith shall always be observed towards the Indians; their lands and property shall never be taken from them without their consent, and in their property, rights, and liberty they never shall be invaded, or disturbed, unless in just and lawful wars authorized by Congress.

The donation act to Oregon was, in view of this polity of the Government, a flagrant disregard of an acknowledged right. The Indian war veterans of Oregon, in their memorial to Congress for the payment of their long and unjustly delayed claims for expenses in the Indian wars of 1855–'56 in the Pacific northeast, confirms the opinion here expressed in the following language:

In the donation act the Government departed from its usual policy and made no such exception. That this has been a fruitful source of difficulty there can be no doubt. It is well understood from experience with the Indians of other States that they always claimed the land on which they resided.

Again they say:

As far back as 1835 the Indians west of the Rocky Mountains protested against the taking away of their lands by the white race; that this was one of the causes of the murder of Dr. Whitman and family.

INDIAN TRIBES AROUSED TO HOSTILITY.

They justly complained of this conduct in thus divesting them of their rights and appropriating their lands for white man's settlement without the sanction of treaty or negotiation and without compensation, and they bitterly resented the settlements made under such authority. Promises were freely given them that payment would soon be made for their lands taken. Many unfortunate delays occurred in attempts at negotiation, and this only increased their suspicion and added to their animosity. Treaties were finally concluded, but ratification was declined by the Government. This again increased the distrust. Still settlements continued under the laws of Congress.

The lands of the Indians were being taken from them under form of law; treaties made were ignored, and payments promised were not forthcoming. The Indian agents officially notified the authorities at Washington of the growing and imminent danger, and predicted calamitous results unless negotiations were concluded with the tribes without further delays. With no adequate military protection in the country the Government might well have taken notice of the dreadful consequences should war occur between the Indians and the defenseless whites. It had ample notice of the impending danger.

On November 1, 1855, United States Agent Olney notified the governor of Oregon:

That the Cayuses were determined upon war; that they were only waiting for the young men that are out in the buffalo country; that they expected the Nez Percés and Spokanes to join them, when they intended to come down in a mass upon The Dalles. * * * I am more and more inclined every day to the belief that the Spokanes, Nez Percés, and Cayuses will go to war with us as soon as they can fix for it.

On October 3, 1855, General Joel Palmer, Superintendent of Indian Affairs, reports as follows:

There can no longer be any doubt as to the hostile intention of the Yakimas and Klikitats, nor can there be of Agent Bolan's death, and that he was killed by direction of Kamiokin. He was shot by the son of Owhi, and then by the aid of three others seized and his throat cut. They then shot his horse and made a fire over both and burned them up. Word was then conveyed to all the surrounding bands informing them of what had been done and requesting them to unite with them in hostilities against the whites. * * *

In another part of his report he says:

If our troops should be repulsed, we may expect a protracted war.

As was predicted by the Indian agents, hostilities commenced. The Government was without adequate force, and the commander of the Department of the Columbia and Puget Sound, Major Raines, United States Army, submitted to the Territorial Governors Curry and Mason his requisition for volunteers. The United States Indian agent at Walla Walla officially notified Governor Curry, as follows:

I beg to draw your attention to the fact of all the Indians north and south of the Columbia, this side of the Nez Perces and Spokanes, having either commenced open hostilities upon the whites or are concentrating their forces for that purpose.

In concluding he says:

The regular force now in the country I do not consider sufficient for the protection of the settlers and the chastisement of the Indians. Delay is ruinous; decisive steps must be taken immediately.

By this time the war was general, and had extended to Southern Oregon and along the coast. The major-general commanding the forces on the Pacific reported to the General-in-Chief of the United States Army as follows:

In Washington Territory there appears to be an extensive combination of hostile tribes, which a check unfortunately given to Brevet Major Hallet with a small command may possibly cause to extend yet to other tribes. The Yakimas, Walla Wallas, Klikitats, Des Chutes, and Cayusas are doubtless in arms. They have been excited by fears at seeing their country rapidly filling up with settlers and miners, lest their fate shall be like that of the California Indians, and hope to exterminate the whites at a blow. * * * It will not be safe to move any more of the troops from their present positions, but I shall endeavor to avoid the necessity of recognizing volunteers in the United States service.

GOVERNMENT NEGLECTS TO PROTECT.

The department commander of the Pacific was at that time General John E. Wool. The memorial of the Oregon Legislature to this Congress represents that in no other Indian war on the Pacific coast, and in a few if any others elsewhere in the past half century, have there been any near comparison of the number of Indians engaged that there were in the war of 1855–'56 in Oregon and Washington Territories. The Indian tribes in Oregon and Washington Territories were estimated to number forty thousand, while to protect the settlers scattered over hundreds of miles from California to British Columbia there were not to exceed seven hundred and forty-one soldiers of the regular Army, and stationed at five different forts, none of them within 100 miles of each other. With this meager distribution of his troops in a country where forty thousand Indians were plunging into hostilities and the official agents calling for help, he coolly announces to the General-in-Chief at Washington:

It will not be safe to move any more of the troops from their present positions.

The general admits the further neglect of the Government to protect the property of the people and to defend the settlers when he says:

I am now with my staff actively preparing an expedition. This, however, after a critical inspection of the troops, supplies, etc., I find can not be accomplished as soon as I could wish, owing to the want of a sufficient number of troops, the means of transportation, and the want of clothing for the Fourth Infantry.

Then again he says:

Under such circumstances, before re-enforcements could be received from the East, or authority to call for volunteers, which would occasion a delay of at least two months and a half, the Indians in a general war might inflict an irreparable injury on the country, for it would be utterly impossible with my limited means to guard and protect so extended a country at all points at the same moment.

ITS NEGLECT AND BAD FAITH BRING ON THE WAR.

The act of the Government in the first instance in disposing of the Indian lands to settlers, guarantying patent title in gross contempt of the Indian right of occupancy which had so uniformly and so scrupulously been observed in all former transactions with the Indians, was of itself an aggravation sufficient to incite war. This could well have been foreseen. The Government was therefore criminally in neglect when it invited its citizens under its guaranties to settle in that country with their families and at the same time failed to provide an adequate military force with which to maintain its compact to the settler and protect him from the fury of the outraged Indians whose homes had been without treaty transferred by the Government to its own white settlers and citizens.

The conflicts between the two parties became more frequent. It was common news to hear of pack trains assailed and fired into or robbed, mining camps attacked, property driven off, and many a poor settler found dead in his remote cabin. It was thus that the cloud which had been so long gathering at last burst in all its horrors upon the ill-fated and unprotected settlements. The war cry of the Indians was: "The whites must be exterminated." By preconcert of action hostilities were commenced and carried on all along the coast. Women and children forted up while the men formed in companies to fight the foe who had burned their homes, destroyed their property, and massacred the defenseless settlers.

The entire history, sir, of the Western frontier is indeed but one sad recital of sacrifice and suffering by those who pitched their tents and anchored their future hopes in faith of governmental protection. We recall in my own State many a melancholy instance. None is better remembered than the story of poor John Geisel and his family. Emigrating from their comfortable home in the East they crossed the continent by sea and land, and selected their home on the beautiful prairies, near Rogue River, in view of the surging waves of the Pacific Ocean. Here, on the trail between California and Oregon, they established a cozy home and inn, with far more than the usual comforts of the frontier settler. In the precious sand by the seashore John Geisel delved and washed for the shining gold. On the prairies their horses and cattle peaceably grazed, and in the household the diligent family prepared the meals and lodgings for the dreary wayfarer in his travels along the coast. All was busy, and thrift followed industry. Indians roamed at will, by consent of the Government agent, who assured the white settlers that all was safe. But, alas! when good-will seemed most assured, danger was most to be feared. On the bright moonlight night of February 22, 1856, when John Geisel and family were in sound slumber, they were aroused at the hour of 12 o'clock by loud rapping at the door. Unconscious of danger Geisel arose from his bed and going to the door opened it, when like a flash he was seized by several stalwart Indians, and deadly blows inflicted upon him. His terror-stricken wife rushed to the rescue, but only in time to receive in her arms the falling and mangled body of her dead husband. In vain she struggled with the ruffians—in vain she cried for mercy. A moment more and she was securely bound, placed with her little daughter and tender infant, and admonished to be passive or she should suffer death. One by one her three little boys were led from their beds and, amid her suppliant cries and their heart-rending appeals, massacred in her presence.

Robbing the dwelling of its most valuable contents the captors then applied the torch to its framework, and there in that horrid night and before her agonizing gaze the house with her dearest treasures on earth were all burned to ashes and cinders. The happy home was ended—its joys forever gone! Barefooted and in her night-robe she marched the weary hours toward her place of captivity. Each dwelling along their pathway was set on fire, property destroyed, and when the defenseless inhabitants were at home they were surprised and saf-

fered cruel death and mutilation. Far in the distance could be seen the lurid light of some burning cabin. At dawn of day, foot-sore, heart-broken, fainting, and hopeless, the captive mother, with her children, arrived at the Indian village of the Toot-toot-nas, where, after undergoing unspeakable indignities, exposure, suffering, and terror, they were ransomed by the white settlers who were forted up on the river below. This heroine still survives, esteemed by all who know her. Her petition is before this Congress for aid. The Government can never restore her lost ones; it can never bring back the home in ashes; it can never recall the departed bliss of the once united family; but it can indemnify her for her property destroyed. A favorable committee report is submitted to this House in her behalf. In declining years, in feeble health, in diminished means, she asks for justice. Shall she have it?

Nor need we recite at length, as to another portion of the State, the sad fate of George W. Harris. Busy on his newly-settled farm, he and his son were suddenly attacked by murderous Indians of the Rogue River tribes. Massacreing the boy they inflicted a mortal wound upon the father. He rushed to the house to alarm his family, and falling at the threshold his wife and daughter hastily dragged him within and barred the door, and there, while slowly dying, he instructed them how to load and aim the rifle. Mrs. Harris bravely held the foe in check, waiting and watching for deliverance, which after twenty-four hours happily arrived in the brave volunteers who came to rescue the imperiled settlers. Burying her dead, they hurried from the scene and had barely passed out of view when the Indians emerged from their ambush, near by, and burned the dwelling and barns, and destroyed and carried off the most valuable of the property on the farm. The heirs of Mary A. Harris are also before Congress. They too ask for justice! I have not the time to narrate to the country the numerous other instances of frontier suffering. It is a long list. But the struggles are over; the victims are at rest, and the survivors will soon follow.

The unyielding and desperate courage displayed by the Indians, the murderous atrocities committed, their well-organized and equipped condition, their numbers and discipline for a long time made the result an uncertain one. The Government slowly came to the rescue, although the brave volunteeers organized from among the settlers had already turned the tide of battle, and the close was reached of a struggle which had become famed over the nation, and which for heroic daring, individual gallantry, bitter sacrifices, and tremendous losses in proportion to the people involved is seldom equaled in the great conflicts which have taken place in America in the struggle for the supremacy of the white race over the aboriginal inhabitants of the country. Hostilities of later years have also their sad histories and their great sacrifices.

IT MUST PAY THE DAMAGES.

Eastern Representatives have in the past utterly failed to comprehend the justness of these claims for indemnity on the part of the Government, and occasional relief has been granted with a reluctant and sparing hand; but we now cherish a hope that with the light of the accumulated testimony before us payments will be made for all depredations by Indians in States or Territories and that a more just as well as generous sentiment will prevail. The Government is able to pay these claims; it has guarantied to do it; they are just and worthy; and the long-established law and good conscience too all demand that further delays should cease and an honorable adjustment be had, and thereby the integrity of the nation maintained, while even-handed justice is at last done to its deserving and long-waiting citizens.

Pension Bills.

SPEECH

OF

HON. COURTLAND C. MATSON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 28, 1888.

Mr. MATSON said:

Mr. CHAIRMAN: I wish to make some statements relating to pension matters in a very plain way.

The subject is one of interest to all the people, made so by the very large and increasing expenditures in that direction, and is of peculiar interest and importance to those who are now, and to others who hope to be, beneficiaries of our very liberal system.

A great number of new propositions have been urged upon Congress. I shall not undertake to enumerate them, nor to even suggest the scope of their provisions. It is enough to say that they are divisible into two classes—those which undertake to remedy and correct the inequalities and injustice of existing laws, and those which propose additional pensions.

Many of them I would be glad to see placed upon the statute-book, and yet hope that before this session ends they may have the deliberate and respectful consideration which their importance demands, and if they fail to receive this it shall be through no fault of mine.

Chief among them are two great measures. They are known as the dependent pension bill and the arrears proposition.

The history of a recent attempt to relieve the unfortunate soldiers of the Union who are without pensions, and who are so disabled as to render it impossible for them to procure a subsistence by manual labor, is familiar to the members of this House and to the people of the country. It would be unprofitable to go over that well-fought field again or to recur to the dispute as to whether the bill was properly framed and well guarded. It remains to us now as a reminiscence only.

But there is a pending proposition in Congress, and to that we can address ourselves both with profit and I hope with interest.

The bill, which passed both Houses and which was vetoed by the President, was finally disposed of by Congress in the latter part of February, 1887. In the following September the national encampment of the Grand Army of the Republic met at St. Louis, Mo., and the subject was then carefully and thoughtfully considered. A bill was framed which, in the judgment of that body, would obviate the objections made by the President in his veto message, and it was urged upon Congress at the opening of this session. I wish here to read the section of the vetoed bill relating to dependent soldiers, and also the section of the bill submitted by the Grand Army relating to the same subject.

The second section of the vetoed bill is in the following language:

SEC. 2. That all persons who served three months or more in the military or naval service of the United States in any war in which the United States has been engaged, and who have been honorably discharged therefrom, and who are now or who may hereafter be suffering from mental or physical disability, not the result of their own vicious habits or gross carelessness, which incapacitates them for the performance of labor in such a degree as to render them unable to earn a support, and who are dependent upon their daily labor for support, shall, upon making due proof of the fact according to such rules and regulations as the Secretary of the Interior may provide in pursuance of this act, be placed on the list of invalid pensioners of the United States, and be entitled to receive, for such total inability to procure their subsistence by daily labor, $12 per month; and such pension shall commence from the date of the filing of the application in the Pension Office, upon proof that the disability then existed, and continue during the existence of the same in the degree herein provided: *Provided*, That persons who are now receiving pensions under existing laws, or whose claims are pending in the Pension Office, may, by application to the Commissioner of Pensions, in such forms as he may prescribe, receive the benefits of this act; but nothing herein contained shall be so construed as to allow more than one pension at the same time to the same person, or pension to commence prior to the passage of this act: *And provided further*, That rank in the service shall not be considered in applications filed thereunder.

The second section of the Grand Army bill reads as follows:

SEC. 2. That all persons who served three months or more in the military or naval service of the United States during the late war of the rebellion, and who have been honorably discharged therefrom, and who are now or may hereafter be suffering from mental or physical disability, not the result of their own vicious habits, which totally incapacitates them for the performance of manual labor, shall, upon making due proof of the fact according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensioners of the United States, and be entitled to receive $12 per month; and such pension shall commence from the date of the filing of the application in the Pension Office, after the passage of this act, upon proof that the disability then existed, and shall continue during the existence of the same in the degree herein specified: *Provided*, That persons who are now receiving pensions under existing laws, or whose claims are pending in the Pension Office, may, by application to the Commissioner of Pensions, in such form as he may prescribe, receive the benefits of this act; and nothing herein contained shall be so construed as to prevent any pensioner thereunder from prosecuting his claim and receiving his pension under any other general or special act: *Provided, however*, That no person shall receive more than one pension for the same period: *And provided further*, That rank in the service shall not be considered in applications filed thereunder.

A comparison will readily demonstrate the only substantial difference between these two sections to be that the condition of dependence is eliminated from the Grand Army bill; and that great and most important of all soldier organizations manifestly arrived at the deliberate conclusion that with the dependent condition out of it, it could not be reasonably opposed by any one.

This Grand Army bill passed the Senate on the 8th day of March, 1888, but with the insertion of these words as a condition upon which a pension could be obtained: "and who are without adequate means of self-support," so that the bill was made by the Senate almost in identical language the bill which had been vetoed by the President. And thus it came to the House and was there referred to the Committee on Invalid Pensions, of which I have the honor to be chairman. A majority of that committee reported to the House a substitute for this proposition, which I wish here to read, and is in this language:

That all persons who have served in the military or naval service in any war in which the United States has been engaged, and who have been honorably discharged therefrom, and who are now or who may hereafter be suffering from mental or physical disability, not the result of their own vicious habits, which totally incapacitates them for the performance of manual labor, shall, upon making due proof of these facts, according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensioners of the United States and be entitled to receive a pension at the rate per month of 1 cent for each day's service in the military or naval service of the United States during any of the wars in which the United States has been engaged, and all persons who have served as aforesaid, and have been honorably discharged as aforesaid, and are now sixty-two years of age shall also be entitled to be placed upon the list of invalid pensioners as aforesaid and paid a pension for and during their natural lives at the rate aforesaid; and all other persons who have served as aforesaid and have been discharged as aforesaid, and who are not of the age of sixty-two years, shall, upon becoming of the age of sixty-two years, be entitled to be placed upon the list of invalid pensioners as aforesaid, and paid a pension from and after that period, for and during their

natural lives, at the rate aforesaid; and such pensions shall commence from the date of the filing of the application in the Pension Office after the passage of this act; and in cases where allowed for disability, upon proof that the disability then existed and continues during the existence of the same in the degree herein provided: *Provided*, That persons who are now receiving pensions under existing laws, or whose claims are pending in the Pension Office, may, by application to the Commissioner of Pensions in such forms as he may prescribe, receive the benefits of this act; but nothing herein contained shall be so construed as to allow more than one pension at the same time to one person: *And provided further*, That this act shall not be so construed as to repeal, modify, or in any way change the law relating to invalid or service pensions, nor shall rank in the service be considered in applications filed under this act.

The scope of this substitute, it will be seen at a glance, is broader than either referred to before. It gives a pension not only to those who are disabled from earning a subsistence by manual labor, but also to all those survivors of the late civil war who fought for the Union and were honorably discharged who are now sixty-two years of age or over, and to all others as they become sixty-two years old. It is unlike the vetoed bill and the Senate bill in that no proof of a condition of dependence is required, and it is unlike the Grand Army bill only in the rate of pension fixed. It recognizes the per diem rate, that is 1 cent per month for each day's service of the soldier. The gist and the pith of all this class of bills was to relieve against a present disability without reference to the time and place of its incurrence, provided only it is not the result of vicious habits. It was to be given wholly on account of the service of the soldier, and therefore it was believed to be just and equitable to make that pension rate according to his service. So that he who served one year would get a rate of $3.65 per month, and he who served four years four times that sum or $14.60 per month. A uniform rate of $12 per month was fixed by all the other bills referred to without any regard to the length of the service of the soldier.

It can be well remembered by those who observed the contest over the vetoed bill that one of the strongest objections urged against it is that it proposed to pension the short-term, large-bounty men, who enlisted near the close of the war, upon the same basis as those who went through all the hardships and suffering of the greatest and most protracted war of modern times. The per diem rate gives to each soldier according to the length of his service, and if a small pension only was obtained it was solely due to the shortness of his service. The objection to this rating has been made that some would not get enough pension to give full relief, and yet if each is pensioned precisely as all his comrades for disabilities not incurred in the service, and according to his service, could he justly complain?

It must be borne in mind that this pension is not for any disability contracted in the service. If it was the length of service should of course not be considered, for the man who incurred a disability the day after he entered the service is clearly entitled to as much as one who suffered the same disability near the end of a long term. These considerations can be confidently submitted to the candid judgment of a just and liberal people, and I believe will meet the approval of that large body of the survivors of those who defended the Union, who I know believe in even-handed justice between comrades as well as between citizens.

I am quite well aware that some of the most conspicuous of the newspapers assuming to be the organs of the soldiers assailed the rate fixed by the last bill, but subsequently they became clamorous for its passage, and others have maintained its justness from the very beginning of the agitation of this question.

If this principle is established now it is not too much to expect that it will obtain in the universal pension bill, which all admit is fast approaching and sure to become a law.

The condition of dependence was eliminated by the Democratic majority of the House committee and the bill made to apply to all who are disabled, and so that which the great representative body of the ex-soldiers regarded as obnoxious and offensive was willingly remedied; and upon this question the substitute proposed may be fairly considered to be, as far as expressed, the policy of the Democratic party, while the Senate bill, with a condition of dependence necessary to be proven to entitle one to a pension, may be justly said to be the policy of the Republican party upon this great issue.

I say this because such a bill not only met the approval of the Republican Senate, but again was indorsed by all the Republican members of the House committee.

Some corollary and other minor propositions were connected with the one I have discussed, but I have set out here the issue, and the only issue upon this question of relief to the soldiers, and need not weary you by a discussion of the others.

And now, Mr. Chairman, let us consider this great question of the payment of arrears of pensions, from which so many instinctively shrink and at the thought of which some great men seem to fear and shudder for the future of the people. Let us look it squarely in the face. I am for it upon the ground of justice. I place my advocacy of it upon the great underlying American principle of equality. I do not assert that it was part of the contract made with the soldier, for I am aware that there was no statute in force at the time of the service that gave arrears to the date of the beginning of the disability, or to the date of discharge, or in cases of widows and dependents to the date of death.

Indeed, I know there have been varying laws upon this subject ever since the war. so that some pensions began at the date of filing the application, others at the date of filing the last evidence, and still others, as in special-act cases, at the date of the passage of the act. And yet I believe that if a man is entitled to a pension for a disability he is, in all justice and equity, entitled to it during the period of that disability, and that the Government should not prescribe a limitation upon the assertion of his right. This, I think, is only naked, absolute justice. But if the doctrine of the waiver of a right could intervene in such a case, I submit that as the Government by its own act relieved the larger portion of the pensioners by the acts of 1879 it can not now refuse those who have since then established their claims.

I assert that among the two hundred thousand claims filed since the 1st of July, 1880, many of them are for serious gunshot wounds received in battle, and I can recall within my own personal recollection a number of cases of that kind. They withheld their claims for various reasons—some through a false pride, some through ignorance, and others because they had no need of pensions. Shall they now be treated less justly because of these reasons? Are they not entitled to be paid as others have been paid for past suffering and past disability? Where is the justice of a refusal upon our part to deal with them as we have dealt with their comrades? Not only in the acts of 1879, but at this very session of Congress this just principle was again recognized, and it was provided, in the general appropriation bill, that all the pensions of widows should be paid from the date of the death of the husband.

How can we deny to the soldier that which we ourselves have conceded to the widows, that their titles shall continue and not be barred by any statute of limitations upon the part of the Government? Logic, justice, equality, and consistency in legislation demand it. The present condition of the public Treasury justifies it, and public sentiment will uphold it, as it has heretofore every measure based upon right principle and for the benefit of those who have rendered valuable service to the people.

But it has been represented that this bill antagonizes the progress of tariff reform, and that the enactment of this law would be hostile to the Mills bill.

I am now and have been constantly since that overshadowing issue was made a consistent and earnest friend of every measure that has been proposed for relief from overtaxation. I yield to no one in devotion to this cause, for I believe it to be the cause of all the people, and the soldiers are only a part of the great body politic.

I believed when I reported this measure that there was enough money in the Treasury not needed by the Government to pay arrears in all cases adjudicated where arrears have not been paid, and I had learned that the reduction proposed by the bill was not equal to the surplus heretofore collected each year, and so if the bill, wise and conservative as I believed it to be, became a law there would then be probably collected each year a surplus sufficient to pay the arrears upon other claims as they were adjudicated.

But if there should be a deficit when the surplus was exhausted, I had in mind a proposition which was in the last Congress for two days urged by my party upon the House, and against which the Republicans filibustered, intended to create a tax upon large incomes, out of which these extraordinary pension demands might be paid; and I said then, and I repeat here now, that I regard such a movement as eminently just, and that the men who became rich during the war should be made, even at this late hour, to bear their fair share of its burdens.

You will bear with me a lively recollection of how forcibly the great Speaker of this House, almost the original leader of the great movement for a reform of our taxes, said on the 19th of May last:

> When the Government has collected or is collecting more money than it needs, the people, realizing the injustice of a policy which unnecessarily deprives them of a part of their earnings, are almost sure to demand its return in some form or other. And so they do now. The problem of getting rid of the surplus now in the Treasury, and that which is sure to be collected hereafter, is one that must command the best thought of our wisest statesmenship.

Here is an object that I believe is sooner or later to be accomplished, because its demands are based upon justice and equality. There is a precedent for it. It will disburse the money in small sums, and goes directly to the people and quickly reaches all the avenues of trade. It goes to those who will spend it, because they need it. It would go out of the Treasury gradually and so would not unduly stimulate business. Its demands are not a continuing charge, and other needed legislation in the direction of a reduction of taxation could go on, for this deals only with what we have as a surplus in the Treasury and what we should in the interest of the whole people get out again into circulation.

I agree that without this legislation the best use we can make of the surplus is to pay it out on the public debt. But if we are to pay each month nearly five millions in premiums over and above principal and accrued interest under this policy, as it was shown by the speech of the distinguished speaker just referred to was done from the 17th day of April last to the following 17th of May, then before any of our

debt is due we will have paid in premiums to the bondholders, that no one will claim is due them, nearly or quite enough to pay this just debt to the soldiers of the country. The value of the bulk of our bonds was by a simple resolution once increased so that they became of a greater value than before of all the cost of arrears paid or proposed. Having submitted to that, do you believe that this great people will hesitate to justify this payment to their defenders?

I have reported this great measure of relief in both Congresses prior to this one. I abide by my judgment now, and I follow the promptings of my heart, that has always been in sympathy with the just demands of my comrades. I have left nothing undone that I could do to promote this and other measures of pension legislation. And if any gentleman can suggest anything that I can do to further this measure that I have not done I will be obliged to him, and if he can suggest any thing that I can do on the floor of this House since I have reported these bills and put them in the hands of the House that he has not the same power to do, I shall feel further obliged to him.

What is the history of your party, my Republican friends, upon the question of a repeal of the acts of limitation of 1879? At Chicago, on the 5th day of June, 1884, your party in national convention assembled gave to the country a declaration of principles and from that I quote the following:

> The Republican party pledges itself to the repeal of the limitation contained in the arrears acts of 1879, so that all invalid soldiers shall share alike, and their pensions shall begin with the date of disability or discharge, and not with the date of application.

Here is a distinct, emphatic, and most solemn promise from the highest authority in your party to the support of this proposition. From that moment to this the Republican party has had a working majority in the Senate of the United States, and its committees are in the control of that party, and yet not a single step has been taken in that body to carry out this important pledge to the soldiers. Such legislation can as well originate in the Senate as in the House, and you will hear loud claims for legislation that has originated there. Other pension measures have passed the Senate, and some have had frequent consideration, but this one has not only not passed, but has never even been reported to the Senate, although one at least of the Senators from my own State [Mr. VOORHEES] has introduced the measure, and probably other Senators have also.

But upon one occasion, and that just one week after the solemn promise of the party made at Chicago, when an amendment intended to accomplish this great object was offered on another pension bill then being considered, under the leadership of the Senator from Ohio [Mr. JOHN SHERMAN] it was stricken down never to rise again. In the course of debate upon this proposition Senator SHERMAN then said, and I quote from the CONGRESSIONAL RECORD, volume 68, page 5050:

> I think a pension ought to commence when the application is filed; that is the true principle, and I shall vote for that.

And upon the same subject he said:

> The quotation of a political platform will not change my views.

Many other specific promises of this kind relating to arrears and other pension matters have been made in State and local Republican platforms, and how faithfully they have been kept the record of the United States Senate, where that party has held undisputed control, will truthfully attest.

I fearlessly assert, Mr. Chairman, that the whole history of politics in this country does not supply so glaring a case of hypocrisy and inconsistency as is shown by the record of the Republicans upon this question, and to which I have invited the attention of the House and the country.

On the 12th of last month the gentleman from Ohio [Mr. GROSVENOR] said in a speech to this House that it would not do to point out what had been done for the soldiers under a Democratic administration; that the record of what had been done was not what was demanded, and that no promises were held out to them for the future in the recent Democratic national platform. That may be true, and if so it only shows that their disappointment arises from the fact that they have been taught to rely upon the promises of the Democratic party.

But even the distinguished gentleman from Ohio will not assert that they could rely upon the resolves of his party after it has made such a record upon this question of arrears, and the party at its recent national convention seemed to recognize the futility of attempting to deceive them further, and carefully abstained from any specific promises to the soldier in its national platform of this year.

But really, Mr. Chairman, I submit that a record of substantial benefits accomplished under Democratic rule will be much more satisfactory than a record of fulsome promises, recklessly disregarded by the Republicans, and believing that the honest and deserving ex-soldiers of the Republic desire to know what has been done, and are willing to make up their judgments upon the records of the two parties. I submit here a succinct and clear statement, which gives a comparison of the administration of the Pension Office for three years under the administration of each party.

These figures are taken from the official records and have been supplied to me by the honorable Commissioner of Pensions, and show the work of that office for the last three years under Republican rule and the succeeding three years of the control of that office by the present able, liberal, patriotic, and earnest Democrat, General John C. Black, appointed by President Cleveland in the earliest days of his administration, and since then continuously administering that great trust. And to accompany this as a part of the work of a Democratic administration I submit a statement showing the acts of the present great Chief Executive in his approval of general and special pension legislation. I submit it to the House, to the people, and particularly to the ex-soldiers as proof, and the best possible proof, of the friendliness of a Democratic President and his administration.

Oratory appeals to passion and to prejudice, and the high-sounding resolutions of political conventions are not to be compared to the great facts set out in this statement. They need no comment; they speak for themselves, and are enough to set at rest the fears that some political alarmist may try to awaken for partisan purposes and for use in a hard-fought campaign. Look at these figures and find in them any evidence of the unfriendliness which political opponents are so free to charge. It is easy to make the charge, but where is the proof of it?

And I ask your attention in this connection to the work of the special examination division, a statement of which is given for the last two years under the Republicans and the first two years under the Democrats, and the striking fact that it cost about four times as much to examine a case in the first period than it did in the last. More than that, where is the charge of any partisan use of their places under this administration? There is no whisper from any source of such a charge, while it was shown by an investigation near the close of the Forty-eighth Congress that in the campaign of 1884 this corps of officers was used largely for political work, and the worst outrages upon the rights of the claimants were perpetrated by these sworn officers of the law in order to secure the ends of the Republican party, by whose favor they were placed in office. I attach to my remarks the statement from which I have quoted and mark it exhibit "A."

Mr. Chairman, I would have been glad, if I had time, to have called attention to other matters of interest to the ex-soldiers of the Republic, but I can say in a word that all the measures recommended and urged by the Grand Army of the Republic have been reported to the House and are now upon the Calendars for its action. Let me suggest that whatever defects there may be in the pension laws are the legacies of Republican rule. No party during or since the civil war has had the power to enact any law except the Republican party. From the 4th of March, 1861, to the 4th of March, 1875, there was undisputed sway; and again from the 4th of March, 1881, to the 4th of March, 1883, there was a Republican majority in both branches of Congress and a Republican President was in the executive chair.

At no time since the 4th of March, 1861, has the Democratic party been charged with the full responsibility of Government. The ridiculous rates given in some cases where the fractions of a cent are computed, and of which my distinguished colleague General HOVEY saw fit on the floor of this House recently to complain so bitterly, are the results of laws enacted while the Republican party had full control of the Government. When he holds these up to the contempt he is simply displaying the wrongs done to the soldiers by his own party.

One other subject, Mr. Chairman, and I am done. Much has been said, and some bitterness manifested toward the President on account of his vetoes of private pension bills. There is room for a difference of opinion upon many of these bills, but there is no reason for the abuse and hostile criticism of the Chief Executive so freely indulged in. They allege that the tone of his messages is unkind and unfriendly to the soldiers. I deny it. I have stood in a relation to this matter to be able to know the feelings of the President, and to ascertain the fact that he has given the subjects of our legislation the most thoughtful, conscientious, and deliberate study. He is required by the Constitution which he has sworn to preserve, protect, and defend, to either approve every bill which has passed Congress or to return it with his objections to the House in which it originated.

His objections in cases of private pension bills read very much like the adverse reports of the Pension Committees of both Houses of Congress. If gentlemen who indulge in these harsh criticisms of the President will glance at the adverse reports made to the Senate and the House, many of them made by Republicans, they will find the same tone of expression, kind of language, adverse to the claimant and his case necessarily, which they denounce in the President's vetoes. When a question is submitted for decision and the judgment is adverse the reasons for the decision upon the facts can not be put in a way to be agreeable to the claimant, and the President is required by the Constitution to give his reasons.

Recently I saw in the Cincinnati Commercial-Gazette of the 7th instant an article severely condemning the President for one of his vetoes, upon the ground that he had advertised a major, who had served

honorably, as a drunkard, and had vetoed his bill upon that ground. If you care to look at the adverse reports made to Congress, I will cite you to House Report 2276, Forty-ninth Congress, made by my amiable Republican friend and colleague upon the Committee on Invalid Pensions, the constant and sincere champion of the rights and interests of his comrades upon the floor of the House and elsewhere, Maj. E. N. MORRILL, of Kansas, in which he advertised John Benson, a soldier, not a major, it is true, in the same way; and he did just right, because he could do nothing else, having found in that the ground of his adverse decision.

And so the President in the discharge of his duty, not with malice or ill-will towards the claimant, but with a desire to do his duty only, states the facts upon which he founded his objections. I challenge any of his loud accusers to show any single instance in which he has animadverted unnecessarily against the claimant. When this wholesale charge is made, ask for the specification. Let the case be cited, and the facts and the criticism go together.

All this is for political effect and is intended by those who resort to it to make Republicans out of Democratic ex-soldiers, and to get their votes in the coming election upon a false issue and in which there is no politics, and I say it in all kindness, the soldier-citizen that has no more political principle than to allow his vote to be controlled by such paltry considerations, such base and unfounded appeals to his prejudice, will make a better Republican than he ever was a Democrat.

The fair-minded and intelligent survivors of our late civil war who stood on the side of the Union must well understand this specious and deceitful appeal, and I repeat for the purpose of emphasis that there may be room for a difference of opinion upon some of these vetoed bills, but there is no ground for the reckless charge made by political opponents for the purpose of appealing to the passions and prejudices of the ex-soldiers.

I also wish to publish with my remarks some statements showing the rapid increase of both the number and the rates of pensions paid in the State of Indiana. This, too, comes from an official source, and is attested by the indorsement of the gallant soldier and efficient officer, Col. Charles A. Zollinger, pension agent at Indianapolis.

Read the record I give you, taken from the official files, and say upon your consciences whether this has been an administration friendly to the ex-Union soldiers, when it shows a more rapid increase towards liberality than was ever known before in the history of the Government. I leave it for the fair consideration of those who are willing to be just.

The Democratic party and its present administration need have no fear of the judgment of the impartial historian upon this subject, nor upon any of the great steps it has taken in the direction of reform for the benefit of the whole people.

EXHIBIT A.

LAST THREE YEARS OF DUDLEY'S ADMINISTRATION.

Claims admitted, fiscal year 1883:	
Original	38,162
Increase	22,746
Miscellaneous	796
Total	61,704
Claims admitted, fiscal year 1884:	
Original	34,192
Increase	22,517

Total	113,087
Grand total claims admitted for three years	359,452

Excess of certificates issued during first three fiscal years of Commissioner Black's administration of the Pension Bureau over the number issued during the last three years of Commissioner Dudley's administration	168,231

NET INCREASE TO PENSION-ROLL.

Fiscal year 1883	17,961
Fiscal year 1884	19,098
Fiscal year 1885	22,369
Total	59,428
Fiscal year 1886	20,658
Fiscal year 1887	40,224
Fiscal year 1888 (approximate)	44,993
Total	105,875
Excess of net increase during first three years of Commissioner Black's administration over that of the last three years of Commissioner Dudley's administration	46,447

FUNDS DISBURSED ON ACCOUNT OF PENSIONS.

Fiscal year 1883	$60,431,972.85
Fiscal year 1884	57,273,536.74
Fiscal year 1885	65,693,706.72
Total	183,399,216.81
Fiscal year 1886	$64,584,270.45
Fiscal year 1887	74,815,486.85
Fiscal year 1888 (approximate)	78,000,000.00
Total	217,399,757.30
Excess of disbursements during first three years of Commissioner Black's administration over the amount disbursed during last three years of Commissioner Dudley's administration	$34,000,540.99

The total number of new names (original certificates) added to the rolls during the last three fiscal years of Commissioner Dudley's administration, which include the names of 15,906 new names added to the rolls by General Black from March 17, 1885, to June 30, 1885, the last three and one-half months of the fiscal year 1885, was 108,121.

The total number of new names added to the rolls during the first three fiscal years of General Black's administration as Commissioner of Pensions, from July 1, 1885, to June 30, 1888, was 156,226. If we add to this 156,226 the 15,906 new names put upon the rolls by General Black from March 17, 1885, the day on which he assumed charge of the Pension Bureau, to June 30, 1885, it makes a total of 172,132 new names added to the rolls since Commissioner Black assumed charge of the Pension Bureau.

GENERAL PENSION ACTS.

Now let us see what President Cleveland, in his official capacity, has done for ex-Union soldiers, their widows, orphans, and dependent relatives.

He approved the act of March 19, 1886, which has increased to $12 per month the pension of 102,568 widows, minors, and dependent relatives of Union soldiers. The total annual increase in money granted to these 102,568 pensioners by reason of his signing this act of March 19, 1886, is $4,923,264.

He approved the act of August 4, 1886, which has increased the pension of 10,092 crippled and maimed Union soldiers of the late war from $24 to $30, from $30 to $36, and from $30 and $37.50 to $45 per month. The total annual increase in money granted to the 10,092 pensioners by reason of his signing this act of August 4, 1886, is $1,089,938.

He approved the act of January 29, 1887, which has placed upon the pension-rolls 21,704 survivors and widows of the Mexican war at $8 per month or $96 per year. The amount in money these 21,704 Mexican pensioners will receive annually is $2,083,584.

He approved the act of June 7, 1888, granting arrears of pensions from the death of their husbands in cases of all widows of the late war whose pensions have been or which may hereafter be granted. This law will favorably affect some ten thousand widows already on the rolls to an amount it is estimated in money of an average of $108 in each case at once, and hereafter will grant to each widow whose claim may be allowed an average of $108 in each case. The amount of money required to pay those already on the rolls it is estimated will exceed $1,080,000, and the number likely to be placed on the rolls during the present fiscal year will swell this amount to over $1,500,000.

So it will be seen that President Cleveland since his inauguration has approved general pension acts which directly and pecuniarily benefit 144,364 ex-Union and Mexican soldiers, their widows, orphans, and dependent relatives, and that the money value of this benefit is over $9,000,000 per annum.

PRIVATE PENSION ACTS.

During the three years and four months that President Cleveland has been in office he has approved, or allowed to become laws by limitation, 1,231 private acts granting pensions, while but 1,524 private pension acts were approved, or allowed to become laws by limitation, during the entire twenty-four years that the Republican party was in power, from March 4, 1861, to March 4, 1885.

Work of special examiners of Pension Bureau under Commissioner Dudley as compared with the work of special examiners for corresponding period under Commissioner Black:

For 1884:	
Examiners in the field	351
Cases investigated	7,452
Reports made	2,187
Depositions taken	18,484
For 1885:	
Examiners in the field	308
Cases investigated	9,831
Reports made	29,224
Depositions taken	189,743
Credibility reports	23,623

Expense account, $514,269.18; of this sum, $343,551 was charged as traveling expenses. Average cost of investing, $52.31 per case.

For 1886:	
Examiners in the field	277
Cases investigated	12,715
Reports made	29,395
Depositions taken	171,380
Credibility reports	23,246
For 1887:	
Examiners in the field	253
Cases investigated	31,010
Reports made	26,399
Depositions taken	140,544
Credibility reports	33,192

Total expenses, $427,404; of which sum $153,180.20 was charged as traveling expenses. Average cost of investigating, $13.78 per case.

Statement showing the number of pensioners on the roll, the net increase of the roll, amount paid pensioners, and the number of pensioners whose rates were increased, taken from the roll of the Indianapolis (Ind.) agency and taken from the yearly and quarterly reports from said agency for the last three years under Republican rule and the first three years under Democratic rule.

Year.	Republican rule.			Year.	Democratic rule.

Department of Agriculture.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 21, 1888.

The House having under consideration the bill (H. R. 8191) to enlarge the powers and duties of the Department of Agriculture, and to create an Executive Department to be known as the Department of Agriculture—

Mr. STOCKDALE said:

Mr. SPEAKER: The bill under consideration undertakes to accomplish the desire of a very large portion of the American people. Its purpose, as I believe, is animated by the highest patriotism and good statesmanship. I believe the interest of the whole people demand its passage, and I desire to occupy a few moments in remarks upon it.

I will address myself briefly to some of the objections that seem to be relied upon to prevent this bill becoming a law.

It is said that the proposed legislation is in favor of a class, and is therefore obnoxious to the Constitution and the spirit of the American theory of government. If it be true that to pass this bill into a law will be legislating in the interests of one class of American citizens and not of the whole people, it would be to me a fatal objection, for I regard that sort of legislation as unwarranted by the Constitution and opposed to the spirit of American institutions. We have had far too much of that sort of legislation.

I do not regard this bill as inaugurating any new feature of legislation. This Government has had a Bureau of Agriculture for years, and I do not know of objection having been made to its establishment or maintenance on constitutional grounds.

There is no new principle announced here. The effect of this bill, if it shall become a law, will be simply to take up the Bureau of Agriculture and extend and enlarge its capacity and powers and advance it to a more dignified place in the machinery of the Government—to make it a coequal branch with other Departments in the Administration—to advance agriculture from a dependency to a power, with a Cabinet minister to preside over it, subordinate only to the President of the United States—not so much to give it dignity and importance, as some of the friends of the bill suggest, and to which the gentleman from Alabama [Mr. OATES] objects, but to provide for it a habitation and position befitting the magnitude and dignity and importance it already has.

If this be class legislation and therefore unconstitutional, our duty is clear, and requires us to repeal the law creating the Bureau of Agriculture.

But is it class legislation at all? We have the Departments of the Navy and of War, each one composed of a separate and distinct class of people, small in number, under separate government, educated and trained at Government expense for those Departments. Each is a complete, absolute despotism within the Republic. They certainly are each a class separate and distinct, but not such a class as is contemplated when we speak of class legislation. They are a class of people selected and trained to their profession and used for the good of the whole people.

And the same may be said of the other Departments.

The provisions of this bill do not propose to organize the agriculturists of this country into an organization, but to provide for a department properly constructed, officered, and manned, whose special duty it shall be to advance and foster and develop the great science of agriculture for the amelioration and elevation of the American people, and I might add civilization and Christianity as well, for it is in history to be read that in all countries and in all ages the purest statesmen come out of the agricultural classes, and the purest religious sentiment exists there.

Just as it is the duty of the War and Navy Departments to advance the science of war and gunnery up into the very vanguard of science and knowledge and invention in that line, that the people may be protected in their liberties and property and the Government guarded against possible danger of attack. As it is the duty of the Post-Office Department to know and adopt all the most skillful appliances for the convenience of the people and to facilitate business transactions.

As it is the duty of the Treasury Department to manage the finances of the Government, so as to keep them on a sound basis, and at the same time employ all the improved methods of this age to facilitate exchanges.

As it is of the Department of Justice to be careful to see that the rights and liberties of the people are protected at home, and of the Department of State to see that they are respected abroad.

It may be said that these Departments are not classes of people in the sense meant in the law; that each Department, while composed of a distinct class of persons, is under the control of the Government and used for the good of the whole people. To which I assent, and

add that the proposed legislation will make another organization consisting of the secretary and his subordinates and employés, to be used in the service of the Government and of the whole people in the advancement of a science, though heretofore neglected, if more important to the American people than any other; and that the Government is under far more solemn and far higher obligations to the people in this than in relation to their protection or convenience. Those are conditions of life; agriculture is the source of life.

If we do not have a complete system of agriculture we would not need an army or navy; we would have nothing worth defending.

There is no class named or designated in this bill; it simply proposes to establish a business department of the Government especially charged with the promotion, elevation, and advancement of agriculture by every possible means that science and learning and skill can command; a scheme in which every man, woman, and child of the 60,000,000 of American people is vitally interested.

We take great care that there shall be a financial department of the Government managed by skillful hands; but if the Agricultural Department should fail we would have no finances to manage. Gentlemen who look upon agriculture as merely a bread-producing industry, which is in itself of the first importance, should elevate their ideas enough to comprehend its relations to this Government, or I might perhaps better say the relations of the Government to it.

A single glance at these relations is all my time will admit of. To secure the balance of trade in favor of the United States has been one of the leading economic questions in our political philosophy, and all efforts to cope with the question have been impotent as those of a child to control the movements of a giant.

To agriculture, and to agriculture alone, we go for the wisdom and power to effect the solution of this great problem. The volume of money in the world is known and measured. Whatever nation or locality controls most of that volume has most prosperity and most power. The great Eastern seaboard cities of America, although they do not create wealth to any considerable extent, revel in magnificence and are more powerful than all the country beside. New York, the Mecca to which money-seekers make pilgrimage, is the nerve-center of American finances, and a shock there may at any time paralyze the system throughout all the States and Territories of this nation.

A telegram from New York can stop and put in motion again half the commerce of America. She has not yet been able to turn the rivers and converge them at New York, but she has stripped their bosoms of their commerce and gathered it to herself by her stupendous system of railways. The secret of her colossal power is in her tons of money. I do not speak in criticism of New York—I may say parenthetically, for the South were among the pilgrims, and had great need to be in her sore distress. The present substantial prosperity that pervades that part of the Union is in a large degree due to the courage and liberality of that emporium of money and brains.

At a time when the last lonesome dollar that lingered in the South had been abducted from her borders, her States and communities left under crushing debt obligations signed by alien hands without consideration to the people; when the air was full of misrepresentaions about the lawlessness of her people, to deter capital; when the thumbs of the world seemed to be all turned down for her exhausted people, the bold and sagacious financiers of New York looked above the stratum of smoke and discovered opportunities for investment. Silently, almost secretly, the current commenced to glide southward, and at the end of twelve months the astounding fact was opened to view that a hundred millions of New York gold had found safe and permanent investment in the South. Soon followed another hundred millions from different portions of the North, and we are all proud of the fact that the volume of money returns to its owners handsome dividends.

By that act New York financiers held up to the world a glittering placard, backed by a hundred millions of gold, branding as false the stories of lawlessness, and that property was not safe in the South. The scarred gladiators came forth from the arena and saluted brave New York.

And yet New York, great as she is, has a commercial master, so much are the nations of the earth interwoven in the lines of commerce. In all the great cities of the West and South the market value of the staple commodities of the country rises and falls every half hour by no other agency than the ticking of telegraphic indicators whose wires converge at New York. Go, then, to New York, the great and still growing commercial metropolis of the New World, and the most sagacious millionaire can only guess what the market value of any great staple of commerce will be in the next thirty minutes until the cablegram from London is laid before him.

London is the autocrat of commerce as well as the clearing-house of the world. While much is due to location London's money is the source of her power. England derives her wealth from her commerce and manufactories, aided somewhat by mines, and depends on them for the balance of trade in her favor. In this country, neither commerce nor manufactories nor mines, except the precious metals, add any considerable amount to the national finances. On the contrary, both mining and manufacture are burdens to the Government in America, for they can not exist without Government aid in the shape of protection, and commerce has dwindled into insignificance, begging with uplifted hands for sustenance from the Government.

We import annually from other countries various articles of use and ornamental to the value of $752,490,563. Deducting from that $73,331,086, the value of goods re-exported, leaves $679,159,477 as the value of the net imports into the United States annually, taking the year ending June 30, 1887, as a criterion, and which must be paid for in gold.

On that amount of imports we pay import duties to about $217,000,000 annually, but that is paid to the Government and does not go abroad, and will therefore not enter into this calculation.

The value of goods of domestic production exported from the United States amounts to about $179,949,149. This includes the products of all our factories and of all products outside of agricultural products.

Deducting this amount from our annual outlay for what we purchase abroad, the balance would foot up against us every year in the sum of $499,215,328, which would have to be paid out of the coin on hand in the United States. The whole amount of gold and silver coin and bullion in the United States is estimated at less than $600,000,000. The coinage is about $57,000,000, so that, with our trade as it is now, the whole volume of coin and bullion would be shipped out of the country to pay for imported goods within two years, and that would, of course, leave the country in financial ruin, with all her great enterprises destroyed.

What do we do in this emergency but call upon agriculture to rescue the nation from bankruptcy, and right nobly does she respond every year. She comes to the front annually with her surplus of more than $500,000,000 of exports:

1887	$523,000,000
1885	530,000,000
1883	619,000,000
1881	730,000,000

These figures show a decrease in agricultural exports, however, while other exports have not increased. And during the same time our imports have remained practically the same. Consequently the balance of trade in our favor is growing less regularly. I have not the time to discuss the causes of this decline in agricultural exports.

I believe it to be because agriculture is not increasing in proportion to the increase of population and needs encouragement. Therefore the sons of farmers abandon that pursuit because unwise legislation has cast burdens upon it without benefits; and a smaller proportion of immigration than formerly are agricultural people. They are mostly wage-workers, trades-people, and shop-keepers and kindred occupations, for which America affords such an inviting field. The home consumption is increasing faster than production is increasing. When agriculture ceases to furnish surplus exports to hold the balance of trade in our favor gold will begin to go out of the country, the circulation will contract, and the people begin to suffer.

I can not see how it is that gentlemen can be indifferent to this matter.

It would be a badly organized army without a complete commissariat. Its inefficiency conquered Napoleon and destroyed his army when Russia had fled before his face.

Famine, gaunt and terrible, has been the Nemesis of the ages, and the government that fails or neglects to provide against it by every means in its power is as unwise as the man who stalks in the midst of malaria and neglects the blood because he is then strong, and blood is neither fist nor foot nor brain for immediate use. He will find that it is more important than either or all of them. Many an incredulous smile will be provoked in the country by what I am saying, and perhaps not one of them has reflected upon the fact that when the time arrives to commence next year's crop there will not be provisions enough in the United States to feed the people one year; and if that one crop should fail all over the lands, as it has frequently done in different localities in this country, there would be such a famine in America as has seldom occurred in the world. The whole food crop will have been shipped except enough for seed and to support the people until the time for the next crop to mature. Localities have suffered for want of food in this land of teeming plenty, and often appealed to Congress for aid. If one-half the country should fail untold suffering would follow. Does not it come to our knowledge daily that our bread crops grow amid swarming enemies, and that food animals are constantly subject to fatal diseases, and how can we say, "Saul, take thine ease?"

In time of peace prepare for war. It is the duty of our Army and Navy Departments to be always ready for action, however profound the peace, and it is far greater generalship to deter and ward off a war than to fight it after it is upon us.

It is the duty of the Government to have a well-organized and well-officered department to investigate all these matters, and many others, in reference to this department more important than all the others.

It is class legislation to give bounties to a class, either directly or indirectly, or to grant special privileges to any class of people over others, no matter how they may be designated—by name or occupation.

It is worse class legislation to impose burdens on one class for the benefit of another class.

It is not class legislation to simply provide a department whose duty it shall be to advance this great science from which is drawn the very blood of the whole system the only source from which the finances of the country can be supplied, the very source of existence itself to both people and Government. There is not a human being on the continent who is not vitally interested in the progress of agriculture—the working people and the poor far more than the rich. Abundant food crops bring health and happiness to every household, while scarcity pinches the poor first, but none are beyond its reach.

The outcast and enslaved son of Jacob became the governor of all Egypt because of his skill in the development and management of her agricultural resources. Canaan journeyed to his feet to obtain that in which all life rests. All the nations bowed before him because he had corn.

Imperial Pharaoh gave all the honor of that management to his "secretary of agriculture" and said unto his people, "Go unto Joseph, and what he saith unto you, do."

The objection that it will create a new office and more officers, and increase the expenses of the Government, is a very small matter in comparison to its importance. A few thousand dollars a year for the better management of the food productions of the country is insignificant.

There can be enough money saved from the proposed expenditures for this inefficient and extravagant city government of Washington to defray the additional expenses of the department over the expenses of the bureau. I will vote for this bill with the religious belief that I vote in the interest of my constituents and of all the people.

Indian Depredation Claims.

SPEECH

OF

HON. GEORGE G. SYMES,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 21, 1888,

On the bill (H. R. 8990) to provide for the adjudication and payment of claims arising from Indian depredations.

Mr. SYMES said:

Mr. SPEAKER: This bill seems to present the only practicable remedy for settling and paying the long-delayed liability of the Government in regard to these claims. The liability to pay these claims has been assumed by the United States just as legally and solemnly as the payment of any other class of indebtedness. The United States is as legally and honorably bound to settle and pay this class of claims as to pay the United States bonds that have been issued.

By the act of May 19, 1796, section 14, first Statutes at Large, 472, it is provided that such claims should be presented and settled under the direction of the President of the United States. That is, the claims were to be examined into by agents, proof taken, etc. The act then provides:

And in the mean time—

That is during the time of examination and settlement—

in respect to the property so taken, stolen, or destroyed, the United States guaranty to the party injured an eventual indemnification; provided always that if such injured party, his representative, attorney, or agent shall in any way violate any of the provisions of this act by seeking or attempting to obtain private satisfaction or revenge he shall forfeit all claim upon the United States for such indemnification.

The act further provided—

That the President may deduct the sums found due for property taken or destroyed by the Indians out of any annuity which the United States are bound to pay to the tribe.

The object of this legislation is plain to be seen. The Government solemnly guarantied to indemnify citizens from any loss or destruction of property or injury from the Indians, but provided that such right to payment from the Government for damages should be forfeited if the party sought to recover his losses by reprisal or revenge. This was the only way peace could be maintained on the frontier, and continual Indian wars prevented. Different acts also provided for settling and paying any claims for property lost or destroyed by the Indians on account of the acts of white men.

These provisions of law are substantially re-enacted in the act of March 3, 1799, section 14, 1 Statutes at Large, 747; also in the act of March 30, 1802, section 14, 2 Statutes at Large, 143, and also in the act of June 30, 1834, section 17, 4 Statutes at Large, 731. The last act provided, further—

And if the nation or tribe to which such Indians may belong receive an annuity from the United States, such claim shall at the next payment of the annuity be deducted therefrom and paid to the party injured; and if no annuity is payable to any such nation or tribe, then the amount of the claim shall be paid from the Treasury of the United States.

This last act of 1834 authorized the President to order such claims paid direct from the Treasury after they had been examined and the amount found due by special agents of the Government. These acts continued in force until 1859. In the mean time some claims were settled and paid under these general statutes without any special or private bills being passed by Congress:

The act of February 28, 1859, section 8, 11 Statutes at Large, 421, modified the act of June 30, 1834, so far as to prevent the payment direct from the Treasury of such claims—that is, the act of 1834 was so modified, that unless there were annuities due the Indians out of which the President could direct such claims to be paid, it was necessary to apply to Congress for special appropriations to pay them.

This act of 1859 did not repeal the provisions herein above quoted, found in all the acts passed before 1859, by which the Government assumed and guarantied indemnification for all property taken or destroyed by Indians; but it only modified the act of 1834 so as to prevent a direct payment out of the Treasury after the claim had been settled and audited, and the amount found due under the direction of the President, without resorting to Congress for a special appropriation for such purpose.

This act of 1859 has been misunderstood by many. It has been claimed under its provisions that the Government did not any longer assume indemnification to all citizens for loss or destruction of property by Indians. The Government has, since 1796, specially guarantied indemnification in all cases. But since 1859 it has been necessary to ask Congress for appropriations for the payment of these claims.

By the provisions of a joint resolution of June 25, 1860, 12 Statutes at Large, 120, the act of 1859 was modified so as not to apply to any claims which existed at the date of said act. This act had no material effect, because the Executive Department in its policy as a rule ceased to pay these claims, either out of annuities due to the Indians or direct out of the Treasury, before the act of 1859, and left it to Congress to make special appropriations for such purpose.

By the act of July 15, 1870, section 4, 16 Statutes at Large, 360, section 2098 Revised Statutes, it was provided that these Indian depredation claims should not be paid out of moneys appropriated in that act for annuities due to Indians, and that no Indian depredation claim should thereafter be paid until Congress should make special appropriation therefor.

As stated, before the passage of this last act, the policy of the Department had been in accordance with its provisions, and for many years no claims had been paid except by applying to Congress for special appropriations.

Mr. Speaker, I wish to impress upon the House that from a review of this legislation the Government has since 1796 specially guarantied indemnity and payment to its citizens for all losses and destruction of property by Indians, on the condition that these citizens would not attempt reprisal or revenge on their own account. But such claims being unliquidated, the statutes were not efficiently enforced when they could be paid directly out of the Treasury under the direction of the President, and since about 1850 no claims have been paid except by private or special bills, and a very few in that way.

By the act of May 29, 1872, section 7, 17 Statutes at Large, 190, sections 445 and 446 Revised Statutes, the Secretary of the Interior was required to publish rules and regulations for filing, examining, and settling these Indian depredation claims, and at the settlement to report such claims to Congress to have specific appropriations made to pay them.

Section 2156 of the Revised Statutes provides how such claims may be presented to the Indian agent of the tribe committing the injury, and under the direction of the President application shall be made to such tribes and payment enforced in such way as in the opinion of the President may be proper.

By the act of March 3, 1885, $10,000 was appropriated to be expended in examining and taking testimony and reporting on these claims. By the act of May 15, 1886, $20,000 was appropriated to the Interior Department to continue the examination and report on these claims.

Most of the acts above referred to also provided for the payment to Indians for all property lost or destroyed by the acts or offenses of white men, and how settlement and payment of such claims should be enforced by rules and regulations under the direction of the President, and provided that the Indians should not be entitled to indemnification or payment for any injuries committed, for property lost or destroyed by acts of white men, if the Indians should make reprisal or seek revenge by their own acts.

The Commissioner of Indian Affairs has reported that under the provisions of the above acts from time to time since 1850 over five thousand claims have been presented to the Department, many of which have been examined and reported upon, and the reports and papers sent to the Committee on Indian Affairs of the House of Representatives. The Committee on Indian Affairs have from time to time reported a number of special or private bills to pay a limited number of these claims. They have been unable to examine the evidence and report private bills for any considerable portion of the claims. It has been entirely impracticable for the committee to report on any large number of these claims with the other duties pressing upon them, but a very

few of the special or private bills reported for the payment of these claims have ever passed the House. They go on the Private Calendar, and that, as a rule, practically ends their consideration during that session of Congress.

When one of these bills has been called up for consideration members of Congress have considered it their duty to examine into the justice and merits of the case before voting upon it. Such bills when reported can not, as a rule, be passed on the findings of the amount due by the agents of the Indian Bureau, but it is considered necessary to examine the original papers and the evidence in the case as to the merits and amounts due. This shows the absolute impracticability of ever disposing of the large number of claims by the present method.

It is fair to say that not 1 per cent. of the meritorious claims have been paid by Congress after they have been reported upon by the Indian Bureau, so that the present course practically amounts to an absolute denial of payment of these claims to the citizens holding them and who have suffered the loss of their property, the payment for which the Government has assumed, as above stated, as legally and solemnly as any other liability of the United States.

Many members of Congress have for some years urged some legislation which would practically result in the equitable adjudication and payment of these claims. A large number of them are very meritorious. Some of them have little merit. Many of them are made for larger sums than the statutes justify the payment of. What may be called the judicial work or investigation necessary to adjudicate upon these claims with justice to the Government, to the white citizens, and to the Indians it is impracticable and impossible for committees of Congress or Congress to perform. Hence the necessity for creating some special tribunal to adjudicate upon these claims.

Mr. Speaker, the Select Committee on Indian Depredation Claims have presented this bill. The committee unanimously recommend its passage as the only practicable remedy.

The bill provides that the President shall appoint three commissioners, to hold office until the close of 1891. Such commissioners shall constitute a court, to be known as the "court of Indian depredation claims," and such court shall consider and pass upon all claims now authorized to be presented to the Secretary of the Interior of white men for property destroyed by the Indians or of the Indians for property destroyed by white men. The claims and papers in the Department are to be transferred to this court or tribunal, and claims may be presented to the court by petition stating the facts supported by proper evidence. The court is to make rules and regulations to govern the practice in presenting such claims. The claimants may appear either in person or by attorney. The United States is to be represented when necessary by the Attorney-General. The court is to consider and report upon each claim separately, and make findings of fact and conclusions of law of the amount due, etc. In a word, this tribunal has substantially the jurisdiction and authority of the present Court of Claims applied only to Indian depredation claims. The findings and conclusions of the court are to be reported to the Secretary of the Interior, and by the Secretary to Congress for Congress to make appropriations for the payment of the same.

Mr. Speaker, it is thought by the committee that this tribunal, to be composed of three able judges with authority to have additional testimony taken in cases where necessary, and with special agents or commissioners authorized to take such testimony, will result in a proper judicial investigation and adjudication of these claims with justice to the Government and to the Indians and to the white people. If so, no more meritorious legislation can be passed by Congress.

Many poor claimants who have had their property destroyed; many poor widows and orphans whose husbands and fathers have been murdered and their property carried off or destroyed by Indians many years ago, have filed their claims under the solemn guaranty of the Government that they should receive indemnification and payment, but under the present system of laws there is little or no hope for them. The Government has expended a great many thousand dollars in investigating these claims, and it is practically thrown away unless some such tribunal is created to make such adjudications and make findings and judgments upon the faith of which Congress will make appropriations to pay these claims.

This bill has received the consideration and sanction of the Interior Department. The honorable chairman of the select committee [Mr. WHITTHORNE] and myself were appointed a subcommittee to confer with the Secretary of the Interior upon the subject.

I introduced at the beginning of the session a bill which I had given much consideration. That bill and several others were considered by the committee and the Interior Department, and the present bill, substantially as draughted by the Interior Department, was reported to the House.

The court is to find out of what funds the payment of the different claims should be made; that is, whether out of annuities due the Indians or direct from the Treasury. The Commissioner reports that it would be impracticable to pay many of the claims out of annuities due the Indians, because it would leave the Indians in want and necessitate Congress making additional appropriations to support them. The policy recommended is that the Government pay these claims in accordance with the liability it has assumed and the matter of reimbursement to the United States out of annuities can be properly dealt with by Congress and the Department.

There are about six thousand of the Indian depredation claims. It is estimated that about $5,000,000 would pay the amounts found due on judicial investigation. Much larger sums are claimed. The Congress has appropriated from time to time for many years hundreds of millions of money to pay annuities to Indians, to pay for their lands, to support them when they needed it.

But the Government has failed to redeem its solemn pledge to pay the pioneers for their property taken, stolen, and destroyed by the Indians. The Government has, through its executive department, violated the statutes by paying to these Indians millions and millions of dollars in annuities, when the statutes expressly provide these claims should be paid from those annuities. Mr. Speaker, I appeal to the House to pass this bill and give these claimants at least a tribunal where they can have their claims adjudicated and the amounts found due, so Congress can make appropriations to pay them. It will be nothing more than long-delayed justice.

Land-Grant Forfeitures.

SPEECH

OF

HON. J. L. MACDONALD,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 24, 1888,

In support of the bill (H. R. 8368) to forfeit the lands granted to the Hastings and Dakota Railway Company, in the State of Minnesota, and for the relief of settlers upon the same and certain purchasers thereof.

Mr. MACDONALD said:

Mr. SPEAKER: I rise for the purpose of calling up for present consideration a privileged bill and report—the bill to forfeit the lands granted to the Hastings and Dakota Railway Company, in the State of Minnesota, and for the relief of settlers upon the same and purchasers thereof.

The SPEAKER. From what committee?

Mr. MACDONALD. From the Committee on the Public Lands.

Mr. SPRINGER. I am willing to yield for that bill.

Mr. MACDONALD. I call up for consideration the bill (H. R. 8368) to forfeit the lands granted to the Hastings and Dakota Railway Company, in the State of Minnesota, and for the relief of settlers upon the same and certain purchasers thereof, reported from the Committee on the Public Lands with amendments, and ask that they be read.

The bill was read, and is as follows:

Whereas by an act of Congress entitled "An act making an additional grant of lands to the State of Minnesota in alternate sections, to aid in the construction of railroads in said State," approved July 4, 1866, there were granted to the State of Minnesota certain lands for a railroad from Hastings, in said State, through the counties of Dakota, Scott, Carver, and McLeod, to such points on the western boundary of the State as the Legislature of said State might determine, upon the express condition "that if said road was not completed within ten years from the acceptance of this grant, the said lands thereby granted, and not patented, shall revert to the United States;" and

Whereas by an act of the Legislature approved March 7, 1867, the State of Minnesota accepted the aforementioned grant of lands, and by the same act transferred the same to "the Hastings, Minnesota River and Red River of the North Railroad Company, subject to the provisions thereafter contained, and of the act of Congress aforesaid;" the name of which said railroad company was thereafter duly changed to that of the "Hastings and Dakota Railway Company;" and

Whereas said Hastings and Dakota Railway Company wholly failed and neglected to build, construct, or complete said railroad through the county of McLeod, and beyond, to the western boundary of the State, for many years after the expiration of the time limited by the act of Congress aforesaid, by reason of which neglect and failure the lands so granted to said railway company reverted to the United States; and

Whereas in consequence of the aforementioned failure of the said Hastings and Dakota Railway Company to construct or complete said railroad within the time so limited and specified in said act of Congress, said granted lands, pertaining to that part of said railroad that was not completed in time, reverted to the United States, and became, and was generally believed to be, subject to settlement and entry under the land laws of the United States, and much of it was, in good faith, settled upon by many settlers, who have ever since remained upon said lands, and have made valuable improvements thereon; and others have, in good faith, purchased portions of the same from said railway company; and

Whereas said Hastings and Dakota Railway Company has (in consequence of its having sold and disposed of its said railroad and everything appertaining thereto, except its right to said lands) been, by the supreme court of said State of Minnesota, adjudged and decreed to have forfeited its charter, and to be dissolved; and the same has ceased to exist, except that for a few months longer it is permitted to close up its affairs and dispose of such property as it may have: Therefore,

Be it enacted, etc., That all the said lands granted to the State of Minnesota by said act of Congress entitled "An act making an additional grant of lands to the State of Minnesota, in alternate sections, to aid in the construction of railroads in said State," approved July 4, 1866, for a railroad in said State from Hastings, through the counties of Dakota, Scott, Carver, and McLeod, to a point on the western boundary of the State, and transferred to the said Hastings and Dakota Railway Company, as hereinbefore stated, except so much thereof as

are adjacent to and coterminous with so much of said railroad as was constructed and completed within the period fixed by the said act of Congress for the completion of the whole road, and the right of way through the remainder of the route, with all the necessary grounds now used by said railroad for station buildings, shops, depots, switches, side-tracks, turn-tables, and all lands which were, prior to January 1, 1888, included within the platted limits of any village, town, or city, be, and the same are hereby, declared to be, and are, forfeited to the United States, and restored to the public domain, because of the failure of the said Hastings and Dakota Railway Company to perform the conditions upon which said grant of lands was made to it: *Provided*, That the title to said lands sold by said company to bona fide purchasers prior to January 1, 1888, and which were not, at the time of such sale, in the actual possession of some person other than the purchaser, is hereby confirmed to such purchasers from said company, and the persons holding through or under them.

SEC. 2. That all actual bona fide settlers upon any of the lands declared forfeited by this act, who settled upon the same as public land, and with the purpose and intention of acquiring title thereto, under the laws of the United States relating to public lands, are hereby confirmed in their rights as such settlers, and permitted and authorized to acquire title to the same (not exceeding 160 acres in any one case) as a homestead, under and pursuant to the laws relating thereto; and, in making proof of such homestead, he shall be allowed for the time that he has already resided upon and improved the same.

The amendments of the committee were read, as follows:

Insert, before the word "except," in line 12 of section 1, the words "and not patented;" also insert, after the words "possession of," in line 29 of section 1, the words "and claimed by."

Mr. MACDONALD. Mr. Speaker, I do not wish to long occupy the time of the House in discussing this matter. I wish merely to explain the necessity for the passage of this bill, and to show that the principles as to forfeitures of this kind adopted by this House by the passage of the general forfeiture bill recently, are embodied in the pending bill and amendments. That our action and that of the Committee on Public Lands (of which I have the honor to be a member) may be correctly understood, I will submit the following facts:

In the early part of the session the Committee on Public Lands reported to the House several bills similar to, and including this one now under consideration. They each referred to, and aimed to forfeit, all lands which had been granted to the company therein named and which had not been earned by that company according to the terms of the grant, namely, lands pertaining to the unbuilt portions of the several roads and the lands pertaining to that part of the road which was built after default. I should have said that one of these bills embraced several small and less important grants.

The consideration and discussion of the tariff prevented the consideration of these bills reported by the House committee, and in the mean time the Senate passed and sent to this House for our action the bill which we recently had under consideration, and which is as follows:

Be it enacted, etc., That there is hereby forfeited to the United States, and the United States hereby resumes the title thereto, all lands heretofore granted to any State or to any corporation to aid in the construction of a railroad opposite to and coterminous with the portion of any such railroad not now completed and in operation, for the construction or benefit of which lands have heretofore been granted; and all such lands are declared to be a part of the public domain: *Provided*, That this act shall not be construed as forfeiting the right of way or depot grounds of any railroad company heretofore granted: *And provided further*, That nothing in this act contained shall be construed as limiting the rights granted to purchasers or settlers by "An act to provide for the adjustment of land grants made by Congress to aid in the construction of railroads and for the forfeiture of unearned lands, and for other purposes," approved March 3, 1887, or as repealing, altering, or amending said act, nor as in any manner affecting any cause of action existing in favor of any purchaser against his grantor for breach of any covenants of title: *And provided further*, That nothing herein contained shall be construed to except from forfeiture that portion of the grant made by "An act making a grant of alternate sections of the public lands to the State of Michigan to aid in the construction of certain railroads in said State, and for other purposes," approved June 3, 1856, or acts amendatory thereof, conferred by the State of Michigan on the Marquette and Ontonagon Railroad Company, lying west of L'Anse, in said State.

SEC. 2. That in all cases where persons are in possession of any of the lands affected by any such grant and hereby resumed by and restored to the United States, under deed, written contract with, or license from, the State or corporation to which such grant was made, or its assignees, executed in good faith prior to January 1, 1886, they shall be entitled to purchase the same from the United States, in quantities not exceeding 320 acres to any one such person, at the rate of $2.50 per acre, at any time within two years from the passage of this act, and on making requisite proofs and payment to receive patents therefor: *Provided*, That in all cases where parties, persons, or corporations, with the permission of such State or corporation, or its assignees, are in the possession of, and have made improvements upon, any of the lands hereby resumed and restored and are not entitled to enter the same under the provisions of this act, such parties, persons, or corporations shall have six months in which to remove any growing crop and within which time they shall also be entitled to remove all buildings and other movable improvements from said lands: *And provided further*, That the provisions of this section shall not apply to any lands situate in the State of Iowa, on which any person, in good faith, has made, or asserted the right to make, a pre-emption or homestead settlement.

SEC. 3. That if it shall be found that any lands heretofore granted to the Northern Pacific Railroad Company and so resumed by the United States and restored to the public domain lie north of the line known as the "Harrison line," being a line drawn from Wallula, Wash., easterly to the southeast corner of the northeast one-fourth of the southeast quarter of section 27, in township 7 north, of range 37 east, of the Willamette meridian; all persons who had acquired in good faith the title of the Northern Pacific Railroad Company to any portion of said lands prior to July 1, 1885, or who at said date were in possession of any portion of said lands or had improved the same, claiming the same under written contract with said company, executed in good faith, or their heirs or assigns, as the case may be, shall be entitled to purchase the lands so acquired, possessed, or improved, from the United States, at any time prior to the expiration of one year after it shall be finally determined that such lands are restored to the public domain by the provisions of this act, at the rate of $2.50 per acre, and to receive patents therefor upon proof before the proper land office of the fact of such acquisition, possession, or improvement, and payment therefor, without limitation as to quantity: *Provided*, That the rights of way and riparian rights heretofore attempted to be conveyed to the city of Portland, in the State of Oregon, by the Northern Pacific Railroad Company and the Central Trust Company of New York, by deed of conveyance dated August 8, 1886, and which are described as follows: A strip of land 50 feet in width, being 25 feet on each side of the center line of a water-pipe line, as the same is staked out and located, or as it shall be hereafter finally located according to the provisions of an act of the Legislative Assembly of the State of Oregon approved November 25, 1885, providing for the means to supply the city of Portland with an abundance of good, pure, and wholesome water over and across the following described tracts of land: Sections 19 and 31, in township 1 south, of range 6 east; sections 25, 31, 33, and 35, in township 1 south, of range 5 east; sections 3 and 5, in township 2 south, of range 5 east: section 1, in township 2 south, of ange 4 east; sections 23, 25, and 35, in township 1 south, of range 4 east of thef Willamette meridian, in the State of Oregon, forfeited by this act, are hereby granted and confirmed unto the said city of Portland, in the State of Oregon, its successors and assigns forever, with the right to enter on the hereinbefore described strip of land, over and across the above described sections for the purpose of constructing, maintaining, and repairing a water-pipe line as aforesaid.

SEC. 4. That nothing in this act shall be construed to waive or release in any way any right of the United States to have any other lands granted by them, as recited in the first section, forfeited for any failure, past or future, to comply with the conditions of the grant, or as forfeiting any lands that have been heretofore earned by the construction of a portion of a railroad under any act of Congress making a grant of public lands: *Provided*, That this act shall not be constructed to prejudice any right of the Portage Lake Canal Company, or the Ontonagon and Brulé River Railroad Company, or any person claiming under them, to apply hereafter to the courts or to Congress for any legal or equitable relief to which they may be now entitled, nor to prejudice any right of forfeiture or recovery of the United States in respect of any of the lands claimed by said companies, nor to the prejudice of the right of any person claiming adversely to said companies or their assigns, under the laws of the United States.

SEC. 5. That this act shall not take effect except as to lands which were entered under the homestead and pre-emption laws and at private entry while the same were held by the Interior Department to be subject to such entry until January 1, 1889, as to a grant of land to the State of Mississippi for the purpose of aiding in the construction of a railroad from Brandon to the Gulf of Mexico, commonly known as the Gulf and Ship Island Railroad, nor as to a grant of land to the State of Alabama for the purpose of aiding in the construction of a railroad from the Tennessee River at or near Gunter's Landing to Gadsden, on the Coosa River, and in all cases where any of the lands excepted as aforesaid in this section have been sold by the proper officers of the United States for cash, or with the allowance and approval of such officer, have been entered in good faith under the homestead or pre-emption laws, the right and title of the persons holding or claiming any such lands under such sales or entries are hereby confirmed.

SEC. 6. The price of the even sections of the public lands not reserved within the limits of the portions of the several grants hereby forfeited, and within the limits of all grants or portions of grants heretofore forfeited, and of all lands hereby and heretofore forfeited, is hereby fixed at $1.25 per acre.

SEC. 7. That section 5 of an act entitled "An act for a grant of lands to the State of Iowa in alternate sections, to aid in the construction of a railroad in said State," approved May 12, 1864, and section 7 of an act entitled "An act extending the time for the completion of certain land-grant railroads in the States of Minnesota and Iowa, and for other purposes," approved March 3, 1865; and also section 5 of an act entitled "An act making an additional grant of lands to the State of Minnesota in alternate sections, to aid in the construction of railroads in said State," approved July 4, 1866, so far as said sections are applicable to lands embraced within the indemnity limits of said grants, be, and the same are hereby, repealed; and so much of the provisions of section 4 of an act approved June 2, 1864, and entitled "An act to amend an act entitled 'An act making a grant of lands to the State of Iowa, in alternate sections, to aid in the construction of certain railroads in said State,' approved May 15, 1856," be, and the same are hereby, repealed so far as they require the Secretary of the Interior to reserve any lands but the odd sections within the primary or 6 miles granted limits of the roads mentioned in said act of June 2, 1864, or the act to which the same is amendatory.

SEC. 8. That all actual settlers on any of the public lands in the State of Florda affected by the grants, who made actual settlement on any of said lands, after the time limited in the granting act for the construction of the said road, and before May 1, 1888, shall have the right to perfect their entries respectively under the homestead or pre-emption laws: *Provided*, That the title to the land described in the act entitled "An act granting lands to the States of Alabama and Florida to aid in the construction of certain lines of railway in said States," approved the 17th of May, 1856, which lies adjacent to the part of the lines of railroad built under and in pursuance of the act of the State of Florida entitled "An act to encourage a liberal system of internal improvements in the State of Florida," approved January 5, 1855, within the time limited by Congress in the granting act, and which were granted to any of the said companies by the Legislature of the State of Florida in accordance with said act of Congress, and are held by purchase in good faith from said companies, made before the year 1866, are hereby confirmed to such purchasers: *Provided*, That a mortgage or pledge of said lands by any of said companies shall not be considered as a sale for the purpose of this act.

SEC. 9. That in all cases when any of the lands forfeited by the first section of this act, or when any lands relinquished to, or for any cause resumed by, the United States from grants for railroad purposes, heretofore made to the State of Michigan, have heretofore been disposed of by the proper officers of the United States, under color of the public-land laws, or under State selections in Michigan confirmed by the Secretary of the Interior where the consideration received therefor is still retained by the Government, the right and title of all persons holding or claiming under such disposals shall be, and is hereby, confirmed: *Provided, however*, That where the original cash purchasers are the present owners this act shall be operative to confirm the title only of such said cash purchasers as the Secretary of the Interior shall be satisfied have purchased without fraud and in the belief that they were thereby obtaining valid title from the United States. That nothing herein contained shall be construed to confirm any sales or entries of lands, or any tract in any such State selection, upon which there were bona fide pre-emption or homestead claims on the 1st day of May, 1888, arising or asserted under color of the laws of the United States, and all such pre-emption and homestead claims are hereby confirmed.

On considering this Senate bill our Committee on Public Lands found that its effect would be to declare a forfeiture to the United States of a portion of the grants which are understood to be claimed and controlled by the following named railroad companies mentioned in connection therewith:

First. The Florida Railroad Company; that part of the grant lying between Plant City and Tampa, and that portion of the Cedar Keys branch of said road lying between Waldo and Cedar Keys, a distance of 20 miles of railroad, now unconstructed.

Second. The Tennessee and Coosa Railroad Company; that part of the grant from Gadsden to Guntersville, Ala., a distance of 36 miles, unconstructed.

Third. The Coosa and Chattanooga Railroad Company; that part of

the grant from Gadsden to Georgia State line, a distance of 37.5 miles, unconstructed.

Fourth. The Mobile and Girard Railroad Company; that part of the grant from Troy to Mobile, a distance of 139.6 miles, unconstructed.

Fifth. The Alabama and Tennessee Rivers Railroad Company; that part of the grant from Jacksonville to Gadsden, a distance of 23.42 miles, unconstructed.

Sixth. The Marquette and Ontonagon Railroad Company; that part of the grant from L'Anse to Ontonagon, a distance of 46 miles, unconstructed.

Seventh. The Ontonagon and State Line Railroad Company; that part of the grant from Rockland to Wisconsin State line, a distance of 55 miles, unconstructed.

Eighth. The Amboy, Lansing and Traverse Bay Railroad Company; that part of the grant from Jonesville to Amboy, a distance of 20 miles, unconstructed.

Ninth. The Gulf and Ship Island Railroad Company; that part of the grant from Brandon to Mississippi City, a distance of 170 miles, unconstructed; being the entire line of the road.

Tenth. The Minnesota and Pacific Railroad Company; that part of grant opposite to and coterminous with remainder of line uncompleted, 5.37 miles.

Eleventh. Southern Minnesota and Minnesota Valley Company; that part of the grant from St. Anthony via Minneapolis to Shakopee, west of Mississippi River, a distance of 25 miles, uncompleted.

Twelfth. The Southern Minnesota Railroad Company; that part of the grant from Houston to Rochester, a distance of 58.5 miles, unconstructed.

Thirteenth. The Portage and Winnebago Railroad Company; that part of the grant from Ashland to Superior City, a distance of 84 miles, unconstructed.

Fourteenth. The Sioux City and St. Paul Railroad Company; that part of the grant opposite to and coterminous with, a distance of 26.91 miles, is unconstructed.

Fifteenth. The Northern Pacific Railroad Company; that part of the grant from Wallula Junction, Washington Territory, to Portland, Oregon, a distance of 225 miles, unconstructed.

Sixteenth. Southern Pacific Railroad Company; that part of the grant from Tres Pinos to Huron, a distance of 84 miles, unconstructed.

All of which shows the aggregate number of miles of uncompleted railroads to aid in the construction of which lands had been granted by Congress is, according to the report of the General Land Office, 1,049.23 miles.

Now, it will be noticed that this Hastings and Dakota Railroad and grant thereto, with others, is excluded from this list which is embraced in the Senate bill; and the exclusion of these railroad grants from it may, in brief, be said to be the reason why the majority of the House Committee on Public Lands refused to favor it. But not wishing to do anything that would defeat Congressional action upon the subject, they did not insist that action be had upon the bill reported to this House by them, and reported back the Senate bill with an amendment, in the nature of a substitute, which is as follows:

That all lands heretofore granted by Congress to any State or to any corporation to aid in the construction of a railroad or a railroad and telegraph line opposite to and coterminous with the portion of any such railroad not constructed and completed within the time specified in the act making the grant for the construction and completion of the whole of such railroad are hereby declared forfeited to the United States, and the United States resumes title thereto, and all such lands so granted lying opposite to and coterminous with the portion of any such railroad not constructed and completed within the time prescribed by the act of Congress making such grant for the construction and completion of the whole railroad as provided for by such act, is hereby restored to the public domain and declared to be a portion thereof: *Provided, however*, That the forfeiture hereby declared shall not extend to the right of way of any such railroad through the remainder of the route, including the necessary grounds for depots, switches, side-tracks, machine-shops, and turn-tables, or to lands included in any village, town, or city within the limits of the lands hereby declared forfeited.

SEC. 2. That the forfeiture hereby declared shall not extend to lands adjacent to and coterminous with any portion of any such railroad which is now completed which were sold by the State or corporation to which any such grant was made, or by the corporation controlling or owning such railroad prior to January 1, 1888, to bona fide purchasers for a good and valuable consideration, but the title to such lands are hereby confirmed to such purchasers, their heirs or assigns, upon condition that all persons claiming the benefit of this section shall, within one year from the passage of this act, make and file before the register and receiver of the proper land office, subject to an appeal to the Commissioner of the General Land Office, proof of the good faith, consideration, date, and extent of his or her purchase; and after hearing such proofs and investigating each case the register and receiver shall determine whether any alleged purchase was in fact made in good faith, for a good and valuable consideration, prior to January 1, 1888, and shall note the finding in each case on the records of the local land office, and shall thereafter certify the same to the Commissioner of the General Land Office: *Provided*, That nothing herein contained shall be construed to confirm any such purchases of land upon which there were prior bona fide pre-emption or homestead claims, valid and subsisting on the 1st day of January, 1888, arising or asserted under color of the laws of the United States, and all such pre-emption and homestead claims are hereby confirmed: *Provided*, That a mortgage or pledge of any of said lands shall not be considered a sale for the purposes of this act.

SEC. 3. That all bona fide settlers upon any of the land forfeited by this act are hereby permitted and authorized to acquire title to not exceeding 160 acres in each case as a homestead, under and pursuant to the laws relating thereto, and in making final proof of such homestead the settler shall be allowed for the time he has already resided upon and cultivated the same, and if such settler is not entitled to the benefits of the homestead law he or she shall have the prior right to enter the tract settled on, not exceeding 160 acres, at $1.25 per acre.

SEC. 4. That no lands declared forfeited to the United States by this act shall inure to the benefit of any State or corporation to which lands may have been granted by Congress; nor shall this act be construed to enlarge the area of land originally covered by any such grant, or to waive or release in any way any right of the United States to have other lands granted by them, as recited in the first section, forfeited for any failure, past or future, to comply with the conditions of the grant.

SEC. 5. That all lists of lands heretofore certified and all patents issued to any State, or to any corporation, for lands embraced in any grant beyond the portion thereof coterminous with the railroad actually completed within the time prescribed by law for its entire completion are hereby declared inoperative and void except as to bona fide purchasers, as provided for by the second section of this act, and excepting land included in any village, town, or city, and proper proceedings shall be instituted by the Attorney-General to annul the same.

SEC. 6. That all acts in conflict with this act are repealed.

A minority of the Committee on the Public Lands [Messrs. PAYSON, MCKENNA, TURNER, and HERMANN] declined to concur in the recommendation to amend the Senate bill by the adoption of this substitute, and made a minority report and recommended the following as a substitute for the bill or substitute recommended by the majority:

A bill to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes.

Be it enacted, etc., That there is hereby forfeited to the United States, and the United States hereby resumes the title thereto, all lands heretofore granted to any State or to any corporation to aid in the construction of a railroad opposite to and coterminous with the portion of any such railroad not now completed and in operation, for the construction or benefit of which lands have heretofore been granted; and all such lands are declared to be a part of the public domain: *Provided*, That this act shall not be construed as forfeiting the right of way or depot grounds of any railroad company heretofore granted, or lands included in any city, town, or village site.

SEC. 2. That all persons who, at the date of the passage of this act, are actual settlers in good faith on any of the lands hereby forfeited and are otherwise qualified, on making due claim on said lands under the homestead law, within six months after the passage of this act, shall be entitled to a preference right to enter the same under the provisions of the homestead law, and this act, and shall be regarded as such actual settlers from the date of actual settlement or occupation; and any person who has not heretofore had the benefit of the homestead or pre-emption law, or who has failed from any cause to perfect the title to a tract of land heretofore entered by him under either of said laws, may make a homestead entry under the provisions of this act.

The Secretary of the Interior will make such rules as will secure to such actual settlers these rights.

SEC. 3. That nothing in this act shall be construed to waive or release in any way any right of the United States to have any other lands granted by them, as recited in the first section, forfeited for any failure, past or future, to comply with the conditions of the grant.

It will be seen that this substitute of the minority is in substance and effect the same as the Senate bill.

To better understand the scope and effect of the Senate bill, or its more brief counterpart, the substitute proposed by the minority, and the bill proposed by our Committee on the Public Lands, which we passed, I submit the following table from that report of the majority:

Name of railroad.	Estimated number of acres which will be forfeited—		
	By Senate bill.	By House bill.	Inevent of forfeiture of entire grant.
Gulf and Ship Island	652,800	652,800	652,800
Coosa and Tennessee	140,160	140,160	140,160
Coosa and Chattooga	144,000	144,000	144,000
Mobile and Girard	536,064	651,264	858,624
Selma, Rome and Dalton*	89,932	258,624	642,624
Atlantic, Gulf and West India Transit	76,800	676,000	1,171,200
Pensacola and Georgia	None	679,680	1,178,880
Vicksburg, Shreveport and Texas	None	364,800	725,760
Jackson, Lansing and Saginaw	None	176,256	898,560
Marquette, Houghton and Ontonagon	294,400	294,400	627,200
Ontonagon and Brulé River	211,200	288,000	288,000
La Crosse and Milwaukee	None	195,724	235,773
Chicago, St. Paul, Minneapolis and Omaha	None	1,446,400	1,446,400
Wisconsin Central	406,880	464,480	1,800,000
St. Vincent extension, St. Paul and Pacific (now St. Paul, Minneapolis and Manitoba)	None	1,113,600	2,009,600
Western Railroad	None	243,712	243,712
Southern Minnesota Railway extension	None	832,115	1,787,955
Hastings and Dakota	None	819,840	1,293,440
Northern Pacific	2,000,000	36,907,741	46,947,200
California and Oregon	None	1,740,800	3,686,400
Oregon and California	None	2,086,400	4,608,000
Southern Pacific	1,075,200	4,147,200	7,116,800
Total	5,627,436	54,323,996	78,503,088

*Lands certified to State for this road prior to May 23, 1872, amounting to 440,700.16 acres, were confirmed to State by act of that date (17 Stat. L., 159), for sole use and benefit of the Selma, Rome and Dalton Railroad Company. The lands so confirmed may not be subject to forfeiture.

When the Senate bill and the substitutes of the majority and minority of the committee came before this House for action recently, it will be remembered that the gentleman from Illinois [Mr. PAYSON] strenuously urged the adoption of the substitute recommended by the minority, principally upon the ground that the Senate would not concur in the amendment proposed by the majority; and that notwithstanding this, this House—by an almost strict party vote—rejected the substitute of the minority, and adopted and passed that recommended by the majority.

As predicted by the gentleman from Illinois, the Senate has already

acted upon our substitute and refused to concur in it, and the matter is now in the hands of a committee of conference.

In view of these facts, I am justified in doubting that my constituents—a large number of whom are vitally interested—will get any relief through this general forfeiture bill which we have passed; and by the more specific method of this bill attempting to secure relief for them.

This is my explanation for now urging this bill to forfeit certain lands granted to the Hastings and Dakota Railway Company.

As will be seen by reference to the report of the committee, the principal facts upon which they based their recommendation of the passage of this bill are as follows:

1. The act of Congress making this grant was approved July 4, 1866 (14 Statutes, 87), and was entitled "An act making an additional grant of lands to the State of Minnesota in alternate sections to aid in the construction of railroads in said State;" and it granted these lands "for a railroad from Hastings, through the counties of Dakota, Scott, Carver, and McLeod, to such point on the western boundary of the State as the Legislature of the State might determine," every alternate section of land designated by odd numbers, to the amount of five alternate sections per mile on each side of said road.

2. It was also provided (in section 3) "that the lands hereby granted shall be subject to the disposal of the Legislature of Minnesota, for the purposes aforesaid, and no other;" and the manner and terms upon which they were to be disposed of were prescribed by section 4 of that granting act, which is as follows:

SEC. 4. *And be it further enacted*, That the lands hereby granted shall be disposed of by said State for the purpose aforementioned only and in the manner following after stating how lands shall be selected and certified: *Provided*, That if said roads are not completed within ten years from the acceptance of this grant the said lands hereby granted and not patented shall revert to the United States.

It will therefore be seen that this grant was made with the express reservation that this road should be completed in ten years from the date of the acceptance of the grant by the State, and that if not, all of the lands not patented to the company would *ipso facto* "revert to the United States."

3. The grant was accepted by the State of Minnesota, by an act of the Legislature thereof, approved March 7, 1867; and by the same act the aforementioned grant of lands was transferred to the railroad company then known as "the Hastings, Minnesota River and Red River of the North Railroad Company," and (section 2) "subject to the provisions therein contained and of the act of Congress aforesaid."

4. Pursuant to an act of the Legislature of the State of Minnesota, approved March 9, 1867, the name of said last-mentioned railroad company was changed to that of the "Hastings and Dakota Railway Company."

5. The definite location of the route of this railroad was made June 26, 1867. It extended from Hastings on the east to Ortonville on the western boundary of the State, and is located through the counties of Dakota, Scott, Carver, McLeod, Renville, Chippewa, Swift, and Big Stone, a distance of 202 miles.

6. The road was only completed to Glencoe (the county-seat of McLeod County), a distance of only 74 miles, within the time fixed by the granting act, leaving the company in default as to the remaining 128 miles.

7. After it reached Glencoe, which was in 1873, the company failed to construct any more of this railroad for several years, and during that time Glencoe was its western terminus.

8. After this company neglected and failed to build its railroad beyond Glencoe, and during the years that Glencoe was its western terminus, the public came to the conclusion that the aforementioned act of Congress meant what it said, and that all lands not patented to it on or before March 7, 1876, "reverted to the United States," and that the same were subject to settlement and entry under the public land laws of the United States; and in accordance with that conclusion a great many citizens of the United States did locate and settle upon the above mentioned granted lands coterminus to the then uncompleted portion of said railroad, with a view to acquiring title to the same under our public-land laws.

9. That this company has received and will by this bill have confirmed to it much more than the amount of lands to which it was entitled for the 74 miles of its road which were completed in time, and in fact nearly all it would get under the grant if no forfeiture was declared.

For the 74 miles of railroad which it built within the time prescribed by the grant it was entitled to 473,000 acres, and it has had patented to it 312,771, which by the terms of the grant can not be forfeited because patented.

In addition to this, this company has assumed to own and has sold and disposed of thousands of acres more than enough to make up the 473,000; which sales this bill, to prevent innocent purchasers, without notice by actual occupancy, from being wronged, proposes to confirm.

Bear in mind that after this company had built its road from Hastings to Glencoe, a distance of 74 miles, it suspended operations for several years and ignored entirely its obligations under the grant; that, having so suspended the further building of its road and allowed the time within which it was to construct it to expire, many persons, believing that, in consequence of its failure to build in time, all lands "not patented reverted to the United States," settled upon the same as homestead settlers and have ever since resided thereon, and have been anxiously waiting for their titles to be confirmed by Congress and the Department.

Another important fact, found and reported by the committee, is as follows:

10. About the time of the construction of this railroad from Glencoe to the western boundary of the State (in the year 1880) this company disposed of its railroad, right of way, and all else, except these lands, to another railroad company, the "Chicago, Milwaukee and St. Paul Railway Company," and has never operated any part of that railroad since; and because of its having thus disposed of all but the lands, it has been adjudged by the supreme court of the State of Minnesota to have forfeited its charter and is required to wind up its affairs, which it is now doing.

The law of the case is also fully set forth in that report. Now, I respectfully but earnestly submit that the rights and claims of these settlers are entitled to the serious and favorable consideration of Congress, and that in their interest this bill ought to pass.

Mr. LIND. Will the gentleman permit me to ask him a question?

Mr. MACDONALD. Yes, sir.

Mr. LIND. I notice that one of the amendments suggested is that the bill shall apply to the lands not patented. Now, as a matter of fact, these lands are not patented; they are certified to the State for the benefit of the railroad company, and I would suggest to my colleague that he substitute the words "not certified to the State" in lieu of the words embodied in the bill. "Not patented" may possibly be construed to mean the same thing, but if the other is substituted there can be no question.

Mr. MACDONALD. We came to the conclusion that it was necessary to limit the forfeiture to lands "not patented," that being the terms of the grant. This is necessary to respect the rights of the railroad company. My colleague must labor under a misapprehension, for to substitute the words "not certified to the State," in place of "not patented," would so limit it as to render the bill practically valueless. We claim that this forfeiture extends to lands certified as well as not certified to the State. I think that for all purposes the bill in its present form is better.

I demand the previous question upon the bill and amendments.

The previous question was ordered; under the operation of which the amendments recommended by the committee were adopted.

The amendments were agreed to, and the bill as amended was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time, and passed.

Indian Depredation Claims.

SPEECH

OF

HON. ANTONIO JOSEPH,

OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 21, 1888.

The House having under consideration the bill (H. R. 8990) to provide for the adjudication and payment of claims arising out of Indian depredations—

Mr. JOSEPH said:

Mr. SPEAKER: I rise to support this bill because I consider it a beginning of justice to the people of New Mexico, as well as to the citizens of all the Western States and Territories, justice which has been long denied them through the absolute indifference of Congress. This measure in itself is imperfect, but I am willing to support it, notwithstanding its many imperfections, because it is the first step in long-delayed relief. But I can not let the bill be passed by the House without putting on record some statement of its imperfections, in the hope that before it becomes a law it will receive such amendments as will enable it to accomplish its objects, the relief of Congress from the pressure of individual claims and justice to the long-suffering claimants.

JURISDICTION OF REJECTED CLAIMS.

After granting jurisdiction to the court, the bill proceeds to destroy a large part of that jurisdiction by these words:

The aforesaid court shall not consider any claim which has been heard and rejected by any Department or officer of the Government authorized by law to adjudicate the same.

It is well known that the rulings of the Department of the Interior upon Indian depredation claims have been exceedingly strict and technical, and that many claims established by legal evidence in the most conclusive manner have been rejected by the Indian Department upon technical grounds. This bill proposes to say to these claimants that

they shall have no relief under its provisions. If the rulings of the Interior Department can be treated as conclusive against the claimants, the Government ought to be willing to accept the same measure for itself, and all awards of the Interior Department made in favor of claimants should be paid without the intervention and delay of a commission. As it is, the Government proposes to require all whose claims have been allowed to submit once more to trial, while claims which have been rejected are to be forever shut out from relief.

I can not believe that the Government of the United States should place its standard of fair dealing so low as to treat its citizens in this one-sided and partial manner. There is another reason why this provision is especially unjust. These claims have been on file for many years and have received more than one decision at different times by different officers under different laws. The same claims have been twice and three times decided, and by successive officers on different evidence in different ways. The language of this provision so restricts jurisdiction that if a claim has been once rejected, though afterward twice allowed, it can not come before this commission. Surely a provision like this can not be honorable or just.

LIMITATIONS.

The question has been often discussed whether any statute of limitation exists preventing the presentation of Indian depredation claims. The Department of the Interior has recently held that any claim not presented within three years of the depredation is barred, but under former administrations a different view was held. The act of 1834 contained such a limitation, but that act has been superseded by section 2156 of the Revised Statutes, which contains no such limitation. It is the opinion of able lawyers who have examined this question that no limitation exists, but I think the new court ought not to be embarrassed at the outset by any such questions. Congress should give the new court a plain, clear law for its guidance, so that it can proceed at once to the disposition of claims presented to it.

There is no justice in a statute of limitations upon claims before this court. The remedy given by existing law has amounted to almost nothing in cases for Indian depredations. Claimants have been privileged to file their claims with the Department of the Interior, and to have these claims considered, allowed, and reported to Congress; but no appropriations have been made to carry these allowances into effect, and an examination by the Indian department has been little more than a mere formality. Under these circumstances, honest claimants whose property has been taken or destroyed by Indians have in many cases not been willing to waste their time and money in preparing their claims and presenting proof in their support. In consequence of this many claims, as justly founded as those on file in the Interior Department, have never been presented. Under these circumstances it would be the greatest injustice to open the doors of this commission to claims which have been presented to the Interior Department and to close its doors to equally just claims which have never been presented. The Government has first discouraged claimants from presenting their claims, and by this bill as amended proposes to discriminate between those presented and those not presented.

The Committee on Indian Depredation Claims recommended that the bill should contain the following clause:

Provided, That in determining the liability of the United States to pay these claims, or any part thereof, the question of limitation as to time and manner of presenting them as prescribed by statutes shall be waived by the court.

But this recommendation has not received the sanction of the House. Before the bill becomes a law some amendment like this is necessary. The American Government ought not to be willing to plead the statute of limitations against its just debts, but should say to all creditors of the Government, "If you prove your debt we will pay it, no matter how old it is." The honesty of the Government should rest on at least as high a plane as the honesty of a business man.

INTEREST.

This bill proposes to pay to claimants the value of the property taken from them, but does not propose to compensate them for the delay in payment. The bill admits the justice of the claims, and in so doing admits that the Government was in duty bound to pay them when they originated, but it does not undertake to assume the full duty of the Government to pay these claimants interest from the date of the depredation to the date of payment. No relief is complete unless compensation is given for the delay. I know that it will be said in opposition to this view that the policy of the Government has been not to pay interest upon claims against it. I can reply to this that this policy is essentially dishonest. The excuse for this policy has been the statement that the Government is always ready to pay its honest debts; but every person of experience knows that this Government is one of the worst of debtors.

Year after year have these claimants come to the Interior Department demanding pay; year after year have these claims been presented to Congress, and year after year have they been put off from one tribunal to another under first one enactment and then another. When finally a step is taken looking to the definite satisfaction of their claims, they are met in their demands for compensation for their delay by the statement that the United States will not pay interest because it is always ready to do justice to its creditors. This great Government should not be placed in such an attitude. I therefore hope that before this bill becomes a law a provision will be placed upon it granting interest to all whose claims are allowed by this commission from the date when the depredations occurred.

The people of New Mexico have for years been exposed to the depredations of hostile Indians. Their stock, their crops, their houses have been destroyed and hundreds of lives lost by Indian raids.

But the Indians are the wards of the Government, and citizens have been forbidden to redress wrongs committed by them. It was the duty of the Government to keep its wards under control, and, failing in this, to pay the losses caused by them. In this obligation the Government has failed. This bill is the first decided step in repairing the neglect of past years, and, as such, imperfect as it is, it is welcome. Its long delay has caused it to fall far short of a full measure of justice. Many claimants who have been despoiled of everything by Indian depredations have died without redress; many witnesses on whom the proof of fact depended have passed where they can give no testimony. Congress has long withheld its hands from this work of justice, but those to whom payment at last comes will welcome it as a recognition, though partial and long delayed, of the just obligation of the Government of the United States towards its citizens.

Decline of the American Merchant Marine.

SPEECH

OF

HON. ALEXANDER M. DOCKERY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 13, 1888.

The House having under consideration the bill (H. R. 9345) making appropriations for the Post-Office Department for the fiscal year ending June 30, 1889—

Mr. DOCKERY said:

Mr. SPEAKER: The gentleman from Minnesota [Mr. NELSON] who has just taken his seat has so well expressed the situation in reference to our merchant marine that it hardly seems necessary to say anything further, and I shall therefore not trespass at length upon the time of the House.

It seems that we have two propositions pending before the House, or a sort of "double-barreled" proposition—one coming to us from the Senate and the other presented by the minority of the Committee on the Post-Office and Post-Roads. Upon an examination of the two propositions it appears that the difference between them is one of degree only. The principle involved is the same in each. Both tend in the direction of subsidy; each, in fact, is unquestionably a gift of the people's money—neither having any tendency whatever to establish any new lines of ocean steamers, the gratuity going to lines already in existence.

The effect of the two propositions, or either of them, as has been so well stated by the gentleman from Minnesota, is to discourage the building of additional lines by giving the bounty to existing lines and thereby creating a monopoly. Now, sir, this question of subsidy is by no means a new one. It has been heretofore fully considered in all its relations to the Post-Office Department and to our merchant marine. Prior to the war, Mr. Speaker, it was adopted by our fathers, but was rejected by them after fair trial; and the lines which had been subsidized, declined, decayed, and went down as soon as the policy was abandoned. The subsidy policy was reinaugurated in 1866, and continued until 1877, when it culminated in the Forty-second Congress in the scandals connected with the Pacific Mail. After that exposure, Congress abandoned the system altogether, and it was not again heard of until the initial step looking to its restoration was taken in the Forty-eighth Congress, by repealing the law which required American steamers to carry the mails as a condition precedent to clearance. After the repeal of that law the steam-ship companies came to Congress and asked a subsidy, and in default of that refused to carry the mails of the United States. Since that event the proposition has been presented in various forms.

The first "subsidy" granted by the House under duress was approved March 3, 1885, and provided for the "transportation of foreign mails, including transit across the Isthmus of Panama, $800,000." This law simply "authorized" the Postmaster-General to enter into contracts with "American steam-ships," and the discretion with which he was invested under its terms was wisely exercised by Postmaster-General Vilas in a refusal to make any contracts.

The proposition reappeared in the Post-Office appropriation bill for the fiscal year ending June 30, 1887, in the following terms:

For the transportation of foreign mails by American built and registered steam-ships, to secure the greater frequency and regularity in dispatch, and a greater speed in the carriage of such mails to Brazil; the Republics of Mexico, Central and South America; the Sandwich, West India, and Windward Islands; New Caledonia, New Zealand, and the Australian colonies; China and Japan, $800,000.

The measure was rejected by the House.

It again appeared in the Post-Office appropriation bill for the fiscal year ending June 30, 1888, as follows:

For the transportation of foreign mails by American built and registered steam-ships, to secure the greater frequency and regularity in dispatch and a greater speed in the carriage of such mails to Brazil, the Argentine Republic, and the Republics of Uruguay and Paraguay, $500,000.

This proposition shared the fate of its predecessor.

In all these propositions offered by the Senate "a rate of compensation not exceeding 50 cents a nautical mile on the trip each way actually traveled" was proposed, or a "rate of $1 per mile on each outward voyage."

With a perseverance "worthy of a better cause" the Senate again confronts us with substantially the same subsidy legislation which has been twice overwhelmingly rejected by this House.

It provides $800,000 for "more efficient mail service between the United States and Central and South America and the West Indies;" and—

To promote the purposes of this appropriation the Postmaster-General is hereby authorized and directed to contract with American-built and registered steam-ships for the transportation of the United States mails to such ports in said countries as in his judgment will best subserve said postal service. Said contracts shall be for a period of not less than five nor more than ten years, at a compensation not exceeding for each outward trip $1 per nautical mile of the distance in the most direct and feasible sailing course between the terminal points as shall be found expedient and desirable to secure the ends above set forth.

The Postmaster-General shall cause schedules to be furnished by the contractors stating dates of departure of steam-ships from the United States six months in advance, and in case of unreasonable failure of any steam-ship or steam-ships to depart with mails on the date or dates therein stated, the Postmaster-General may withhold from the contractor or contractors as penalty one-half the contract price for said trip or trips, and in the event of continued failure to depart on dates stated in the schedule the Postmaster-General may annul the contract or contracts, or the same may be terminated by Congress.

In this amendment we have an express provision, which not only "authorizes" the Postmaster-General to contract, but "directs" him to do so; and I challenge the gentleman from Pennsylvania, if I understood him correctly, on any fair construction of the term "direct" to find any warrant for the "discretion" he seems to find in the exercise of this power on the part of the Postmaster-General.

Mr. BINGHAM. You will find in every utterance in the Senate and every utterance in this House that it is a discretionary power.

Mr. DOCKERY. Ah, Mr. Speaker, does the gentleman go to the debates in Congress——

Mr. BINGHAM. Go on a little further and read the modifying clause.

Mr. DOCKERY. Does the gentleman go to the debates in Congress for the construction of a plain proposition which declares the meaning of the phrase "authorized and directed?" Directed to do what? To contract with American-built and registered ships for the transportation of the United States mails to such ports in such countries as in his judgment will best subserve the interest of the postal service.

Mr. BINGHAM. The gentleman is quoting from the Senate amendment; I have submitted an amendment to which I have directed my remarks.

Mr. DOCKERY. I will direct my attention to that "double-barreled" proposition in a moment.

Mr. BINGHAM. I am glad it has "two barrels."

Mr. DOCKERY. It seems that it was framed with the idea of catching either "gwine or comin." [Laughter.] The Senate amendment was perhaps not expected to be received with favor by the House, and we therefore find our friend from Pennsylvania offering this measure. I will not read it, as my time is limited.

Mr. BINGHAM. You had better read it, because it is a good proposition.

Mr. DOCKERY. I will do so, as the gentleman requests it.

To provide more efficient service between the United States and Central and South America and the West Indies, Australasia, Japan, and the Sandwich Islands, $450,000. To promote the purposes of this appropriation the Postmaster-General is hereby authorized and directed to contract with American built and registered steam-ships for the transportation of United States mails to such ports in said countries as in his judgment will best subserve said postal service: and in cases where a contract shall be made in addition to the sea and United States inland postage allowed under section 4009 of the Revised Statutes to register United States steam-ships plying between ports of the United States and Central and South America, the West Indies, Australasia, China, Japan, and the Sandwich Islands, the Postmaster-General may by agreement, with the owners of said steam-ships——

Mr. DINGLEY. May authorize it.

Mr. DOCKERY—

at an equivalent consideration therefor, allow any sum not exceeding three times the sum of the said sea and inland postage to steam-ships running to such of the said countries as are in the Postal Union, and an equivalent sum to steam-ships to such of said countries as are not in the Postal Union, for dispatching their vessels without failure upon certain days to be specified in schedules covering periods of not less than six months, to be agreed upon in advance by the Postmaster-General and said owners or agents: *Provided*, That any failure to dispatch vessels upon a schedule date may subject the owners or the agents to a penalty not less than the sum to which the vessel would be entitled for the conveyance of mails if she had sailed in accordance with the schedule; said penalty to be deducted by order of the Postmaster-General from any sums found to be due said owners or agents.

The amendment of the gentleman from Pennsylvania having just been offered, I have not had an opportunity to give it a critical examination; but it appears from the reading that it "directs" the Postmaster-General to contract with American-built and registered steam-ships on the basis of sea and inland postage. In other words, it simply reannounces the policy that has prevailed under the Administration of President Cleveland, preference having been given to American steam-ships and allowance of both sea and inland postage. The amendment further provides, after having thus "directed" contracts to be made on the basis of existing law, that the Postmaster-General "may" allow any sum not exceeding three times the amount of sea and inland postage. In its first provision it is mandatory; in its second, discretionary. Let us examine for a moment its practical effect, which can only be an increased compensation to existing lines. Does the gentleman indulge the hope that the limited additional compensation will stimulate the establishment and growth of new lines of ocean steamers?

Mr. Speaker, it can not possibly accomplish such a result, because the amount is insufficient for the purpose. It is a gratuity too small to establish new lines and only amounts to a bonus to the lines already in existence. If the Government is again to launch out on the policy of subsidy the appropriations should be "allopathic" rather than "homeopathic" in amounts.

Mr. BINGHAM. Why do you not state how much it is?

Mr. DOCKERY. The amount is $450,000.

Mr. BINGHAM. What will be the bonus, as you call it, to new lines?

Mr. DOCKERY. I have not had the opportunity of estimating the bonus to each line.

Mr. BLOUNT. There will not be any new lines.

Mr. DOCKERY. I stated, if the gentleman will remember, a moment ago, that no new lines would be established.

Mr. BINGHAM. How do you know?

Mr. DOCKERY. I say so because the amount is wholly insufficient for the purpose, and, as heretofore stated, is a mere gratuity to existing lines. There are twenty lines of American steamers plying between the ports of the United States and Central and South America and the West Indies. These are the countries named in the Senate amendment, and my friend from Pennsylvania has also included by his amendment the lines to Australasia, Japan, and the Sandwich Islands.

WHO ARE THE BENEFICIARIES.

Now, Mr. Speaker, I have not had an opportunity to ascertain what number of additional lines would be brought within the provisions of this amendment, but I have examined the original proposition as it comes from the Senate, and I desire that the House should know the beneficiaries under that legislation.

Let us see whether or not they are weak and struggling corporations, entitled by reason of this fact to especial consideration and to the bounty of the Government. Under the Senate amendment, from which our friends of the other side on the committee have run away, twenty American lines plying to foreign ports were included. Those lines had a total sailing last year on their outward voyages of 546,758 miles, and received during that time, under the present law authorizing the payment of sea and inland postage, $39,381.57. The Senate amendment gives them $546,758 for a service that last year cost the United States $39,381.57; or, in other words, they are to receive $507,376.43 in excess of the compensation received for like services during the fiscal year just ended.

Now, who are these beneficiaries? The Pacific Mail Steam-ship Company, running from San Francisco to Panama, would be entitled to $129,600 of the $546,000.

Mr. BINGHAM. Will the gentleman allow me to ask a question?

Mr. DOCKERY. Not just now.

The Pacific Mail Steam-ship Company would also be entitled to compensation for services rendered by its line from New York to Aspinwall to the amount of $76,000. To state the case plainly, Mr. Speaker, of the $546,758 that would be expended under the Senate amendment to the American lines now running from the United States to the countries named the Pacific Mail Steam-ship Company would receive $205,600, or nearly one-half the entire sum. My friend from Pennsylvania, by the amendment he offers, also generously takes in the lines of the Pacific Mail Company, which runs from our Western coast to China and Japan; but I have not had an opportunity to estimate the additional amount they would receive under this proviso. I challenge the House to a critical examination of this measure, in view of the lines that are to be its chief beneficiaries.

Now, who is the Pacific Mail Steam-ship Company? It is the corporation which in the Forty-second Congress debauched the Representatives of the people by the expenditure of $900,000 for the purpose of securing the continuance of a subsidy that it had enjoyed for ten years. The Pacific Mail Steam-ship Company is a corporation owned by Jay Gould, Russell Sage, C. P. Huntington, and other poor laboring men in this country. [Laughter.] Sir, I do not wish to invoke any prejudice whatever in this discussion. Mr. Gould has his rights under the law, and so far as my vote can affect the result they shall be maintained; but I am not willing to give to Mr. Gould or to any one else the public money unless the general interests of the whole people will be subserved by so doing.

INTERFERES WITH POSTAL SERVICE.

Mr. Speaker, I apprehend that it will not be seriously contended that

this measure will in any wise benefit the ocean mail service; for, instead of extending our postal facilities on the ocean, this legislation virtually restricts that service to the twenty lines of American steam-ships. The Postmaster-General has so succinctly and ably pointed out its defects that I will ask to incorporate his views in my remarks, as they appear in the following letter, of date July 2, 1888, to Hon. J. H. BLOUNT, the distinguished chairman of the Post-Office Committee:

It will hardly be claimed for this legislation that it is either demanded or required, or that it can be utilized for the benefit of the postal service merely. The resources and powers of the Department have proved entirely adequate to afford to the citizens of the United States a foreign mail service equal to, and in most cases superior to, that of any nation in the world. Nine-tenths of our foreign letter mail crosses the Atlantic, and the settled policy of the Department has been to employ the swiftest vessels from week to week for carrying the mails. The Department, at the request of prominent merchants, importers, and bankers of the United States having commercial relations with foreign countries, has endeavored to induce foreign postal administrations to adopt a similar policy to promote expedition and security in correspondence.

Under the present system, on routes other than to European ports, mails have been carried in American steam-ships at four times the rates paid for transatlantic service, although no foreign vessel has ever refused or hesitated to accept the sea postage, or one-fourth the rate paid to American bottoms. Under the present conditions the Central and South American letter mail increases at the rate of about 10 per cent. in weight a year, and the number of sailings to West Indian and Central and South American ports from the three ports of New York, New Orleans, and San Francisco increased in the fiscal year ending June 30, 1887, from 712 to 831. In addition to the compensation paid in money, all common carriers by water are greatly benefited by carrying the mail. Provision for their benefit in Brazilian ports are as follows: Mail steamers are allowed to immediately discharge their cargoes, preference being given them before any other vessel and before they have been entered at the custom-house, both on week days and on Sundays or holidays.

They may sail at any hour, day or night, after they have received the mail, and can not be detained under any pretext whatever beyond the hour fixed for sailing. Similar benefits are provided for mail steamers at other West Indian and Central and South American ports. While the Department in every case has given the preference to American ships at four times the cost of carriage on competing foreign ships as permitted by law, yet in very many cases because of very much greater expedition or because of the absence of proper facilities in American steamers, or because of very great delays, the other ships offering have been given the business at the lower rate on the principle that the first duty of the Department to our citizens under the law was to give them the best, most expeditious, and certain mail facilities within its resources.

If there shall be superadded to the functions of postal administration that of administering a subsidy or a bounty for the promotion of American shipping interests I can readily see why, in practice, these two offices must so conflict that, so far from being of advantage to and promoter of efficient mail service, such a subsidy, with such a purpose, in the hands of the Postmaster-General must antagonize and overbear the primary object of his office, which is to give to the correspondence of our citizens the best expedition and certain transmission. If the bounty or bonus system is to be revived, it should be done without involving this Department in the complications certain to arise from administering it, and without hampering its fundamental rule of action, which is that the mails must go at all events.

While we granted aid to Pacific railroads, with conditions imposed that the mails should be carried for a credit on the debt, yet the Department was left free to employ better or more expeditious routes in its discretion. The proposed legislation will be in effect a mandate to the Postmaster-General to contract with American-built as well as American-registered steam-ships for the transportation of the mails to the ports of Central and South America and the West Indies for a period of not less than five years and with a compensation for each outward trip of $1 per mile.

There is no condition for advertisement, and, indeed, unlike even the British subsidy acts, competition is not contemplated or permitted, as the contracts are to be limited to American ships, and as to these will be practically limited to those now in existence, between whom there is comparatively no competition because of the number which can be employed in the service.

In the present conditions the proposed law might as well have named the few persons to whom this money is to be paid. Even the laws (Revised Statutes, sections 3976 and 4203) under which American ships might be compelled to carry the mails have been repealed (23 United States Statutes at Large, 58), and it goes without saying that the proposed legislation intends the Department to pay the maximum rate provided, *i. e.*, $1 per nautical mile for five years, to these few persons, without troubling them with any negotiations as to terms, and, indeed, as you will observe, without even the lodgment of discretion in the Department to designate from what ports of the United States the mails shall sail. It may be said in passing that presumably the "terminal points" from which sailings will be made, if self-interest, as is usually the case, governs, will be those from which the greatest number of nautical miles may be computed, rather than from those at which the convenience and needs of the service would be suited. It may be noted also that the schedules of sailings are to be furnished by the contractors, and not by the Postmaster-General; altogether, from an analysis of the proposed legislation it would seem to exclude the exercise of any power of any representative of this Government to provide for this mail service in the interest of the people, except after contract, which must be on the carrier's own terms and after the carriers have fixed the schedules according to their ideas of what the mail service should be, to compel them to conform to their own expressed views and decision as to the public convenience and the public interests.

I beg you to believe that in this criticism of the bill I am not commenting unfavorably at this place upon a policy of granting bounties to American ships. I do think, however, that the carrying out of that policy should not be involved in the postal administration. Such gifts should be voted and given directly, if the Government shall determine to pursue a policy of engaging in this branch of private business. With very great respect, however, to the framers of the bill, I do seriously object to that provision of the proposed legislation which places the mail service at the mercy of any firm, individual, or corporation. While, indeed, the susidized lines might be compelled to carry the mails if tendered, yet the Department should be independent, and should at all times be enabled to send the mails by the most expeditious routes and make use of the best facilities afforded for that purpose from among all carriers offering. The Department should be free to take advantage of all sailings, of increased facilities coming from increased business, of changes for the better wrought by time, extension of commerce, and competition, and should not be tied up for a decade to single lines of communication, unstimulated to improvement and all progress by the existence of a settled, inordinate, and certain income.

Herewith I furnish you two tables marked "A" and "B." From them you will see that the mails of this country were carried to Central and South America and the West Indies for the fiscal year ended June 30, 1887, by foreign steamers at a cost of $7,936.27 at the single rate, and by steamers of American register at a cost of $39,381.57. The number of miles sailed by the foreign ships employed was 666,478; the miles sailed by the ships of American register employed were 546,758. It will be seen, on the plan of payment proposed, which is fixed without regard to the amount of mail carried, that the service, which cost us in the fiscal year 1887 $47,317.84, would have cost us, if paid for as proposed, $1,213,206. It is estimated that the weight of mails will be for the next fiscal year increased 20 per cent. over these figures, and from what I have before shown it will be seen that the number of sailings will be increased in about the same ratio over the figures given in Tables A and B. The total cost of the sailings under this bill, predicated upon the business of 1887, can be but an approximate standard by which to estimate the cost under a provision of $1 for every nautical mile for each outward trip.

But without regard to the cost, it is perfectly evident, from an examination of these tables and from the experience of the Department in affording the best attainable service, that "American-built ships" alone, with whom the Department can now contract under this bill, and with which it must contract for a term of years, can not perform the service absolutely essential. Heretofore, as I have said, whenever it has been possible and consistent with the best interests of the public which this Department serves, American ships have been employed to carry the mails at four times the rate paid to foreign ships; yet with this policy steadily maintained, to give proper service at all it has been necessary to employ other carriers, as shown by Schedule A. One of the most serious disadvantages from connecting the proposed subsidy with this Department will be that, even in cases where service is not furnished to certain ports by American ships at all, carriers that might be had will hardly suffer the enormous discrimination in compensation for the carriage of the mails. The conditions would certainly predispose human nature to refuse to perform the service at all.

Again, it will not commend itself to our people if, with this enormous compensation, avowedly for the carriage of the mails, frequency of transmission shall be largely curtailed, even to ports touched by American ships, as must be the case where we pay one carrier about two hundred and fifty times as much as we offer for the same service to another. In my opinion the bill would not be advantageous to the service but the disadvantages would be positive in so far as this Department is concerned. While, if it shall become a law, the Department will of course faithfully administer the fund in accordance with the spirit of the act, I feel confident that such administration will result only in a very great pecuniary benefit to a dozen individuals, at the expense and embarrassment of good service, and of inconvenience, injustice, and material injury to the great body of the people, whose money will be used in the purchase of those results.

Considering this as a subsidy pure and simple, unconnected with the postal service, it becomes a question of general policy with which this Deparment has nothing to do. The subject has been ably and exhaustively discussed in Congress, notably in the Thirty-fifth, Forty-fifth, Forty-sixth, and Forty-ninth. You, sir, and other distinguished members of the Post-Office Committee as at present constituted, have on the floor of the House presented the learning which the history of the subject, political economy, or the experience of legislation can teach. It has been frequently demonstrated by the experience of this and other countries that to enable one line by Government aid to carry more cheaply and thus to destroy competition, does not promote commerce. The most successful ocean steam-ship lines of the Continent—those of Hamburg and Bremen—receive no pay from the government other than the moderate postage rates. The British precedent is not in point and would not be even if Great Britain did not offer her mail service to the carriers of the world. "Her aims are political and not commercial. She must have constant communication with the colonies, and she has spent large sums for this object. She must have an efficient and capable transport service for the protection of those colonies." The views of that Government are stated in Mr. Scudemore's report (Parl. Papers 1867-'68, XII, 113), as follows:

"The question (mail subsidy service) can not be dealt with on commercial principles. * * * For the sake of keeping up such communication with the East as the nation requires they must set commercial principles at defiance, and cost what it may the nation must either pay them what they lose thereby or forego the communication."

Of course England may subsidize lines of ships to open up new markets for her surplus, because she freely exchanges commodities with such markets; and her policy is after establishing the commerce to steadily decrease the subsidy. If the policy of giving bounties to promote commercial relations with other countries be ever adopted again after the failures in our history, it would seem that its adoption should be deferred until closer commercial relations with those countries can be maintained, and are not antagonized by an opposing system of laws.

COMPARATIVE COMPENSATION.

Mr. Speaker, during the last fiscal year the United States employed the services not only of the twenty American lines which ply to South America and the West Indies, but also of the twenty-five foreign lines plying to the same countries. The foreign lines made a greater sailing distance than the American lines, having sailed 666,448 miles and received only $7,936.27, while the American lines under the law of 1858, which gives them both sea and inland postage, sailed only 546,758 miles and received $39,381.57; and yet the gentleman from Maine [Mr. DINGLEY], well informed and usually very fair in the discussion of any question, left the impression upon the House that the Government had virtually discriminated against its own steam-ships. Speaking of the amounts paid to the foreign lines, he said that "the British Cunard line received 65 cents per mile one way for transporting our mails, while the American Brazilian line received but 14 cents." The gentleman's statement is unfair because he does not give all the facts upon which he bases his declaration, and besides is slightly in error as to the amount paid the British Cunard.

For the fiscal year ending June 30, 1888, the North German Lloyd Line received 43 cents per mile, the Cunard 50 cents, the Guion 60 cents, and the White Star Line 27 cents. But why? Because they were paid on the basis of services actually rendered to the Government. They received the increased compensation over the Brazilian line because they rendered greater service. If these lines plying to European ports had been American lines they would have been employed by the Government of the United States to carry the mails, and would have received both sea and inland postage. The North German Lloyd, instead of getting 43 cents per mile, would have received $1.36; the Cunard, instead of 50 cents, would have been paid $1.47; the Guion, which received 60 cents, would have been paid $1.75 per mile, and the White Star, that was compensated at the average rate of 27 cents per mile, would have had its compensation increased to the amount of 86 cents per mile.

It is therefore manifest, Mr. Speaker, that the limited compensation

to the South American lines results from the fact that they carry but little mail for the Government. The increased compensation to the foreign lines sailing to European ports, even at the rate of sea-postage only, is explained in the fact of the increased weight of mail.

This is an equitable and just basis of compensation; but the gentleman from Pennsylvania [Mr. BINGHAM] in the amendment he submits—as is also the case in the Senate amendment—departs from this universal rule of action which obtains in the conduct of private affairs, and proposes a gratuity rather than a system of "equivalent consideration."

In all Departments of the Government compensation is predicated on the basis of services actually rendered. The Government ought to pay for what it gets and not a dollar in excess.

Mr. BINGHAM. You do it under the law of 1858, under which you are operating now. You leave the discretion to the Postmaster-General, and he gives full sea and inland postage to American vessels three times as much as he gives to foreign vessels.

Mr. DOCKERY. The gentleman did not quite catch my point. I was saying that the basis of compensation ought to be the service actually rendered to the Government, and if the law authorizes such compensation to the American lines as the gentleman speaks of it is because of the service they render to the Government and a desire to discriminate in their favor.

Mr. BINGHAM. That is right—because of a desire to discriminate in their favor.

Mr. DOCKERY. I am heartily in favor of discriminating in favor of American steam-ships. The compensation for carrying the mails is ample, and if there exists any just ground for complaint it must come from the foreign ship-owners.

CAUSES OF THE DECLINE OF MERCHANT MARINE.

But, Mr. Speaker, let us come to the point at issue. If this subsidy proposed by the Senate amendment or by the amendment of the gentleman from Pennsylvania will have the effect of stimulating the organization of new lines of ocean steamers, I would ask the gentleman to explain why it is that American lines are not now plying between New York and European ports? Under the law, as we have shown, they would receive $1.36, $1.47, and $1.75 per mile for carrying the mails of the Government on each outward voyage; and if the compensation proposed in the Senate amendment ($1) is adequate to build up our merchant marine, and is designed for that purpose, why should there be any necessity for the amount suggested in this amendment, when under the law, as it has stood on the statute-books since 1878, there is a basis of compensation which realizes more for them than this subsidy?

Mr. Speaker, I again desire to emphasize the real point at issue—why is it, in view of the statement I have just made and which can not be successfully controverted, that American lines are not now doing business between New York and European ports? The answer is plain—because it does not pay. In the analysis of the question the next thing to be considered is why does it not pay? It is evident they can not afford to construct lines even when they receive $1.75 per mile for carrying mails, which is 75 cents more than the amount submitted by the Senate amendment.

Mr. BINGHAM. The Senate amendment relates to lines to Central, South American, and West India ports.

Mr. DOCKERY. The suggestion of the gentleman from Pennsylvania only emphasizes the situation which to-day confronts us upon the ocean. If we are to re-establish the American merchant marine, it ought to be under laws general and uniform in their operations, so that the American flag would again respond to the breezes of every sea as it did in the olden time when our ships carried 75 per cent. of the commerce of the United States.

The Senate amendment is a feeble attempt to revive our carrying trade to South America and the West Indies, and in considering it the inquiry naturally suggests itself, why is it that with liberal mail compensation for the trans-Atlantic steamers and with abundant commerce, American lines are not now plying between New York and European ports? The further inquiry logically follows, if with abundant commercial material awaiting transportation, and with liberal mail compensation already authorized, American lines can not successfully carry our trans-Atlantic commerce, what reason have we to expect that the meager amount carried by the Senate amendment will accomplish the purpose for which it is claimed to be intended? It is evident that Americans have relinquished the ocean carrying trade because it is not profitable. Now, let us investigate this question for a moment and endeavor to ascertain the reason why it is not profitable.

Mr. BINGHAM rose.

Mr. DOCKERY. I desire to complete my statement before yielding to further interruptions.

Why does it not pay? I will not attempt to enumerate all the causes which have led to the decline of our carrying trade upon the ocean, but the principal causes may be briefly summarized:

First, it has declined because under the present law the American ship-owner is compelled to pay from $100,000 to $150,000 more for a ship than the foreign ship-owner.

Mr. COX. Now you have got it.

Mr. DOCKERY. Second, it has declined because the daily operating expenses of an American ship are from 25 to 35 per cent. greater than those of the foreign ship, the difference being accounted for in some measure by the higher wages paid to American seamen.

Mr. FUNSTON. Let me say good for that.

Mr. DOCKERY. I did not catch the statement of the gentleman.

Mr. FUNSTON. I was saying there is no fault to find with the fact that we pay higher wages to our labor.

Mr. DOCKERY. We are agreed as to that point.

Mr. FUNSTON. It is all right.

Mr. DOCKERY. If we except the pauper labor of India, I would be warranted in the statement that seamen upon foreign vessels are the poorest paid laborers in the world. They are poorly paid, because as a rule they are a shiftless and irresponsible class of people, managed and controlled with extreme difficulty, and with no place they can call "home," they "tramp" from port to port around the world.

But to continue, our merchant marine has declined for the further reason that in addition to the increased cost of American vessels and their daily operating expenses, foreign governments have granted large subsidies to their steam-ship lines.

These three causes have driven American ships from the high seas.

Mr. Speaker, in view of these causes which I have briefly summarized, let us consider the remedy, if there be a practicable one—as I shall assume that every American citizen is earnestly desirous of the restoration of our carrying trade upon the ocean. How can it be accomplished? If this desirable result is to be attained, it must be reached first by the repeal of all laws which prohibit the American ship-owner from purchasing or constructing his ship as cheaply as do ship-owners of other countries. If this action is not proposed, the increased cost of the American ship must be made good to the American ship-owner by an appropriation from the public Treasury.

Again, the American ship-owner must be compensated by an appropriation from the Treasury for the excess of the operating expenses of his vessel over those of a foreign vessel. Then, Mr. Speaker, after having met these two conditions, we must appropriate a sufficient sum in the form of a subsidy to meet the subsidies granted by foreign countries. When we have done this we shall have placed American steamship lines upon an equal footing with foreign lines, so that they can successfully compete for the carrying trade of the world.

The remedy is heroic perhaps, but at this time it seems to be the only practical solution of the difficulties surrounding us. If the statement be true, then it remains for Congress and the country to determine whether they are willing to make this enormous expenditure for the purpose of rehabilitating and re-establishing the American merchant marine. I confess frankly, Mr. Speaker, that I am not willing to attempt a restoration of the carrying trade to American vessels by the vast expenditure which the logic of the situation seems to require.

A great deal has been said by way of explaining the decline of our carrying trade. Prior to 1860 75 per cent. of the commerce of this country was carried in American bottoms; but at this time with twice the commerce we then had American ships carry but 15 per cent. of it, and why? Simply because the Americans have relinquished the carrying trade.

Mr. BINGHAM. The war did that.

Mr. DOCKERY. Not at all. The gentleman from Maine [Mr. DINGLEY] who sits just in front of the gentleman showed a few days ago that the decline in our shipping interests began six years before the war, and the percentage of decline during that period was quite pronounced.

Mr. DINGLEY. Yes, but during the four years of the war that percentage largely increased.

Mr. DOCKERY. That statement is quite correct, but twenty-five years have elapsed since the close of the war; and while we have rebuilt the "waste places" in other directions, this decline has steadily continued until, as I stated a moment ago, only 15 per cent. of our commerce is at present carried in American bottoms. Our sea-faring men have relinquished the sea, because that pursuit is no longer profitable. The sturdy young men who grow up in the State of my friend, the distinguished ex-governor of Maine [Mr. DINGLEY], instead of going to sea in a business arduous and dangerous, and with a meager compensation, have gone into other pursuits yielding more satisfactory returns.

Many of them have followed Mr. Greeley's advice and "gone West"—to Kansas, Missouri, and other States where, under our generous laws, they are permitted to possess themselves of 160 acres of the public domain; and so long, Mr. Speaker, as we continue to people this continent and build up and develop its resources so long will the hardy young men of New England continue to migrate to the great West rather than go out to sea.

The increased facilities for transportation developed during the last quarter of a century have materially assisted in turning the tide of emigration to the West and Southwest.

Prior to 1860 it was not so easy to "go West." To the young man upon the Atlantic seaboard it was a "far-off country," as my friend from Ohio [Mr. BUTTERWORTH], who does me the honor to hear me, well knows.

Mr. Speaker, I can remember quite well myself when the emigrant

who started from Missouri to California called his relatives and friends about him to bid them a tearful good-bye before beginning a journey which required many weary months of toilsome and dangerous travel. All these conditions have been so revolutionized that now the emigrant to California goes on a magnificent train, starting out either from Kansas City or Omaha; whilst instead of occupying four or five months in travel he makes the journey in as many days.

Mr. FELTON. On these roads built up by subsidies.

Mr. DOCKERY. I am obliged to the gentleman for the suggestion, as the observation in no wise impairs the force of my argument. In the one case the railroad is subsidized to assist in its construction, and when so constructed it stands upon a solid business footing, without any further appeal to the bounty of the Government. On the other hand, in despite of the largest subsidies continued for a number of years, the steam-ship lines have declined and ceased to exist the moment the subsidy was withdrawn. The difference is thus made more clearly manifest.

Now, Mr. Speaker, let me read for a moment, for the benefit of the gentleman from Pennsylvania [Mr. BINGHAM], the views of the present Presiding Officer of the Senate on this question, and certainly my friends FUNSTON and PETERS will readily concede that the eminent Senator is at all times good Republican authority. However, let us consider this as a business question, wholly removed from the domain of partisan politics. Senator INGALLS, discussing this question, said, and remember, this was in the last Congress——

Mr. BINGHAM. Not the recent speech? [Laughter.]

Mr. DOCKERY. No; it is not the Chicago utterance [renewed laughter], but was delivered in the Forty-ninth Congress. He said:

The reason for the decay of American shipping, in my judgment, will be found in the fact that American capital can be more profitably employed in some other way than in building ships.

Mr. FUNSTON. He means manufacturing, probably.

Mr. DOCKERY. The gentleman can put the construction on the declaration that seems to him fitting and proper, and he is perhaps correct, as manufacturing has grown to be very profitable since the people have been taxed so heavily to maintain that interest.

Continuing, the Senator said:

I have heard much during the continuance of this argument of the advantages to result by the proposed appropriations to the restoration of the interests of American shipping; but I have listened in vain for some information as to the reason why the men of Maine and the men of Massachusetts do not now build ships if they want them. There is no reason why they should not build ships if they desire them. They have the yards and they have the forests and they have the mines and they have the skilled labor, and if ship-building was profitable, I venture to say that the capitalists of Maine and Massachusetts would build ships; and the reason why they have not done it is because they can make more money by building railroads, and by buying Western lands, and by lending on mortgage at 6 and 8 and 10 and 15 per cent. to Western borrowers.

Mr. BINGHAM. Ship-building, you know, as far as that is concerned, has been transferred to Pennsylvania, and the Delaware River is the ship-building center now for the reason that ship-building is of iron, not of wood any longer.

Mr. DOCKERY. Well, you must settle that difference with Senator INGALLS. It is his own speech, and I have only quoted what he said. He says that ship-building is not profitable, and I am satisfied that the statement is correct.

The Senator further says:

I do not, therefore, Mr. President, feel that this appeal to a patriotic impulse to vote for a large appropriation out of the national Treasury for the purpose of restoring the decayed interests of American commerce has much weight. Very much the same argument applies to the carrying trade of this world. There has been a unanimity of lamentation about the loss of the carrying trade by the United States, and we have been told of the disgrace and the shame that arises from the fact that the United States no longer has the carrying trade of the world. Mr. President, we did not lose the carrying trade of the world; we relinquished it. The reason why we have not the carrying trade of the world is because it is not profitable. Great Britain can afford to conduct the carrying trade of this world at a loss, as she does, because she has an insular position. There is not a point in Great Britain so remote from the seaboard that any product of her fields, that any product of her factories or her mines can not by her railway system be placed in fourteen hours in the dock ready for shipment to any portion of the world. Great Britain has an enormous excess of manufacturing facilities. She wants an enormous amount of free raw material. Therefore, Great Britain and the other continental nations so situated can afford to do what they are now doing, and that is to carry on what may be called the transfer, the transportation business of the world by water at a loss. There is to-day a million tons of English shipping that may be bought for 50 per cent. of what it cost, if anybody wants to buy it.

Therefore the reason why the United States does not do the carrying business of the world is because she can do better. It does not sound reasonable or logical or sensible to rise here and declare that the reason we do not do the carrying trade of the world is because Congress does not vote subsidies for mail pay. Statistics show better; and whenever the carrying trade of the world can be conducted at a profit, the United States of America will have their share of it. But so long as American money can be more profitably employed in railroad transportation at home than it can in water transportation upon the deep, so long it will continue to be so employed, and the voting of $100,000 or $500,000 to one or more lines of steam-ships for service will not prevent it, and will not help it.

We have been told also that to the south of us there is a great commercial empire waiting for the invitation of American commerce. Congress has been appealed to to vote for an appropriation upon the ground that unless it is enacted by Congress the balance of trade would continue to be against us.

There is another reason why we have not got the trade of the South American republics, one that has not been mentioned here, one that deserves mention, because it is not becoming that Congress should be held up here and fustigated and castigated for unpatriotic frugality in failing to making the necessary appropriations, whereby we are unable to secure our share in the millions of South American commerce. The reasons why we do not have South American commerce is because we do not attempt to sell them the things they want to buy. The reason why our merchants and our manufacturers find no market in South America is because the merchants and manufacturers of other countries can offer them a better article at a less price. There is no want of facility of communication; the testimony in the report of the commissioners shows that the means of communication are ample, but that in their dealings with American merchants and American manufacturers they have been flouted, they have been refused credit; they have not been offered the articles they wanted to buy, and when goods have been sold to them by sample they have proved to be entirely out of comparison with those samples both as to price and as to quality.

Mr. Speaker, the Pacific Mail Steam-ship Company, the principal beneficiary under the amendments, realizes 8 per cent.——

Mr. BINGHAM. Let me interrupt the gentleman. They are paid but 5 per cent., and to-day the stock is at $34——

Mr. DOCKERY. I have not time to yield. I will accept the gentleman's statement and say 5 per cent. This particular line is profitable because of certain surroundings not now necessary to refer to; but what do the foreign ship-owners get on their investment? They do not realize, according to Senator INGALLS, 1 per cent., and yet you propose to tax the people for the benefit of the Pacific Mail Steam-ship Company, whose profits you concede to be 5 per cent.

SHIPPING DEPRESSION AND SUBSIDY PERIODS.

Mr. Speaker, the shipping interest of the world is, as stated by the Commissioner of Navigation in his report for 1887, involved in serious depression; and he assigns as the cause of this condition the excess of the supply of ocean tonnage, the result of overbuilding. The policy of subsidy has unduly stimulated it, and as a result we have reached a period of depression that is always consequent upon undue excitement.

In 1881 the tonnage of the whole world built that year was, in round numbers, 1,000,000 tons; in 1882, 1,200,000; in 1883, 1,250,000, and in 1884, 750,000 tons, a decrease of 500,000 tons; in 1885 it was 540,000 tons, showing a still further decrease; and in 1886 it had dropped down to 473,000 tons. So that, as the gentleman from Minnesota [Mr. NELSON] has well stated, the result is that to-day you can purchase any ship in the Old World for 50 per cent. of its original cost.

Now, Mr. Speaker, let us briefly examine the results of the subsidy policies that have heretofore prevailed and ascertain, if we can, what effect they have had upon our merchant marine. I submit as a fair proposition, which our friends upon the other side of the House must concede, that if subsidies tend to the development of our merchant marine that effect ought to have been manifest during the period from 1866 to 1877, when that policy prevailed. Will any gentleman controvert the correctness of that statement? I do not think he will. From 1866 to 1877 the United States Government paid in subsidies $7,517,661.22. In 1866, when the policy was reinaugurated notwithstanding its disastrous failure before the war, the tonnage of American vessels registered for the foreign trade was 1,387,756.

In 1877 there was, after ten years of subsidy, an increase of only 100,000 tons, the total tonnage being 1,570,600. In 1866 32 per cent. of American commerce was carried in American vessels; in 1877 only 26 per cent. was carried in American vessels, an absolute decrease in the carrying trade of the country of 6 per cent. during ten years of subsidy, at an annual cost of $800,000.

Mr. BINGHAM. To two lines.

Mr. DOCKERY. The gentleman says "to two lines." What was the effect of giving it to the two lines; and what ought to have been the effect?

Mr. BINGHAM. To sustain the two lines.

Mr. DOCKERY. Very well; the gentleman states that the $800,000 was given for the sole purpose of sustaining two lines. With that understanding there ought not to be any great difficulty in reaching a correct conclusion as to the proper policy of the Government in respect to this question. If the subsidy policy is based upon sound business principles, it ought to have had the effect of doing what? What is the position of the gentleman from Maine [Mr. DINGLEY], and what views has he expressed in this debate? He insists that subsidy will develop new lines of ocean steamers and build up our trade with Central and South America. If that is the correct view the result ought to have been to build up the business of these two lines and make it more profitable, so that when the subsidy was withdrawn they would have been able to stand erect, self-reliant, and vigorous without Government aid.

It did not have that effect; but on the contrary the tonnage of vessels built in the United States, which amounted to 336,146.56 in 1866, decreased in the ten years succeeding, until in 1877 it amounted to only 176,591.06, while the tonnage of vessels owned in the United States for the same period decreased from 4,310,778 to 4,242,600, a loss of 68,178 tons. I sincerely regret that I have not time to pursue this matter further. I will only say in conclusion that the American merchant marine has declined because it does not pay; and it does not pay for the reasons I have briefly stated. That is a plain business proposition. So long as the people of the United States can do better on land than they can by going to sea they will follow pursuits on land.

Mr. BRUMM. I ask as a matter of information, has the gentleman any remedy at all?

Mr. DOCKERY. In reply to the inquiry of the gentleman I will state frankly that I have made a very thorough examination of this question and as yet have failed to reach any satisfactory conclusion, so as to be able to suggest a remedy.

Mr. DINGLEY rose.

Mr. DOCKERY. I hope the gentleman will not interrupt me, as my time has almost expired.

Mr. DINGLEY. My point is very important. It is true, as you say, that our merchant marine in the foreign trade does not pay, but it is also true that our merchant marine in the coastwise trade does pay. Why is it that the merchant marine in the coastwise trade does pay and the merchant marine in the foreign trade does not pay?

Mr. DOCKERY. The Government of the United States has given the coastwise trade to American vessels; but unfortunately perhaps for us we can not give to this country a monopoly on the high seas. .The difference is manifest and must be apparent to the gentleman. We have a prosperous coastwise trade because it has exclusive privileges under the law. We have no merchant marine of consequence on the oceans, because there we can not compete, and can not compete for the reasons I have heretofore stated.

Now, Mr. Speaker, I observe that my time has about expired, but I would like a few minutes additional.

Mr. HEARD. I ask unanimous consent that my colleague may have ten minutes longer.

Mr. DOCKERY. Five minutes will do.

Mr. BLOUNT. I have some time still remaining which I will yield to the gentleman from Missouri.

Mr. DOCKERY. I do not like to accept the time so kindly offered by the gentleman from Georgia, as he has other uses for it. I will only add a few words.

I desire to say in conclusion, Mr. Speaker, that this question is of such vast moment to our people that it ought to challenge the immediate attention of the Committee on Merchant Marine charged with the duty under the rules of the House of considering the whole question, and it ought not to appear under the questionable guise of a "rider" on an appropriation bill. We should approach its consideration, not in a spirit of partisanship, but actuated by a spirit of patriotism, based upon sound business principles. Let us intelligently survey the whole field and if possible remove the causes which hinder and impede our progress.

Mr. Speaker, I earnestly sympathize with every gentleman on this floor who desires to see the flag of our country once more a familiar sight upon all the waters of the globe and the American Republic no longer an inferior power upon the high seas; but I say to you, gentlemen, you can not permanently restore it by subsidies, or if it is accomplished in that way, instead of $450,000 or $800,000—the meager sums you propose—there must be an annual appropriation of from five to eight million dollars to compensate American ship-owners for the differences to which I have adverted.

Sir, I am not wedded to any particular theory or policy which looks to a restoration of American commerce to American ships, but "struggling in the way" in the honest effort to reach the best methods to accomplish this result, I shall hail with joy the hour when American prowess shall again be restored upon the seas. [Applause.]

The Tariff.

SPEECH

OF

HON. JOSEPH M. CAREY,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 18, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the revenue—

Mr. CAREY said:

Mr. CHAIRMAN: It must be evident to every one that speeches have not and will not affect the vote on any one of the various propositions presented in this bill. I desire to call attention only to a few of the industries of Wyoming Territory, which, if they should not be entirely destroyed, would be seriously embarrassed should the Mills bill become a law.

In 1872, then and now an honored member of this House—the gentleman from Pennsylvania [Hon. WILLIAM D. KELLEY], then in the prime of a noble manhood—was for a few months a sojourner in the beautiful valley known as the Laramie Plains, Wyoming Territory. While there he lived in a log house within the Fort Sanders military reservation. In sight and under protection of the military post a town site had been surveyed, and after the Western custom called a city, Laramie City. At this particular time "the city" was a village of log cabins and board shanties, with a population of a few hundred people only. It had been made a county seat, and Judge KELLEY delivered the address at the laying of the corner-stone of one of the first court-houses erected in the Territory. On that beautiful summer day, he, true to the work of his life, in his address told his little audience what could be done if they would turn their attention to the development of the various resources, especially the working of the mines and the transforming of the raw materials, everywhere so abundant in the surrounding mountains, into the manufactured products of commerce. The people listened and have since acted. Laramie City is no longer a village. The main public school building of the city to-day is of more value than all the buildings in the village in 1872. The commodious business houses, well filled with merchandise, the beautiful homes, the good schools and elegant churches, tell that the young city is populated with an intelligent and enterprising people, but the crowning glory of the citizens of this beautiful place is the manufacturing establishments which have cost in the aggregate over a million of dollars. Among these are machine-shops, rolling mills, a glass factory, and chemical works.

In an interesting letter from Hon. S. W. Downey, of Laramie City, concerning the manufacturing establishments, he says:

The present capacity of the glass-works is about 30,000 boxes per year, and the proposed capacity at once will be 70,000 boxes per year. There are now about sixty men employed at the glass-works, but next season there will be more than double that number.

The rolling-mills employ 200 men, and the manufactured product is now $50,000 per month. During the past twelve years the average product has been nearly, if not quite, $750,000 per year. Engaged in the shops, rolling-mills, glass-works, and chemical-works in ordinary times there should be employed at least 1,000 men, who, with their families, would constitute 4,000 of our population.

I need not inform you how these important enterprises have been paralyzed by the tariff agitation. We are continually hampered by the distrust of capital, which is extremely coy, over the doubts which hover over the legislation of the country.

With these articles protected, as they are under the present tariff, and with no immediate prospect of immediate hostile action by Congress, I have no hesitation in saying that we would soon have a population of 15,000—about treble our present size.

In this connection I desire to read a letter from a very intelligent gentleman, Clifford Pemberton, jr., the general agent of the Laramie Chemical Works. It is to the point, and is a strong argument why the reductions of the duties on soda and soda products should not be made. The letter is somewhat lengthy, but its contents will justify the space it will occupy:

LARAMIE CHEMICAL WORKS, *Laramie, Wyo., July* 2, 1888.

DEAR SIR: Replying to your valued favor of late date, I beg leave to lay before you the following information regarding the manufacture of soda products from the natural deposits of Wyoming Territory:

For the past four years we have been engaged in working up the natural soda from the soda lakes near Laramie and overcoming one after another the many difficulties of the processes. As there are no other like deposits in foreign countries, our work was slow and difficult, as all the information obtainable was confined to what is known as the Le Blanc process, a part of which is in operation at our works, but the proper process adapted to our requirements was only learned after years of experiment and the investment of considerable capital.

Our works, as they are to-day, represent an investment of about $300,000 and give employment to one hundred to one hundred and fifty men. Our products are caustic soda, soda-ash, sal-soda, pure Glauber's salts, dehydrated Glauber's salts (or salt-cake), and concentrated lye, and we have the capacity to supply the Western markets from Chicago to San Francisco. Our products find a ready sale in the various markets, the quality being fully equal to that of foreign goods, although at times we have found it necessary to make a discount in price in order to remove the prejudice in favor of English goods.

The great item of cost in our manufacture is that of labor. The total value of one of our products, caustic soda, is made up of the cost of the raw soda, which is very small, the cost of coal, limestone, and labor; and the labor cost is several times as great as the sum of all other expenses and materials. This additional labor cost in comparison with that of our competitors, who are mainly the alkali manufacturers of England, is as follows: To our yard-men or ordinary unskilled labor we pay $1.80 per day, or $10.80 per week, while our English competitor pays but 14 and 16 shillings per week, equal to $3.50 and $4. To our furnace-men we pay $2.60 per shift, or $16.20 per week, against $6 paid at Widnes, England, for the same work.

These prices paid to our labor are not excessive for this part of the country, nor are they high in comparison with the wages that skilled labor receives in the East; but in comparison with English labor it will be noticed that they are more than double. This difference in cost of labor makes it impossible for us to compete with the alkali manufacturers of England unless our present duties on soda products are retained.

Our position with regard to this competition can best be illustrated by noting the change that has taken place in the selling price of caustic soda in the Denver market.

In December last we began offering our caustic soda on this market and made several large sales at the price of $4.05 per 100 pounds for caustic soda of 76 per cent. strength, this price having been agreed upon as being 5 per cent. below the price at which foreign caustic soda could be laid down at Denver. To-day the price of caustic soda of the same strength, in the same quantities and in the same market, is only $3.30 per 100 pounds, our last sales having been made at this figure—a reduction of over 20 per cent. from the price of eight months ago.

This reduction can be attributed to but one cause. The English manufacturers are confident of the passage of the Mills bill, which reduces the duty on caustic soda one-half cent per pound, and are discounting this reduction to our disadvantage, selling in the Denver market at a price which nets them one-half cent per pound less than they can obtain for the same goods in Liverpool. The figures to substantiate this statement are as follows:

Present cost of 76 per cent. caustic soda per ton in Liverpool, £8 per 2,240 pounds, which equals a cost per 100 pounds of $1.75; present duty, 1 cent per pound, $1; freight to New York, 15 shillings and 10 per cent. 17 cents; freight to Denver (cheapest route), 90 cents; making a total cost of the goods laid down at Denver of $3.82 per 100 pounds, against a selling price of $3.30—an absolute loss of 52 cents per 100 pounds to the English manufacturers.

Without the present duties on soda products the natural soda deposits of this country will never be developed. During the past few years work has been done on the soda lakes of California, at Owen's Lake, at the soda marshes near Schurz, Nev., at Ragtown, Nev., and at Salt Lake City, Utah, in addition to the work on our own soda lakes, and thousands of tons of product, mainly sal-soda, soda-ash, and salt-cake, have been placed on the markets. The manufacture of salt-cake and soda-ash will soon be begun at Gill's Lakes, on the Cheyenne and Northern Railroad, and doubtless before long the extensive Dupont Lakes in

the Sweetwater district of Wyoming will be developed to meet the increasing demands for these goods. All these enterprises, however, depend entirely upon the continuance of the present duties, and I can assert most positively that if the Mills bill is passed, and the duties thereby reduced more than 50 per cent., in less than six months from the enactment of the bill the development of the soda deposits named will stop, and not a pound of product will be turned out until the duties are again restored.

It must be understood that in this branch of the chemical business the competition is with English manufacturers, established more than thirty years, with millions of capital invested and more millions at their disposal, employing labor at almost one-third of the cost of the same labor to us, and to whom the question of reducing the price of their goods in our markets sufficient to cause us to work at a loss, is a simple one and a course often pursued. To continue to ship goods to the United States and sell them at an actual loss for one year, for two or three years, is of frequent occurrence in the chemical business, and a course which seldom fails to bring success to the Briton and failure to the American.

As manufacturers we ask one of two things, either that our labor be given to us cheaper—and this no act of Congress can accomplish—or that we be permitted to enjoy the same protection that induced us to enter into the manufacture of soda chemicals, to invest our money in a manufacturing plant, and to devote four years to the development of one of the great natural deposits of this country.

We consider it a gross act of injustice to legislate against one class alone of all those engaged in labor in this country—the manufacturing class.

Very truly yours,

CLIFFORD PEMBERTON, JR.,
General Agent.

Hon. JOSEPH M. CAREY,
Washington, D. C.

The United States does not require the soda of any foreign country. We have enough soda in Wyoming Territory to supply the United States for centuries. Professor Ricketts, Territorial geologist, says "these deposits of soda found almost pure in great lakes in various places in the Territory are practically inexhaustible." This soda is so abundant at different points in the Territory that the cost of the manufacture of the various products from it may be determined by the interest on the capital invested, the cost of the fuel, and the cost of the labor expended. The crude soda costs but little more than the expense of handling and the transportation from the place of deposit to the place of manufacture.

The present duty on sulphate of soda is 20 per cent. ad valorem. This bill proposes to put it on the free-list. The rate of duty on caustic soda is now $20 per ton. This bill places it also on the free-list. Various other products of soda are to be put on the free-list, or the duties are to be materially reduced.

It is not difficult to see that the passage of the bill will destroy this industry, or the American workingman must take English wages for his labor.

The manufacture of glass in the Territory of Wyoming should become a great industry; its cost may be measured also by the labor and interest on the capital invested in the works. Soda, sand, limestone, and fuel are found in inexhaustible quantities and of good quality in the same localities for the production of glass. There are only a few factories in the extreme West. Nearly all the glass used in the Pacific States and Territories is of foreign manufacture. The present duty can be paid and the glass sold cheaper than it is possible for the American manufacturer, owing to the high price of labor and transportation in the United States, to sell his products.

The superintendent, Mr. Davis, of the Laramie Glass Works, says of the glass-blowers in Laramie City:

These skilled laborers nearly all have families, and are in a condition, generally, from the amount of wages earned by them, to purchase homes and live in a good style. It will be noticed that the workmen employed are so well pleased with the outlook and with our city that nearly all of them are buying property here and managing to build themselves homes in Laramie.

To those who would lower the duty on glass in this country I would commend a comparison between the condition of American workmen engaged in the manufacture of glass with those employed in the same industry in France and Belgium. To further show what the cost of glass manufactured in Wyoming Territory represents, I read further from the same interesting document:

The soda is the natural sulphate, chemically pure, and is used precisely as it is taken from the natural deposit, the only preparation being to calcine it. The sand used is from a bed 3½ miles east of the factory, and is perfectly white, without any trace of iron or any other impurities. Seen under a powerful microscope, every grain appears as a perfect quartz crystal, as clear as the glass itself. The limestone is found in the vicinity of the sand-bed, and is a species of marble of extraordinary purity. It contains nearly 99 per cent. of carbonate of lime, as I learn by analysis, and is used in its natural state, being simply pulverized.

The coal used here is slack, and is undoubtedly the best in the United States for the purpose of making glass. By its use as a fuel the melt is ready for the blowers on an average in twelve hours from the time it is placed in the furnace, while with the coal used in the Eastern factories fifteen hours are required before the melt is ready. This coal produces on the glass as fine and clear a gloss as can be obtained by using wood for fuel.

Recently the Northern, Central, and Pacific Railroad Companies have made large purchases of English steel rails. It is said by the advocates of this bill that the duties are too high on iron and steel used in railroad construction. I believe every pound of iron and steel used in the construction of American railroads should be made from American ores, in American furnaces and mills, and that American and not English wages should be paid at every step from the mining of the ore and fuel to the laying of the tracks. The Western and inland farmer must have a market at home. His cereals will not stand inland transportation to the ocean. Great progress has been made under the existing tariff laws in the establishment and successful management of manufacturing industries in the States and Territories. There are grand opportunities for such establishments in the West, and there is no reason why the surplus cereals of the trans-Missourian States should not be consumed by those who could be employed in the manufacturing industries. The fuel and base metals exist in many districts of the Rocky Mountains. Let the duties be retained on lead and copper and iron ores and on the manufactured products of iron.

There are enough iron ores and fuel in the Rocky Mountains for the manufacture of all the iron and steel that can be consumed on this continent. To illustrate, I need but mention one of these many mineral districts that exist in Wyoming. In the central and eastern part of that Territory, near the Nebraska line and the great grain belts west of the Missouri River, there is a great deposit that could properly be called a mountain, 7 miles long, 1 mile wide, of unknown depth, of red Hematite ore, remarkable for its high percentage of metallic iron and the small percentage of sulphur and phosphorous. All tests made show it to be entirely free from tintanium. The assays have averaged from 66 to 68 per cent. metallic iron, 0.02 to 0.06 per cent. sulphur, 0.04 to 0.08 per cent. phosphorous. The lime to flux the ore is found in the immediate proximity of the ore.

It is estimated that over 15,000,000 acres of the area of Wyoming is underlaid with coal. Examination of these raw materials have recently been made with a view of establishing furnaces; but capital, always timid, now says: "Wait until it can be seen what is to be the fate of the Mills bill." Its passage, with the repeated statement that it will be the entering wedge only for further reductions in the duties and the ultimate destruction of the system of protection, are embarrassing established industries and are deterring the investment of capital in new enterprises.

It is estimated that not less than $150,000,000 are invested in sheep in the United States, and that not less than a half million of men are employed in the care of the flocks. The annual product of wool amounts to more than $70,000,000 each year, and the sheep consumed each year to supply the mutton market amounts to $50,000,000. In Wyoming Territory not less than $6,000,000 are invested in the sheep husbandry. The business gives many men employment. Since the reduction of duties on wool in 1883 the business has not been a very profitable one. It is estimated that within three years after the reduction of the duties took place the number of sheep in the United States was reduced at least six million head. I do not believe there is any demand for cheaper wool. With the existing duties the industry is struggling to live. With proper protection against the cheap labor of Australia and South American states all the wool required in the United States could be produced in this country.

The importation of waste and shoddy through the evasion of the law which competes with wools produced in the United States should be prohibited. Making wool free of duty would seriously affect this branch of agriculture, and would be a direct thrust at the farmer and ranchmen. The sheep of the United States are grazed for the most part on waste lands or lands worthless for other purposes. The sheep are generally owned in small numbers by small farmers. The bill puts the farmer's wool on the free-list, but compels him to pay duty on rice and sugar. Putting wool on the free-list will destroy the sheep industry, and in the end it will not materially cheapen wool. The 350,000,000 pounds of wool now produced in the United States will have to be produced in other countries, and as the industry is destroyed here it will be increased abroad to supply the increased demand for wool in the United States.

The sheep-grower of Australia will be benefited just in proportion as the American sheep-grower is injured. I believe this great home industry of the farmer and ranchman should be protected as long as any article is protected by the laws of the United States. As there is no demand for free wool this industry is to be bankrupted to prevent a few millions of dollars from going into the Treasury of the United States. Far better would it be to expend the revenue derived from this source in building great water-storage basins in the Rocky Mountains to reclaim the arid lands and to protect the Western farmers and Southern planters from the floods that at certain periods overtake them and destroy their fields and growing crops.

I have mentioned a few industries only in the young country which I represent that would be injured if this bill should become a law. The bill will affect mining of silver ore, for in many places the price of lead found in these ores answers the question whether such ores can be profitably worked.

The coal output will be affected seriously should the bill become a law, for its production is largely determined by the demand made by the furnace, forge, and other manufacturing establishments. In my Territory the coal industry, yet in its infancy, represents, when it has reached the consumer, nearly $10,000,000 annually. The development of the copper deposits, the great marble quarries, and the rich oil fields, all so widespread in the Territory, must depend in a great degree upon the maintenance of the American protection system.

The West needs protection more than the East. As we travel west

from Chicago and St. Louis over either of the great trunk lines of railroad, the people of every town and city of importance through which we pass point with pride to the manufacturing establishments built up under the protective system, which have made a home market for the products of the farmer, employment for the artisan, and customers for the wares of the merchant. On the main line of the Union Pacific Railroad and on the lines of the Northwestern and Burlington systems of railroad, now pushing their tracks across my Territory, there are great opportunities for the establishment of manufactories for the transforming of the raw materials there found so varied and abundant into those products demanded by the great agricultural districts east of us.

Much is said of the commerce of Great Britain under free trade. How insignificant is it in comparison with the great inland trade of the States and Territories of the United States, which is eight times greater than the entire export and import trade of Great Britain. There is a demand in our own country for 75 per cent. of all our manufactured products, and of all our agricultural products less than 10 per cent. has to find a foreign market. The great growth and the continued prosperity of this country, I believe, are largely attributable to the system of American defense of our labor and industries against the cheap labor and industries of foreign countries. Wages in the United States averaging so much higher than those of the Old World have enabled our workingmen, with the practice of economy and industry, to at least provide for themselves and those dependent upon them a good support in comfortable homes. The system has made us powerful as a nation and as a people largely independent of the rest of the world.

In all the arid region of the United States, especially in Wyoming Territory, nature has spread with a bountiful hand those raw materials which have done so much to make us great as a manufacturing people. I believe, Mr. Chairman, that Wyoming, with some help from the nation to reclaim her valleys that they may be brought into bearing, with the continuance of the American system, that the products of her great grazing fields may be protected, and that her iron, coal, copper, lead, soda, and oil fields may be developed, will within the life of some of us furnish homes and employment for at least a million of people.

Rice.

And yet of what avail to our laboring classes are laws to keep the Chinese out, and let in practically unhindered, as some of you propose, the products of labor cheap as theirs?

* * * * * * *

We can not raise the requirements of living, the rates of pay of the Asiatic races to the standards which prevail in our land; but God forbid that we should attempt to drag our standards of living and of wages down to theirs, or that we should take away the employment and the livelihood from any of our people to send abroad to them.

SPEECH

OF

HON. THEODORE S. WILKINSON,

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 10, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the revenue——

Mr. WILKINSON said:

Mr. CHAIRMAN: Bread from wheat is an article of such general use as to be popularly called the staff of life. But if we consider the number of lives supported by another cereal, the name belongs as well to rice. Wheat is the great life-supporter of the Europeans and the Americans. Rice fills a similar position of equal importance with the teeming multitudes of Eastern Asia.

These two cereals, wheat and rice, together, support more human beings than do all other articles of food combined. Their growth and use are as old as history.

Wheat is referred to by the earliest Scriptural writers, and—

Rice has been cultivated from time immemorial in tropical countries. According to Stanislaus Julien, a ceremonial ordinance was established in China by the Emperor Chinnung 2,800 years B. C., in accordance with which the emperor sows the rice himself, while the seeds of four other kinds may be sown by the princes of the family.—*Encyclopædia Brittanica*, page 553.

Alike as these two are in the antiquity of their origin, alike in being the great life-supporters of the earth, alike in demanding fertile soils, or soils made fertile for successful harvests—with these points in common, there are most striking points of difference between the two. Wheat can yield its richest harvests on the rolling prairie or the slant of the steep hillside. Rice—I speak of lowland rice, which forms the great bulk of the rice product of the world—rice, I say, can only thrive on level ground, and if the ground is not level naturally it must be made level or cultivated in level areas, no matter what the cost may be to make it so.

Sir Samuel Baker, speaking of rice cultivation in a portion of the East, says:

The system of rice cultivation is exceedingly laborious. The first consideration being a supply of water, the second is a perfect level, or series of levels to be irrigated. Thus a hillside must be terraced out into a succession of flat-forms or steps; and a plain, however apparently flat, must by requisite embankments be reduced to the most perfect surface.

The reason why rice, unlike wheat, can be cultivated only on level areas is that, also unlike wheat, it is not a product of land alone, or of land and the occasional moisture that is afforded by dew and rain, but demands as essentials to its growth and perfection both land and water, and for most of its growth the latter element in enormous quantities and unfailing supply.

IT CAN NOT THRIVE WITHOUT IRRIGATION,

and the land must be level to be irrigated properly. The fields need to be so level, or divided off into such level areas by embankments and flood-gates, that the water can be spread to a similar depth throughout their entire extent.

An abundant, and at nearly all times a certain, supply of water is an absolute essential for a good yield of rice, and this is what causes it to require far more labor than any other of the cereals. It not only needs the water, but its necessities require complete control over it. This element must be under such complete control as to be put on or taken off at will. At certain stages of its early growth a depth of a few inches is just right; a depth of a few inches more will make it stretch its tiny stems in the endeavor to point its tender shoots above the shallow flood in striving after some portion of air and sunlight still. Its life then hangs by a slender thread, a prey to cray-fish and their kind, and when the utmost skill in the management of the water and the control over it is essential to its very existence. A few inches submerged too deep, and the tiny points left under too long, the plants are drowned as surely as human beings are who sink too long beneath the water. A letting off or lowering of the water too much, a fall too fast, and the fragile stems are broken or fall down to be plastered fast in the ooze which does not let them rise. At the second and last stages of its cultivation drainage is as necessary as irrigation. It is a prey to birds by millions in its sowing and in its ripening, at seed time and at harvest, to enemies of the air and enemies in the water.

The softness of the land and the numerous embankments that are requisite to hold the water to a uniform depth greatly interfere with and in many cases absolutely prevent, the use of reaping-machines, and compel the use of the old-time sickle. Without taking into consideration the great expense, such as I have shown unavoidably attends the cultivation of this plant, the gentleman from Missouri [Mr. WARNER], in comparing the amount of product of an acre of wheat and an acre of rice, infers that there is a profit in the business of rice growing which the actual circumstances of the case do not warrant. That his conclusions are based on data insufficient, partial, and erroneous, I shall proceed to show. Considering one item at a time, I must dissent from his statement that—

From these figures it will be seen that when the rice is cleaned the net value to the planter is $1.10 per bushel.

In Louisiana the producer sells his rice to the miller as wheat is sold in other sections. The millers, on account of the large number of the mills and the competition among them at present, pay a full price for what they buy, although there have been times when they have combined in the past, and these times may and doubtless will occur in the future. The price in the New Orleans market, according to papers of a late date, is from $2.50 to $3.50 per barrel, or an average of $3 per barrel "rough" or paddy, weighing 162 pounds. A barrel of this is equal to 3.6 bushels of 45 pounds each, the standard in Carolina and Georgia; hence the gentleman's figures are incorrect to start on. Instead of being worth now $1.10 per bushel to the farmer it is worth to-day an average of 83⅓ cents, and that not on the plantation or farm, but sacked and freight paid and delivered at the New Orleans market.

In a comparison of the amount produced on one acre of the two cereals a very essential item, so far as the comparative profit is considered, is

THE COMPARATIVE COST OF PRODUCTION OF THE TWO CROPS.

I am entirely within bounds when I say that the average cost of cultivation, including a fair percentage on the original outlay, is from two to three times as much in the case of rice as in the case of wheat, and one man can cultivate and harvest from two to three times as many acres of wheat as he can of rice.

Mr. WARNER. Will the gentleman pardon me to submit a question which I wish to ask for information? How much does it cost to raise rice in the South?

Mr. WILKINSON. That depends very much on what has to be done——

Mr. WARNER. I supposed so.

Mr. WILKINSON. If the gentleman will not interrupt me I will endeavor to answer his question. That depends, as I was going on to

say, very largely on what has to be done in the way of preparing the land for the crop, in building embankments, digging, flooding, and draining ditches, putting in dams, flumes, and flood-gates. But I suppose the gentleman does not desire an estimate based on these expensive preliminary preparations, but on a field that has been already prepared and has been in process of cultivation for a series of years.

Mr. WARNER. I desire to know the average cost per acre or per bushel of raising rice.

Mr. WILKINSON. I will leave out the original cost of preparing the land for rice before a furrow is run, which in some portions of the South would be fully tenfold greater than the ordinary cost of preparing the fields for the plowing for wheat.

From some experience in the cultivation of rice for a number of years, and up to within a comparatively short period, I estimate the average cost of cultivating and harvesting an acre of rice to be about as follows:

Cost of all items, including seed rice, plowing, harrowing, irrigation, the repair of banks, dams, ditches, and flood-gates, grassing, "water tending," gunpowder, "bird minding," labor of all kinds, and all expenses up to but not including harvesting, per acre, about	$17.00
The harvesting, not including the threshing—that is, the cutting, binding, and shocking—estimating not exceeding one-sixth of the total area in Louisiana harvested to be cut by the reaper and five-sixths of the total by the sickle, say $3 per acre for one-sixth and $5.50 per acre for five-sixths, or average per acre	5.08
The hauling to the thresher, threshing, cost of sacks, and freight to New Orleans, about 12 cents per bushel or 43 cents per barrel, at 10 barrels or 36 bushels to the acre	4.30
Average cost per acre	26.38

The average yield to the acre I estimate, in Louisiana, at about 10 barrels "rough," or 36 bushels; the cost per acre at about $26.38; the cost per bushel (45 pounds) of paddy or rough rice at about 73 cents. I trust that this may be a sufficiently explicit answer to the question of the gentleman from Missouri. The average yields in Carolina are estimated at 30 bushels to the acre, and in Japan, where the fields are highly fertilized and cultivated like gardens, at 40 bushels to the acre. These estimates of yield and cost will vary considerably according to the length of time the land has been in cultivation, as those lands that have been cultivated for a number of years become so set with water-grasses that the pulling up of them adds largely to the cost of cultivation, besides reducing the yield. Those fields on which reaping machines can be used can, of course, be harvested more cheaply than the others, but I think the figures I have given will be fair averages. The cost of irrigation also varies very largely. At times when the rivers do not rise above the surface of the lands to be flooded, or where, after having risen, they fall below the required level, as is often the case,

THE WATER MUST BE PUMPED UP BY STEAM MACHINERY.

Some of the steam-pumps used in Louisiana have a capacity of 500,000 gallons per hour, and are run constantly at those times day and night for every hour of the twenty-four.

Mr. KELLEY. Will the gentleman permit a question for information?

Mr. WILKINSON. Certainly.

Mr. KELLEY. Is it not true that upland rice is largely supplanting the rice produced by the methods just now described?

Mr. WILKINSON. No, sir; it is not true, for this reason: While the upland rice is produced without the expense of irrigation, its yield is so much less that as a consequence comparatively little is raised. I do not think that there are figures to give the exact statistics of the production, but it is quite a small amount and cuts an exceedingly small figure in the rice product of the country. There may be a trifling amount produced in Louisiana, but, although born and reared in the rice regions, I can not now recollect ever having seen a stalk of upland rice growing in that State.

Mr. KELLEY. I learned in Florida in many rice-fields and on examining the rice-bins on the farm at St. Cloud, that upland rice was gradually supplanting the old process of making it. I may have been misinformed, but that was the information I got.

Mr. WILKINSON. In Florida, Mr. Chairman, there is little rice grown.

Mr. KELLEY. Oh, no.

Mr. WILKINSON. The chief and largest rice-producing States are Louisiana, the Carolinas, and Georgia.

Mr. KELLEY. But——

Mr. WILKINSON. I can not, Mr. Chairman, yield any further time to interruptions. In answer to the gentleman from Pennsylvania [Mr. KELLEY], I said that in Florida there was but little rice grown. The last census reports the total Florida rice product at 1,294,677 pounds, or only a little over 1 per cent. of the total product of the rice-producing States at that time. And while Florida may have increased her production since then, I doubt if much relative increase has taken place as compared with the total product. And even if the gentleman from Pennsylvania was correctly informed that a portion of this 1 per cent. was being changed from one system of cultivation to another system, it would have but a small bearing on the statement at issue that the cost of irrigation was a large element of cost in the production of rice.

Mr. HOPKINS, of Illinois. Does the gentleman from Louisiana——

Mr. WILKINSON. I decline to yield any further. I will come directly to consider the source of some of the information which the gentleman from Illinois [Mr. HOPKINS] has depended on to support his arguments on this floor. I have been surprised, Mr. Chairman, to find on what flimsy support have been principally based the arguments of the gentlemen who have advocated these amendments, and who have assailed these schedules and this industry, not only to-day, but months ago in this House. Their conclusions do not seem to have been based upon the views or the testimony of men familiar with this culture, but far the greater portion of the figures that have been given and the statements that have been made have been taken from a letter largely circulated among members of this House, and signed by John L. Many, rice broker. This furnisher of alleged statistics has evidently provided most of the ammunition for the attacks that have been made against this schedule. The gentleman from Illinois [Mr. HOPKINS] had evidently loaded up, in part at any rate, from that magazine when he said:

> Now, in view of the fact that rice can be cultivated at a profit when the cleaned rice brings 3 cents a pound, the net profit at 60 bushels per acre would be $36 an acre. That is the net profit as given by parties who are familiar with the cultivation of rice.

And who are the parties who have given this information? Who besides Mr. John L. Many, rice broker, have furnished such statements as these, or statements like these in any respect? Name one witness that is familiar with the subject; furnish one credible and capable authority to substantiate the unsupported assertions of this individual.

Other gentlemen have made use of the allegations made in the letter that I have referred to. As early as April 30 last the letter was quoted entire (see page 4647, CONGRESSIONAL RECORD), without giving the authorship, by the gentleman from Ohio [Mr. GROSVENOR], who speaks of him as—

> One of the most prominent rice-dealers of the country, a gentleman who would be at once known and recognized were I to publish his name.

I do not know what his prominence is, but I recognize the misleading statements that he wrote down in almost every speech against the schedules now under discussion. It is difficult to find the proper language with which to denounce those who utter reckless and unfounded statements as to facts on subjects with which they pretend to be familiar. They who do this are guilty of the attempt to poison the wells and springs of public information. Although falsifiers of fact, their statements come arrayed in the semblance of accuracy and truth, and are scattered broadcast in this House, and, alas! but too often are seized upon and made use of by members who do not stop to inquire fully into the veracity or capacity of knowing of such informants.

Mr. Chairman, I wish to denounce as untrue, and made through ignorance or malice, and perhaps both, the following statements made by this would-be guide of American legislators, who claims such familiarity with an industry in distant States:

> First. That 60 bushels of rice to the acre is an average yield.
> Second. That 80 bushels to the acre is a not unusual yield.
> Third. That since the war, when there have been sudden enlargements of the crop, while there has been some complaint about prices "in the Atlantic Coast States, there was none heard in Louisiana, where the larger amount of the crop is now produced."
> Fourth. That he "was assured by residents, who were planters as well as capitalists, that rice could be profitably raised and sold, cleaned, at 3 cents per pound, and pay fair intermediary charges—*i. e.*, to commission merchant and miller."
> Fifth. That Louisiana rice can be raised as cheaply as any other cereal.

I challenge the gentleman from Illinois or the gentleman from Missouri to produce any competent witness or any fact to prove that such average yields as their informant alleges are true.

They can find not a single reliable witness to show that there have been no complaints of low prices in Louisiana during the period of greatest production. They can not furnish one jot of testimony to bear out the assertion that rice can be raised, milled, and put on the market profitably at 3 cents per pound; and finally, they can not, any one of them, prove, by any living man familiar with the business, who has any pretensions to veracity, that a crop demanding the extensive and costly preparations, the arrangements for both irrigation and drainage, the almost constant supply and control over water—furnished often by costly steam machinery—in which there is the difficulty, and in most places the impossibility of using reaping machines, on account of the softness of the land and the number and closeness of the banks and ditches—none of these gentlemen, I say, can produce a single trustworthy witness, that knows whereof he speaks, to show that a crop with such costly requirements as I have named can be produced in Louisiana, or in America, as cheaply as any other cereal!

Sir, this last assertion relating to the cheapness with which rice could be raised as compared with other cereals is made regardless of the fact that rice culture in all the countries in which it is grown requires such care and such labor as is required by none of the other cereals. In Japan, where nearly five times as much rice is raised as wheat (180,000,000 bushels rice, 38,000,000 bushels wheat), why is it that the price of rice has been reported as nearly twice as high per pound as the

price of wheat? (See Consular Reports on Labor in Foreign Countries, 1884, volume 3, page 339.)

This increased cost as compared with other cereals, not only in America, but in the East, is due chiefly to the labor that it requires.

Sir Samuel Baker, in the work which I have already quoted from, says, speaking of Ceylon—

The system of rice cultivation is exceedingly laborious.

Consul Jones, in his report of April 26, 1888, from Chinkiang, China, says:

The cultivation of rice from beginning to end is accompanied with great labor.

Consul Webb, in a report from the Philippine Islands, dated Manila, May 15, 1888, says:

The most potent reason probably for this state of affairs—

referring to large importations of rice—

is the fact that it requires more labor and care to raise and harvest a crop of rice than are necessary for any other food product.

I can not but be surprised, Mr. Chairman, that the author of such statements as have been paraded on this floor should have found members so ready to accord full credence to assertions so utterly unsubstantiated and so at variance with facts as his have been.

Gentlemen have spoken of the large ad valorem tariff on certain portions of the rice schedules under existing law, singling out only certain items that suited their argument best. It would be well to remember that the average rate of the entire rice schedules under the existing law was about 62 per cent., and the present bill proposes to lower the rate on every single item of the list. It were well to recollect that the Ways and Means Committee in framing this bill have not started anew to make a tariff law. Their duty has been not to ruthlessly destroy, regardless of existing conditions in our industrial system. They have been charged with sectionalism in not making greater reductions in these schedules, but yet they have reduced decidedly the tariff on rice, placed there by Republican Congresses, and

HAVE NOT TOUCHED OR LOWERED ONE WHIT THE DUTY ON POTATOES, OR THAT ON WHEAT, OR BARLEY,

or other cereals grown mostly at the North. The duty on wheat, some gentlemen may say, is a nominal one, and has no practical effect, yet I noticed some time ago that the gentleman from Minnesota [Mr. NELSON] was unwilling when interrogated on that point to have it removed or reduced.

Now, Mr. Chairman, I wish to touch on another point—

THE DESCRIPTION OF UNCLEANED RICE—

about which so much discussion has arisen. The gentleman from Illinois [Mr. HOPKINS] says that—

For more than forty years the schedule of rice has been found to work well in this country. The decisions of the Treasury Department have been uniform. But since this bill was first reported to the House several cargoes of rice were stopped at the port of Savannah and other Southern ports, and this question was raised; and in view of that fact, this question having been raised by the Southern rice-planters, the interpolation was made in the bill and an entirely new classification was presented, such as we now find presented for our adoption here.

I have watched these tariff proceedings quite closely. I have also tried to keep posted as far as was in my power concerning the action of the Ways and Means Committee on these schedules; but I now have heard for the first time this new charge made. No interpolation, such as is charged, was made in this bill after it left the room of the Ways and Means Committee and was presented to the House. To verify this statement I refer to the language of the bill itself reported by Mr. MILLS from the Ways and Means Committee on April 2 last. The only change that I have heard of being made in this bill after it left the committee was a change in the rice-flour and rice-meal rate, restoring the old language and lowering the duty from 20 to 15 per cent. As to the alleged interpolation about uncleaned rice, the gentleman can find that the bill as first presented to the House contains the exact language which is now under dispute. The bill was presented to the House by the committee unchanged in that particular in one letter or one word, as the bill itself will show, and has remained so since.

The Assistant Secretary of the Treasury, Mr. Maynard, recommended a more explicit definition of the different grades of rice, "in view of the many questions which have heretofore arisen between importers and officers of the customs" on that subject.

But the gentleman from Illinois says that the present schedules have been found to work well for forty years, and yet he could have found if he had taken the trouble that disputes have risen almost without number on these very schedules. This matter has been a source of endless trouble, vexation, and cost to the Treasury Department in the very particular which this bill proposes to remedy in the future. The gentleman from Illinois says the decisions of the Treasury Department have been uniform when they have been directly opposite before and after 1877. He intimates that this question was first raised on account of the arrival of certain cargoes at Savannah and elsewhere since this bill was reported to the House, when, in point of fact, it

WAS RAISED AT THE PORT OF SAN FRANCISCO MORE THAN TWENTY-THREE YEARS AGO,

when the Treasury Department decided "that Patna rice, of which the hull and inner cuticle had been removed, was subject to classification as cleaned rice." This decision was practically reiterated by the Department again and again, until the importers obtained in the lower courts a decision in their favor by means of testimony of interested witnesses, and when the officers who were charged with looking after the interests of the Government failed to take the matter up to the Supreme Court of the United States.

There are at this time exactly contrary rulings by different appraisers as to what constitutes uncleaned rice at the different ports on and near our seaboard. It is to settle these clashing views, it is to stop in great measure these unending disputes that this grade of rice which has been the source of so much controversy has been accurately defined in this bill.

The division of rice into three general classes is a natural and a reasonable one:

First. Paddy or "rough" rice is the grain from the thresher with its hard outer husk or hull, consisting largely of silica, not removed.

Second. Uncleaned rice is that which has had this outer husk removed, but on which a close-adhering inner skin, like that which surrounds a grain of wheat or barley, still remains.

Third. Cleaned rice has this inner skin removed also, and is then in proper shape for food. It is ordinarily polished besides, as a picture is varnished after it is painted, but the polishing process, while giving it a pleasing appearance, is not essential to its use as food.

The milling of rice consists of several processes to which I will briefly refer, appending as a matter of interest in this connection the reports of Consul Waller and others concerning the milling of rice in Europe. The removal of the outer hull or husk is the first process after certain screenings, etc., have been undergone. This hulling process is done by millstones set close enough only to take off the outer hull without breaking the grain itself.

The next and most difficult and expensive process is the removal of the inner skin or cuticle which adheres to the grain with great tenacity. This is done by friction, ordinarily in pounders or mortars. A by-product of this process (being fine particles of the inner cuticle and also of the grain itself) is known as rice flour or bran, and is used for cattle food, and the finer particles by manufacturers of face powder. After this process of pounding and after the bran or flour is separated from it, it is cleaned, so far as suitability for food is concerned. Without going into the details of fanning, screening, etc., one of the last processes, and among the quickest and the least costly, is the process of polishing. This is done by brushing the rice with cylinders covered with sheepskins with the wool on. This last and inexpensive process gives the rice the pearly and polished appearance which makes its finished product the most beautiful of all the cereals. The rice on which this last process has been omitted is virtually "cleaned" if "unpolished," and the widest limit a controversy as to its actual condition could possibly justly take would be whether it was entirely cleaned or only nine-tenths cleaned.

Those claiming that in this condition it is not ten-tenths cleaned, but admitting that it is nine-tenths cleaned, set up the unreasonable demand that it should be classed when imported in this condition as "uncleaned," and these unreasonable demands the classification in this bill does not attempt to satisfy. It seeks to preserve the classifications which have been thought to be just and reasonable by repeated unbiased constructions of the law by the Treasury Department for a number of years.

Mr. Chairman, the gentleman from Missouri, prompted I believe by the erroneous information that has been furnished on this question, proposes to go much further in the reductions in these schedules than the Ways and Means Committee have done, but the gentleman from Pennsylvania [Mr. BAYNE] has been more ultra still in his proposition. He proposes to cut the tariff on "cleaned" rice down from 2¼ cents to one-half of 1 cent per pound, and on "uncleaned" from 1½ to one-quarter of 1 cent per pound. Where is his consistency? He has declaimed day after day about

THE CAUSE OF AMERICAN LABOR AND AMERICAN INDUSTRIES, AND NOW ATTEMPTS TO STRIKE A BLOW AT BOTH.

The laborers in the rice fields of Carolina, Georgia, and Louisiana are a long way from Pennsylvania, it is true, but whatever benefits the levying of a tariff brings should be received as well by them as by the laborers in mill and mine in the gentleman's own State. Pennsylvania is a great State, but can the gentleman not look beyond its borders?

There are certain regions in Lower Louisiana where rice is almost the exclusive support of the people. In these regions the farms are usually small, many of the fields being not over fifteen acres in area. These regions are the homes of a people with an industry and an energy which go to show that enervating lives are not necessarily bred by Southern climes. In most cases in this region this crop is the farmer's all. Upon its success depends the support of wife and children, the comfort and happiness of fireside and of home; with its failure come want and distress and debt to overhang the coming years. There we

watch the rise or fall of the Mississippi much as the Egyptians watched the Nile of old. The vicissitudes of weather, the east wind which brings in the destructive tides from off the Gulf, or the north wind which sends them back, the harvest time of sunshine or of rain after all the months of toil, are viewed with solicitude as bearers of happiness or misfortune.

When I go through the West and see the farmer riding his improved plows, his cultivator, or his reaping machine, from seed-time until harvest, which American ingenuity has devised to alleviate so much of the toil of farm life, I think of the scenes in the rice fields of Lower Louisiana, where no such realization of farming-made-easy has yet been attained except in very partial degree. As a contrast, I am reminded how often I have seen the rice farmers and rice laborers—and not only seen, but been with them—over knee-deep in mud and water, pulling out the water-grasses until the hands were cut and sore; how often upon the harvest field, with mud beneath and the fierce blaze of an August sun overhead, seen the cutting, binding, and shocking or stacking go on as if no such thing as heat or fatigue could slacken their labor or arrest their indomitable energy.

And yet the gentleman from Pennsylvania and other gentlemen upon this floor advocate an amendment which if adopted would remove the scenes of this industry in great part from American fields to India and Siam, to Java and Japan. They would turn over the growing of this food supply to the East Indian, the Japanese, and others of their kind—would take the employments away from our own people, from white and colored both, and give work and bread to them instead.

THE WAGES OF THE LABORERS IN THE RICE FIELDS OF THE EAST

in some localities are as low as 5 cents per day, and vary from that to an extreme of 20 cents per day, according to late authorities. Our lands are as good as any in the world for rice production. The rice fields near the Atlantic coast are as well adapted to that cultivation as those near the Indian Ocean or those of the islands around the Yellow Sea. The delta of the Mississippi is as fertile as those of the Ganges and the Irrawaddy, but our farmers and our laborers can not compete in the open market with labor such as theirs. The enormous labor cost of this crop I have alluded to at length already.

MORE THAN TWO-THIRDS OF THE COST OF THIS CROP IS LABOR.

The tariff rate that this bill proposes does not more than span the difference between the labor that produces it here and that which produces it abroad. In the case of wheat, agricultural machinery and cheapened processes for harvesting go to span that gap, but in the case of rice, with the great amount of labor which is required, a tariff at least as great as that which is now proposed is required to bridge the difference over. This difference in labor cost both parties are positively pledged to maintain. The Democratic platform said in 1884 and reiterated in 1888:

> The necessary reduction in taxation can and must be effected without depriving American labor of the ability to compete successfully with foreign labor and without imposing lower rates of duty than will be ample to cover any increased cost of production which may exist in consequence of the higher rate of wages prevailing in this country.

The Republican platform of 1884 pledged itself to correct the inequalities of the tariff—

> by such methods as will relieve the tax-payer without injuring the laborer or the great productive interests of the country.

Do members of that party claim that the platform of 1888 relieves them from that pledge?

If political platforms are not made to be utterly ignored, then how can members of this House introduce and support these amendments?

When gentlemen on the other side take this position what has become of the greatest argument of the protectionist which they seem at will to stand by or ignore as suits them best?

WHAT HAS BECOME OF THAT CHEAPENING PROCESS

which home production brings to the consumer? Is rice to be made an exception to the rule? Look at the prices and the home production since the war; see how the price has gone down as the home production has gone up in all these years, and then answer, if you can, why you place rice outside the law.

There was a time when the rice industry was practically wiped out of existence.

About twenty-five years ago the races of the Orient had the rice markets of this country (except a small area) all to themselves. The home production was practically cut off by war, and virtually none of it found its way to the great Northern markets. Money went over across the Pacific in millions of dollars, and the plains of India and Siam and the level terraces of Japanese hillsides had demands for their products such as has never been known here before or since. The farmers and laborers of the East and the importers of Europe

HAD A MONOPOLY OF OUR MARKETS.

With the Southern crop entirely shut off, consumers paid far more for rice than they do now, and prices in this country rose to a higher point than at any time in our history.

There is a law apart from the ordinary tenets of protection or of revenue reform which will stand whatever theories of taxation may prevail in the end. It is a law cherished in the hearts and demanded by the welfare of our laboring men and the great masses of our people—a law written in part only, but one which politicians and statesmen may not care to disregard. This law demands that our institutions shall not be overthrown, our enlightenment shall not be clouded, our civilization shall not be contaminated by the influx of hordes of the Asiatic races. And yet of

WHAT AVAIL TO OUR LABORING CLASSES ARE LAWS TO KEEP THE CHINESE OUT AND LET IN, PRACTICALLY UNHINDERED, AS SOME OF YOU PROPOSE, THE PRODUCTS OF LABOR CHEAP AS THEIRS?

They are alien to us in their wants, alien in their habits, and our people like them best when a great ocean flows between. They can live in comfort when our own people would well-nigh starve, and they can produce in plenty at rates with which our people can not compete.

We can not raise the requirements of living, the rates of pay of the Asiatic races to the standards which prevail in our land; but God forbid that we should attempt to drag our standards of living and of wages down to theirs, or that we should take away the employment and the livelihood from any of our people to send abroad to them! We need all our employments. We need all our industries; and the day we remand any of them to the East Indian, the Japanese, or the Chinaman will be a day when the folly of such an action will only be less than the crime! Our granaries should all be here, not across the Pacific Ocean, and the fields to fill them from should be tilled and sown and harvested by our own people.

I append to my remarks some statistical tables and extracts from consular reports relating to the cultivation and milling of rice. Some of these reports have not yet been published and I am indebted for original copies of them to the courtesy of Mr. Worthington C. Ford, Chief of the Bureau of Statistics of the Department of State.

APPENDIX.

The following statistical tables were taken from a report by a committee from the Rice Association of Savannah, Ga.:

Table showing domestic production, importation, exportation, and consumption of rice, commencing with 1865–'66.

Years.	Domestic production.	Domestic rice exported.	Domestic rice consumed.	Foreign rice imported.	Foreign rice exported.	Foreign rice consumed.	Total consumption.
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*
1865–'66	11,592,600	639,080	10,953,520	60,407,756	7,998,996	52,408,760	63,362,280
1866–'67	12,206,729	2,212,901	9,993,819	75,514,064	8,656,060	66,858,004	76,851,823

EXTRACTS FROM REPORT OF CONSUL-GENERAL BONHAM, RELATING TO RICE IN INDIA.

While exact statistics of the production and consumption of rice in British India are not available, yet enough is known to warrant me in saying that the quantity is very great. When we take into consideration the fact that rice is the principal article of food with the native population of British India (estimated at 250,000,000), and that each adult will consume during the year about 500 pounds of rice, and that the entire population will use on the average probably from 200 to 250 pounds each, an approximate idea may be formed of the vast quantities of that staple food cereal which are consumed by these people, in fact, "rice and curry," as you are probably aware, is a standard dish in this country with the European population also.

METHODS OF CULTIVATION.

Rice is cultivated entirely, as far as I am able to learn, by the native farmers or "ryots," as they are called here.

The zemindar or landlord is often an extensive land holder, but the tiller of the soil is, as a rule, the tenant of a small patch of ground only. He plows his land at least twice (or scratches over it) with a very rude and small East Indian plow, which has but one handle, and costs about $1, and is constructed somewhat like the old fashioned "bull-tongue" plow of early times in the United States.

Two crops of rice are raised during the year, but on the same ground.

The "ans," or early rice as it is called, is sown in the latter part of April and in the month of May, the time of sowing being controlled to some extent by the rainfall. This crop ripens and is harvested in the latter part of the following August and the first part of September.

But the principal rice crop is the one that is sown during the rainy season in August and September and ripens in the following December and January. The rainy season proper in this part of India usually extends from about the middle of June until the middle of October.

The greater portion of the rice crop in this country is pulled up and transplanted (on other ground) by hand when the plant has grown to the height of 12 or 15 inches.

This occurs during the rainy season, and the stalks are set out in small bunches 6 or 8 inches apart.

The rice cultivator depends principally upon the natural rainfall, and a drought is usually followed by a failure of crops and often a famine amongst these poor and improvident people.

* * * * * * *

EXPORTS.

Besides the vast quantities of rice required for home consumption in India as I have already indicated, it is also an important article of export, as the following figures will show:

For the year ended March 31, 1887 (the latest reported), exports were as follows: Rice in the husk (paddy), 418,772 cwt; value, 720,117 rupees. Hulled rice, 26,460,500 cwt.; value, 87,648,089 rupees.

The above exports are credited as follows:

	Cwt.
Bengal	5,902,278
Bombay	638,787
Sindh	139,511
Madras	1,564,053
Burma	18,215,871
Principal countries to which above exports were sent:	
United Kingdom	8,108,021
Malta	1,119,230
Germany	128,316
Egypt	4,370,150
Mauritius	1,222,757
France	89,280
Italy	63,597

I notice that a few trial consignments of East Indian rice have been sent to the United States during the past quarter. The Government of India levies an export duty on rice (hulled and unhulled) of 3 annas—a fraction over 6 cents—per maund.

B. F. BONHAM, *Consul-General.*

UNITED STATES CONSULATE-GENERAL,
Calcutta, April 23, 1888.

PRODUCTION AND CONSUMPTION OF RICE IN CHINA.

[Report of Consul Jones.]

Rice is the chief product of the soil of China, as it is also the chief article of food of the people.

The two varieties of the rice plant known as the "upland" and the "lowland" are both cultivated in this district, but the great bulk of the production is the "lowland" rice.

The tribute sent to Peking for the imperial use is for the most part of the "upland" variety. This is grown on high, dry ground requiring little or no irrigation. The labor of producing upland rice is less than half, probably a third, of that required for the lowland. The soil is prepared by the plow after having been thoroughly manured. The seeds are sown in March and the soil is dug up between the drills from time to time to keep it loose and free from weeds. During the growth of the plant liquid fertilizers are applied to the roots three or four times. It is harvested in September. Soil which will produce wheat and barley will grow the upland rice. A good yield is about 30 bushels to the acre. The weight of a bushel of this rice, hulled and cleaned, is about 60 pounds. As the upland rice is nearly all sent as a tribute it does not come on the market and I can give no quotations as to its price.

LOW-LAND RICE.

The low-land rice requires an abundance of water in its cultivation and is grown in the plains and valleys.

The Chinese are rather gardeners than farmers; the farm lands being small in size, rarely more than 2 or 3 acres in extent.

Their agricultural implements are few and simple, of the rudest and most primitive pattern, the same they have used for centuries, without improvement. The farmer makes up, by hard labor and constant manuring, for any lack of knowledge and the disadvantage of poor implements.

They use the hoe more than any other implement. It has a broad wooden blade, with an iron edge and a long, stout handle. It is used to dig as well as to break the sod by a blow. Its weight makes it effective.

The plow is made of wood, guarded with iron, which makes a furrow 5 or 6 inches deep and about as broad. It is drawn by a buffalo, which is attached by a rude gearing and guided by a line through his nostril.

The harrow is a heavy stick, furnished at one end with a single row of wooden teeth set in a sort of frame-work of bamboo.

Cradles, scythes, and implements generally in use in America are unknown to the Chinese. They have no modern or labor-saving machinery for cleaning, hulling, or thrashing rice.

The fields, or, more correctly speaking, the plats of ground devoted to the cultivation of rice are separated by raised pathways, which serve the purpose of a fence, path, and water way.

Preparations for sowing the rice begin early in March. The ground is broken by the hoe or the plow, when the water is turned on to the depth of 2 or 3 inches. A few days after it is harrowed and made level, all lumps of earth being carefully broken. Then it is ready for planting.

Several weeks previous to this, however, a small patch of ground is broken up and flooded, when the seed rice, which has been soaked in water for a short time, is thickly sown on it. In a month this has taken good root and stock and is ready for transplanting. The farmer then takes this growing rice, wading in the mud for this purpose, divides it carefully into small bunches, tied with a piece of rice straw, and transplants it in the ground prepared for it, a few spears together in rows a few inches apart. The women of the farm do much of this work. The plats are constantly supplied with water for about two months, when they are drained off and allowed to dry. In September the rice is ripe and ready to be gathered, which is done by hand, with an implement something like an old-fashioned reaping-hook or bill-hook.

The cultivation of rice from beginning to end is accompanied with great labor. The yield per acre is about 500 pounds from 75 pounds rice sown, gross—that is, unhusked rice, about 25 bushels.

For thrashing the rice they have what are called thrashing-floors, a level space smoothed over, with a layer of mixed lime and sand, with cement added, and well pounded. The surface of this floor is a little inclined, and has a raised curb around it. The thrashing is done by unshod oxen, or with flails.

Husking rice is done by means of a stone roller revolving in a stone mortar, and has to be gone over five or six times. Five piculs of unhusked rice yield 2½ piculs of clean rice. About 5 piculs can be husked by one man per day. The husks are used for fuel.

FERTILIZERS.

Fertilizers, which are repeatedly used in the early stages of the cultivation of rice, are made from night soil mixed with earth. Thousands of people are engaged in gathering the night soil from cities and towns and transporting it to the country. This is done, when at a distance, by donkeys, with a covered tub slung on each side, and generally by coolies, with buckets slung on each end of a pole, across the shoulder. The droppings of horses and cattle are carefully gathered also for this purpose. Bean-oil cake is also used as a fertilizer. The farmers provide large tanks as receptacles for this manure.

IRRIGATION.

To maintain a water supply for the rice fields the farmers usually club together and make large pools to receive the rain for common use. It is then, when required, supplied to the fields by pails, sometimes by water-wheels, worked by treading with the feet. Where a natural streamlet exists it is utilized by conducting it through ditches or bamboo pipes to the fields. The Chinese have no system of irrigation, as in Japan, where it is elaborate and complete, and has been established for centuries.

The cost of the ground or lease per acre is from $7 to $10 per annum. The laborer in the rice field, for hoeing, manuring, and harvesting, is paid 20 cents per day. The consumption of rice per family of five persons is about 5 pounds per day. The present price of good rice is $3.00 per picul of 1,331 pounds. It has ranged during the last ten years from $2.50 to $4.50 per picul, but does not vary much during the year. Three kinds of rice, exclusive of the upland, are grown in this consular district in the following proportions:

Sienmi, ordinary eating rice, seven-tenths.

Nomi, fermented and distilled into wine and spirits, one and one-half tenths.

Wanmi, for cakes and soup, one and one-half tenths, same as ordinary rice.

Rice is brought to this port mainly by water, by the river and through the canals. Powdered quartz (limestone) and water are frequently mixed with it by the dealers to increase the weight.

The freight from Chinkiang to Canton or Tientsin, the principal consuming markets, is about 12 cents per picul.

It is usually packed in straw bags, containing 100 pounds.

Rice pays an inland revenue tax, very variable, according to distance, direction, etc., about 15 to 18 cents per picul.

I have no data as to the quantity or value of the total rice crop of the district.

By imperial decree it is forbidden to export rice to foreign countries.

Sugar is not cultivated in this district.

A. C. JONES, *Consul.*

CONSULATE OF THE UNITED STATES, *Chinkiang, April 26, 1888.*

RICE CULTURE IN NINGPO.

[Report of Consul Petters.]

Rice is cultivated to a large extent. In the early part of April a small patch or bed of ground is prepared by being richly fertilized and thoroughly plowed to a depth of 6 inches, then raked or harrowed, so as to leave the soil without lumps, perfectly smooth, and well saturated. Rice seed is then sown thickly, after which care is taken to keep the soil covered with fully 5 inches of water until the young shoots appear. In fifteen days the shoots are ready to trans-

plant, having in that time attained a height of some 7 or 8 inches. They are then transplanted to the fields which have been prepared.

The preparing of a field for transplanting requires a great deal of care and labor. By the 15th to 25th of April, when the work commences, the rice-fields have a rank growth of wild clover. This is cut down with a crooked knife, something like our brier-hook, then the land is dampened by water from the canals (a wooden chain pump is placed in the canal and worked by an ox, thus throwing water rapidly into the fields) and the field well plowed; then the clover which has been cut is thickly scattered over the field and plowed under; then water is again pumped on the soil.

Then the soil is perfectly prepared by a rake with iron teeth, some 10 feet wide, pulled by an ox, causing the soil to become so very soft that the man and ox have to walk knee-deep in mud. The harrowing finished leaves the land prepared for transplanting the rice from the seed bed.

The shoots of the first crop are planted, set out 8 inches apart in rows 16 inches apart.

Twenty days after the second crop is set out between the rows, water to the depth of 2 or 3 inches above the soil is pumped from the canals until about a month before the ripening of the rice; the water fertilizes and keeps down the growth of weeds. In four and five months' time from the transplanting the rice has ripened, and is cut with a small straight knife with a handle at right-angles with the blade. A variety called the Lomi is set out about the 1st of June and ripens late; about the middle of November from this samsha (wine) is made, also a cake much relished by the natives.

Poppy is planted about the 1st March and taken off about 1st June, the field is then prepared and set out with rice. After the rice has been cut and gathered, it is then dried in the sun. As soon as well dried, it is thrashed out in a box, by beating it on the side of the box, the hinder or back part of the box being 2 feet higher than the front. The rice being beaten out is again thoroughly dried in the sun and then run through large sieves (made of bamboo) worked by hand so as to clean it of small straws and dirt. The rice or paddy is now ready for sale or cleaning. It is not cleaned by small farmers; they may now and then attempt to clean a small portion for immediate use, but it does not pay. It is more profitable to sell the paddy and buy rice.

Rice cleaning is a trade which persons learn and follow as a life business, and is attached to all nice hongs or shops, some of these giving employment to twenty hands, a few employing many more. The hongs employ skillful purchasers, who go into the country and buy the paddy of the farmers, forwarding it to their hongs. All large rice dealers are more or less speculators, so grain corners sometimes occur.

The cleaning of the paddy by small dealers is to place the paddy in a large stone mortar, using a stone pestle to beat it clean. Larger dealers have a circular machine of stone, some 10 or 12 feet in diameter; on the extreme outer circle the stone is grooved or hollowed out so as to fit a stone wheel (which is 5 feet in diameter and 6 inches thick) having a rounded edge; the paddy is placed in the groove and crushed or cleaned by the wheel running over it. This work is done by an ox, which patiently circles around, pulling on a lever attached to the circular stone crusher. A picul (133⅓ pounds) of paddy will turn out about 75 pounds of clean rice, the balance being the husk, tailings, dust, chaff, and broken rice.

The paddy, or rice, is generally sold by small farmers to the rice-dealers, who clean it.

Hull—Used with mortar for plastering houses and fires for cooking.

Tailings—Used to feed ducks, geese, etc.

Dust and chaff—Used to feed pigs and poultry.

Broken rice—Ground into flour and sold to confectioners.

Production—The yield per mow (one-third of an acre) in ordinary seasons is about 8 piculs of paddy, or 1,066⅔ pounds.

Average consumption—A family of six, man, wife, and four children, would consume about 6 pounds of rice per diem, as it is their principal food, which at the present value of rice would cost 10 cents per diem.

Cost of cultivation—This is hard to find out. In this immediate district the farms are small, owned by large land owners, rented to the smaller farmers on shares, the land-owner furnishing tools and fertilizers, the renter furnishing ox labor, etc.; also gathers the entire crop and pays the land-owner one-half of the entire production for rent. Consequently the renter and his family work the land. There are no supply merchants, but a farmer can borrow money if he has stock. A middle-man is consulted; he arranges with the capitalist, who takes a pledge on the stock; the middle-man is witness and security; he is paid brokerage; the farmer pays the capitalist 2 per cent. per month for the money he procures, but very few borrow; they support themselves by sale of poultry, eggs, and vegetables. Day laborers for the farm can be procured for 10 cents a day—including their meals. There is no expense for fences; the country lays open; stock is kept off, not permitted to interfere with growing crops.

As an article of commerce—The amount of rice produced in this part of the province being insufficient to supply the consumption (as cotton is grown to a considerable extent), consequently a large quantity is imported from Chinkiang in junks. Tribute, in lieu of rice, is paid in bullion.

Freight—Through to Canton, by junks, 23 cents per bag of 200 pounds.

Value.—The present value of rice is $3 per 200 pounds, this being the price for the ordinary rice raised by the native farmers. The extra cleaned full grain, such as used by foreigners, is worth more, being imported from Canton, about 5 cents per pound. There is but little fluctuation in the price during the year, except a short crop, in that case the speculator makes his corner and advances the price from 25 to 50 per cent., according to the wants of the consumer.

The money values, as given in this report, are based on the Mexican dollar, which is the currency here.

THOS. F. PETTERS, *Consul.*

UNITED STATES CONSULATE, *Ningpo, 1st May*, 1888.

[Extracts from a report on rice-culture and rice-cleaning machinery in Japan by Consul Jones, of Nagasaki.]

* * * * * * *

Rice is the chief product of the soil of Japan, as it is the chief article of food of the people. In the early days the treasury of the government consisted of granaries of rice, and in the absence of a monetary system rice was the standard of value. All taxes were paid in this grain. Military and civil officers received hereditary incomes from the government in rice. Its cultivation was therefore of the first importance.

IRRIGATION.

As water was of prime necessity in its cultivation (rice being sown, transplanted, and grown under water), the early rulers encouraged, by edicts and examples, the building of canals and water sluices that irrigation might be carried on to the fullest extent. Mountain streams have been thus conducted to the lower grounds and distributed through canals and ditches over many miles of country. In very many places on low lands, at the base of mountains, vast reservoirs have been constructed and drawn from at the proper seasons as often as desired. Lakes above the sea level have been tapped and the water carried through paved conduits to the plains below. This work was done centuries ago by a succession of rulers, and has been maintained through all the years to the present time.

The rice lands in the plains and valleys are divided into small plats and gardens, for, as I have observed, there are no fields in the broad sense of fields, and are without fences, bounded only by water courses, fences being unnecessary from the absence of any ranging live-stock. The mountains are terraced into rice plats or gardens in like manner.

CULTIVATION AND PRODUCTION OF RICE IN JAPAN.

[Report of Consul Jernigan.]

The Japanese rice farmer devotes great attention and care to the selection of good, sound seed. This is a consideration of primary importance, and no one is regarded by the Japanese as a skillful farmer who sows his land with inferior seed.

HOW SEED ARE SELECTED.

The experienced farmer is guided in selecting seed by his experience, but the young farmer must be governed by general principles until taught by practice, and the general principle is, to carefully watch the rice plant as it matures, and when the stock assumes a perfect green color the time has come to make the selection. At this stage close examination will show that some parts of the rice head or ear are of a very light yellow color, though other parts remain more of the color of the stalk. It is this latter that the Japanese farmer thinks better suited for seed and which he culls out. The seed should not be selected from plants grown on low, boggy land, nor on land of superior fertility. A medium grade of soil is preferable. Great care should also be exercised in curing the seed, and they should never be stored away in a damp place. To do so will impair their vitality and consequently lessen the yield.

Another important consideration is to have the seed in a proper condition when the season for sowing has come. The preparation for this is commenced about the middle of January. The seed intended for sowing are put in a bag which is sunk about one foot and a half in water. When possible the bag should always be placed in running water, which is always fresh, and supposed to be more susceptible to climatic influences. If sunk too deep the seed would not be so sensibly affected by such influences, and consequently the sprouting will be slow. To secure uniformity in sprouting the bag should not be too full of seed, and it is advisable to put a bundle of straw-rope in the center of the bag in order to prevent the seed from lying too thick. It must not be understood that bags containing rice for seed should always be sunk on the sunniest side of a stream.

Nature, when courted to extreme, is never so sure to confer as substantial rewards as when our demands are conservative. Five or six days before the seed are to be sowed the bags should be taken out of the water. It should remain in the same condition as when taken from the water for one night, to let the water pass off. On the second day the ropes around the bag should be loosened, the rice stirred well, and then bind the bags again with ropes, and sprinkle water over it. On the third day the rice is dried in the sun for an hour or two, and water sprinkled over it again. This process is repeated until about seven or eight seed out of every ten begin to bud, and now it is ready for sowing.

Another way the Japanese have of preparing rice seed for sowing purposes is to bury the bags containing the seed in the ground, the end in view being similar and the agricultural principle being the same. Sandy soil is preferred and the hole should be about one foot and a half deep. The bags, when put into the hole, should be covered with earth about 6 inches thick. If a sunny spot is selected for burying the bag the hole should be somewhat deeper, and *vice versa* if a shady spot. If the farmer has no sandy soil his best remedy is to dip the seed in water for a few hours, mix sand with them and so shape the hole that he can keep the soil light by the frequent use of water.

PREPARING LAND FOR RICE SPROUTS.

The Japanese rice farmer commences to prepare his ground about the latter part of March. He first marks out as much as he intends to sow for rice sprouts, which should be in an open space, unshaded, and where the air circulates freely, and builds around it a small embankment to hold the water with which the land, later on, is to be flooded. If the soil is sticky he will turn it to the depth of about five inches with an instrument like an American spade, and, after the clods have dried in the sun for two or three days, break them with the back of the spade and apply the manure (described further on). Most of the farmers, for their holdings are generally small, use the spade to "break up" their soil. If the farmer, however, can afford it, he owns a pony or bullock which he hitches to a dagger-like plow and breaks up the soil. After the soil has been leveled and everything removed from it that could obstruct the growth of young sprouts the land is flooded with water from four to five inches in depth, and, at this stage, the farmer again hitches his bullock to an instrument like a harrow and plows through the water, mixing it and the soil until the latter becomes as mortar.

In this boggy state the soil is ready to receive the seed, and the farmer, walking around on the little embankments or standing ankle-deep, scatters them on the surface of the water.

It requires special attention in order that the seed may not be sown too thick, for the roots of the sprouts should have room to spread before the sprout grows too high or else its vigor is weakened. The good judgment of the farmer will guide him here.

The seed are sown about the middle of April and within sixteen days from this date the young sprouts will grow from 4 to 6 inches, according to the fertility of the soil. When about the height mentioned the sprouts are large enough to take up and set out. The soil to receive them must also be in good condition, and the interval between the sowing of the seed and the growth of the sprouts the farmer utilizes in preparing it. The Japanese thoroughly "break up" the soil and work it into as good condition as possible before planting or sowing. This saves labor after the seed are up, and enables the plant to "grow right off." Their wonderful success in producing two or three different crops year after year on the same piece of ground is no doubt due to the habit of thoroughly preparing the soil in the beginning, which obtains so universally among them.

The fields or patches of ground intended to receive the young rice sprouts are similar in appearance to the patches where they are grown. They all resemble squares in an old-fashioned Southern garden, and the majority of them are not any larger. The little embankments are around these also, for water is necessary to the successful cultivation of rice, and the sprouts are set out while the fields or patches are covered with water 2 or 3 inches deep.

MANURE AND HOW APPLIED.

The manure mostly prized by the Japanese consist of human and animal deposits. This is mixed with urine, or a little water when necessary, and applied while in a putrid and liquid state by dipping it from large wooden buckets and pouring it on the plants. When the water is removed from the soil where the seed for rice sprouts have been sown, a manure consisting of ashes from burnt straw, grass, husks, and bamboo leaves, as well as rich dirt mixed and by the aid of a sieve spread as so much powder over the soil.

Straw is often spread over the soil containing the seed to protect them from the ravages of birds. When this is done care should be taken to select straw in a decaying state, for, otherwise, the roots of the young plants would twine around it and make it difficult to remove. But the Japanese farmer is so skillful in the chemical analysis of manure that it requires an adept in the science of chemistry to follow him intelligently, and I must content myself by adhering to general principles while on this part of the subject. If his farm is near the sea, he uses seaweed and fish as manure, but, as stated, his main reliance, especially near cities, is night soil and urine, which, with the American farmer, nearly all runs to waste. About the farm-house everything of this kind is care-

fully preserved. In the cities the water-closets are unknown, and every night the vaults and urinals are emptied and the contents taken to the country many miles away. All this material is poured into vats placed in the fields to receive it and covered with straw awnings to keep off the hot sun and rain.

There it lies for months till it has thoroughly fermented, when it is ready for use. It is then dripped out in buckets, carried to the growing crops and carefully sprinkled about the young plants. This process is repeated several times during the season. Sometimes piles of rice straw or chaff or old leaves are saturated with the mixture and left to rot, when this product is used as the American farmer sometimes puts stable manure under a hill of corn. It is this economy of material and the application of it in the way pointed out that has enabled the Japanese farmer to gather as many as three profitable crops, year after year, from the same acre of land so far back that the memory goes not to the contrary.

IRRIGATION.

The rainfall in Japan is very heavy, varying, according to locality, from 60 to 100 inches annually. Along the ocean shores, on the alluvial plains, the average amount of precipitation is about 60 inches. At the foot of the mountain ranges it is 70 to 75 inches, and on the great mountain sides it will reach 100 inches.

Notwithstanding such a rainfall irrigation is an important feature in Japanese agriculture, and has been practiced with marked success for more than a thousand years. The Government records show the decrees of the Emperor Sujin, who reigned in the country before the Christian era, regulating irrigation, and his son and successor ordered the construction of eight hundred irrigating canals in different parts of the empire. The traveler finds in all parts of Japan, especially the rice districts, large irrigating works, massive and costly in their character, and from a distance looking like double-track railways.

In addition to such large reservoirs for holding water the mountain streams are taken from their beds and carried in ditches, winding around the hills until they pour their contents on some narrow terrace or flood some rice-field in the plain. By such means the supply of water to the farmer is equalized through the whole year, and the health of the irrigated districts for plants and people is also conserved. Some of the most illustrious names in Japanese history are the names of mikados who won their way to the hearts of their subjects by instituting and perfecting elaborate plans for the amelioration and advancement of the agricultural classes, among which is the system of irrigation briefly described, and the necessity for which is more and more attested by subsequent experience.

CULTIVATION.

I reserved for this heading an account of how rice plants are set out and cultivated. As indicated, the sprouts or plants are set out while the soil is covered by water to the depth of 2 or 3 inches. This office is usually performed by women or young girls. When the soil is very good from three to five sprouts make a bunch, and about thirty-six bunches are set out to every tsubo (6 feet square). If the soil is not so good then sprouts make a bunch and about sixty-four bunches are set out to the tsubo. The sprouts should not be set in the ground too deep, but shallow as possible to secure a firm hold.

When set too deep the roots will sprout and interfere with the growth of the new crop. To ascertain what space should exist between, dig one up in autumn after the rice has been cut and measure the roots. If they are as long as 6 inches the space should be 12 inches, the idea being that the roots should not touch or interlace.

The first working of the plant takes place about two weeks after it has been set out. This is done with an instrument called karyume (made like a rake, has four iron teeth, each one-tenth inch thick, one-half inch wide, and 5 inches long) by digging between the bunches. After the first working the soil appears rough or cloddy, and in this state it is allowed to remain about ten days when the uneven surface is leveled with the same instrument. It is thought better not to remove all the water but let it remain on the surface in small quantities so as to facilitate the leveling of the soil. The water also contains a manure which reaches the roots of the plant quick, and carries with it the influence of the temperature, which is very beneficial to the growth and strength of the plant. About thirteen days after the soil has been leveled the third working takes place. At this working it is usually found that small roots have grown on the top part of the ordinary roots. These absorb the manure without protecting or benfiting the growth of the plant; they should be cut off. About the time of this third working a small egg may be found which produces the Seni-mushi, a small insect destructive to the rice plant. Care should be taken to remove the eggs and they should be searched for diligently, or else the farmer sees his rice plants later on wither, although he is industrious in working and manuring them. The rice plant requires five different workings; this is the general rule in Japan, but I suppose the condition of the soil has much to do in determining the number of workings necessary.

When the ear of the rice shows a light yellow color it is important that the water be drawn off in order that the soil may dry. By thus drying the soil the best quality of rice can be produced.

The rice plant is not, strictly speaking, a water plant, though it is fond of the water, the application of which is necessary to aid nature and man. The time it requires water most is between the time of replanting, or resetting out, and its heading. The water during this time will be let on or drawn off according to the apparent needs of the plant, but it should never be suddenly drawn off, as the manure may flow out with it, nor should it be let on in too strong a volume.

HARVEST.

About the last of August and the first of September the rice farmer puts his reap-hook in order. The yellow golden color of the ear or head of the rice plant will best tell him when to enter his field and cut down what, for the past several months, has been the object of his greatest care. I have not seen any mowing machines since I have been in Japan such as are used in the United States for cutting wheat and other cereals. The way in which the fields are divided off and the small area included within each division would render the use of such machines impracticable, though there are many level plains in Japan, wide and extended. The instrument used for cutting rice is a small crooked blade fastened to a short wooden handle, and can easily be wielded by a man with one hand.

The rice, when first cut, if the weather looks favorable, is often spread on the ground and left to dry. This is supposed to be the better plan; but if the weather is unfavorable it is tied into bundles as fast as cut and carried home to dry by hanging the bundles on a long pole supported by forks, which is sometimes done in the field where cut.

The fruit is separated from the straw by a very simple process. The farmer will make an ordinary wooden bench and drive iron pins into one side of the wood forming the seat, then take a bundle of rice and draw it through the iron pins or teeth. The fruit is by such a process successfully separated and falls on a straw matting prepared to receive it.

The fruit is separated from the hull by a process equally as simple as that employed in separating it from the straw. After being separated from the straw it is poured on a straw matting spread on the ground and beaten with a flail until hulled.

Now it is necessary to free the fruit from all chaff. To do so the fruit is put into a basket and then poured on a matting or cloth spread on the ground. The chaff is blown off and the fruit falls on the cloth. It is then taken and run through a machine similar to a hopper. But the most peculiar machine for cleaning rice is known as the Usu, a large wooden or stone mortar, the pestle being fastened to the end of a beam, fixed on a pivot and put in motion by a man treading on one end of the beam. Sometimes the pestle is worked by means of water power, and there are some mills near this city for cleaning rice with twenty or thirty pestles all moved at the same time by water power. Modern machinery is now being introduced into Japan for the purpose of cleaning rice. There is a large mill in this city with such machinery.

PRODUCTION AND CONSUMPTION.

A very interesting official report of the principal articles of food in Japan has recently been published, and the following statistics and comparisons are compiled from it:

The principal articles of food in Japan are rice, wheat, barley, etc., and next to these come all other cereals and potatoes. Besides these, seaweed, fruit, and vegetables are consumed. Dividing these into six divisions, namely, rice, wheat, other cereals, sweet potatoes, potatoes, and other articles, the percentage of consumption will be as follows: rice, 51; wheat, 28; other cereals, 13; sweet potatoes, 5; potatoes, 1; and all other articles not enumerated, 2 per cent. This computation is only approximate, but if the rate be apportioned between the population of Japan—37,778,705—according to the census of 1886, we find that 19,267,140 persons eat rice, 10,578,037 persons wheat, 4,911,232 persons other cereals, 1,888,935 persons sweet potatoes, 377,787 persons potatoes, and 755,574 persons greens, seaweed, fruit, etc.

If the amount of rice, wheat, etc., consumed for a year be estimated at the above rate, the amount of rice consumed will be 21,097,518 koku (1 koku = 5.13 bushels), or 3 go (about 5.1 ounces = 1 go), per day for one person, and wheat, etc., 11,582,951 koku. The aggregate produce of rice in 1886 was 37,191,424 koku, and the amount imported from abroad was 3,926 koku, making a total of 37,195,350 koku. Of this, 21,097,518 koku is used for food, 1,961,076 koku for saki brewing, 554,976 koku for export abroad, and 2,995,932 koku for cakes. Deducting these amounts from the above-named total, there remains a surplus of 10,585,848 koku. The wheat produced in 1886 amounted to 16,023,960 koku, and the import from abroad was 127 koku, which makes a total of 16,034,087 koku. Of this, 11,582,951 koku were consumed as food and 657 koku were exported, leaving a balance of 4,450,478 koku which is supposed to be consumed in other ways.

The aggregate export of rice for the last nineteen years, from 1868 to 1886, inclusive, was 3,221,135 koku, valued at 18,531,313 yen (now 73½ cents in gold is equal to one yen), while the import during the same period was 3,572,842 koku, valued at 23,914,067 yen. The amount imported in 1870 was especially large, as it constituted about 60 per cent. of the aggregate of the nineteen years. If we compare the exports of that year with the imports there is a balance in favor of the latter of 5,382,754. But since 1877 the export has been gradually increasing, the export for 1886 totaling a little over 550,000 koku, valued at 3,300,000 yen. If the export is continued at this rate the balance will be equalized in two or three years. Below is given a comparative table of the import and export and of the original value of rice, wheat, etc.:

Foreign trade in rice, wheat, etc., from 1870 to 1886.

Articles.	Imports, original value.	Exports, original value.	Excess imports.	Excess exports.
	Yen.	*Yen.*	*Yen.*	*Yen.*
Rice	23,914,067	18,531,313	5,382,754	.....
Wheat	69,621	2,728,677	.....	2,659,056
Flour and other grain	1,208,926	259,841	949,085	.....

Rice is now selling in Japan at 6 yen per koku. The demand is fair and steady. The facilities for shipping are good, and the charges (freight) to New York range from $10 to $22.

Osaka, Hiogo, Japan, June 1, 1888.

POUNDING AND POLISHING RICE IN ENGLAND AND GERMANY.

POUNDING AND POLISHING RICE IN ENGLAND.

[Report by Consul-General Waller, of London.]

It is interesting to notice that in a pamphlet published in London in 1701, "On the importance of British plantations in America," it is mentioned as a recent circumstance "that a brigantine from the island of Madagascar happened to put into Charleston, S. C., having a little rice seed left, which the captain gave to a gentleman named Woodward. From part of this he had a very good crop, but he was ignorant for some years how to clean it. It was soon dispersed over this province, and by frequent experiments and observations they found out ways of producing and manufacturing it to so great perfection that it is thought to exceed any other in value." The seed of which the pamphlet speaks soon became famous. It was exported to Java, Italy, Spain, and other countries, and now the finest East Indian rice is grown from this seed.

In the early part of the present century Great Britain was principally supplied with this grain from the States of South Carolina and Georgia.

This trade, for a variety of reasons, has practically ceased, and now England exports to the United States about 250,000 cwt. of rice annually.

THE MANUFACTURE.

The manufacture—the pounding and polishing—of rice is nearly all done in England, in the cities of London and Liverpool. The following table of customs statistics shows the sources and amounts of supply in the year 1884:

	Cwt.
Germany	117,180
Holland	145,735
Italy	12,120
Austrain territories	13,035
British India	5,338,082
Straits Settlements	65,261
Java	9,970
Siam	250,714
Cochin China	486,041
Japan	131,553
Other countries	9,767
Total	6,579,458

Nearly all of this was received, as usual, in a condition requiring preparation for the market, and about one-half of it will be consumed here.

PROCESSES.

The details of treatment may differ, but the general system of rice pounding and polishing in the mills of England is substantially the same.

* * * * * * *

In describing these processes and the machines employed it may be observed

that for the sake of accuracy the technical and identical language of experts and authorities on rice milling is often used in preference to my own.

1. Rice is generally elevated first to the top story of the mill, where it is blown or aspirated to get rid of the dust that would otherwise soon glaze the shelling stones and spoil their work. It is then sieved, either through a six-sided wire screen, or preferably through a long sieve supported on wooden springs and worked transversely off a crank, to get rid of sticks, straws, stones, etc.

2. This being done, shelling-stones, resembling ordinary wheat-stones, are used for removing "paddy" or husks. This is sometimes accomplished, however, by passing the rice over a common form of sieve having a jumping action or tapping motion at the bottom of it. In Burmese rice mills, it is said, they use artificial stones made of emery and magnesian cement. Four parts by weight of No. 18 emery are added to one part of ground calcined magnesite (a rock carbonate of magnesia), and tempered with a saturated solution of chloride of magnesium. This mixture is laid about 1 inch thick on the iron plates made specially for the purpose. It sets in a few hours and becomes hard enough for use in a few days. It is far more durable than the best mill-stone, and it always keeps a sharp face, owing to the difference in hardness between the emery and the cement that agglomerates it. Shelling-stones covered with cork have been tried and given up in England. In Italy a surface of hard wood set on end is sometimes used, like the Burmese native hand-mills, and they are being gradually superseded by the common shellers, either of cement or stone. The shelling-stones generally used in the mills of London and Liverpool * * * are of the texture of "peak," not "burr." They are from 5 to 6 feet across, having a "swallow" or cut in them of about 2 feet 6 inches, and a "skirt" or plain surface of about 2 feet 6 inches. They are set horizontally, and usually about three-sixteenths of an inch apart. This, however, varies according to the size of the grain to be treated. They work at about 120 revolutions per minute. The centrifugal force impels the grain towards the periphery, and as it passes through the narrow space at the working face the grain is tipped up on end and the husk is cracked off. When the stones run true, with good rice, the breakage is about 3 per cent. In some mills the rice is shelled twice and winnowed twice.

3. In the process of shelling a meal or flour is made from the crushing of the rice paddy and the three pellicles which, inside of the paddy, inclose the grain. This meal is separated by a common screen scourer or meal machine. Within the last year, however, an improvement has been made in this part of the process, not used, it is said, and perhaps not known, in the United States. It is called the "conical flapping brush," an invention of Mr. I. W. Gray, of Trinity Square, London. The cone of this machine is covered with a wire case, through the meshes of which the meal, by the operation of the flapping brushes, is made to pass.

4. The rice is now left with only the husks and the pellicles that still adhere to the grain; otherwise it is perfectly clean. The husks being separated by the action of a common blast or exhaust, the pellicles are removed by the use of mortars. Ordinary mortars have been used many years both in England and America. Recently the "Gray mortar" has come into use. It has an inner coating composed chiefly of emery. The coating, it is said, adds to the activity or motion of the grain in this cleaning operation, and greatly lessens the time required for it. The rice passes from the mortars by valves at their base.

5. The rice is again winnowed by flapping cone brushes or blasts, and the chaff that has escaped previous operations is finally got rid of, and the grain is now ready for milling.

6. Milling is generally done by the ordinary machine known as the barley mill. The objection is made to this mill that its rotary motion breaks the germ end of this brittle grain, and so alters its natural shape and lessens its market value. It is being superseded here by a mill that has an emery drum, with fans at its base to keep the grain cool, and that is worked horizontally. I regret my inability to give a plan of this machine. The inventor, with whom I conversed, reluctantly refused it, and admission to the mills where it is used is not obtainable.

7. The rice is now again screened or subjected to flapping brushes, the meal made in the last process removed, and it is now ready for polishing.

8. Polishers generally consist of a sheep-skin-covered drum, that revolves, inside of a fixed wire casing, about 1,800 feet to 2,000 feet per minute at the periphery. The form mostly used is that of an inverted frustum of a cone.

* * * * * * *

The skin of a Southdown sheep is preferred for a cover, because of its thickness of wool. Sometimes the rice, as it passes into the polisher, is subjected to an infusion of indigo toned down with rice flour to a pale blue. This gives the rice a bluish tint that is liked better in England than the natural creamy whiteness of the grain itself.

9. On leaving the polishers the rice is usually again blown or aspirated, and then separated into whole rice, broken rice, and rice of different sizes.

10. Recently, for certain markets—the English included—rice is pressed through an oiling machine to give it a smoother and glossier surface.

In London there is a representative journal for almost every trade and manufacture. The Miller, published at 24 Mark Lane, is the name of the one devoted to the interests of rice millers and brokers.

THOMAS M. WALLER,
Consul-General.

UNITED STATES CONSULATE-GENERAL,
London, August 29, 1885.

POUNDING AND POLISHING RICE IN GERMANY.

[Report by Consul Loening, of Bremen.]

In reply to your communication of the 25th ultimo, directing me to obtain information in regard to "the method of pounding and polishing rice in Germany," I have to say that the information desired is very hard to obtain, as the rice millers here closely guard the secret of their process of cleaning and polishing rice, and have heretofore allowed no one to visit their mills.

I have, however, been permitted to visit several rice mills, and witnessed the cleaning and polishing, etc., of rice; but as lucid explanations of the several processes have not been given me, I can only give you a description of and report on what I actually have seen. My being no practical rice miller will no doubt excuse all technical mistakes I may make. I shall endeavor to treat each process separately, beginning with

PRELIMINARY CLEANING.

The crude rice is almost all received here from India, and is of a quality about 75 per cent. free of shell or husk.

This rice is passed through a mill (for cleaning and separating the shell or husk from the rice) consisting of two* circular stone grinding-wheels, 6 feet in diameter by 6 inches thick, revolving horizontally and reversely upon each other.

The rice (shell and substance) product of this grinding process is conducted on to a flat horizontal sifter 10 feet by 2.

The rice, shell, and husk, after being sifted of all fine dust, etc., fall off this sifter onto a short trough or conductor, that empties them into a bin or receiver; as the rice falls off this trough or conductor a strong blast of wind blows the shell and husk away from the rice; there are also, at the end of this trough or conductor, magnets (inlaid in the wood), to attract all particles of metal that may be in the rice.

* In some mills only one stone grinding-wheel is used.

CLEANING RICE.

Rice, after being separated from the husk or shell and all extraneous substances, by the process of "preliminary cleaning" and sifting aforesaid, is subjected to a process of cleaning, which is done in a machine consisting of a circular wheel (either of fine stone or composition) about 6 feet in diameter by 15 or 20 inches thick, fitting closely into and revolving horizontally inside a mill (box) lined on the top with smooth steel and on the sides with smooth perforated steel.

The rice enters this mill at the top and is turned out cleaned of the yellow mealy coating common to all rice.

The rapid motion of this "wheel" while grinding and rubbing the rice against the perforated steel sides of the mill forces out the fine meal, dust, and scrapings.

This process of cleaning is repeated several times until the rice is sufficiently clean and white.

As the process of shelling and cleaning is by forcible grinding, some of the grains of rice are unavoidably more or less broken and crushed.

These broken grains or granules must therefore be separated from the rice by a process of

SIFTING.

This is done by means of a horizontal revolving cylinder sifter about 4 feet in diameter by 10 feet long, slightly inclined.

The sieves in this cylinder are of steel wire, divided into four or five sections or sizes. Thus as the rice enters this revolving sifter the smallest granules or particles of broken rice fall through the first section of sieve (which is of the smallest size), and are collected separately; then the next larger grains are sifted through the next following section, gathered separately; and so on through four or five different sections and sizes of sieve until the whole grains only remain, fall off the sifter, and are gathered separately.

By this process of sifting rice four or five different grades and classes of broken rice or so-called granulated rice is obtained.

POLISHING RICE.

Polishing is the finishing process of cleaning rice.

The rice obtained from the cleaning and sifting processes before mentioned is carried into a "polishing machine," consisting of a roller (truncated-cone shaped) covered with soft sheep-skin, fitting closely into and revolving horizontally in a cylinder the same shape, lined either with smooth skin or finely perforated smooth steel or very fine "gauze sieve."

The rice entering one end of this cylinder machine is turned out at the other beautifully polished.

A fine quality of transparent rice is also produced here by a chemical process and application of fine oil, presumably done by the same process as polishing rice, with only the addition of oiled and chemical substances.

ALBERT LOENING, *Consul.*

UNITED STATES CONSULATE,
Bremen, August 6, 1885.

GRANULATED RICE IN GERMANY.

[Report by Consul Loening, of Bremen.]

I have been requested by the consul-general at Berlin, under date of July 25, to "obtain information in regard to the method of pounding and polishing rice here in Germany," and I reported on that subject under date of August 6.

In addition to and in connection with the above-mentioned report I have the honor to report to the Department on the subject of "granulated rice," a commodity sold here in the market as *Bruchreis* (broken rice), or, so called, granulated rice, used here entirely by brewers and starch manufacturers, and of which large exports have been lately made from here to the United States.

As I have said in my report to the consul-general, rice is shelled, cleaned, and polished by a process of forcible grinding, in which grinding operation some of the grains of rice are unavoidably broken more or less fine, and are afterwards sifted through sieves of various sizes, thus producing different grades and classes of *Bruchreis* (broken rice) or granulated rice.

As far as I have been able to observe in the rice mills here, I find no special grinding process for manufacturing "granulated rice," although it can be easily done, and a prominent rice miller here proposes that if the United States Treasury Department "object to his *Bruchreis* (broken rice) as granulated rice, in the sense of the term, to submit it again to a supplementary grinding process, although that would not materially alter the appearance of the broken rice, as it had already been broken and granulated by a special forcible grinding process" in the shelling and cleaning aforesaid.

Some rice millers here claim that their process of cleaning rice is at the same time intended as a special process of granulating rice.

I also have the honor to forward herewith to the Department fifteen tin boxes containing samples of rice, numbered, marked, and labeled as follows, with explanation and description of each:

No. 1. Raw rice as received from India, about 75 per cent. free of shell.
No. 2. Rice after the grinding process of "preliminary cleaning" or shelling.
No. 3. Rice after the "cleaning" process (half polished).
No. 4. Polished *mittel* (middle) table rice.
No. 5. Polished table rice.
No. 6. "Transparent" or oiled table rice (finest quality).
No. 7. *Bruchreis* (broken rice) or granulated rice, classed here as Nos. 2 and 3 (smallest).
No. 8. *Bruchreis* (broken rice) or granulated rice, classed here as No. 1 (small).
No. 9. *Bruchreis* (broken rice) or granulated rice, classed here as No. 0 (coarse).
No. 10. *Bruchreis* (broken rice) or granulated rice, classed here as No. 00 (very coarse).
No. 11. Husks (shells) the result of shelling and sifting.
No. 12. Rice meal or flour obtained in cleaning process, classed here as No. 3.
No. 13. Rice meal or flour obtained in the cleaning process, classed here No. 2.
No. 14. Rice meal or flour obtained in the cleaning process, classed here as No. 1.
No. 15. "Rice-meal flour," a special manufacture from the broken or granulated rice.

There are four rice mills in Bremen, and large capital is invested in the business.

I am told that the profit in rice milling is in the advantageous disposal of the "waste," such as broken or granulated rice, rice meal, flour, etc.

The cost of cleaning and polishing rice is such as to allow very little, if any, margin of profit on "table rice."

ALBERT LOENING.

UNITED STATES CONSULATE,
Bremen, August 10, 1885.

POLISHING RICE IN HAMBURG.

[Report by Consul Lang, of Hamburg.]

I have the honor, in response to your letter of the 28th of July, 1885, to present herewith such information as to the method of pounding and polishing rice in Germany as I have been able to gather.

At present the "Nagel" mill is most in use in Hamburg, although several others are in activity. This system is constructed by a Hamburg engineer, Mr. Nagel, jr.

It comprises all manipulations needed to clean the raw rice, to pestle, shell, and polish, and to assort it.

1. The cleaning is done by exposing the grist to a moderate current of wind, caused by a ventilator, and by passing it over or through a system of sieves.

2 The cleansed grist is now shelled and partly broken by running it through two systems of grinding or mill stones. One of the latter is cylindrical, and contains a hard millstone of 6 feet or 6 feet 7 inches diameter. Through this operation a quantity of rice flour is received, and therefore the whole mass has to be sieved again.

3. The most important process of polishing the rice is done very differently, and every manufacturer has his own system, which he keeps secret. The general principle, however, is a wooden cylinder revolving in a wooden mantle, between which the rice has to circulate and to be rubbed. The Nagel machine does it in the following manner:

The mantle is made of wire work, thus offering a rough surface, in order to retard the grains on the way downwards; the revolving cylinder is furnished with brushes, which clean and polish the rice. Some millers color their rice with fluid indigo, by suspending a basin containing the fluid over the cylinder and allowing it to drop slowly into the cylinder of rice.

In other mills the mantle is made of wood and the cylinder filled with small pieces of sheep-skin nailed on its surface, or the mantle is made of stone and the cylinder of wood without any cover on the surface.

4. After leaving the polishing cylinder the rice passes over a system of shelves, which assorts the grains as follows: Full grains and broken grains; and the latter into small, middling, and coarse broken grains. A Nagel machine cleans and polishes 5,400 kilograms within twelve hours.

WM. W. LANG, *Consul.*

UNITED STATES CONSULATE,
Hamburg, August 20, 1885.

Agricultural Appropriation Bill.

SPEECH

OF

HON. RICHARD W. TOWNSHEND,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

July 11, 1888,

On the bill (H. R. 10233) making an appropriation for the Department of Agriculture for the fiscal year ending June 30, 1889, and for other purposes.

Mr. TOWNSHEND said:

Mr. SPEAKER: Last year the people of the United States paid for sugar $142,707,103.06 in addition to a large profit to lines of transportation, refiners, and merchants who handled the same, which probably amounted to at least 20 per cent. more, or over $28,000,000. Add this to the prime cost of the article and the tax and it will be seen that the grand total of $171,248,523 was paid by our consumers for sugar. Of this amount only 181,123,872 pounds were produced in the United States, and 3,136,443,240 pounds were imported from foreign countries. It will be observed that we imported from foreign countries over seventeen times as much as we produced in our own country. The consumers of sugar paid an average tax on what they used of nearly 2 cents per pound, or about $66,000,000.

Now, sir, if we could make sufficient sugar at home to supply our wants not only would the price of sugar be made much cheaper to the consumer, but many millions we pay into the pockets of foreigners for sugar would go into the pockets of our own people, and to that extent the country be enriched. The question is, can this be done? I am convinced that it can, not by the cultivation of the ordinary Louisiana or West India sugar-cane—it requires a tropical or semi-tropical climate to produce that kind of sugar-cane abundantly and profitably—but, sir, I am convinced that the process has at last been discovered by which sorghum-cane juice can be converted into as good sugar as that which is produced in the West Indies or elsewhere, and that every farmer within the vast belt of our country where sorghum is produced can not only produce from his own farm sugar enough for his family, but that he will find that the most profitable use to which his land can be applied is in producing sugar for the market, and that this country, instead of importing sugar for consumption, can supply the demands of our own people and export a large surplus abroad, thereby greatly adding to the wealth of own people, increase the value of our farms, and greatly promote the prosperity of our farming classes.

It was not demonstrated until within the past two years that sugar could be profitably manufactured from the sorghum cane. Years before experiments had shown that sugar could be produced from that cane, but the methods through which that was accomplished were so imperfect and expensive that the sugar produced could not be sold in competition with the Louisiana or West India sugar. The greatest difficulty encountered was that a sufficient quantity of saccharine matter could not be extracted from the cane to make it profitable. Only 55 per cent. of the saccharine matter could theretofore be extracted. Later experiments by means of the process of diffusion have resulted in extracting over 97 per cent. of the saccharine matter; and whilst before only about 59 pounds of sugar were obtained to the ton, these experiments secured over 100 pounds to the ton, and in addition thereto from 15 to 25 gallons of sirup per ton, and have clearly demonstrated that good quality of merchantable coffee-sugar can be profitably produced from the sorghum sugar-cane grown abundantly in many States of our Union.

Before proceeding further I desire to present the evidence furnished by the officials of the Agricultural Department.

Private enterprise having failed after repeated and expensive experiments to discover the process by which sorghum-juice could be converted profitably into merchantable sugar, the American Congress, fully realizing the importance of this question to the agricultural interest and the consumers of sugar in this country, authorized the Agricultural Department to make experiments for this purpose, and placed under the control of that Department appropriations to defray the expenses of such experiments. The sum of $50,000 was appropriated in 1885, and the sum of $94,000 the next year.

The experiments were conducted under the supervision of experts and officers of the Agricultural Department at Fort Scott, Kans., at Rio Grande, N. J., and at Lawrence, La. As the experiments at Fort Scott were the most extensive and nearest the section I represent, I shall confine my attention to those made at that point during last year. I will first quote a portion of the report of Mr. Swenson, the Government expert in charge of the experiments at the works of the Parkinson Sugar Company, Fort Scott.

The Clerk read as follows:

REPORT OF M. SWENSON.

Previous to my appointment to take charge of the experiments in the manufacture of sugar from sorghum cane at Fort Scott, Kans., all attempts to make sugar from this source in paying quantities had failed. This was due to many difficulties, of both a mechanical and a chemical nature, in the manipulation of the cane and juice. The most important problems to be solved were the proper cutting and cleaning of the cane, the prevention of inversion of cane sugar in the diffusion battery, and to find a cheap and effective method for treating the diffusion juice.

Owing to the fact that we were unable to secure a sufficient supply of cane, the work progressed very irregularly. Only twice during the entire season was the battery kept in operation continuously for twenty hours, and during the sugar-making season the diffusion battery was emptied sixty-two times. This entailed no inconsiderable loss, amounting to from 1 to 2 tons of clean cane each time a stoppage occurred.

CANE WORKED FOR SUGAR.

The total amount of cane worked for sugar was 2,610 tons. In this is included all that was used for experiments in filtration and defecation during the first part of the season. I have no record of the exact amount lost in this way. The total amount of first sugar made was 235,476 pounds. This sugar was all washed, and polarized on an average 96 per cent. The total amount of molasses produced was 51,000 gallons.

TRIAL RUNS.

In order to ascertain as nearly as possible the average yield of sugar per ton of cane two trial runs were made.

FIRST TRIAL.

On September 15 a strike was made from 133 tons of clean cane. In order to obtain a better grain 2,600 pounds of sugar were added to the juice after it had been defecated; 2,200 pounds of juice were drawn from each cell.

The following is a record of this experiment:

Sucrose in mill, juice from chips	10
Glucose in mill, juice from chips	3.41
Solids not sugar, juice from chips	3.20
Ratio of sucrose to glucose	2.94
Co-efficient of purity	60.03
Sucrose in diffusion juice	7.91
Glucose in diffusion juice	2.60
Solids not sugar, diffusion juice	2.59
Ratio of sucrose to glucose	3.04
Co-efficient of purity	60.04
Sucrose in defecated juice	8.34
Glucose in defecated juice	2.4
Solids not sugar, defecated juice	2.46
Ratio of sucrose to glucose	3.47
Co-efficient of purity	63.6
Total weight of first sugar ..... pounds	17,608
Sugar added to juice ..... do	2,600
Total yield of first sugar ..... do	15,008
Total yield of second sugar ..... do	2,330
Total yield of molasses ..... gallons	2,220
Yield per ton:	
First sugar ..... pounds	113
Second sugar ..... do	17.5
Molasses ..... gallons	15.5
First sugar polarized	93
Second sugar polarized	88.7

Temperature in battery was between 75° and 80° C.

SECOND TRIAL.

Eighty-six tons of clean cane were worked, 54 tons on October 1 and 32 tons on October 2. All was boiled in one strike. No analyses were made on October 2, and unfortunately the complete data can not therefore be given. The juice was not enriched as in the previous trial.

The following are the results:

Yield of first sugar ..... pounds	9,292
Yield of second sugar ..... do	1,988
Yield of molasses ..... gallons	1,462
Yield per ton:	
First sugar ..... pounds	108
Second sugar ..... do	23
Molasses ..... gallons	17
First sugar polarized	97
Second sugar polarized	88

AVERAGE YIELD OF SUGAR.

Making fair allowance for cane and juice lost in experiments during the first part of the season, the average yield of first sugars will be fully 100 pounds per

ton, polarizing 97. A strike of average molasses boiled to string proof yielded 12½ per cent. of the weight of the *masse cuite* in sugar, containing 88 per cent. of sucrose. This is at the rate of 28 pounds per ton of cane. Had the entire crop been boiled for seconds the average yield per ton of cane would not have been less than 128 pounds of sugar and 16 gallons of molasses. From a financial standpoint, the advantage of working for seconds depends entirely on the sirup market. In my judgment it would not have paid this season, as the market is better than for years past. The entire product of 51,000 gallons has already been sold at a good price.

AVAILABLE SUGAR.

It is at once apparent that the old method of calculating available sugar must be abandoned. According to this rule there would be but 61.6 pounds available sugar per ton of cane in the diffusion juice of the first trial, when, as a matter of fact, 130½ pounds were obtained. It would therefore seem that instead of preventing an equal weight of cane-sugar from crystallizing, the glucose and other solids not sugar in the juice prevented only two-fifths of their weight of cane-sugar from crystallizing. This is also borne out by the data furnished by the analysis of the juices during the entire season.

* * * * * * *

CONCLUSIONS.

In reviewing the work the most important point suggested is the complete success of the experiments in demonstrating the commercial practicability of manufacturing sugar from sorghum-cane.

2. That sugar was produced uniformly throughout the entire season.

3. That this was not due to any extraordinary content of sugar in the cane, but, on the contrary, the cane was much injured by severe drought and chinch-bugs.

4. That the value of the sugar and molasses obtained this year per ton of sorghum-cane will compare favorably with that of the highest yields obtained in Louisiana from sugar-cane; and, taking into consideration the much greater cost of the sugar-cane, and that it has no equivalent to the two bushels of seed yielded per ton of sorghum-cane, also our much cheaper fuel, I say without hesitancy that sugar can be produced as cheaply in Kansas as in Louisiana.

M. SWENSON.

Now I call attention to the report of Mr. Parkinson, the manager of the works:

To the Board of Directors Parkinson Sugar Company:

GENTLEMEN: I respectfully submit for your consideration the following report of the operations of the works of your company for the season just closing:

It is provided in our contract with the United States Department of Agriculture that certain experiments in sugar-making shall be made by the Department with certain machinery of its own and at its own expense, using the company's plant and machinery. * * *

As you are aware, the crop of cane contracted for last spring was very much less than the capacity of our works to consume. It was considered prudent to limit our danger from loss, by reason of the experimental nature of the work, and at the same time to have sufficient cane to determine thoroughly the value of the work on a practicnl manufacturing basis. This has been done, though it is now apparent that had the crop been twice as large, the expenses for working it would have been relatively much less. Indeed, a crop double the size of the one just finished could have been worked in about the same time, and at a comparatively trifling additional expense.

The plans, methods, and processes which have made the work of the season successful beyond our most sanguine expectations were adopted early in the season, so that the risks incident to experiments taken into account when contracting for a crop were reduced to the minimum. The fact that at least a portion of these highly successful processes were not tried and adopted last season was no fault of your company, nor of any one connected with this season's work.

To arrive at the cost per ton of cane worked, let us take the working of a single average day, when in full operation, and apart from the cost of experiments referred to.

The capacity of our factory, aside from deficient centrifugals, is limited to the capacity of the diffusion battery. Working twenty-two hours per day, this battery can comfortably handle 135 tons of chip or cleaned cane. This represents a capacity of field cane, or cane with seed to s and blades, of about 170 tons. To handle this, aside from curing and handling seed, cost us per day of twenty-two hours, when running regularly, as follows:

1 weighmaster, at $2	$2.00
1 team, pulling cane onto storage racks, at $2.50	2.50
5 men, unloading and getting cane to cutters, 22 hours, at 12½ cents	13.75
1 man, cutting machine, at 15 cents	3.30
1 man, cleaning machine, at 12½ cents	2.75
1 man, grinder, etc., at 15 cents	3.30
1 man, oiler, at 15 cents	3.30
3 men, diffusion battery, 1 at car and 2 above, at 12½ cents	8.25
1 man, diffusion battery, director of battery, at 20 cents	4.40
2 men defecating, at 15 cents	6.60
2 men, double effects, at 15 cents	6.60
1 man, strike-pan, at $5	5.00
1 man, hot room, at 12½ cents	2.75
1 man, barreler, at 12½ cents	2.75
2 men, centrifugals, at 15 cents	6.60
1 man, machinist, at $3	3.00
2 men, engineers, at 20 cents	8.80
5 men, firemen, at 15 cents	16.50
2 men, roustabouts, at 12½ cents	5.50
1 man, water-boy	2.00
1 man, night watch	1.50
2 men, foremen, at $2.50	5.00
Total cost of labor	111.75
Oil, etc	2.50
Coal, 23 tons slack, at 90 cents	20.70
Total	134.75

This makes the cost of working a ton of cleaned cane, with a factory of the capacity of ours, about $1 per ton for labor and fuel, or 90 cents per ton of field cane. The cost per ton for salaries, insurance, wear and tear, etc., must depend, of course, not only upon the size of the salaries and other general expenses, but the number of tons worked. This plant, rated as above, is capable, in seventy days, of working 9,450 tons of chips, or 11,900 tons of field cane. There is necessarily considerable expense in preparing for the season's work, and again in closing up. Allowing liberally for this and for the proper management and control of the works, we may still bring our total expenses, outside the cost of labor and fuel, at $1 per ton upon the above basis. Add to this the cost of labor and fuel, and we have $2 per ton as the total cost per ton of working cleaned cane.

These figures are fully verified by our pay-rolls, coal bills, and other expenses while working to our capacity during the season, separated from expenditures in the completion and changing of machinery directly connected with experiments made. And to work a factory with a capacity at least one-half greater than this one would require very little additional expense except in the matter of fuel, and that would be relatively less. It seems to me a very conservative basis, with a factory of the capacity of ours, to place the actual cost of manufacture at $2 per ton of cane; and with such a factory as I have indicated, and with a season of, say, seventy days, it is safe to place the cost of manufacture at considerably less than that sum. It requires but little figuring upon this basis, and with the cost of cane at $2 per ton, and the yield of cane and product secured this year, to show that we have here developed a business of great interest and profit to our State and nation.

To run a factory at the maximum profit it must be operated constantly during the working season. The loss this season by reason of the irregular operation of the factory for the want of sufficient cane was very considerable. During the whole season the factory was operated but three whole days of twenty-two hours each. Some idea of the loss from this source may be gathered from the fact that not less than 2 tons of chips were lost at each break in the operation of the diffusion battery. Sixty-five such breaks or stoppages were made while running for sugar. With a larger crop of cane and better arrangements for delivery upon the part of the larger contractors, but little or no difficulty from this source need be apprehended in the future.

	Tons.
Total cane bought	3,840
Total seed-tops bought	437
Total field cane	4,277

This represents the crop, less about 30 tons of seed-tops yet to come in, from about 450 acres of land. There were something over 500 acres planted. Some of it failed to come at all, some "fell upon the rocky places, where they had not much earth, and when the sun was risen they were scorched;" so that, as nearly as we can estimate, about 450 acres of cane were actually harvested and delivered at the works. This would make the average yield of cane 9½ tons per acre, or $19 per acre in dollars and cents. * * *

Of the total cane worked, 162 tons were consumed in experiments with our cutters and cleaning machinery before the cane was ripe enough for use for either sirup or sugar. No product whatever, not even seed, was saved from this, nor from 10 tons additional brought in since the factory closed down. About 300 tons of mostly down and inferior cane was worked in the early part of the season on the crushers, and without diffusion. The only product from this was molasses, and of that but a small quantity. About 375 tons were also worked for molasses only on the diffusion battery. This, with the exception of 50 tons at the close of the season, and which came in too irregularly to be worked for sugar, was worked before the sugar season began, and comprised such down patches and poorer quality of cane as could be gathered, mainly on the lands belonging to the company. It was an open question whether very poor cane could be worked successfully, even for sirups, on a diffusion battery. Nothing in this direction had hitherto been attempted. The total yield of molasses from this source, and from which no sugar has been taken, is 4,157 gallons. From this are sold 3,157 gallons, for $726.71 net. The remaining 1,000 gallons are still on hand, and are worth 25 cents per gallon.

	Tons.
Deducting from total tonnage, less seed	3,840
Amount not worked for sugar	897
We have total cane and leaves for sugar	2,943

The total number of diffusion cells worked for sugar is 2,643. The weight of a cell of chips is 1,975 pounds. With this as a basis there was worked by diffusion for sugar 2,610 tons of clean cane as it entered the cells. Deducting this from 2,943 tons of cane with leaves and blades, and we have 333 tons of leaves and blades. The latter are to us a dead loss. A small portion has been hauled away by farmers for feed, but the bulk of this large tonnage is now fit only for manure. This waste was considerably increased by the failure of our separating-machines, especially in the early part of the season, to properly discharge their duties. This whole subject was new; machines had to be devised, and their adjustment, which is not yet perfect, caused considerable loss of cane. The weight of blades and leaves will not be far from 10 per cent. of field cane. For either feed or fuel, especially where the latter is much of an object, the blades can be utilized so as to at least cover their own cost. At present we figure the loss from this source to seed account.

SEED.

There have been delivered of seed tops 437 tons. As nearly as we can estimate, there are yet to be delivered 30 tons, making in all 467 tons. From the best calculations we can make, and judging from our experience in former years, seed yields about 70 per cent. of the weight of heads, as brought in over the scales, in cleaned seed. Putting it at 60 per cent., and with 56 pounds to the bushel, we shall have 10,000 bushels of cleaned seed. A portion of this, estimated at 1,000 bushels, has, at considerable additional expense, been picked over by hand, head by head, tied into small bundles, and hung up in the dry. This has been done to provide ourselves with pure seed of the different varieties for planting and to supply a probable want in the same direction from others. For this hand-picked seed we expect to get not less than $2 per bushel. The cost of handling the seed has not been kept separate from the cost of running the factory. The total cost of curing, stacking, and hand-picking will not be far from $700, fully $200 of which has been expended in securing pure and perfectly cured seed for ourselves and others willing to pay the extra price. To thrash and prepare the seed for market the seed will cost about 6 cents per bushel additional. I estimate that we shall get for our seed crop $7,000 net. There will be left of seed tops, after thrashing, fully 100 tons. These are good for feed and fuel.

SIRUPS.

The bulk of our sirups are stored in the large cistern or cellar under the warehouse. The amount on hand we estimate at 50,000 gallons. This includes the whole crop, except the 3,157 gallons sold in early part of season. Of this we have sold, to be delivered within thirty days, and one car-load of which has already gone, 250 barrels, or about 12,500 gallons, at a price that will net us here 20 cents. This sale includes the bulk of our poorest sirups. I think we can safely estimate our sirup product, exclusive of packages, at $10,000. Considering the condition of our factory for work in cold weather, and the limited capacity of our centrifugal machinery, I recommend their sale, without boiling for seconds.

* * * * * * *

W. L. PARKINSON.

I quote further, as follows, from the report of the Commissioner of Agriculture upon the subject:

THE PRESENT STATE OF THE INDUSTRY.

The experiments in making sugar from sorghum, which, as above shown, have been in progress for several years at the expense of private capital and the United States Department of Agriculture, have this year reached so favorable results as to place the manufacture of sorghum sugar on the basis of a profitable business.

The success has been due to, first, the almost complete extraction of the sugars from the cane by the diffusion process; second, the prompt and proper treatment of the juice in defecating and evaporating; third, the efficient manner in which the sugar was boiled to grain in the strike-pan. That these results may be duplicated and improved upon will be readily understood from the showing made in Mr. Parkinson's report, and the descriptions of methods and processes used, and the discussion of the same as they appear in the subsequent pages of this paper.

* * * * * * *

THE YIELD OBTAINED AT FORT SCOTT.

The actual yield obtained was 234,607 pounds of first sugar, from 2,501 cells. If, now, the cell be taken as a ton, the yield of first sugar was 234,607 + 2,501 = 93.8 pounds. Enough of the molasses was reboiled for a second crop of crystals, and the sugar separated, to ascertain that 15 to 20 pounds per ton of cane represented could be obtained. Calling it 15, we have for the entire yield 93.8 + 15 = 108.8 pounds per ton of cleaned cane. This is a larger yield than is obtainable according to the heretofore accepted theory. There is some uncertainty about the weight of a cell, which may account for the discrepancy between the theoretical and the actual results. It is possible, however, that the theory may need reconstruction. In any case the yield actually obtained is most gratifying.

I have made no mention in the above of the exceptionally large yields of some special strikes made during the season. One strike gave 109 pounds of merchantable sugar for each cellful of chips. The seconds from this would doubtless have brought the yield up to 130 pounds. But the general reader and the prospective manufacturer are more interested in average than in special results. It seems safe to assume that a mean of 100 pounds of sugar and 12 gallons of molasses can be made from each ton of cleaned sorghum cane of average richness.

Science suggests several methods for the complete separation of the cane sugar from the grape sugar and the "not sugar," and further experiments in this direction should be the work of the near future. As yet almost nothing has been done towards the development of methods of separating the grape sugar from the not sugar. This subject presents a most inviting field for the chemist.

THE FUTURE OF THE SORGHUM-SUGAR INDUSTRY.

The sorghum-sugar industry now seems to have an assured future. The quantities of sugar and molasses and other valuable products obtained from each ton of the cane and from each acre of land well remunerate the farmer for his crop and the manufacturer for his investment and the labor and skill required to operate the factory.

An acre of land cultivated in sorghum yields a greater tonnage of valuable products than in any other crop, with the possible exception of hay. Under ordinary methods of cultivation, 10 tons of cleaned cane per acre is somewhat above the average, but the larger varieties often exceed 12, while the small Early Amber sometimes goes below 8 tons per acre. Let 7½ tons of cleaned cane per acre be assumed for the illustration. This corresponds to a gross yield of 10 tons for the farmer, and at $2 per ton gives him $20 per acre for his crop. These 7½ tons of clean cane will yield—

	Pounds.
Sugar	750
Molasses	1,000
Seed	900
Fodder (green leaves)	1,500
Exhausted chips (dried)	1,500
Total	5,650

The first three items, which are as likely to be transported as wheat or corn, aggregate 2,650 pounds per acre.

Sorghum will yield 7½ tons of cleaned cane per acre more surely than corn will yield 30 bushels or wheat 15 bushels per acre.

In the comparison, then, of products which bear transportation, these crops stand as follows:

Sorghum, at 7½ tons, 2,650 pounds per acre.
Corn, at 30 bushels, 1,680 pounds per acre.
Wheat, at 15 bushels, 900 pounds per acre.

The sugar from the sorghum is worth, say, 5 cents per pound; the molasses, 1½ cents per pound; the seed, one-half cent per pound.

The products give market values as follows:

750 pounds of sugar, at, say, 5 cents	$37.50
1,000 pounds molasses, at, say, 1½ cents	17.50
900 pounds seeds, at, say, one-half cent	4.50
Total value of sorghum, less fodder	59.50
The corn crop gives 1,680 pounds, at one-half cent	7.40
The wheat crop gives 900 pounds, at 1 cent	9.00

Thus it will be seen that the sorghum yields to the farmer more than twice as much per acre as either of the leading cereals, and as a gross product of agriculture and manufacture on our own soil more than six times as much per acre as is usually realized from either of these standard crops.

In order to use to the best advantage the services of the specialists of the business, it has been proposed to establish at convenient places auxiliary factories which shall carry the processes so far as to prepare sirup for the strike-pan. This sirup will be stored in suitable tanks or cisterns and worked for sugar after the close of the season for handling cane. In this way the working season for the central factory may be prolonged to occupy almost the entire year. The auxiliary factories will cost about one-half or two-thirds as much as the complete factory, capable of taking care of the same amount of cane. As thus arranged, the central factory will, in addition to its own regular season's work, take care of the sirup from two or three of these sirup factories.

OUTLINE OF THE PROCESSES OF SUGAR-MAKING.

As now developed, the processes of making sugar from sorghum are as follows:

First, the topped cane is delivered at the factory by the farmers who grow it.

Second, the cane is cut by a machine into pieces about 1½ inches long.

Third, the leaves and sheaths are separated from the cut cane by fanning-mills.

Fourth, the cleaned cane is cut into fine bits called chips.

Fifth, the chips are placed in iron tanks, and the sugar "diffused"—soaked out with hot water.

Sixth, the juice obtained by diffusion has its acids nearly or quite neutralized with milk of lime, and is heated and skimmed.

Seventh, the defecated or clarified juice is boiled to a semi-sirup in vacuum pans.

Eighth, the semi-sirup is boiled "to grain" in a high vacuum in the "strike-pan."

Ninth, the mixture of sugar and molasses from the strike-pan is passed through a mixing machine into centrifugal machines, which throw out the molasses and retain the sugar.

It may not be inappropriate to add the definition of diffusion as applied to this process which I find in the Agricultural report, and which, with much of the foregoing, is taken from the report of Mr. E. B. Cowgill.

WHAT IS DIFFUSION?

The condition in which the sugars and other soluble substances exist in the cane is that of solution in water. This sweetish liquid is contained, like the juices of plants generally, in cells. The walls of these cells are porous. It has long been known that if a solution of sugar in water be placed in a porous or membranous sack and the sack placed in water, an action called osmose takes place, whereby the water from the outside and the sugar solution from the inside of the sack each pass through until the liquids on the two sides of the membrane are equally sweet. Other substances soluble in water behave similarly, but sugar and other readily crystallizable substances pass through much more readily than uncrystallizable or difficultly crystallizable bodies. To apply this property to the extraction of sugar the cane is first cut into fine chips, as already described, and put into the diffusion cells, where water is applied and the sugar is displaced.

The statement of the gentleman from Kansas [Mr. PETERS] made in this debate confirms the truthfulness of these official reports. He says:

But this was overcome last year, and the diffusion process was more thoroughly tried and experimented upon, and as a result, instead of securing only 55 per cent. of the saccharine matter from cane, we secured by the diffusion process 97 per cent., and instead of securing from this saccharine matter about 56 pounds of sugar to the ton, we secured over 100 pounds of sugar to the ton in addition to the sirup that was also made from the same matter, from 15 to 25 gallons per ton.

The works at Fort Scott worked up about 600 acres of cane last year, and my colleague from the Fort Scott district [Mr. FUNSTON] says that they produced 235,000 pounds of sugar.

Mr. FUNSTON. C sugar.

Mr. PETERS. Yes, coffee C sugar. Anybody who knows what that is can understand just the kind of sugar that they made at the Fort Scott works.

Now, I want to go on with my statement in relation to the production of this sugar. As I said before, last year we were able to produce over a hundred pounds, and in many instances 115 pounds, the first run from a ton of cane, and in addition to that from 5 to 20 gallons of sirup.

To show what the interest of the farmer is in this industry, I state that any farmer with a team can plant and grow and harvest 50 acres of this cane, and the average yield per acre in Kansas was about 12 tons. That gives for one farmer 600 tons of cane, which sold last year at $2 per ton, yielding him $1,200 for the labor of himself and team upon 50 acres of ground, and requiring at the outside only about four month's time to plant, grow, and harvest the crop. Every one can see at a glance why it is that the farmers in the belt of country where this cane can be raised are interested in the development of the industry.

Mr. FUNSTON. And none are interested more than the people of Illinois.

Mr. PETERS. And, as my colleague says, none are interested more than the farmers of Illinois, and the farmers of the entire Union, wherever they live within the belt in which the cane can be successfully produced.

Aside from this, there is another very important item to be taken into consideration, and that is that the cane is almost a certain crop. Drought does not materially affect it; the grasshopper does not affect it. It can be raised almost surely every year in this belt of country, regardless of rainfall or of atmospheric or climatic influences.

I have said that two years ago we had too much science, and therefore did not produce sugar successfully after we had obtained the saccharine matter; but last year it was left to work itself out, passing from the diffusion battery into the vacuum pan, and from that into the centrifugal, and from the centrifugal into the barrel. I made a trip to Fort Scott during the sugar season last year. I went to the field and saw the cane cut; I saw it loaded on the wagon; I saw it hauled upon the scale; I saw it taken to where it was cut up into small pieces; I saw it go into the diffusion battery, and from that into the vacuum pan, and then into the centrifugal, and I saw it come out sugar in the barrels; so that I know what I am talking about, because seeing is believing, and I not only know that sugar was made, but I know that it was made in the quantities I have stated, because I saw the ton of cane weighed and saw the sugar that was produced weighed.

I call special attention to the assertion of the gentleman from Kansas in which he says "the cane is almost a certain crop and drought does not materially affect it." This statement may somewhat exaggerate the virtue of the cane, but it is no doubt true that it is affected less by drought and injured less by chinch bugs and other insects. It is therefore a very valuable plant to farmers located in regions afflicted by drought.

Notwithstanding the fact that in past years, especially during the war period, Congressional legislation has done the farming classes more harm than good, yet Congress can and ought to promote the welfare of that class by reducing the burden of taxation, the abolition of monopolies, the destruction of trusts, and the repeal of laws unjustly affecting their interests, but in addition to all this, great good results to them from legislation like the proposition now before us which calls to their aid science and art and the inventive genius of experts in the development and improvement of methods by which their products may be made more useful, their value increased, and also by such a policy as will enlarge the markets for their surplus.

I can conceive of nothing which will do more to promote the prosperity of the farmers of the district I represent, than that involved in the measure now before us. It lies in the same latitude as the region in which Fort Scott, Kans., is located, where the experiments mentioned were made. I believe that the Congressional district I represent is as well adapted to the cultivation of the best quality of sorghum, and can produce it as abundantly, as any other district in the Union. Therefore I feel the utmost desire for the adoption of this proposition, and the continuance of these experiments, under the direction of our wise and faithful Commissioner of Agriculture, who has accomplished so much for agricultural interests by the zeal, energy, and ability which he has bestowed upon this and other very important discoveries and questions deeply affecting the interests of agriculturists.

Before ending my remarks I am gratified to mention the success of efforts that have been made in Congress during the past ten years to promote the welfare of the farming classes. Since then the interstate-commerce law, which protects them against railroad extortion, has been enacted. The oleomargarine law, which protects their dairy product from competition with a fraudulent, counterfeit article, has been passed.

Experimental agricultural stations throughout the country have been provided. The animal industry has been promoted by wholesome legislation.

We have passed in this House the bill which establishes a new department, called the department of agriculture, and which creates a secretary of agriculture, who is to be a member of the Cabinet. Whilst I think the new department thus provided for could be made more useful to the agricultural and other interests by including other bureaus which have important bearing upon the farming and laboring classes, as well as the commerce and transportation of the country I feel that this is a just recognition of and will greatly benefit the largest and most important interest in the United States. It increases the powers and efficiency of the Agricultural Department and raises it from its present position as a mere bureau of the Interior Department to the dignity of the other Cabinet branches of the administration.

Mr. Chairman, there are other important acts of legislation for the relief and benefit of the farming and other laboring classes which have been enacted within the past few years which I could mention, but I will not occupy further time in doing so now.

I will, however, congratulate the farmers upon the happy change which has occurred in their favor during the past ten years, and the devotion to their interest which has been manifested by many of their representatives in Congress. The change is a wholesome one, and was much needed for the relief of agriculturists. We can more fully comprehend the value and importance of the reforms in their favor when we contrast the present with the unjust course of Congressional legislation against their interest which existed before and at the time when I first came to this House. I will quote from a speech delivered by myself on June 15, 1878, advocating a bill I had introduced, which provided for the repeal of the unjust restrictions upon the leaf tobacco producers. I then said: (See CONGRESSIONAL RECORD, page 4671, second session Forty-fifth Congress, June 15, 1878.)

Mr. TOWNSHEND, of Illinois. The reasons impelling me to offer this amendment were induced partly by this circumstance: A short time before my departure from home for this city last summer I met on the railway a neighboring farmer who owned a small piece of land. I found him in custody of the United States marshal, who was taking him to Springfield, the State capital, where the United States courts are held, some 200 miles away. The only charge against him was that on his little farm, devoted mainly to other agricultural productions, he had raised a very small patch of tobacco, intending it for his own consumption, but the necessity for bread in his family store rendered it necessary for him to forego his luxury and part with it.

He had placed the tobacco under his arm, being the entire crop produced by him, and at a neighboring mill exchanged it for flour. Remember, the tobacco had been planted, cultivated, and gathered by his own labor, with no help save Him who gives the increase. The farmer was entirely ignorant of the legal restriction upon his right to dispose of the product of his farm to whomsoever he pleased. A malignant neighbor, moved by a grudge, being better advised, had informed the United States revenue officers. These officers and the marshal, knowing there would be fees in their pockets, no matter what became of the unsophisticated farmer, had caused this man to be arrested, torn from his home and horror-stricken family, and the deputy marshal was conveying him 200 miles away to answer this as a criminal charge.

I asked myself, can it be possible, considering the character of the men from whom we have sprung and who made this Government, men who a hundred years ago rose in rebellion because a small tax had been levied upon a foreign product—tea—that the descendants of those men of the third and fourth generations were being thrown into prison for daring to sell the product of their own labor in order to obtain the necessaries of life for their families? Can it be possible that a man is not permitted to exchange his own honestly-acquired God-given property for bread? But, sir, as grievous and humiliating as it may seem, it must be confessed that our statute-book is disgraced with just such a law. The provision I seek to repeal prohibits a man from exchanging or selling this product of his farm to the highest and best purchaser, even where it be necessary to obtain the necessaries of life.

Now, Mr. Speaker, if you can by law restrict a farmer in the sale of his tobacco, I ask if it is not also in the power of Congress to enact a law restricting farmers in the sale of corn, wheat, or other products except to a certain privileged class? If you build up such a class, having a monopoly of the right to purchase the agricultural products of the country, will you not bind hand and foot the producing classes and deliver them over to the control and power of a combination having the power, governed by their greed and avarice, to fix the price of farm products?

In my judgment the foundation of the wealth and prosperity of this country rests upon the producing classes. When you strike down that class you will have retarded the growth and development of this land and shattered the basis of its greatness.

If the revenue officials who had arrested my neighbor had been in office in the day of our earliest ancestor, Adam, they would not have arrested him and his wife for stealing from the tree of forbidden fruit, but, sir, if Adam had dared to exchange tobacco produced by the sweat of his brow with the men of Nod or any other land, he would have been arrested and thrown into prison.

The letter of the law is as I have stated it, but when I contemplate the purpose for which this Government was established, when I read in the Constitution that it was ordained "to establish justice, promote the general welfare, and secure the blessings of liberty," when I go further back and read in that Declaration of Independence which gave birth to the Constitution, that all men are endowed by their Creator with the inalienable rights of "life, liberty, and the pursuit of happiness"—as these reflections run through my mind I am driven to the belief that this law is unconstitutional. It is violative of the spirit of the Constitution, as it is certainly in violation of the inalienable right of man to exchange his property for bread.

As I have already said, if you can dictate to whom the farmer may sell his leaf-tobacco, you can dictate to whom he may sell his corn and wheat; if you can deprive him of the right to sell his leaf-tobacco to his neighbor for consumption, you can deprive him of the right to sell his corn or wheat to his starving neighbor for food. Such a law is unjust. It is not an enactment of freedom—it is an edict of tyranny.

While on this subject I will avail myself of the liberty of saying that our system of Federal taxation is wrong. Taxation should be equal and uniform and in proportion to the amount of property. Dollars, not individuals, should be taxed. Every man should bear the burden of taxation in proportion to the value of the property he possesses. The larger the amount of property a man possesses, the greater the amount of protection he receives from the Government. Among the principal objects of government is the protection of property, and yet we find under our system that the poor pay as much Federal taxation as the rich.

* * * * * * *

Before I yield the floor, as a parting word, I desire to remind this House that the national legislation for the past fifteen years has borne heavily upon the agricultural classes. So grievously are they oppressed that they are unwilling to submit to further endurance. They constitute the bone and sinew of this land. They are patient, law-abiding, self-sacrificing, and ardent lovers of their Government, but as they are the main support of the social and political fabric they feel that they have a right to demand relief from the oppressive features of the present law. This amendment is a step in that direction, and I now conclude with an earnest appeal to you who are the direct representatives of the people to listen to their complaint and commence at once to repeal the unjust legislation of the past.

Since then we have succeeded in securing an amendment of that law, which permits the farmer to sell $100 worth of his tobacco with the same freedom that he may sell any of his other products. At the commencement of the present Congress I again introduced the bill to repeal all laws restricting the rights of the farmer to sell his leaf-tobacco, which was referred to the Committee on Ways and Means, and I am now gratified to see that its provisions have in substance been ingrafted on the Mills tariff bill, which has been favorably reported by that committee. If that bill becomes a law, among the many great blessings of relief that it will bring to the farmer will be the right to dispose of his entire tobacco crop with the same freedom from arrest and punishment that he may dispose of his corn or wheat crop.

The Tariff—Raw Material.

SPEECH

OF

HON. N. P. HAUGEN,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. HAUGEN said:

Mr. SPEAKER: On the 10th of July my colleague, Mr. GUENTHER, presented and had read at the Clerk's desk a communication to the Milwaukee Sentinel, written by a prominent manufacturer of Wisconsin, Mr. John A. Johnson, residing at Madison, in my State. Mr. Johnson supported Mr. Cleveland in 1884, and in 1886 was the Democratic candidate for State treasurer. But he has turned from the error of his ways and is this year giving his hearty and zealous support to home industries, fair wages, a home market, and honest elections, by supporting Harrison and Morton. In the communication referred to, in touching upon the Democratic fallacy that only 18 or 20 per cent. of a finished product is labor, Mr. Johnson said:

It does not take any great profundity to show the absolute fallacy of the assertion. * * * The material in a $20,000 steam-engine and a $25,000 printing-press can be bought for a few dollars, say $1 per ton, and not over $50 for material sufficient for both machines, before any labor is put upon it. A finished farm-wagon sells for, say, $60, but I can safely agree to furnish the materials for it before any labor is put on it for $1.

Mr. Johnson evidently knew what he was about when he made this offer, as the following extract from a Wisconsin paper will show. I ask that it be read, simply adding that Mr. Johnson's free-trade friend, when last heard from, had failed to furnish the bonds for the fulfillment of his part of the contract.

The Clerk read as follows:

WHAT IS RAW MATERIAL?

[Eau Claire Free Press.]

Some time ago General Simeon Mills, of the Wisconsin Wagon Works, offered to take the material for ten thousand wagons from J. A. Johnson at $1 for each wagon, the material to have had no labor whatever bestowed upon it. In a late issue of the Madison Democrat is published the reciprocating agreement of Mr. Johnson, which is as follows, and it should be borne in mind that Mr. Johnson, although a large manufacturer of agricultural implements, thinks that in that particular line of manufacturing a tariff is no longer necessary:

"DEAR SIR: With much gratification do I read your letter in the Democrat of the 15th, giving me an order for materials for 10,000 farm wagons, on which no labor has been expended, at $1 for each wagon, in accordance with my proposition in the Milwaukee Sentinel. I will be at my office at 9 a. m., the 19th instant, when please call, and we will have an attorney make out the papers in due form. As the transaction is quite a large one, I presume you will procure the sanction of the board of directors of the Wisconsin Wagon Company. I also think it advisable that both parties enter into bonds for the faithful performance of the contract, let the forfeiture be $5,000 to $10,000. I will try and secure acceptable bondsmen, and I am sure your wagon company will not for a moment hesitate to furnish the bonds. I will not attempt to conceal that I hope to make something out of the transaction. I meant to be perfectly safe when I said that I would furnish materials before any labor had been put upon it at $1 each wagon. I want this to be a bona fide transaction.

"I suppose I might under my proposition furnish the wood and iron material in Tennessee and Alabama. Considerable of wagon material used in this State come from those States. But if preferred, I feel confident that I can get an abundance in this State both of timber and ore, but you must go to the coal States for coal. The trees for the timber that I shall sell you will doubtless be in this State, and the tops of the trees can be utilized to make charcoal, with which you can make charcoal iron. You can fell the trees this fall—they ought to be felled soon to make the best of timber—and haul them to the mills during the winter. The ore for the iron you can mine at any time, as it will not take

me long to make provision for the necessary ore. The lead ore for the paint I can also get the privilege for you to mine in this State, I think. As for the linseed-oil, I can rent land for you to raise the seed in Dakota. It is a good country for flax. For the turpentine you will have to go to North or South Carolina in order to get it before any labor is put on it. Aniline colors for paints are, as you know, manufactured from coal-tar, and the coal you must, as before said, go to the coal regions for.

"Now, while I expect to make from $5,000 to $7,000 on this contract if it is consummated, according to free-trade views, the Wisconsin Wagon Company will make a good round sum. Free-traders generally accept the statements of the leading free traders, David A. Wells, Senator McDonald, Mr. Mitchell, and the Chicago Tribune, who all say that the amount of labor in our finished wares is only 18 to 20 per cent. of their finished value. Now suppose the value of a farm wagon is $50, the labor on it would be $10, then you pay $1 for material, this leaves a profit of $39 on each wagon, which the company gets, except the freight. Suppose we knock off $4 for possible accident and freights, still the profit is $35, and on 10,000 wagons the total profit is $350,000. This will make the stockholders smile, and I am sure, general, there will be no opposition to your re-election as president.

"There is one very strange feature about these wonderful profits that free-traders figure out in manufacturing. Very few free-traders go into the manufacturing business. They content themselves mostly with figuring out the enormous profits, without at empting to get a fair share of those profits themselves. It is true that General Mills seems in dead earnest about making $350,000 on those 10,000 wagons. And yet I confess that I have a little suspicion that he does not intend to consummate the bargain. If he had so intended, it seems to me that he would have come right to me, instead of sending his acceptance to the newspapers. I stand ready to furnish materials in the same way for several times 10,000 wagons. If there is a big margin for him in this contract, he can certainly do a nice business by reselling material to other wagon manufacturers. Here is an excellent opportunity for General Mills or some other free-trader, who really believes what he preaches, to make not one, but several fortunes. Now, do not let modesty be in the way.

"Yours, truly,

"J. A. JOHNSTON."

The French Spoliation Claims.

SPEECH

OF

HON. ALBERT C. THOMPSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 8, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 10896) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1888, and for prior years, and for other purposes—

Mr. THOMPSON, of Ohio, said:

Mr. CHAIRMAN: I do not flatter myself that I can present to the committee anything new upon the subject of the French spoliation claims, and shall content myself with restating some of the arguments which have been used against them heretofore, and which have been sufficient to convince me that they ought not to be paid.

By the act of January 20, 1885, the French spoliation claims were referred to the Court of Claims for investigation and report to Congress. The court is required by this statute to—

receive all suitable testimony on oath or affirmation, and all other proper evidence, historic and documentary, concerning the same, * * * to decide upon the validity of said claims according to the rules of law, municipal and international, and the treaties of the United States applicable to the same—

And to—

report all such conclusions of fact and law as in their judgment may affect the liability of the United States.

The statute requires this report to be made—

on the first Monday of December in each year * * * to Congress for final action—

And is to be taken by Congress as merely advisory, and shall not—

conclude either the claimant or Congress.

So that practically the Court of Claims in this matter stands in the relation of a master commissioner to Congress, which is the court in which final action must be taken, and instead, therefore, of being concluded by the action of the Court of Claims, as insisted the other day by the gentleman from Massachusetts, we are now called upon to carefully examine the report of this master commissioner, hear the exceptions to it, and deliver final judgment in the case.

The law provides only for valid claims—

Valid claims to indemnity upon the French Government arising out of illegal captures, detentions, seizures, condemnations, and confiscations prior to the ratification of the convention between the United States and the French Republic concluded on the 30th of September, 1800.

Resort must be had therefore to existing law, "municipal and international, and the treaties of the United States applicable to the same," to determine what are valid claims, and if they are not "valid" under existing law they can not be appropriated for in this bill. We can not change the law. We can not broaden the scope of the statute of 1885 by a rider on an appropriation bill, and to properly discharge our duty, therefore, we must consider and determine the questions of validity which are presented under existing law.

The question is presented whether the depredations complained of were committed during a state of war between the two countries or were the result of the abuse of the rights of belligerency on the part of France while engaged in war with other nations. To my mind the evidence clearly establishes that there was a state of war—maritime war—between France and the United States between the year 1795 and the year 1800. There was no formal declaration of war; there was no fighting upon land, yet there was actual and flagrant war. These depredations began prior to 1793 and finally reached a point in 1798 where the United States could no longer forbear, and decisive action against France was taken by both the executive and legislative departments of the Government.

On June 23, 1798, Congress authorized the President to officer and arm the "provisional army." On June 25 our merchant vessels were authorized to resist by force "any search, restraint, or seizure" from any vessel sailing under French colors, and to capture or recapture such vessels. On June 28, the President was authorized to treat persons captured in such vessels as prisoners of war. Prisoners so taken were duly exchanged.

On July 7 Congress passed an act annulling all our treaties with France, and two days afterwards, on July 9, passed another act, which, in the language of another—

Without any formal declaration of war, not only authorized the President to instruct the commanders of public armed vessels of the United States to capture any French armed vessel, such captured vessel with her apparel, guns, and appurtenances, with goods and effects on board the same, being French property, to be brought into the United States and proceeded against and condemned as forfeited, but the President was authorized to grant special commissions to private armed vessels which should have the same license and authority.

And the Attorney-General had given an official opinion that there was a state of war.

Mr. LONG. In what year was that?

Mr. THOMPSON, of Ohio. In the year 1798.

Diplomatic intercourse was suspended. Our minister had been dismissed from France, and she had refused to receive our ministers plenipotentiary, and President Adams in his proclamation had used the following language with reference to French consular officers in this country:

And whereas actual hostilities have long been practiced on the commerce of the United States by the cruisers of the French Republic under the orders of its government; which orders that government refuses to revoke or relax, and hence it has become improper any longer to allow the consul-general, consuls, and vice-consuls of the French Republic above named or any of its consular persons or agents heretofore admitted in these United States any longer to exercise their consular functions: These are, therefore, to declare that I do no longer recognize the said citizen Letombe as consul-general or consul, nor the said citizens Rosier and Arcambal as vice-consuls, nor the said citizen Mozard as consul of the French Republic in any part of these United States, not permit them or any other consular persons or agents of the French Republic heretofore admitted in the United States to exercise their functions as such; and I do hereby revoke the *exequaturs* heretofore given to them respectively, and do declare them absolutely null and void from this day forward.

Mr. DIBBLE. Will the gentleman state the date?

Mr. THOMPSON, of Ohio. I am not able to give the precise date without spending more time than I care to devote to looking for it, but it was about the time the act of Congress was passed annulling the treaties. I found the extract which I quote in Wharton's International Law Digest.

Mr. DIBBLE. I wish simply to call attention to the fact that that was towards the latter period of these spoliations and that the largest proportion of them were before the act or this proclamation.

Mr. THOMPSON, of Ohio. Of thirty-three cases reported to Congress December 7, 1887, by the Court of Claims, seventeen arose before July 7, 1798, the date of the passage of the act, and sixteen afterwards. Of those arising before the passage of the act, one arose in 1793, one in 1795, eleven in 1797, and four in 1798, so that out of the thirty-three, twenty arose in 1798.

I had not intended and I do not want to spend any more time upon this question, for I wish to pass to other matters. It is enough to say that depredations were committed on more than two thousand vessels, men were killed and wounded on both sides, and after great preparations for war on a more extensive scale a treaty of peace was concluded, which excluded indemnity for captures definitely condemned prior to the execution of the treaty, the French negotiation of which was conducted upon the basis of the existence of a state of war, and which basis we were compelled to accept or continue the war. The French position is stated by Trescot thus:

The French plenipotentiaries would consent to the abrogation of the old treaties, but as such an abrogation could only be the result of war they were obliged to consider the action of the United States preceding, equivalent to war, and a new treaty, in necessary consequence, a treaty of peace. In such case the question of indemnity must be laid aside because a war extinguished all neutral obligations; each party had taken the remedy of complaints into its own hands, and the treaty of peace was a fresh start upon such a new basis as their respective positions warranted them in proposing; and therefore they offered to the American ministers either the abrogation of the old treaties without indemnity, or indemnity with the old treaties.

Judge Washington in Bas *vs.* Tingy, 4 Dallas, page 34, stated the case thus:

In March, 1799, Congress had raised an army, stopped all intercourse with France, dissolved our treaty, built and equipped ships of war, and commissioned private armed ships, enjoining the former and authorizing the latter to defend themselves against the armed ships of France, to attack them on the high seas, to subdue and take them as prize, and to recapture armed vessels found in their possession. Here, then, let me ask what were the technical characters of an American and a French armed vessel combating on the high seas with a view the one to subdue the other and to make prize of his property? They certainly were not friends, because there was a contention by force; nor

were they private enemies, because the contention was external, and authorized by the legitimate authority of the two governments. If they were not our enemies I know not what constitutes an enemy. * * * What, then, is the evidence of the legislative will? In fact and in law we are at war.

Congress had annulled our treaties with France; had provided for the organization of an army, which Washington was called from his retirement to command; had provided for a navy and the issuing of commissions to privateers; had enjoined our ships of war to defend themselves against the armed ships of France, to attack them on the high seas, to subdue and take them as prize, and to recapture armed vessels found in their possession; had authorized the President to treat persons captured in such vessels as prisoners of war, and they were so treated and exchanged as such. The President had announced the suspension of diplomatic intercourse with France; had issued his proclamation revoking the *exequaturs* of all French consuls in this country; and his Attorney-General had given an official opinion that there was a state of war. The Supreme Court, at the August term, 1800, in Bas vs. Tingy, had distinctly recognized a state of war; and as a matter of fact there was actual fighting on the high seas between our armed ships and those of France. McMaster, in his History of the People of the United States, says:

The little navy, which the Republicans so maligned, was serving in four squadrons. Nine ships, under Commodore Barry, cruised along the Lesser Antilles from Tobago northward to the island of Martinique. Five more, under Commodore Truxtun, had their rendezvous at St. Kitts, and watched the ships that came from Guadaloupe. A third fleet closed the Windward Passage. A fourth was off Havana and the Cuban shore. The private armed vessels in commission were, it was boasted, as many as the days in the year. (A report made toward the close of 1798 gave the number of private armed ships as 365, the number of guns on them as 2,733, and the sailors manning them as 6,874.)

And in speaking of the fight between the Constellation and L'Insurgente, which took place about the 10th of February, 1799, he said:

There the Constellation, flying Commodore Truxtun's pennant, gave her chase. In two hours the space between the ships had so much shortened that the fight began. In tonnage, guns, and seamen the pair were not ill-matched. But the fire of the Constellation was slow and well directed, while the shots she received from L'Insurgente passed generally through her sails. When the battle had lasted for an hour and a quarter, and sixty-seven killed and wounded sailors lay on his deck, the French commander thought enough had been done for the honor of the tricolor, and drew down his flag.

And speaking of another contest, says:

The list of prizes for the three years sums up seventy-four; a noble showing, it was said, for an infant navy. The last and, in time, the most famous capture was made in November by the frigate Boston, Captain Little in command. The vessel was cruising in the waters between the West India Islands and the American coast, when she fell in with the corvette Le Berceau, one of the finest and fastest ships of the French marine. The Boston had a few more guns, but the Frenchman was nothing loth to fight, and the battle at once began. For two hours the firing was uninterrupted. By that time the first lieutenant, the master, the boatswain, the gunner, and some thirty of the crew lay dead on the deck of the Berceau, her rigging was cut to pieces, her sides were shattered, and her foremast and mainmast so injured that, not long after she struck, both went by the board. What remained was brought to the United States.

To the ordinary observer this would seem to be a condition of war. It was limited and defensive it is true, but nevertheless war; and although there had been no formal declaration of war, yet its existence had been recognized by every department of the Government.

But if it be conceded that these claims were valid claims against France at the time of the ratification of the treaty of 1800, it by no means follows that by virtue of that treaty the United States became liable to its citizens for these claims. It is assumed that a bargain was made by which the individual claims of certain of our citizens against France were released to France in consideration of the release by France of certain national claims against us; that thereby the United States appropriated the private property of these citizens to the public use, and should make compensation therefor, as she would for land taken for public use. Or that these claims having been used by the Government to effect a compromise with France, the amount thereof is to be treated as so much money had and received to and for the use of these claimants, which the Government is liable to pay upon demand. Or that the circumstances in equity raise a trust against the Government to account for the amount of these claims as having in effect been collected from France through the treaty. The liability, therefore, is to be reached through construction and implication; if it exists it must be implied from the circumstances.

There is nothing in the transaction that directly commits the United States to any such liability. Our Government in no way assumed such liability. Nothing of that kind can be found in the treaty, but it is sought to work out a liability by construction. It is not pretended that the Government expressly or directly assumed liability, as she did not under the treaty with Spain when Florida was purchased. By that treaty it was provided that as a part equivalent for the cession of Florida the United States should renounce all claims of citizens of the United States upon the Spanish Government—

Statements of which, soliciting the interposition of the Government of the United States, had been presented to the Department of State or to the minister of the United States in Spain since the date of the convention of 1802, and until the signature of the treaty.

The United States assumed these debts and agreed by treaty to appropriate $5,000,000 to their payment. The treaty provided for a board of commissioners to—

ascertain the full amount and validity of the claims thus assumed by the United States.

There was nothing of that kind in the treaty with France.

What was the transaction with France? Our contention with her arose under the treaties of alliance and commerce of 1778. Under those treaties we guarantied to France her possessions in America and gave her the privilege of our ports, to the exclusion of her enemies. That is, under the treaty she had a right to come into our ports to refit and reman her ships of war and privateers, to bring in and sell her prizes there, while her enemies were to be wholly excluded. This was of great importance to her in her struggle with Great Britain, and when the privilege was taken from her and given to Great Britain by the Jay treaty she was greatly exasperated.

Prior to this time her depredations on our commerce grew almost out of her necessities, and she always expressed her willingness to make just and proper compensation for them. But after the negotiation of the Jay treaty with England had become known she made open war upon our commerce, and from that day the controversy was hot until the treaty was made. She, however, had first violated the treaty, particularly Article XXIII, which provided that free ships should make free goods, and we were fully warranted in making the Jay treaty. We took this ground and regarded her depredations upon our commerce as unjustifiable and as in further violation of the treaties and of the law of nations; and when negotiations looking to peace began we demanded indemnity for them, but France refused to pay indemnity unless we would reinstate the treaties of 1778, which imposed obligations upon us we could not perform without risking our very existence as a nation. She offered, however, to enter into a new treaty of "peace, commerce, and navigation" if we were willing with her to wipe out past relations and begin anew. She would consent to our recision of the treaties of 1778 if we would abandon our claim for indemnity, and would make a new treaty with us. But our plenipotentiaries were instructed to insist upon indemnity, and they did so.

We presented these claims; we urged them in season and out of season. No gentleman on this floor will assert that up to the time of the treaty the Government of the United States was in any respect derelict in its duty to its citizens in the prosecution of these claims. Our Government carried its prosecution of them at least to the point of war, and in my judgment beyond that; but France absolutely refused to pay any indemnity. She insisted that these depredations on her part were just reprisals for violations of the treaties of 1778, particularly through the operation of the Jay treaty, by which she was excluded from the privileges of our ports and England accorded those privileges. In all our negotiations we were met with her absolute refusal to consider these claims in any but one view, and that was in connection with the reinstatement of the treaties.

She took the position that if we would reinstate the treaties of 1778 she would pay something; that is, she would not pay indemnity for depredations which she justified as acts of reprisal, but would be willing to pay a money consideration to have the treaties reinstated, to have the privileges of our ports granted to her and England excluded. But the alternative on the part of France was, reinstatement of the treaties and indemnity, or a new treaty without indemnity. In other words, the question presented to the United States was the question of peace or war—whether the war then going on should be continued and enlarged until it should become a general war, or whether we would have peace upon the single condition on which France would permit it; that is, peace without indemnity, or peace by the reinstatement of the treaties and such compensation as she would be willing to make for those depreda ions. The transaction, as I view it, was simply this: Instead of a bargain with France, instead of a set-off between the two nations, it was simply the abandonment of the prosecution of these claims when it became apparent that we could no longer prosecute them without involving the country in a war with most disastrous consequences, situated as we then were.

Mr. GROSVENOR. I would like to inquire how the Government could abandon the prosecution of the claims of its citizens, so as to deprive these citizens of their rights, without the Government at the same time becoming liable?

Mr. THOMPSON, of Ohio. I will in time answer that question. That is the point I want to come to. There is plenty of authority on that subject which I do not think it necessary to cite here, in view of the discussions which have taken place in Congress during almost a hundred years. I do not think any gentleman will claim that the Government is bound to go to the extent of war in the prosecution of the private claims of its citizens. Is it to be asserted that our country is to be involved in all the consequences of war, and that the property and lives of its citizens generally are to be sacrificed in order to prosecute to the utmost the interests of a few individuals? The interests of an entire people were to be considered when this treaty was in course of negotiation—the interests of the whole people, not of these few claimants. And when the question of peace or war was presented, the Government simply said we will have peace upon the only condition on which it will be conceded to us; that is, the abandonment of the further prosecution of these claims.

France stood upon that position; but she finally consented to the making of a new treaty if we would agree that the cousideration of these claims be indefinitely postponed. So we had the treaty of 1800

with the original Article II, by which the consideration of all questions arising under the treaties of 1778 was indefinitely postponed.

But the Senate of the United States was not willing to leave the matter in that shape. The Senate insisted that the treaty should stand for only eight years; that Article II should be stricken out and the following be inserted in its place:

It is agreed that the present convention shall be in force for the term of eight years from the time of exchange of ratifications.

France, however, unwilling that at the end of eight years this controversy should be revived (for you must put that construction upon the action of Napoleon), returned to her original position, and insisted upon the absolute abandonment of the claim for indemnity. Hence there was a new treaty without provision for indemnity, a foot-note being added to the treaty at the instance of Napoleon agreeing to the new article and to the retrenchment of original Article II, but providing—

That by this retrenchment the two states renounce the respective pretensions which are the object of the said article.

So that France simply came back to her original position: if you will indefinitely postpone these questions of controversy we will make this treaty with you. This was a polite and diplomatic way of getting rid of the matter; but if you will not consent to that, but insist upon having the matter in such shape that it may be revived at the end of eight years, we will return to our original position; we will demand that this treaty shall be simply upon the condition of the abandonment of all claims of indemnity.

And the United States Senate accepted that condition, which was, as I say, a condition of peace. Now, from these circumstances, is it to be implied that the United States assumed the payment of these claims? Was there anything in these circumstances of which any gentleman can speak as an appropriation of private property for public use, like land taken for the purpose of a public building? France was not bargaining with us. France was not asking the release of any claim which we had against her. When we pressed this claim for indemnity she simply said we will not pay it; all that we have done to your ships has been in just reprisal of the violations of these treaties of which you have been guilty and the injuries you have done to us by depriving us of the privileges of your ports which were guarantied to us.

She did not call upon us to guaranty her American possessions. On the contrary, it was to her interest to prevent us from being involved in the European war, because she depended upon us largely for her food supply, and Genet, at his first interview with Jefferson, waived the provision of guaranty. He said:

We know that under present circumstances we have a right to call upon you for the guaranty of our islands, but we do not desire it.

Her great complaint against us was because of the Jay treaty, by which the privilege of our ports was taken from her and given to Great Britain; and she justified her refusal to pay indemnity upon our alleged violation of the treaties thereby.

She did not ask to be released from anything. There was no effort to sell to us advantages. There was at least a state of quasi war, a condition of things which could not be continued with safety to the country. It was important that peace should be restored, and the condition imposed on our Government was the abandonment of the prosecution of these claims. Will gentlemen insist that rather than abandon these claims the Government should have gone on and allowed this condition of quasi war to continue until it became general, involving this country in the European wars which then prevailed? Because we did not choose to involve ourselves in the general continental war then prevailing will gentlemen on this floor insist we thereby made ourselves liable for the payment of these claims?

Could any such duty be imposed on an infant republic struggling to get a footing amongst the nations of the earth? Yet that is the position assumed by the gentlemen who support the proposition to pay these claims, and who urge them upon this House, that we were compelled to risk the peace of the country and to suffer all the consequences of war in support of these claims, or by abandoning them make ourselves liable for their payment. That is the position of these gentlemen as I understand it; because we stopped there to avoid a general war in the prosecution of these claims we have by so doing made ourselves liable to pay them on the ground that it was an appropriation by the Government of private property for public uses. Now, Mr. Chairman, to my mind there is a great deal of difference between the case where the Government takes private property with a strong hand and devotes it to public use and the case where it merely abandons the prosecution of claims on the part of certain of its citizens in order to avoid being involved in a general war and for the purpose of securing the peace of the country.

So I say there is no warrant for the position taken here that the Government has in negotiating and consenting to that treaty assumed payment of these claims, or put itself in a position where either at law or in equity liability can be justly implied against it. She did not seek with these claims to buy a release from France of the old treaties. She refused to consider the old treaties, they having been annulled by the solemn act of Congress, and stood upon her claim for indemnity, but France refused to pay indemnity, and presented the alternative of the abandonment of the claim or war—the chances of war or peace without indemnity. She chose peace, and accepted the condition that would bring it. She was forced to abandon the claim of certain of her citizens in the interest of the whole people. It was not a case of bargaining for advantages which were to be purchased with the moneys of some of her citizens of which she had control, but the acceptance of a condition which put an end to war and brought peace to a country sorely needing it.

The duty of government in such cases is thus stated by Mr. Adams:

A government which neglects properly to present the claim of one of its citizens to a foreign government in consequence of which such claim is lost, is not necessarily bound to make good the claim. The argument of the abstract right is strong, but as the justice obtainable from foreign nations is at all times, and under every state of things, very imperfect, and as the only alternative in cases of denial of justice is the abandonment of the claim or war, a nation by abandoning the claim, after exhausting every specific expedient for obtaining justice, neither partakes of the injustice done, nor makes itself responsible to the sufferer; for war, even if it eventually obtains justice for that sufferer, secures it by the sufferings of thousands of others, equally unmerited and which must ultimately remain unindemnified. And mere inability to obtain justice can not incur the obligation it is unable to enforce.

This present idea of fixing the liability of the United States by construction and implication originated in 1835. There was no serious prosecution of these claims prior to 1822. Perhaps in 1818 in some way they were brought to the attention of Congress. There was, however, no earnest attempt to prosecute them before Congress until 1822. They never received any serious consideration until 1835.

The idea—that of constructive liability—was one of the evil consequences of an overflowing Treasury. It had its birth in the demoralizing influence of a surplus, which, then and to-day, is bringing to the front all sorts of trumped-up and preposterous claims, the object of which is to divert the public money into the pockets of a few favored individuals.

Mr. BRECKINRIDGE, of Kentucky. Does not the gentleman remember there was a report made on these spoliation claims in 1802 and another in 1807?

Mr. THOMPSON, of Ohio. No, I do not.

Mr. BRECKINRIDGE, of Kentucky. I think I shall be able to furnish them to the gentleman.

Mr. THOMPSON, of Ohio. I will be obliged to the gentleman if he will do so. But I think the gentleman will find when he comes to look the matter up that I am substantially correct in what I have stated. I do not lay much stress upon the early reports in favor of these claims. They did not come from the regular standing committees, but from select committees composed of a majority favorable to the claims. Senator SHERMAN, in a speech made in the United States Senate December 17, 1872, with reference to a bill to pay these claims then pending, said:

It is said that there are some thirty or forty reports in favor of it. Why, sir' how incorrect that is. The way the reports came to be in favor of this bill was that some Senator who thought his constituents were interested would move a select committee, to whom it would be referred. A majority of the committee had to be in favor of it. That was the rule of parliamentary law. Most of the reports in the first instance were made by such committees. And so year after year, from 1829 down to 1861, a majority of and nearly all the reports were made by select committees of one or the other House, packed, as I may say—and I say it in no offensive sense—packed by parliamentary law in favor of the claims.

It is an easy matter to bring claims of this kind amounting to millions of dollars to the attention of Congress, while claims for a few hundreds of dollars or a few thousands of dollars, no matter how just, wait day after day without a hearing. Here are claims which have been running for nearly a hundred years and have been prosecuted by an organized agency established here in 1822. There has been a constant effort to foist them upon the Treasury. Without merit, without any foundation in justice and right, they have yet been able to live and grow because of the large amount of money asked for. That has been their principle of life, the large amount which there will be for division in the event of success. If this appropriation is made it will establish a precedent which will assure the success of any claim, provided only that it be old enough to insure general ignorance of the circumstances of its origin and big enough to pay good dividends to the promoters of the enterprise.

I was a little surprised at one of the propositions suggested by the gentleman from Maryland the other day. He would support the claims upon the ground that the Government is liable because of an appropriation of private property. All the supporters of the claims, including the gentleman from Maryland, place the right of recovery against the United States on the ground of a conversion of trust funds, or an appropriation of private property to public use, and I was much surprised to hear the gentleman from Maryland claim that the question was a purely political one, over which the Supreme Court could have no jurisdiction, even if Congress should confer it by a law enacted for that purpose. If I understood the gentleman aright, that was his position, and it was certainly a very strange one in view of the grounds upon which these claims are being urged here.

This also brings me, Mr. Chairman, to the question of the remedy proposed. All I ask is that this matter of the validity of these claims be submitted to the Supreme Court of the United States, that great tribunal of last resort, which commands the fullest confidence of the people, and if that court upon an examination of the circumstances and

of the law says that these claims are valid, and that the United States is liable for their payment, it will satisfy the people of the country; and I undertake to say that no other plan of settling the matter will meet with their approval.

[During the delivery of the foregoing remarks the hammer fell.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. THOMPSON, of Ohio. I want a minute or two more in order to conclude the single point that I am now suggesting.

Mr. BURNES. I will yield the gentleman a few moments longer.

Mr. THOMPSON, of Ohio, then resumed and concluded his remarks as above.

Free wool will give the people cheaper clothing without reducing the price of wool, without detriment to the manufacturer, and without lowering the wages of labor.

SPEECH

OF

HON. ALEXANDER M. DOCKERY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 12, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. DOCKERY said:

Mr. CHAIRMAN: I do not expect to occupy the time of the House for more than ten minutes; but I ask unanimous consent to speak without limit, as I may desire a few moments additional.

The CHAIRMAN. Without objection the gentleman from Missouri will be permitted to proceed without interruption.

There was no objection.

Mr. DOCKERY. It was not my purpose, Mr. Chairman, to make any observations upon this item of the bill, and I have not therefore prepared in systematic order any data upon the question.

Mr. Chairman, I do not believe that there is any individual, section, or political party in this country hostile to American interests. I am not in sympathy therefore with the position taken by many gentlemen on the other side when they assert that the Democratic party is in favor of a British policy; indeed, I am quite sure that the gentlemen themselves can not be sincere when they announce such a belief. I believe that the entire American people, without regard to section or political creed, honestly desire to encourage and promote that policy which in their judgment will best subserve the interests of this great country. I should despair, sir, of the future of the Republic if I believed, as some gentlemen on that side affect to believe, that a great party numbering nearly five millions of voters is hostile to the real interests of the American manufacturers and the laborers employed by them.

Those gentlemen are not candid when they make this averment. I do not think, sir, there is any difference of intention among us. Upon all questions involving the interests of this country as against any other country the American people are a unit; and if it were necessary to protect the rights and privileges of the humblest citizen or to enforce any feature of our policy, fiscal or otherwise, we would girdle the Dominion of Canada with American bayonets and defend our coasts with American war ships. Since the beginning of this discussion the statement has been constantly reiterated on that side of the House that this and other propositions looking to a reduction of taxation were hostile to American industries; and some one on this side has made a computation by which it appears that (accepting the statement of our Republican friends as true) there have already been thrown out of employment by this bill 43,143,191 American laborers. [Laughter.]

It is barely possible that the exigencies of their party have caused our Republican friends to misapprehend the real condition that confronts them. There is no peril confronting American industries or American laborers, but the imminent danger of the utter overthrow of the Republican party alarms and affrights our friends and is the real explanation of the exaggerated statements that have been made in this discussion and which will undoubtedly be reiterated before the people in the coming campaign.

Mr. Chairman, let us by an unprejudiced and unbiased discussion of the pending proposition, endeavor to reach a correct conclusion. What is the true interest of the American wool-grower, and the American wool-producer in respect to a tariff rate? The gentleman from Ohio [Mr. BOOTHMAN] who has just taken his seat, insists that the placing of wool on the free-list will destroy that industry; and that a high duty has developed it.

WOOL PRODUCTION.

Let us turn to the record and see what the effect of a high tariff has been upon the sheep industry and ascertain whether it has really developed by reason of such tariff. The high rate of duty on wool was imposed by the tariff act of March 2, 1867.

From the statistical abstract of the United States for 1887 it appears that the production of wool from 1867 to 1883, inclusive, was as follows:

	Pounds of wool.
1867	168,000,000
1868	180,000,000
1869	162,000,000
1870	160,000,000
1871	150,000,000
1872	158,000,000
1873	170,000,000
1874	181,000,000
1875	192,000,000
1876	200,000,000
1877	208,250,000
1878	211,000,000
1879	232,500,000
1880	240,000,000
1881	272,000,000
1882	290,000,000
1883	300,000,000

From an examination of this table it is manifest that during the entire time the high wool tariff was in operation up to 1883, when it was reduced by the Republican party, there were varying degrees of production, depending not upon the tariff rates but upon the inexorable law of supply and demand, which no high tariff can abrogate. When there was an increasing demand for wool, there was a corresponding increase in the wool production; when the demand was not so great, there was a corresponding decrease in the production. The ten years following the adoption of the high wool tariff of 1867 only increased the production of American wool by 31,000,000 pounds, notwithstanding the marvelous development of this country during that period, and its rapid increase in population. During the greater portion of this period there was an absolute decrease of production under this exorbitant tariff, so that in 1871 the production reached its lowest limit since the war—150,000,000 pounds. In 1884, the year following the reduction of the tariff, there was an increase in the wool production of 8,000,000 pounds, and in 1885 the increase was 2,000,000 pounds, while in 1886 the production decreased to 285,000,000 pounds.

Now, Mr. Chairman, let us inquire how a reduction of the tariff can injuriously affect the wool interest? Manifestly, if at all, it will be by increasing the importation of foreign wool, and thus bringing American wool in competition with the foreign production. By the act of March 3, 1883, the Republican party made a reduction of the wool tariff of 1867. During the first year of the operation of that law the total importation of foreign wool amounted to 78,350,651 pounds, while in the ensuing year, instead of increasing under the reduced duty, it decreased to 70,596,170 pounds—an absolute decrease of 8,000,000 pounds.

Under the high wool tariff of 1867 there were very heavy importations of foreign wool, notably in 1871, when the importation amounted 126,507,409 pounds, and in 1879, when the aggregate swelled to 128,131,747 pounds. It will thus be seen that while the importations of foreign wool amounted to 129,084,958 pounds for the year ending June 30, 1886, the fact is not in any wise attributable to the reduced tariff, as we have shown that the importations were just as large under a higher tariff.

Now, let us see what is the effect on the number of sheep.

Mr. ALLEN, of Michigan. Will the gentleman allow me to ask him a question?

Mr. DOCKERY. Certainly.

Mr. ALLEN, of Michigan. Of course it took them a year or two to raise the first crop before they could begin to send the wool here. Did not the importation gradually increase from 1883 up to date, after they had a chance to produce one crop of wool?

Mr. DOCKERY. It did not, as the importation which amounted to 129,084,958 pounds in the fiscal year 1886 decreased to 114,038,030 pounds in 1887.

Mr. ALLEN, of Michigan. Was not that an increase over 1884?

Mr. DOCKERY. Certainly.

Mr. ALLEN, of Michigan. Has it not increased since?

Mr. DOCKERY. There has been, as I stated a moment since, an increase over the importations of 1884, but does the gentleman claim that the increase resulted from the lowering of the tariff?

Mr. ALLEN, of Michigan. The increased importations resulted largely from the decrease in the tariff.

Mr. DOCKERY. Largely?

Mr. ALLEN, of Michigan. Yes, sir.

Mr. DOCKERY. Will the gentleman then explain, if that be true—it is a poor rule that does not work both ways—how it was that under the high tariff of 1867 the importations increased and the production of wool decreased from 168,000,000 pounds in 1867 to 150,000,000 pounds in 1871? Did the tariff lower the production?

Mr. ALLEN, of Michigan. No, sir; but from 1867 to 1883 inclusive——

Mr. DOCKERY. I think I understand the position of the gentleman. When the production is increased it is the tariff; when it is de-

creased it is not the tariff. "Now you see it and now you don't." [Laughter.]

Mr. ALLEN, of Michigan. Allow me to answer your question. From 1867 to 1883 inclusive the number of sheep raised in this country and the production of wool increased; from 1883 to 1888 inclusive both the amount of wool raised in this country and the number of sheep produced here have decreased. In other words, after the high tariff came an increase, and after the low tariff came a decrease both of wool and sheep.

Mr. DOCKERY. How about the tariff of 1867?

Mr. ALLEN, of Michigan. I said that from 1867 to 1883, taking the whole time, the amount of wool produced and the number of sheep raised increased largely in numbers; but after the tariff of 1883 was levied the number decreased right along.

Mr. DOCKERY. Then do I understand the gentleman to say that the tariff is to be accredited with this result, and that the rapid progress we have made in every department of effort, including our immense increase in population, has had nothing to do with stimulating production?

Mr. ALLEN, of Michigan. No, sir, I do not go so far as that; but I say that under the operations of the tariff of 1883 thousands and tens of thousands of farmers have ceased to raise sheep and wool because the business is not profitable.

Mr. DOCKERY. Why is it not profitable?

Mr. ALLEN, of Michigan. It is not profitable because the markets of this country are so flooded with foreign wool that American wool has decreased in value.

Mr. DOCKERY. Does not the gentleman know that it requires a large importation of foreign wool to supplement our own wool crop, and that American wool is insufficient in amount to supply the markets of this country; and even if it were sufficient in the number of pounds, does he not know that by reason of the difference in fiber between American wool and foreign wool our manufacturers are compelled to import a certain amount of foreign wool to mix with the article produced at home in making the best articles of woolen goods? Does not the gentleman further know that the production of American wool for the year 1886 was only 285,000,000 pounds, and the importations of foreign wool for that year 129,084,950 pounds, while it is estimated that the woolen goods imported for the same period contained raw wool amounting to 196,000,000 pounds, making a total consumption of 610,084,950 pounds? The United States has never produced one-half of the wool required annually for the consumption of her people.

Mr. ALLEN, of Michigan. I do not wish to occupy the gentleman's time even in answering questions; but I will answer that one if he will allow me.

Mr. DOCKERY. I do not care to have the gentleman interject a speech into my remarks.

Mr. ALLEN, of Michigan. I would like to answer that question, and then I will stop.

Mr. DOCKERY. I will yield later on. Let me tell the gentleman why it is that in some sections of this country the wool business is not so profitable as it was under the tariff of 1857 and prior tariffs. The American wool-grower must depend upon the American manufacturer for his market. I suppose the gentleman will admit that.

Mr. ALLEN, of Michigan. He depends upon the American people ultimately.

Mr. DOCKERY. Oh, of course the American manufacturer regulates his manufacture by the demand of the American market.

Mr. ALLEN, of Michigan. Yes.

Mr. DOCKERY. Now then, when the American market is supplied, the American demand for wool ceases, and this demand has diminished because of the lack of untaxed foreign wool necessary to mix with our domestic wool in the manufacture of the goods that we need in this country.

Mr. DINGLEY. Will the gentleman kindly furnish any evidence of the statement which he has just made?

Mr. DOCKERY. I have not time to enter upon a lengthy dissertation, but the gentleman will find the evidence by a careful consideration of the figures presented in the Statistical Abstract and other publications upon this question. Perhaps the strongest suggestion in favor of free wool is to be found in the message of President Grant submitted to Congress December 7, 1874. The recommendation is in the following terms, and thoroughly accords with the facts I have just stated.

I would suggest to Congress the propriety of readjusting the tariff so as to increase the revenue and at the same time decrease the number of articles upon which duties are levied. Those articles which enter into our manufactures and are not produced at home, it seems to me, should be entered free. Those articles of manufacture which we produce a constituent part of but do not produce the whole, that part which we do not produce should enter free also. I will instance fine wool, dyes, etc. These articles must be imported to form a part of the manufacture of the higher grades of woolen goods. Chemicals used as dyes, compounded in medicines, and used in various ways in manufactures, come under this class. The introduction, free of duty, of such wools as we do not produce would stimulate the manufacture of goods requiring the use of those we do produce, and therefore would be a benefit to home production. There are many articles entering into home manufacture which we do not produce ourselves, the tariff upon which increases the cost of producing the manufactured article. All corrections in this regard are in the direction of bringing labor and capital in harmony with each other, and of supplying one of the elements of prosperity so much needed.

In addition to the testimony of President Grant, I desire to quote from the report of a committee of the New York wool trade made to the Chamber of Commerce in New York in 1874. The situation is tersely stated in the following language:

Before we enter upon an examination of the effects of our tariff on the wool-growing interest it will be well to consider that neither our country nor any country in the world does or can produce to advantage wools of all kinds and grades. It must further be borne in mind that in order to produce the endless variety of woolen fabrics demanded by our times, with the highly-improved machinery now in use, and with the active competition among all manufacturing nations, the free and unrestricted selection of the most suitable classes and grades of wool has grown to be a matter of much more importance to the manufacturer of every country than it used to be in old times. Nor will it be denied that but few of our mills can at this day be run to advantage without using to some extent wools of such working quality as can not be produced in this country, or are not produced here in sufficient quantity. The simple fact that even under our present tariff we have annually imported from fifteen to sixty million pounds of fine wool sufficiently proves these positions. The question of duty on fine wool can therefore never be a simple question of protection or no protection to the wool-grower.

These facts show most conclusively that the object ostensibly aimed at by the tariff of 1867, namely, the protection and encouragement of the wool-growers, has most signally failed. The wool-grower must be blind, indeed, if by this time he has not learned the lesson that he can not prosper as long as the woolen interest does not flourish; why should he not also understand that our industry can not permanently flourish until it is relieved of the present heavy burden of obstructive tariff legislation? By helping the manufacturer he would certainly help himself, and secure a better reward for his labor and investment than he could ever expect to derive from the illusive protection of any tariff.

Facts, indeed, as well as sound reasoning call loudly for the abolition of all duties on wool. In the light of past experience it is clear that neither the wool-grower nor any other special interest ought to plead any injury as likely to result in our country from a policy that has had the most encouraging effect in all other parts of the civilized world. No perfectly safe and solid ground will be reached until wool takes its permanent place on the free-list, and this must be the goal of the manufacturer as well as of the wool-grower—in fact, of the whole people.

Mr. Chairman, if further evidence is necessary to make it manifest that foreign wool is essential to the manufacture of our best woolen goods, it will be found in the testimony of the woolen manufacturers in a reply to a circular of Secretary Manning in 1885, printed in Senate Document No. 72, first session, Forty-ninth Congress, from which I submit the following extract:

It may be said that a remedy for these difficulties is to be found in the exclusive use of the domestic wools, which will be abundantly supplied under due protection. To this we reply that neither our own country nor any other in the world does or can produce to advantage wools of all kinds and grades. Experience under high protection of wool in this country for over thirty years had demonstrated that our domestic wool-growers find it to their advantage to produce only the staple wool required for the ordinary range of woolen fabrics, and as these fabrics will always be in demand they build up their flocks—a work of time—for the production only of the fleeces which will be profitable for a long series of years.

This system, although providing admirable raw material for common goods, is incompatible with the variety required for the diversified and highly advanced manufacture which should be our aim. The American manufacturer, to compete with the fabrics of other nations in the endless variety demanded by our times, must have the power of selecting a portion of his raw material from all the world's sources of supply. The sudden and exceptional demand for more or new raw material must be supplied by importation.

Mr. ALLEN, of Michigan. Will the gentleman answer a question?

Mr. DOCKERY. Let me talk a little while. [Laughter.] American wool is a coarse wool. I do not know that I am using the proper technical term, but I would call it a "jointed" wool, while the Australian wool has a fine fiber in which there are no "joints."

Mr. CASWELL. Will the gentleman——

Mr. DOCKERY. Just let me get through with one statement before you interrupt me.

In consequence of this peculiarity of American wool it has to be intermixed with foreign wool in order to produce the best grades of woolen goods. The woolen manufacturers will all bear witness to the accuracy of this statement, and I do not think there is any question about it whatever. Now, Mr. Chairman, the effect of the proposition in the bill is simply to give to our manufacturers foreign wool freed from the burden of taxation, and the result will be that with foreign wool free, the demand for American wool will be increased and thus the market price of American wool will be maintained if not enhanced.

Mr. WARNER. Then, if I understand my colleague, his proposition is that the greater the quantity of foreign wool imported into this country, the greater will be the demand for the wool that we produce here.

Mr. DOCKERY. My colleague does not state the proposition fairly. If the American wool fiber were exactly the same as the foreign wool fiber the effect of striking off the duty would be to increase the importation of foreign wool, and lower the price of American wool; but the fibers being entirely distinct, and both being necessary for the manufacture of the best woolen goods, the result will be that the importation of foreign wool free will necessarily increase the production of American woolen manufactures and thereby increase the demand for American wool and thus maintain or enhance its price.

Mr. JOHNSTON, of Indiana. Does the gentleman mean to say it is necessary to have American wool to mix with foreign wool in order to make good woolen goods?

Mr. DOCKERY. It is necessary in the manufacture of certain grades of goods; and the best evidence of that fact is in the large importation even under the present high rates of duty of woolen goods manufactured abroad.

Mr. JOHNSTON, of Indiana. Is any of our wool exported for that purpose?

Mr. DOCKERY. I beg that the gentleman allow me to proceed with my remarks.

Mr. JOHNSTON, of Indiana. If the foreign manufacturers have not our wool to mix with theirs, how do they succeed in making such excellent goods?

Mr. DOCKERY. They get the coarser grades of wool which they require from other countries with which they trade, and in respect to which their trade is not obstructed and interfered with by high tariff taxes.

NUMBER OF SHEEP.

Now, Mr. Chairman, let us ascertain what effect, if any, the tariff has on the number of sheep and their value. In 1868, the year following the passage of the high tariff act of 1867, there were 38,991,912 sheep in this country, valued at $98,407,809. In 1878, after ten years of the highest tariff on wool this country has ever known, there ought to have been a much larger number of sheep, ought there not? Instead of an increase, however, there was a pronounced decrease, so that in that year there were only 35,740,500 head of sheep, valued at $80,603,062, a reduction in the number of sheep of 3,251,412, and a decrease in their value of $17,804,747.

Mr. DINGLEY. How does the wool product compare in the two years to which the gentleman has referred?

Mr. DOCKERY. In 1868 the production of wool was 180,000,000 pounds; in 1878 it was 211,000,000 pounds. The decrease in the number and value of the sheep is, however, as I have just stated, and at several periods in that decade more pronounced than in 1878.

Mr. DINGLEY. But it appears that the wool product increased.

Mr. DOCKERY. That is very true. The increase in the weight of each fleece is due to the progress which has been made in the science of sheep-breeding, the average weight of the American fleece having increased from 1.85 pounds in 1850 to about 6 pounds in 1887. The same improvement is manifest in Australia where the weight of fleece averages about 8 pounds,

Again, Mr. Chairman, it appears from official figures that in the twenty-nine States east of the Mississippi and Missouri Rivers the number of sheep decreased from 37,864,609 in 1868 to 23,320,730 in 1883, when the tariff was reduced, a decrease of 14,543,879 under the high tariff of 1867, or an average annual decrease of 908,992.

It further appears that there has been a loss in the same States of 4,624,011 from 1883 to 1888 inclusive, or an average annual loss of only 770,668 under a lower tariff. The conclusion is therefore reached from which there can be no escape, that the percentage of loss in these States was greater under the high tariff of 1867 than it has been under the reduced tariff of 1883. Mr. Chairman, let us pursue this inquiry further. In seventeen States and Territories west of the Mississippi and Missouri Rivers the official figures show that the number of sheep have increased from 5,079,430 in 1870 to 24,774,261 in 1887. These figures tell their own story and show that the sheep-culture in the older States, where land is high-priced and exceedingly valuable, can not compete with the sheep-culture as we find it to-day on the cheap hills, plains, and "free ranges" of the Western States and Territories.

The St. Louis Globe-Democrat, one of the leading Republican papers of the West, commenting upon the reduction of the tariff of 1883, and defending the action of the Republican party in effecting such reduction, aptly and tersely stated the situation when it declared that—

Wool-growing is bound to increase in importance on the plains and in Texas and California, and to become less and less important in Ohio and the East, tariff or no tariff.

Mr. Chairman, the position of the Globe-Democrat can not be successfully controverted, and I commend its views, so succinctly stated, to the consideration of our friends across the aisle.

The effect of reducing the price of foreign wool to the extent of the duty now paid will be to increase the product of American manufactories. As the imported raw material will be thus cheapened, it necessarily follows that the American people will get cheaper clothing. That is the point we are aiming at; and we will reach this result without any reduction whatever in the price of wool or the wages of workmen employed in American manufactories. If that result is to follow, certainly our friends on the other side ought to favor this measure.

Mr. WEBER. The gentleman from New Hampshire [Mr. MCKINNEY] stated a little while ago that the placing of wool on the free-list would have no effect on the price of wool, except to raise it on the other side of the Atlantic, which seems to be the object you gentlemen aim at. We on this side of the House seek to legislate so as to keep up prices in the United States; your anxiety seems to be to elevate prices on the other side.

Mr. DOCKERY. If the gentleman from New Hampshire [Mr. MCKINNEY] made the statement that the effect would be to increase the price of wool on the other side, I do not agree with him. I did not hear his statement, but I assume that any fair construction of what he said would not warrant the interpretation put upon it by the gentleman from New York [Mr. WEBER].

PRICE OF WOOL.

Mr. Chairman, I have but a word to add with reference to the price of wool under high and low tariffs, and I am indebted to the very able gentleman from Illinois [Mr. SPRINGER] for the statements I shall make with reference to this phase of the question.

The average price of fine wool in January for the four years prior to the reduction of 1883 was 46.25 cents per pound; the average for the four years succeeding the reduction was only 35.50 cents per pound, and there was also a like decrease in all grades of wool; but this decrease did not begin after the reduction of 1883, but the decline dated from 1873, when wool was quoted at 70 cents per pound. In each of the years succeeding 1873 it dropped to 58 cents, 55 cents, 48 cents, 46 cents, 44 cents, and finally to 34 cents in 1879, or substantially the same price it now commands.

Will the gentlemen on the other side kindly advise me as to the cause of the decline in 1879 to 34 cents when there had been no reduction of the tariff, and when there was no proposition pending looking to such reduction? And besides, both the tariffs of 1867 and 1883 were protective to a high degree, that of 1867 averaging on all grades of raw wool 40.59 per cent. and that of 1883 averaging 33.26 per cent.

According to the "Economic Fact Book," a publication of standing and reliability, it appears that when wool was practically free of duty in 1857 the price averaged 53 cents; in 1858, 45 cents; in 1859, 59 cents, and in 1860 54 cents per pound. Will some gentleman kindly explain how it happened that wool was higher under a low tariff or no tariff than it is under a high rate of duty? In the absence of such explanation from any gentleman on the other side, I will briefly summarize the relation of the tariff to the production of wool and the price of wool.

Mr. Chairman, if this country were able to furnish a wool product sufficient for the demands of its people, and that wool product presented such varying kinds and grades as to enable our woolen manufacturers to produce all grades and classes of goods, then it would be apparent to the most superficial observer that a reduction of the duty on wool or placing the product on the free-list would necessarily result in lowering its price. This, however, is not the "condition that confronts us." The entire wool product of this country is inadequate by at least one-half to supply the demands of the people, and to this fact must be added the further consideration that the grades of American wool are such that they are used largely for the coarser classes of woolen manufactures, whilst they can not be exclusively used in its best grades. The result therefore follows of necessity that foreign wool must be mixed with American wool.

Whatever conduces to the prosperity of the woolen manufacturer results in substantial benefit to the wool-grower, for he must look to the manufacturer alone for a market for his wool. When you furnish the American manufacturer his raw material free of duty you enable him to manufacture his goods at a lower cost. The lower cost of the product enables the manufacturer to extend his market, increasing thereby the demand for his goods, with all the attendant benefits of increased employment and increased wages.

This is the inviting future which awaits the American wool manufacturer and his employés. What of the wool-grower? His position is clearly manifest in the reflection that whenever you furnish the manufacturer with free foreign wool you enable him to purchase a greater amount of American wool, because he is thus enabled to manufacture all grades of woolen goods and extend his market; and instead of importing forty to fifty million dollars annually of woolen goods manufactured abroad, these goods will be manufactured on our own shores and the American wool-grower will furnish the wool for such increasing manufacture.

CONCLUSION.

Mr. Chairman, in conclusion let us consider for a moment the main question involved in the pending bill—the reduction of taxation and the surplus. When we present the gentlemen on the other side, item by item, with propositions looking to a reduction of the unnecessary burdens of taxation, we are confronted with the universal wail of "destroyed industries" that are to follow the passage of this bill, and the accusation that we favor a British policy.

Mr. Chairman, I might have more faith in the prophecies we have heard from gentlemen on the other side upon this question if we had not already had some test of their ability as prophets within the last few years. Sir, I remember that the campaign of 1884 rung with prophecies of the disasters which were to befall the country in the event of the election of a Democratic President. In many instances their speakers declared on the "stump"—and frequently succeeded in alarming the colored people—that slavery was to be re-established in this country. It was repeatedly announced that the doctrine of secession was to be revived, that the pensions of the soldiers would be discontinued, that the public credit would be jeopardized, and that the business interests would be imperiled by the election of President Cleveland. More than three and a half years of Democratic rule, with these prophecies unfulfilled, have passed away, and if the old Mosaic law were in force to-day every one of them would be stoned to death as a false prophet. [Laughter and applause on the Democratic side.] After the utter failure of the prophecies made in that campaign, and in view of the prosperous condition of business, the restored fraternity between the two sections of the country, with new enterprises projected

everywhere, with $500,000,000 of capital invested in the development of the resources of the South under the administration of President Cleveland, I should think they would abate somewhat of their disposition to prophesy upon public questions. [Applause on the Democratic side.]

Mr. Chairman, the Democratic party is the friend of every legitimate interest, and I do not believe that our Republican friends are sincere when they assert, as they have asserted here to-day, and will doubtless, as I have remarked, reiterate in the coming campaign, that we are hostile to the manufacturing interests and the laborers employed in those industries.

Sir, I confess that I have listened with some degree of impatience to this talk about the Democratic party being hostile to the laboring men of the country. As well, sir, might you expect the mother to desert her babe [derisive laughter on the Republican side] as the Democratic party to turn its back on the laboring men, who have always constituted the "bone and sinew" of its organization. [Applause on the Democratic side.]

Mr. Chairman, why all this cant about "destroying" the manufacturing industries of the country? Under the low tariff from 1846 to 1861 there was a greater degree of legitimate prosperity in those industries and a greater percentage of growth than has ever been known at any subsequent period in our history. Sir, the greatest of all the leaders of the Republican party, Mr. Blaine, in his Twenty Years of Congress, referring to this remarkable era, makes the most eloquent and forcible comment upon the great prosperity and advancement of that epoch.

Mr. Chairman, why should the Democratic party be hostile to the growth and development of any part of this great country? It gave to the original thirteen States nearly every acre of the public domain, and always had a well-determined, fixed, and aggressive policy of territorial acquisition. Its first achievement was made under the administration of Thomas Jefferson, the great founder of the Democratic party, when he acquired from the first Napoleon the magnificent purchase of Louisiana. Following this came the acquisition of Oregon, Florida, Texas, and the vast territory that was added to the Union as a result of the Mexican war.

Mr. Chairman, every acre of soil added to the original thirteen States, with the exception of Alaska (and that was acquired under Andrew Johnson after he had left the Republican party), was a contribution to the Union by the Democratic party. The original area of 819,815 square miles has thus been increased by the Democratic party until now the flag floats over 3,501,409 square miles of territory.

Sir, with such a record of splendid achievements is it reasonable to presume that the Democratic party does not share with the Republican party in the patriotic desire for the continued growth and development of the agricultural, commercial, and manufacturing interests of this mighty Republic?

Sir, it is not true that the Democratic party favors a "British policy" but as between the United States and any other nation, the American people without regard to party affiliation are indissolubly united, loyal to American institutions and to the old flag of our fathers. [Applause.]

APPENDIX.

Price of fine, medium, and coarse washed clothing fleece wool in the markets of New York (1860–1887) and Philadelphia (1865–1887), inclusive.

The only "protected" class (if protected as claimed by Republicans) are wool-growers.

The French Spoliation Claims.

SPEECH

OF

HON. GEORGE D. WISE,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 9, 1888,

On the bill (H. R. 10896) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1888, and for prior years, and for other purposes.

Mr. WISE said:

Mr. CHAIRMAN: It is a matter of grave doubt whether it is in the power of Congress to confer upon the Supreme Court jurisdiction of a class of claims depending upon principles of international law and the construction of treaties. Gentlemen assert that Congress possesses this power with great confidence, but the weight which properly attaches to their personal judgment is greatly diminished when they rely upon the case of Chirac *vs.* Chirac. The case of Chirac *vs.* The Lessees of Chirac (reported in 2 Wh.) was an action of ejectment brought by citizens of France, as heirs at law of John Baptiste Chirac, for lands to which he, having been naturalized, had acquired title in Maryland. The State of Maryland, regarding them as escheatable, conveyed them to the natural son of John Baptiste in that State. The sole question there was whether, a French subject having acquired lands in Maryland by purchase, his heir could take them by descent, the descent having been cast upon the French subject whilst the convention of 1800 was in force. The court held that he could, notwithstanding at the time suit was brought the convention had expired by its own limitation.

This involved a mere question of individual and private right under a treaty which came within the jurisdiction of the court. In the Head-money cases (112 U. S.), from which I shall quote further directly, the Supreme Court says:

> But a treaty may also contain provisions which confer certain rights upon the citizens or subjects of one of the nations residing in the territorial limits of the other, which partake of the nature of municipal law, and which are capable of enforcement as between private parties in the courts of the country. An illustration of this character is found in treaties, which regulate the mutual rights of citizens and subjects of the contracting nations in regard to rights of property by descent or inheritance, when the individuals concerned are aliens.

Of such is Chirac *vs.* Chirac.

But it is very different from the construction of a treaty involving the obligations of nation to nation as does the construction of the treaty of 1778. And it is very different from the construction of a treaty in

which nations make releases to each other of claims between themselves which involve private rights as a mere incident to international negotiation. Such constructions involve issues of international law, which belong solely and exclusively to the great political power of the Government.

Congress may require the subordinate courts of the United States to aid it in the exercise of its political power, but can it devolve such duties upon the Supreme Court of the United States whose jurisdiction is limited to cases of "law and equity arising," etc.? Let gentlemen pause to consider whether these claims are law cases, or political questions belonging solely to the political power of the Government—Congress.

A political question may involve issues of law which we may well submit to courts to aid us in the discharge of our duties in exercising the political power of the Government. That is one thing, but it is a very different thing to cast upon the Supreme Court the exercise of the political power of the Government from which it is excluded by the Constitution and which is vested in Congress solely. Let Congress, the immediate representative of the people, hesitate long and proceed cautiously before it strips itself of one of its highest attributes and vests it in another branch of the Government. This question is graver, is far more important to the future of our country than all the money alleged, even, to be involved in these claims.

Let us see what the Supreme Court itself said on this most important and grave matter.

In the case of Ware, administrator of Jones, *vs.* Hylton, 3 Dallas, this very question arises, and it will add force to the opinion when I state that the defendants in error were represented by John Marshall, esq., of Virginia, afterwards Chief-Justice of the United States. Before the Revolution, Hylton, a Virginian, was indebted to Ware's intestate, a British subject, and during the war paid the amount over to the treasurer of Virginia under the provision of the act of Assembly of that State concerning escheats and forfeitures. The British creditor relied upon the provisions of the fourth article of the treaty of Paris of 3d of September, 1783, "that the creditor of either side would meet with no unlawful impediment to the recovery of the full value in sterling money of all bona fide debts theretofore contracted." The court gave judgment for the British creditor, and in doing so uses this important language, namely:

That Congress had the power to sacrifice the rights and interests of private citizens to secure the safety or prosperity of the public I have no doubt, but the immutable principles of justice, the public faith of the States that confiscated and received British debts pledged to the debtors, and the rights of the debtors violated by the treaty, all combine to prove that ample compensation ought to be made to all the debtors who have been injured by the treaty for the benefit of the public. This principle is recognized by the Constitution, which declares "that private property shall not be taken for public use without just compensation." (See Vattel, Lib. I, c. s., 244.)

Although Virginia is not bound to make compensation to the debtors, yet it is evident that they ought to be indemnified, and it is not to be supposed that those whose duty it may be to make the compensation will permit the rights of our citizens to be sacrificed to a public object without the fullest indemnity.

In 1801 the case of the United States *vs.* Schooner Peggy (2 Cranch, 103) came before the court, and Chief-Justice Marshall delivered the opinion. It was a case growing out of these very spoliations. The United States ship Trumbull was commissioned by the President to seize armed vessels of France "found within the jurisdictional limits of the United States or on the high seas;" and had on April 24, 1800, seized the Peggy, and she had been condemned in the lower court on September 23, 1800. On December 21, 1801, the treaty with France had been ratified, the fourth article whereof provided for the return of all property "not definitely condemned," and on the appeal the judgment below was reversed and the Peggy released. In the opinion the Chief-Justice says:

The Constitution of the United States declares a treaty to be the supreme law of the land. Of consequence its obligation on the courts of the United States must be admitted. It is certainly true that the execution of a contract between nations is to be demanded from, and, in the general, superintended by, the executive of each nation; and, therefore, whatever the decision of this court may be relative to the rights of parties litigating before it, the claim upon the nation, if unsatisfied, may still be asserted. But yet where a treaty is the law of the land, and as such affects the rights of parties litigating in court, that treaty as much binds those rights, and is as much to be regarded by the court as an act of Congress; and although restoration may be an executive, when viewed as a substantive act, independent of, and unconnected with, other circumstances, yet to condemn a vessel, the restoration of which is directed by a law of the land, would be a direct infraction of that law, and, of consequence, improper.

* * * But in great national concerns, where individual rights, acquired by war, are sacrificed for national purposes, the contract making the sacrifice ought always to receive a construction conforming to its manifest import; and if the nation has given up the vested rights of its citizens, it is not for the court, but for the Government to consider whether it be a case proper for compensation.

Now, here is just the distinction to which I ask your attention, namely, in cases of individual or private rights the treaty controls and the court surrenders the private rights of the citizens, but the right of constitutional compensation belongs, not to the court, but to the Government; not to the judiciary, but to the political branch of the Government.

In the face of this language of the Supreme Court will gentlemen argue seriously that Congress can vest jurisdiction of these cases in the Supreme Court without divesting themselves of their power under the Constitution which the Supreme Court itself says belongs to Congress and not to the courts?

Is the Congress of the United States driven to such a strait to avoid the discharge of a simple duty?

We can not shirk our own responsibility by such a device, for we must either discharge our own duty or else divest ourselves of our constitutional prerogative by refusing to act upon a political question pure and simple. The issue is squarely before us and we must either pay these claims or else say that they shall not be paid.

In the case of the Cherokee Nation *vs.* Georgia (5 Peters) a bill filed in the original jurisdiction of the Supreme Court by the Cherokee Nation to restrain the State from violating treaties between that nation and the United States, was argued by Sergeant, and William Wirt (who had long been Attorney-General of the United States) for the complainants; and the opinion was delivered by Chief-Justice Marshall. The court having held that the nation was not a "foreign state," says:

The propriety of such an interposition by the court may well be questioned. It savors too much of the exercise of political power to be within the proper province of the judicial department.

The principle announced in these early cases by Chief-Justice Marshall has been followed and elaborated by that court and by its individual justices on the circuit.

In the Clinton Bridge case (1 Woolworth) one Gray filed a bill complaining that a bridge across the Mississippi River obstructed its navigation, and that the treaty of the United States with France (1803) by which the territory was ceded secured its free navigation. Mr. Justice Miller dismissed the bill, and in the opinion uses the following pointed language:

Questions of this class are international questions, and are to be settled between the foreign nations interested in the treaties and the political department of our Government. When those departments declare a treaty abrogated, annulled, or modified, it is not for the judicial branch of the Government to set it up and assert its continued obligation. If the court could do this, it could annul declarations of war, suspend the levy of armies, and become a great international arbiter, instead of a court of justice for the administration of the laws of the United States.

In the Russian hemp case (2 Curtis) the United States sued an importer for duties on imported hemp, and the defense was that the amount of duty allowed under the treaty had been tendered. Judge Curtis gave judgment for the duties claimed, and held that the defendant's rights under the treaty was a question for Congress, the political branch of the Government.

In the Cherokee tobacco case (11 Wall.) the issue was the right of the United States to collect internal revenue on Indian products in violation of the treaty between the United States and the Cherokee Nation, and the opinion of the Supreme Court holding that the tax was collectable despite the treaty was delivered by Mr. Justice Swayne, in which he says:

The consequence in all such cases gives rise to questions which must be met by the political department of the Government. They are beyond the sphere of judicial cognizance. In the case under consideration, the act of Congress must prevail as if the treaty were not an element to be considered. If a wrong has been done the power of redress is with Congress, not with the judiciary, and that body, upon being applied to, it is to be presumed, will promptly give the proper relief.

In the case of Georgia *vs.* Stanton (6 Wall.) the Supreme Court dismissed the bill, saying that it—

calls for a judgment upon a political question, and will therefore not be entertained.

In Mississippi *vs.* Johnson (4 Wall.) the court says the duties sought to be enjoined are not ministerial, but "executive and political."

An attempt on the part of the judicial department of the Government to enforce the performance of such duties by the President might be justly characterized, in the language of Chief-Justice Marshall, as an absurd and excessive extravagance.

In the head-money cases (112 U. S., 581) the Supreme Court expressly decides as follows:

A treaty is primarily a compact between independent nations, and depends for the enforcement of its provisions on the honor and the interests of the governments which are parties to it. If these fail, its infraction becomes the subject of international reclamation and negotiation, which may lead to war to enforce them. With this judicial courts have nothing to do.

I do not undertake to say that this jurisdiction can not be conferred by Congress, but I have given you the decisions of the Supreme Court itself on that question. What I do undertake to say is this, that the question of paying or not paying these claims is a political question which belongs to Congress; that it is the duty of Congress to decide it, and that Congress can not evade it or delegate it to any other branch of the Government without stultifying itself; and I protest now and forever against this House, as the immediate representative of the people, surrendering its powers for the cowardly purpose of avoiding its own responsibility.

There are other questions in this case. There are questions of good faith with these claimants who have for near four years followed the plan prescribed by Congress, at great expense to themselves. There is injustice in the unnecessary delay. There is no wisdom or justice in wiping out all that has been done since January 20, 1885, and starting over under new provisions in the Court of Claims, in order to meet the requirements necessary to an appeal.

I pass by all of these considerations and stand upon the ground that Congress shall not shift its duties upon others, but must meet its own responsibilities.

French Spoliation Claims.

SPEECH

OF

HON. CHARLES T. O'FERRALL,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 9, 1888,

On the bill (H. R. 10896) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1888, and prior years, and for other purposes.

Mr. O'FERRALL said:

Mr. CHAIRMAN: Ever since I was old enough to take any interest in the legislation of this country I have heard of the French spoliation claimants constantly and persistently seeking the payment of their claims at the hands of our Government—this was more than thirty years ago—and now when I come as a member of this body to examine into the matter I find that from a period back of the birthday of the oldest member on this floor these claimants have been knocking at the doors of Congress and endeavoring year by year to secure that which they assert to be simple justice.

Generation after generation has passed away and these claims have descended from the original owners to their children, from their children to their grandchildren, and in many instances from their grandchildren to their great grandchildren, and yet they are unsettled.

Whose fault has this been? Why this long delay, this long deferment of an adjudication of these claims? It has not been the fault of the claimants for they have for three-quarters of a century nearly been bending their energies and doing all in their power to bring the matter to a close. It has been because this Government in the arrogance of its power has been slamming the door in the faces of these citizens and refusing to pay them or even to recognize that they have rights which have been entitled to respectful consideration. It has used its power most tyranically and cruelly, and now after decades of waiting and years and years of wasted time and large expenditures of money, after these claimants have in good faith submitted their claims to a legal and competent tribunal as directed by an act of Congress, and secured a decision in their favor, for one I propose to give them the benefit of this decision, and I shall not be guilty of a further travesty upon justice by voting to refer their claims to the Supreme Court, where the youngest justice on that bench, if he should live to fill out man's allotted time, will not see the end of them, and the infant claimant of to-day will be gray and hoary before a conclusion of them is reached.

Mr. Chairman, if I understand the history of these claims and the steps taken in their prosecution from the time they originated, more than forty favorable reports have been made by more than forty committees of Congress, and not one unfavorable report; and now we have the decision of the Court of Claims, after a full hearing in which the Government was represented by able counsel, in their favor.

What more could any reasonable man require?

Every imaginable question was presented by the Government in the way of defense, substantial and technical, and yet the court held as follows:

1. That the French depredations upon American commerce were illegal. 2. That the United States, by the treaty of 1800, set off these claims against others maintained by France and released them for a valuable consideration beneficial to the nation. 3. That an appeal from a prize court is not an indispensable prerequisite to diplomatic interference, and amid the circumstances is no defense in these cases. (See Thomas Cushing, administrator, *vs.* The United States, 22 C. Cls. R., 1.)

These depredations upon American commerce are held to have been illegal, and it is further held that the United States Government by treaty acting in her sovereign capacity released the French Government from all liability by reason of them, and in doing so received a *quid pro quo*.

This Government by releasing France of all liability to American citizens and granting this release for a valuable consideration, by all principles of equity and fair dealing became liable for the damages which had resulted to her citizens from the illegal acts of the French Government, and she would be false, not only to the sufferers but to her own fair name and reputation, if she were to refuse to pay every dollar of the damages sustained.

I do not, sir, sympathize with the views of the honorable gentlemen who still insist for further delay and investigation of these claims.

With the opinion of many of the shining lights of this country in the past and present in favor of these claimants, with the reports of more than forty committees of Congress in their favor, and with the decision of the Court of Claims in their favor before me, I do not require the decision of the Supreme Court to enlighten my judgment.

It seems to me, if human investigation can be relied upon at all, the justice of these claims has been established to the satisfaction of the country, and their payment should be no longer delayed.

At every session of Congress we appropriate millions to pay claims against the Government upon reports made by a single committee. As a rule we rely upon the reports of the committee to which they are referred; we rely upon the integrity and judgment of the gentlemen comprising the committee, for rarely, indeed, can any other member spare the time from his allotted work to give them a critical examination.

Now, if we can place so much faith in the integrity and judgment of one committee in regard to other claims, can we not rely with implicit confidence upon the combined integrity and judgment of more than forty committees and the Court of Claims, which as with one voice have declared that these French spoliation claims are just and should be paid by this great Government?

But, Mr. Chairman, I have heard the remark frequently made that these claims are so old and stale they ought to be buried beyond the reach of the hand of the resurrectionist.

Sir, this is a sentiment which finds no place in my breast.

If these claims or any others antedated the existence of this Republic, if they were even older than the Constitution, and by any rule of equity or principle of justice this Government should pay them, I would vote for the payment of every dollar of them, even if they had never been before presented; for lapse of time while it may be pleaded in bar in a court, can never alter the eternal principles of honesty and justice by which a great government in the blaze and effulgency of its glory near the close of the nineteenth century should square its actions.

But if these claims are old and stale, who made them old and stale?

This Government, by holding these claimants off for nearly three-quarters of a century and refusing to settle—refusing arbitrarily—standing like a mailed giant and laughing to scorn these men who, weak and powerless, plead for simple justice, for the fulfillment of obligations and the redemption of implied promises.

But these claims are not stale in a legal sense. The claimants have never slept on their rights nor been guilty of latches, but with a consciousness of their justice they have kept their demands constantly before the Government and the country.

Let me repeat, I shall not be a party to the effort to consign these claims to the graveyard of unfulfilled hopes, to file them away in the pigeon-holes of the Supreme Court and place them at the foot of a docket already so long that it will take years to reach the bottom of it.

In conclusion, Mr. Chairman, let me say that I am proud of my country, proud of its traditions and memories, proud of its grandeur and beauty, proud of its power and material greatness, but I would be prouder of it still if it would at all times, with its overflowing Treasury and daily incoming revenues, square its actions with the precepts of the proverb:

Withhold not good from them to whom it is due, when it is in the power of thy hand to do it.

Chinese Immigration.

SPEECH

OF

HON. OSCAR L. JACKSON,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 20, 1888.

The House having under consideration the bill (S. 3304) to prohibit the coming of Chinese laborers into the United States—

Mr. JACKSON said:

Mr. SPEAKER: The history of Chinese affairs on the Pacific coast during the last few years and the alarming increase of undesirable immigration at all our principal ports satisfies me that there is need of legislation that will forever exclude from entering this country all Chinese persons who either come or are brought here as laborers. I desire to state very briefly the reasons that induce me to support the bill now under consideration.

In former discussions in Congress on this subject, objections were raised to the passage of bills of this character on the ground of want of power of our Government to do so whilst the treaties we had made with the Chinese Government remained in force.

Some of the wisest men in Congress voted against similar legislation for this reason. It is not necessary to stop now and discuss the power of Congress to abrogate a treaty whenever its provisions become pernicious to the nation. The power, I have no doubt, remains with every sovereign nation to abrogate any treaty it has made; but it must be the strongest necessity that will justify it in exercising such power. Every honorable effort should first be made to obtain a release from the obligation. We are, however, saved from the need of considering this question in the present case for the best of reasons. The bill itself contemplates a change in our treaty relations with China, and expressly provides that it shall only take effect after the ratification of a new treaty. That the Chinese Government will agree to a modification of the treaties here-

tofore made between us in regard to its people coming into the United States scarcely admits of a doubt.

As was so clearly and eloquently shown by the gentleman from Mississippi [Mr. HOOKER] in the opening of this discussion, that government in its dealings with us has always shown itself both just and liberal.

It changed what is known as the Burlingame treaty heretofore when we requested it, and the additional changes we desire can most likely be obtained in the same manner.

It is a subject of congratulation that we are able now to perfect legislation to remedy a great evil and still observe in good faith our solemn treaties with that nation.

National honor and national good faith is too sacred an attribute of a people to allow even suspicion to be attached to it. It should be our pride to maintain the highest reputation in this respect.

The question of prohibiting immigration to this country is a new one in our history. For a hundred years we have encouraged foreigners to settle among us, and have passed laws that extended citizenship to them on the most liberal terms. For generations our orators have boasted that this land was a home for the oppressed of all people. These sentiments have been so generally expressed and in such extremely liberal terms, that a proposition to prohibit immigration even of the most objectionable kind seems to some a violation of the spirit of our Declaration of Independence and the Constitution our fathers made. Some even go so far as to argue that all the people of the earth have some kind of inherent right to come and settle in this country if they want to do so. I am fully satisfied that from this time on the question of prohibiting vicious and undesirable immigration to this country will be one of the most important that can come before Congress.

The right of our Government to prohibit undesirable immigration is beyond question, and this right is entirely consistent with every principle contained in the Declaration of Independence, and is fully sustained by constitutional provisions.

It is a general principle of natural and public law that every nation has a right to determine what people of other nations shall be allowed to come and locate within it.

When our fathers sought to declare the independence of this nation they did not declare the right of every person to come and locate here, but they did declare the right of every people being in a particular territory anywhere on the globe to establish for themselves, not for other people, a government of their own.

They asserted the right of every people to determine for themselves the form and character of their government, and of course, that includes the question of receiving other people among them.

When they formed a Constitution for themselves and their posterity they gave Congress a right to prescribe a uniform rule of naturalization, and to determine the terms and conditions upon which foreigners might come among us and become citizens of the United States. From the earliest legislation by Congress on this subject we learn that naturalization was limited to certain classes, and on certain conditions. At no time has our law permitted a Chinaman to be naturalized at all, and before a citizen of any country could be naturalized he was required to reside here a certain length of time, to take a prescribed oath, and that he should be proved to be friendly to the institutions and the polity of the Government of the United States. So long as we have a Government it must reserve to itself the right to determine these questions. No nation could long exist without it. It is necessary to its self-preservation, and all nations of the earth have claimed this right.

The general policy of our Government has always been to encourage immigration of all persons who would come here and make good citizens, and whose children would so unite with our people as to make a homogeneous nation. This bill does not propose to change that policy, and there is, perhaps, no need as yet to change it if it is only strictly observed that the immigrant is of a desirable kind. But there is a great change in these latter years in the character of immigrants who are coming to this country. We are met now with the fact that the European governments are sending to the United States their paupers and criminals; that vast numbers are shipped here at the expense of these governments who neither desire to come nor are able to come of themselves; and that laborers are brought here under contract to displace our own citizens. To prevent such classes from coming here requires prompt and strict legislation of a prohibitory character, and all right-thinking men are agreed on this point.

It is the intention of the bill under consideration to prohibit all Chinese persons from coming into the United States except teachers, students, officials, merchants, and travelers for pleasure or curiosity. This will keep out all Chinese laborers, which is in fact the principal purpose of the bill. Is there good reason for this prohibition? I think there is, and that an examination of the facts will satisfy any candid man that Chinese immigration is a great and threatening danger to our country. Fortunately, only the Pacific Slope of the United States has yet felt with any severity this evil. But the danger threatens to sweep over the whole land. The advance guard of Chinese has already reached every large town and village. They are

> The first low wash of waves,
> The presage of the incoming sea.

The people of the Eastern States have but little idea of the terrible condition of affairs where these foreigners have come in large numbers.

I will not attempt to give any general description of Chinese settlement on the Pacific coast. My time will not permit, and if I had the time I do not feel at all competent to do the subject justice.

I will conclude my remarks with stating in a very brief manner some of the reasons why the Chinese are not desirable and why I think they should be prohibited from coming here.

They are an entirely different race of people from those who have settled the United States. They will not and can not assimilate with our people so as to form, in time, a homogeneous nation. They do not desire to become naturalized. Unlike other immigrants they come without wives or children, make no effort to acquire homes, herd in vast numbers in filthy tenement houses, gather all the money they can and send it to China; and all expect eventually to return there.

They are a heathen race and bring with them and retain their idolatrous practices. It is impossible to administer justice in our courts, when they are concerned either as parties or witness. It is the universal testimony that they have not the slightest regard for the sanctity of an oath and that they deliberately plan and contract to commit perjury wherever they have the slightest interest. That they maintain in their communities pagan customs, rules, and laws which they regard as binding upon them, and that crime in pursuance of these laws is of common occurrence.

They seek to establish impurities and criminalities of a nature so depraved and disgusting that I can not mention them, adding to them all the crimes known to our calendar.

To enable them to evade law, defeat justice, destroy innocence, establish prostitution, and defy the execution of all law, perjury, hypocrisy, and fraud are in constant use. Nor are these things committed and done by a small criminal class. On the contrary, it is the common, usual practice of the entire community of Chinese wherever they have come in any considerable numbers.

There is the most conclusive proof that for years the Chinese in California have carried on between the Pacific coast and China a slave trade in Chinese women for immoral purposes more revolting and disgusting than ever was that of the African slave traffic—done by a regular system of written contracts and guaranties enforced by heathen customs and penalties extending even to murder.

CHEAP LABOR.

But it is from the cheap, servile labor of the Chinese that the greatest injury is likely to be inflicted on our people. They come in competition with labor of all kinds, and are willing to work for less than an American can possibly take and make a living. They are an industrious race; docile, teachable, slow of invention, but quick to imitate other workmen. For many generations, in the densely-populated country of China, they have been taught the greatest cunning and endurance in a struggle against poverty. Accustomed to the smallest pittance of wages, they have learned to live on an amount so small that it is beyond the comprehension of an American how they subsist at all.

They have lived in this condition for many centuries, with scarcely a particle of change. The Chinese Empire has existed in much its present condition at least since the time of the building of the pyramids and the giving of the law on the tables of stone.

It is part of their religion to worship their ancestors, and they neither seek nor desire a change. Wherever they come in large numbers they drive American workmen out of employment.

They can work for lower wages, for they have neither wife nor children to support. They contribute nothing to the support of churches, schools, or charitable institutions. Forty or fifty can live in a house not larger than one necessary for an American family and subsist contentedly on food and in conditions that would render the life of an American laborer simply unendurable. Nothing is better settled than the fact that low, cheap labor will always drive the better class of workmen out of competition.

In slavery times the poor whites of the South would not work in the fields or at any kind of labor in which slaves were engaged, because they considered it degrading. At the same time in the North intelligent, thrifty men worked at all kinds of manual labor and considered it honorable.

In California to-day the Chinaman has so monopolized many kinds of labor that an American can scarcely be found engaged in them. No matter how low the American offers to work, the Chinaman will work just a little lower. He is shrewd and cunning, and keeps his wages only enough lower to get the job.

The American laborer is to-day rightly alarmed at the offer of free-traders to place him in direct competition with the products of the cheap and poorly-paid labor of Europe. Free trade will undoubtedly reduce the price of wages in this country, but the introduction of the servile labor of China into this country will effect a more permanent and serious injury.

It is impossible to overestimate the injury to our people and to our domestic institutions that must follow the introduction of millions of the cheaply fed and cheaply paid servile races of Asia.

But some one asks, "Are Americans unable to compete with these foreigners?" They certainly are except under the same conditions; and I insist that American laborers shall never be forced to accept the condition

of living the Chinaman takes. When Chinamen are found pressing for employment at all our mills, factories, shops, and mines, when they are ready to work in all our hotels, kitchens, laundries, and on every farm, then will Americans be driven out of these employments or else be forced to accept as low wages as the Chinamen. This is a competition that capitalists and owners might possibly endure, but to the great mass of our people, who are laborers and producers, it is a calamity fearful to contemplate.

It is estimated that China has a population of 450,000,000 from which immigrants can be drawn. The past history of the race shows that at different times they have overrun other nations simply by force of numbers. It is apparent that they have a determination to come here. Whilst their number here is not yet great, there is good reason to believe that if permitted they will soon come in vast numbers. It is said that the Chinese now in our country, estimated at 300,000, come from a single province in China not larger than the State of New Hampshire. The facilities for their travel have increased, and in the same proportion the danger of their coming in vast numbers has also increased.

The people of California, who have felt the effect of this immigration, are practically unanimous in their opposition to it. The colonies of Great Britain, which have had experience of the same kind, have passed laws to further prevent their coming among them. Those who are most familiar with the Chinese character are most opposed to having them come to our country.

Much good may come from the passage of this bill, and I cheerfully support it. But I have no doubt that further legislation will be required, and I would, so far as possible, direct the attention of Congress and the American people to the subject.

Much of this immigration comes from the port of Hong Kong under British control, and at least a considerable part of it is first landed on the British possessions north of us, from whence it finds its way into the United States.

Our Government should make an effort by treaty to secure the aid of the British Government in suppressing it. The importance of this whole subject can not be overestimated. The dangers threatening the people of the United States from Chinese immigration are, I firmly believe, both great and imminent.

The French Spoliation Claims.

SPEECH

OF

HON. SETH L. MILLIKEN,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 9, 1888,

On the bill (H. R. 10896) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1888, and for prior years, and for other purposes.

Mr. MILLIKEN said:

Mr. CHAIRMAN: It is not my purpose to enter into an elaborate discussion of all the circumstances and conditions surrounding the origin of the French spoliation claims, partly because the time allotted to me would not admit of it, but chiefly because I see no utility and never take comfort in thrashing over old straw.

The gentleman from Illinois [Mr. TOWNSHEND] was very near the truth, if not directly upon it, when he said on Saturday last that these claims had been before the country for nearly a hundred years, and that everything had been said about them that could be said.

Certainly the most painstaking and exhaustive research has been made in procuring evidence to establish their real merits. It has been made by the ablest lawyers and wisest as well as the most distinguished statesmen, distinguished alike for their disinterested integrity and great ability, during nearly three generations of men, and I am sure it would be exceedingly difficult, if not quite impossible, to-day to produce any historical fact, statement, or argument bearing upon the subject which could correctly be called new and valuable.

Charles Sumner in his great report to the United States Senate in 1864, in which he seems to have gone to the bottom of every branch of the subject, bringing to the aid of his investigation, and under the power of his masterly analysis, every source of information obtainable, having examined every treaty stipulation and all the contemporary and subsequent understandings between our Government and France, as well as the opinions of the leading statesmen of both countries relative to these claims, gives the weight of his decidedly and earnestly expressed judgment in favor of their payment.

At that time forty-one reports had been made upon them to Congress, all of which, with the exception of three, had been favorable, and these three were made before the communication of evidence upon the subject of a decisive character.

Since the communication of this evidence there has been an unbroken line of favorable reports, numbering nearly fifty, made upon these claims. They bear the signatures of many of the most illustrious citizens of the Republic.

Edward Livingston, Edward Everett, John Holmes, Daniel Webster, Caleb Cushing, John M. Clayton, and Rufus Choate are among the distinguished names which we find appended to these reports. The findings of facts and the arguments and conclusions of these committees, as well as the reasons presented by their signers and many others in their speeches, both in the Senate and House, extending from 1802 to the present time, for the payment of these claims, have never been successfully controverted.

Such payment has been asked for by thirteen States in the resolutions of their Legislatures presented to Congress, and the same has been prayed for in petitions which may be counted by thousands.

On two occasions bills for the payment of these claims for damages by the spoliation of the commerce of our ancestors by France have passed both Houses of Congress. In the Forty-eighth Congress a bill was introduced and reported from the Committee on Foreign Affairs to this House, providing that these claims should be sent to the Court of Claims that the court might "examine and determine their validity and the amount due to each individual claimant."

This bill was most strenuously fought in this House. Gentlemen who to-day talk so glibly and with so much apparent earnestness about a final ascertainment of the merits of these claims by the highest judicial tribunal in the land, left no stone unturned in their efforts to prevent their validity being examined and the amounts due being ascertained at all.

They would refuse to those who had been petitioning the Government for ninety years for justice at its hands an opportunity to go into court and there have settled the question whether they had any valid claims, and if they had, then to determine the amount due. Their efforts then were to turn these claimants away from the doors of the Government without a hearing.

Have gentlemen forgotten their arguments upon the occasion referred to, as well as how, by every means known to parliamentary tactics, a reference to the Court of Claims was sought to be prevented?

They said these claims were stale; that they were a hundred years old, and that therefore they should not be considered; and when I asked if that were a good reason for refusing payment of claims, provided they were just and due the claimants, if, in other words, this great nation of sixty millions of people, with all its vast wealth and a Treasury overflowing with a surplus of money, could afford to plead the statute of limitations against payment of honest demands against it, the answer came that the Government often did plead the statute of limitations; thus clearly showing that they were indifferent to the means they employed to defeat the bill, if only that object could be accomplished.

But it was not accomplished. It was not the bill, but the gentlemen who opposed it who were defeated. The bill passed the House by a decided majority. It passed the Senate readily, was signed by the President, and became a law, and these claimants, who had been standing for ninety years at the threshold of the Government petitioning for redress of their grievances, find not in Congress the deaf ear that gentleman would have had turned to them, but an opportunity to go to the Court of Claims and there have their rights determined by a tribunal which the Government had constituted for that and kindred purposes.

These cases were entered in the Court of Claims. They were presented on their merits to the court, many of them. The Government was present to defend in the person of its attorney, who opposed their allowance not only with earnestness and ability, but with a fertility of expedients if not with an intensity of feeling which savors of the vindictiveness with which they have been opposed in this House. Notwithstanding this the Court of Claims, a tribunal of the Government's own appointment, has been forced, after the fullest hearing and most thorough investigation it could give to the subject, to render judgment so far as its jurisdiction extended over them, for the payment of the claims.

Then the claims which the Court of Claims had adjudicated were returned to the House for payment. Again gentlemen commenced the old fight. It was for delay. Yes, for a long, very long delay. They desired to refer them to the Committee on Appropriations, known to be opposed to their payment. They knew that was to bury them too deep to ever hear the trumpet-call of resurrection.

We have excellent authority for believing that man has died and been resurrected the third day afterwards. And in a shorter or longer period after death, it is the belief of Christendom, that all will hear the call of Gabriel's trumpet and arise to be adjudged good or bad. But there is no prediction and experience does not teach that for anything sent to the Committee on Appropriations to which that committee is unfavorable there is any resurrection in this world or the world to come.

The sound of Gabriel's trumpet has never been loud enough to reach down to the depths where the Committee on Appropriations hung the things which they do not want to come to light in the halls of Congress.

In this unapproachable tomb, from which nothing either of body or spirit was ever known to escape, the gentlemen who now oppose us at-

tempted to place these claims. But they were again defeated in their purpose.

The claims of many of the claimants appear here on the deficiency bill, where the House directed them to be reported, with the indorsement of the Court of Claims, that the House may make an appropriation for their payment.

And what do we meet? Something very extraordinary at least; something which evidences certainly the persistent vindictive spirit with which these claims are opposed; something showing that members of the Appropriations Committee meant to get in their work against this bill by hook or crook, by fair means or foul, and if possible invest their individual opinions with the weight and authority of a committee report.

What was the duty assigned to this committee by the House relative to these claims? It was to insert them in the deficiency bill for the consideration of the House as to their payment as they insert any other item in that bill. They and their friends, as I have shown, tried with all the strength they had in the House to get these claims referred to them and failed. The House refused this disposition of them by a decided majority.

But nothing can daunt these gentlemen; modesty and a decent sense of propriety are words unknown to their vocabulary. Notwithstanding the House by a large majority refused to give them any discretion or authority, but simply directed them to place these items in the deficiency bill, they attach to that bill a long presentation of their views, and endeavor to clothe them with the dignified habiliments of a committee report, as if the subject had been referred to them by the House—a report, if it may be so called, full of ignorance of history, perversion of fact, disingenuous statements, false reasoning, and unwarranted conclusions.

Yes, defeated in the House in their attempt to prevent any hearing at all of these claims, defeated in the Government's own court in their efforts to combat them on their merits, defeated again in the House in their exertions to bury them in the bottomless tomb of a committee, they bob up serenely with a change of base and an assumption of solemnity that is altogether too thin to veil their purpose and pretense of patriotism that they never felt. They seriously proclaim that a subject of so great importance should be sent to the Supreme Court of the United States for final decision. Their decision, they say, they think all the people will bow to and be satisfied.

Why did they not think of this when in the Forty-eighth Congress they had the option to go to the Supreme Court and take a final decision, or go to the Court of Claims as we did do and get the adjudication of that court with the revisory power of Congress reserved?

Gentlemen opposing these claimants, gentlemen who were in that Congress, know they had that option, though I believe it is not of record. Gentlemen did not desire reference to the Supreme Court then. They did not dare to trust the court then to give a final decision. They preferred an adjudication by another court with a reversive power by Congress. They have the opinion of that court. It is that the Government is holden to the claimants, in justice and equity at least, and that it should pay these claims.

Now they repudiate their own chosen tribunal and want reference to the Supreme Court which in the Forty-eighth Congress they turned their backs upon.

And why do they now move to go to the Supreme Court? First, it is their last chance to defeat those claimants. Secondly, it is not so bad a last chance as it would seem to be, though the claimants are confident that it would sustain their claims. But time is an element to be calculated in measuring the chances of success or failure in all human affairs.

The court has now three or four years' business ahead of it. It would be half a decade before judgment could be obtained on the first of these cases, and if it can be correctly said that three generations have come and gone since the indebtedness of the Government to the French spoliation claimants accrued, it may be safely predicted that as many more generations of men will appear upon the face of the earth and leave it ere all these claimants are paid their just dues from the Government by the method now proposed by gentlemen who continue their uncompromising opposition to them.

What do these views of gentlemen so extraordinarily attracted to this bill show? They exhibit no fertility either of information or argument on the part of those who have subscribed to them. They present the same old, unsubstantiated statements and fallacious reasoning that have appeared and have been conclusively answered and overthrown time and again all along the line of the present century.

They present nothing new. They are the reiterations of gentlemen whose persistent efforts to defeat these claimants have known no bounds and no scruples.

But suppose it were possible to get an early decision in favor of these claimants by the Supreme Court, and it should be done, what would be the next means to be resorted to by these gentlemen to defeat these claims? Of course they would resort to something. They would have some excuse, and it would be a wonder if they should not find some means of delay. For nobody supposes they would accept the decision of the Supreme Court as binding unless it should decide in their favor.

The evidence is indisputable that during the great wars of France against all Europe, when an English fleet was attempting to blockade and starve that great nation, the French cruisers committed depredations upon our commerce and the French Government recognized this fact, apologized for it, and promised to make reparation. Our merchants were alarmed by these depredations and hesitated to expose their ships and cargoes to the dangers which threatened them. Our Government fearing its commerce would he frightened from the sea by these new perils, reassured them by promising to protect their property and obtain redress from France.

Thus the Government invited them to accept the hazards to which they were exposed. They accordingly did accept them, and when they had been despoiled our plenipotentiaries made claims against France for their reimbursement. They were ordered not to renounce them in any of their negotiations, but to press them and insist on their payment.

These claims were partially, at least, recognized by Talleyrand, who at the same time presented counter-claims in offset, and the matter went so far that the American Government, by an act of Congress, suspended all commercial intercourse with France until French depredations upon our commerce be disavowed by the French Government.

Now, what were the counter-claims of France against us? They were not without foundation.

France had guarantied to us "liberty, sovereignty, and independence." That guaranty she kept. She did it with great sums of money from her treasury and the blood of many of her bravest soldiers. The war consequent upon the performance of her pledges to us cost her $280,000,000, and the cost to her in blood was even greater.

On our part we guarantied, among other things, her continuance in her French possessions in America. That guaranty we did not keep. An adjustment was made between the two nations, and in that adjustment our Government gave up the claims of our citizens against France for the spoliation of their property as an offset against the claims which France made against us for a failure to make good our guaranties.

Thus our Government used the private property of its citizens to buy itself out of an embarrassing position, to free itself from obligations which it could not probably have met, or if it had met them it must have been at a cost vastly greater than the amount of all these claims.

The proposition made by France in the course of negotiations between the two nations was that "the indemnities which shall be due by France to the citizens of the United States shall be paid by the United States," and this proposition was unquestionably accepted by our Government as one of the conditions of settlement. Yet our Government, though having got its consideration for these claims in being discharged from her obligations to France, has never paid these claims to those of her citizens to whom they were due, but holds that which belongs to them, and has held it in her Treasury for ninety years.

STATE OF WAR A RIDICULOUS ASSERTION.

The rights of the French spoliation claimants were fully recognized by our Government in the demands she made upon Spain for payment of damages for French captures and confiscation of the vessels and cargoes of her citizens in Spanish waters. These demands were met by Spain in every case, and the individual owners of the property received payment for it. I know personally of one instance; it was payment for vessel and cargo made to my grandfather, John Milliken.

Now, if Spain could be holden in justice or equity for allowing French captures and confiscations of our merchantmen in her waters, how much stronger the case against France, who made the captures, confiscated the property and converted it to her own use.

In the case of Spain our Government exacted payment, received it, and paid it over to the individuals whose property had been captured.

In the case of France our Government pressed the claims of its citizens and received payment by offsetting them against claims which France urged against it for violation of its guaranties to her.

Our Government has received all the benefits accruing to it from thus utilizing these claims in its negotiations, but she has paid nothing of them to those whose property was captured. She retains the consideration received from the use of her citizens' property. She has retained and enjoyed it for nearly ninety years.

The claimants have never ceased petitioning for their rights of which their Government has so long deprived them. At last a court, the Government's own court, appointed by its executive, has decided these claims to be due, and in certain cases has estimated the amounts.

Gentlemen in this House who have persistently opposed the adjustment of these claims at every step now contend for further delay. Is it not time that the claimants should receive that justice which has been so long denied them? Is it not time we should wash out a stain that has marred the nation's honor since the dawn of the present century?

Gentlemen set up the plea, I know, that France would not have paid the French spoliation claims to the individuals whose property they captured and confiscated if our Government had not utilized them in the course of her negotiations and for a consideration to herself relieved France from its obligation to pay them, and therefore she should not be holden for them now.

Well, that is altogether problematical. If what has been had not been, no one certainly can tell what would have been.

But even if this statement were substantiated by any evidence of its truth, I certainly never heard that the receiver of stolen goods should be relieved from liability to make restitution to the owner on the plea that

if he had not received them from the thief the latter might have put them beyond the owner's reach, and I do not think that argument worthy of consideration by this House upon the question which is before it.

The Tariff—Wool and Woolen Goods.

I should seriously object to the repeal of the duty on wool. To repeal that would work great injustice to many interests and would seriously discourage what we should earnestly encourage, namely, the sheep culture among farmers throughout the Union. To break down wool-growing and be dependent on foreign countries for the blanket under which we sleep and the coat that covers our backs is not a wise policy for the National Government to enforce.—*James G. Blaine.*

The ability to make its own woolen clothing lies at the basis of a nation's industrial independence.—*Professor Denslow.*

SPEECH

OF

HON. WILLIAM W. MORROW,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 16, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. MORROW said:

Mr. CHAIRMAN: The annual wool product of the world is about 2,000,000,000 pounds. To this sum total the United States has, under favorable conditions, contributed a little more than 300,000,000 pounds, or a little less than one-sixth of the entire product. This domestic product, which has now grown to be an important factor in the world's market, does not, however, fully supply the home demand. In other words, the wool product of this country does not in fact go into the world's market to any great extent as an article of export, but is consumed at home.

It affects the foreign market, however, in withdrawing us from that market to the extent of the domestic supply. The annual consumption of wool in the United States has been estimated as high as 600,000,000 pounds, but I doubt if it much exceeds 500,000,000. The high estimate would indicate that the consumption exceeds our home production 250,000,000 or 300,000,000 pounds. This deficiency, whatever it may be, is supplied by importations of raw wool from other wool-growing sections, and manufactured woolen goods from the manufacturing districts of Europe. These importations last year amounted to nearly 115,000,000 pounds of raw wool and an estimated importation of nearly 133,000,000 pounds in manufactured woolen goods, making a total of about 248,000,000 pounds imported and used in this country.

IMPORTATIONS OF RAW WOOL.

The importations of raw wool for the year 1887 were as follows:

Raw wool imported for immediate consumption and withdrawn from warehouse for consumption for the year ending June 30, 1887.

Quality.	Class.	Quantity, pounds.	Value.	Duty.	Average specific duty per pound.	Average equivalent ad valorem duty.	Average cost per pound.
					Cents.	*Cents.*	*Cents.*
Clothing wool	1	23,195,734.30	$4,339,497.97	$2,395,536.78	10.3	55.20	18.7

Average ad valorem duty on all imported raw wool	do	36.08

WOOL IN IMPORTED MANUFACTURED GOODS.

The statistics kept at the Treasury Department do not show the pounds of wool contained in imported woolen goods, but George William Bond, of Boston, who appears to be accepted as authority on the subject, determines the quantity of wool contained in imported woolen goods by assuming that every dollar of cost of goods represents 3 pounds of wool. This method of estimating quantity would give us an aggregate of 132,705,730 pounds on the value of the total importations, amounting to $44,235,243.64 for the year 1887.

HOME PRODUCTION.

The Department of Agriculture reports that the wool production in the United States last year amounted to 269,000,000 pounds.

AMOUNT OF WOOL USED IN THE UNITED STATES.

The wool account of the United States for the year 1887 therefore stands as follows:

			Pounds.
Wool production in the United States (estimated by the Department of Agriculture)			269,000,000.00
Raw wool imported			114,404,173.70
Total raw wool			383,404,173.70
	Pounds.		
Domestic raw wool exported	257,940.00		
Foreign raw wool exported	6,728,292.00		
Total raw wool exported			6,986,232.00
Retained for home manufacture			376,417,941.70
Imported in manufactured goods		132,705,730.00	
Wool in domestic manufactured goods exported	1,618,026.00		
Wool in foreign manufactured goods exported	823,305.00		
Total wool in manufactured goods exported		2,441,331.00	
Imported in manufactured goods less domestic and foreign woolen goods exported			130,264,399.00
Total home consumption of wool			506,682,340.70

CARPET WOOLS.

It will be observed by examining the table showing the importations of raw wool that more than two-thirds of the imported raw wool of last year was of the lowest grade, costing on an average only 12 cents per pound in the foreign market and paying an average specific duty of only 3.1 cents per pound. It is a fact, however, that a considerable part of this low grade of wool was really of a higher grade, and our home market has suffered by the importation of certain grades of clothing and combing wools which under proper classification should not have been admitted into the country under the lower rate of duty as carpet wools.

In an article on the "Development of wool manufactures in the United States," written by Mr. Bond and published in the recent special report of the Bureau of Statistics on "Wool and Manufactures of Wool," Mr. Bond says:

I regret to add that recently there have been repeated attempts to enter wools under the third that should have paid duty as first or second class. I notice large quantities of wool imported as third class from Turkey in Europe, whence a very small percentage of wools of this class comes. Our advices from Liverpool have continually reported large quantities of noils from English wools shipped to this country which, from the prices at which they have been sold, it is to be feared have been entered as third class.

The term "noils" is applied to the short fibers, knots, broker fleeces, and tangled fibers combed from wool, usually scoured. They are carded and mixed with longer fibers for clothing purposes.

Mr. Bond estimates that about 8,800,000 pounds of the higher grades of wools were imported last year as carpet wools and used in the manufacture of clothing. This statement, indorsed by the Administration by its publication in an official report, is sufficiently startling to call for an investigation and the institution of proceedings that would put a stop to such frauds upon the revenue, but unfortunately the Administration is not disposed to enforce with much vigor the protective features of our present revenue laws, and the fraud of evading duties goes on in every direction. Indeed, I am informed by reliable authority that Mr. Bond's estimate of the extent of the evasion of the duty on raw wool last near is too low, and that the amount of higher grade wools imported as carpet wools and used for clothing purposes was nearly 20,000,000 pounds. Bear in mind that these carpet wools are graded at the custom-house as belonging to the lowest class, and the greater part of them pay a duty of only 2½ cents per pound.

Now what is the effect of this failure to properly classify imported wools at the custom-house? The domestic wool-grower under the impression that his higher grade of wool in its natural condition is protected by a tariff duty of 10 or 12 cents per pound is really in competition with a large importation of foreign wool that has passed through the custom-house at 2½ or 5 cents per pound.

Here is a difference of 7 or 7½ cents per pound in favor of the foreign importer. In this condition of an unfair competition the wool-grower discredits the value of a protection he does not get under the present system of administering the law; and when he complains, as he does, he is advised by the free-trader to seek the markets of the world as a remedy for his misfortunes.

HOME MARKET.

What the wool-grower really wants and what he should have is his own home market. If he could have this market under the protection contemplated by the statute, he would be justified in a development of this important industry that would at least meet the demand for home consumption, and that too without any increase of the price of wool to the consumer. If the law were properly construed and enforced, the present margin of profit obtained by the foreign importer in the low grading of imported wool would go in part to the domestic wool-grower. This encouragement would stimulate production, and an increase of production would result in the consumer getting the benefit of a legitimate and active competition in a prosperous home industry, and he would also get the remainder of the profit now obtained by the foreign importer. The wool-grower is suffering now from the effect of a free-trade administration of the law, where every point in controversy concerning the

tariff rate on different grades of wool is construed in favor of the foreign importer and against the policy of protection to the domestic producer.

CLASSIFICATION OF MANUFACTURED WOOLEN GOODS.

If we turn now to the importation of wool in manufactured goods we again find the importer favored in a method of classification of several articles, particularly in the classification of worsted goods, waste, and wool-tops, that destroys the value of the protection which the law intended for the benefit of the manufacturer.

The following carefully prepared table, showing the importations of woolen goods for the year ending June 30, 1887, will prove exceedingly interesting to any one desiring information as to the classification, quantity, and value of imported woolen goods for that period:

Woolen goods imported for immediate consumption and withdrawn from warehouse for consumption for the year ending June 30, 1887.

Total duty paid..... 29,729,717.50
Ad valorem duty, 67.21 per cent.

PROTECTION DESTROYED.

The foregoing table discloses several important facts; among others, the extent to which the rulings of the Treasury Department have been taken advantage of in the importation of worsted cloths. It is admitted by everybody familiar with the trade that woolen cloths and worsted cloths are substantially the same goods and should be subject to the same rate of duty; but under the rulings of the Secretary of the Treasury worsted goods are so classified for revenue purposes that the rate of duty ranges from 10 to 35 cents per pound and 35 to 40 per cent. ad valorem, while woolen cloths are all subject to a duty of 35 cents per pound and 35 to 40 per cent. ad valorem. It is officially stated that in many cases the duty on the wool used in making the imported worsted cloth, if imported in an unmanufactured condition, would exceed the duty imposed on the finished article.

Manifestly there is a great injustice here, not only to the manufacturer, but to the wool-grower, and is another instance where the value of the protection intended by the law is virtually destroyed. It must be

remembered, furthermore, that the importations of woolen and worsted cloths are the largest items in weight and value in the whole list of importations of woolen goods. The weight of all imported woolen goods last year, excluding carpets, mats, rugs, screens, bunting, and women's and children's dress goods weighing less than 4 ounces per square yard, was 30,869,035 pounds, and the foreign cost or value was $28,582,595.47. The weight of the woolen and worsted cloths alone amounted to 15,798,776 pounds, and were valued at $15,176,575.10, or more than one-half the weight and value of all the woolen goods imported, with the exceptions mentioned. These woolen and worsted cloths are therefore important factors in the tariff schedule, and if the principle of protection is destroyed here the whole wool growing and manufacturing industry must suffer. Now, what is the situation. The effect of the rulings of the Treasury Department in favor of the lower rate of duty for worsted cloths will be seen by the following statement of the importations of these goods for last year:

	Weight.	Values.	Duties.
	Pounds.		
Woolen cloths	8,807,263.42	$10,022,370.67	$7,055,824.94
Worsted cloths	6,991,512.25	5,154,204.43	3,557,298.10
Total	15,798,775.67	15,176,575.10	10,613,123.04

It appears that while the importations of worsted cloths amounted to 44 per cent. in weight of the total importations of worsted and woolen cloths together, the duties collected at the custom-house on worsted cloths amounted to only 33 per cent. of the whole sum collected on these two articles. This loss of percentage does not, however, give any correct information as to the loss of duties sustained by the method of classification now in force, since the element of value must be taken into consideration. Perhaps as fair an estimate as any would be to use the rate of duties on woolen cloths in calculating the duties on the worsted cloths, as follows:

Worsted cloths:	
Valued at not above 80 cents per pound:	
5,648,255.45 pounds, at 35 cents per pound	$1,976,889.40
Valuation, $3,684,542.70, at 35 per cent. ad valorem	1,288,589.94
Valued at above 80 cents per pound:	
1,343,256.80 pounds, at 35 cents per pound	470,139.88
Valuation, $1,469,661.73, at 40 per cent. ad valorem	587,864.69
Total duties under woolen cloth rate	4,323,483.91
Deduct duties collected	3,557,298.10
Loss in protective duties	766,185.81

The difference between the amount of duties collected on worsted cloths and the amount that should have been collected is a loss to protection, because if the law had been enforeed in harmony with its general purpose our own wool-growers and manufacturers would have supplied a large part of the nearly 7,000,000 pounds of worsted goods imported from abroad last year. It was the advantage the importer obtained in a classification of these goods at a low rate of duty that enabled him to capture our market to the extent indicated.

RAGS, WASTE, ETC.

The next largest quantity of woolen material imported in the year 1887 was under the designation of rags, shoddy, mungo, waste, and flocks. The importations under this paragraph of the tariff schedule reached the enormous quantity of 4,902,381 pounds, and the average invoice cost or value is given at 38 cents per pound, amounting to $1,855,618. All this wool material came in under a uniform tariff rate of 10 cents per pound.

Now mark the evasion of the law that has been practiced at this point. The present law imposes a duty of 12 cents per pound on raw wool valued over 30 cents per pound, and yet under the classification of rags, waste, etc., wool in a condition advanced beyond raw wool and costing on an average 38 cents per pound is admitted at the rate of 10 cents per pound. But this is not all. The law classifies raw wool for revenue purposes on the basis that 1 pound of scoured wool, through the process of cleaning and in consequence of the shrinkage resulting therefrom, represents 3 pounds of wool in its natural state; hence we find that 1 pound of scoured wool costing 30 cents or less per pound in the foreign market is subject to a duty of 30 cents, or three times the duty on raw wool, and if costing over 30 cents per pound the duty is 36 cents per pound.

Now, it is an established fact that much of the imported "waste" is not refuse waste at all, but an article prepared expressly for shipment to this country. It is really scoured wool, and as such should pay a duty of 30 or 36 cents per pound. The duty of 10 cents per pound imposed on an article rating as the equivalent of scoured wool for manufacturing purposes is a fraud upon the revenue and destroys the protection to the wool-grower, since such a duty is only the equivalent of 3⅓ or 4 cents per pound on raw combing or clothing wool. I repeat what I said before, what the wool-grower wants is his own home market protected against all fraudulent devices in the importation of foreign wool.

WOOL TOPS.

In the process of manufacturing raw wool into certain grades of worsted goods an intermediate result is the production of an article of manufacture known as "wool-tops." Mr. Whitman, president of the National Association of Wool Manufacturers, describes "wool-tops" as follows:

> They are composed of the longer fibers of the wool. These fibers are by the process of manufacture separated from the short fibers and other refuse known as "noils," and are arranged by combing parallel to each other and slightly twisted. In their manufacture it is necessary to employ very costly and complicated machinery.
>
> * * * * * * *
>
> In the manufacture of the article of wool tops in this country many millions of dollars are invested. The buildings and machinery employed for this purpose in one mill alone cost over $500,000, and the annual pay-roll of said mill in 1881 to operatives employed in this industry amounted to over $100,000. The tops can no longer, therefore, be said to be the "wools" of either class specified in the tariff acts. They are in a state, by the manipulation before described, beyond what are termed wools. By these manipulations and the shrinkage thereby produced, a great value per pound has been added to them, and they have been wrought into an article recognized in commerce and trade as different in appearance, quality, character, and value from wools.

This article thus described is, however, not classified as a manufacture of wool, and we do not find it reported in the table of imported worsted or woolen goods, but we find it classified as scoured wool, and as such is imported in large quantities and reported as raw wool. Here, again, the wool-grower and wool-manufacturer are made to suffer in an unfair competition with the cheap labor of foreign lands and the cunning of the foreign importer.

The tariff should be so revised as to correct the evils I have mentioned and afford reasonable protection to our home industries. The present bill placing wool on the free-list proposes to destroy all protection to the wool-grower. This is the first step in the direction of general free trade. The next step will be to remove the tariff from all manufactures of woolen goods.

THE CONFERENCE SCHEDULE.

A conference of the representatives of the wool-growers, wool-dealers, and wool-manufacturers of the United States was held in this city, commencing on the 11th of January last, for the purpose of considering the wool-tariff question. This body, after full consideration, recommended the enactment of a schedule of duties on wool and manufactures of wool which substantially adopts the act of March 2, 1867, with amendments that would prevent the frauds I have pointed out and would equalize and balance the rates of duty on the various articles mentioned in the schedule.

Among other things, it provides that worsted cloths shall be subject to the same duty as woolen cloths. Noils are made subject to the same rate of duty as washed wools. The duty on all kinds of waste, except refuse waste, is equalized with wool at 30 cents per pound, and wool tops are made subject to duty as manufactures of wool.

I will insert in the RECORD at the end of these remarks a comparative statement of the rates of duty on wools and manufactures of wool under the acts approved March 2, 1867, June 6, 1872, March 3, 1875, and March 3, 1883, the so-called Mills bill now under consideration, and the schedule agreed on by the conference of wool-growers, wool-dealers, and wool-manufacturers. I commend this statement to the careful consideration of those who would study the effect of proposed legislation on the wool industry of this country. The conference schedule was before the Committee on Ways and Means when this bill was being prepared, having been introduced and referred to that committee by the gentleman from Ohio [Mr. MCKINLEY]. Its measure of protection was ignored, and in place of it we have a bill that would strike down the most important industry in the country.

DIAGRAMS OF WOOL INDUSTRY.

I shall also take the liberty of inserting a number of diagrams prepared by the Bureau of Statistics relating to the wool industry of the country. They present to the eye a number of interesting facts which it would be well to consider in determining the propriety of a change of policy in our tariff system.

WOOL PRODUCTION OF CALIFORNIA.

Mr. Chairman, the State of California, which I have the honor in part to represent, is the leading wool-producing State in the Union. The climate is favorable and the large ranges of public land heretofore open to sheep pasture have been of course a great advantage to the industry. The gentleman from Pennsylvania [Mr. BUCKALEW] seemed to think that these advantages were sufficient to warrant the removal of the tariff protection from wool.

But I desire to say to him and others who entertain the same opinion that the rapid increase in our farming population in the last few years has about absorbed all the public land of any value for pasture, and no sheep-owner in California can expect now to find pasture elsewhere than on his own or leased land. It is true that there is a large quantity of unsurveyed land in California. The report of the United States surveyor-general of the State shows that it amounts to 33,000,000 acres, but he also shows that the land is nearly all occupied by settlers for agricultural purposes. The fact that the land is unsurveyed is the fault of the Government, and does not indicate the absence of the pre-emption or homestead settler. The fact is, we have reached the important and desirable period of the small farming industries in California. Our labor is still fairly well paid as compared even with flush times. And as compared with other countries, the comparison indicates the difference between comfort and independence and wretched, pinching poverty.

We would like to at least maintain our present standard of wages for labor. It would be well if we could raise it at some points. The effect of this bill will be to reduce wages in many of our industries in California, if it does not destroy some of the industries altogether. The wool-growing industry is one of the most important we have. It ought to be encouraged and developed, as it can be, in both quantity and quality; but on small and valuable ranges to which we are now coming we can not compete with the free ranges and cheap labor of Australia or South America.

In the circular of Messrs. Justice, Bateman & Co., wool merchants of Philadelphia, dated March 1, 1888, I find the following paragraph making a comparison between the growing of wool in Montana and the Argentine Republic:

COMPARISON OF THE COST OF GROWING FOREIGN AND AMERICAN WOOL.

The main cost of raising wool in foreign countries, where the sheep graze over the public domain, is the wages of the herder. In the Argentine Republic this quality of labor receives 3 Spanish dollars per month. In Montana, where the sheep also graze on the public domain, the wages of the herder, which is also the main cost of growing wool there, is $40 per month, as against $3 in South America. This is an increase in the cost of growing American wool, otherwise under similar conditions, of 1,200 per cent. The freight on wool from Buenos Ayres to New York by sailing vessel is only one-fourth cent per pound, while the cheapest freight from Montana is 2 cents per pound to the same market. Here is an increase to the Montana grower in the cost of transportation of 700 per cent. over the cost to the South American grower. With this difference against the American grower on the free range how much more must be the cost of raising wool on farms worth $50 to $75 per acre?

THE EFFECT OF THE MILLS BILL ON THE WOOL INDUSTRY OF CALIFORNIA.

The last sentence in the above circular applies to the situation in California, where, as I said before, the public land is no longer available for sheep pasture. I commend the facts stated to those who following some vague theory would destroy an important industry already embarrassed, as I have shown, by unfair competition, and now being deprived of whatever advantage there was in large ranges. Remember also that the wool production of California is an important factor in the markets of this country. If you drive it out, as you will if this bill becomes a law, and compel our people to send their sheep to the slaughter-pens, the wool-growers of Australia and South America, instead of giving you the benefit of the remitted duty, will compel you after we are out of the market to pay good prices for their product to supply the deficiency.

The following table shows the number of sheep in, and the wool product of, California and the United States for the past five years:

Years.	California.		United States.	
	Number of sheep Jan. 1.	Wool production.	Number of sheep Jan. 1.	Wool production.
		Pounds.		*Pounds.*
1883	5,907,680	40,848,690	49,237,291	300,000,000
1884	6,203,064	37,415,330	50,626,626	308,000,000
1885	5,892,911	36,531,390	50,360,243	302,000,000
1886	6,069,698	38,509,160	48,322,331	285,000,000
1887	6,069,698	31,564,231	44,759,314	269,000,000
1888	5,462,728	.....	43,544,755	.....

It will be seen that California has about one-eighth of the sheep and produces about one-ninth of the wool of the whole United States. It is therefore a matter of importance to know the effect of this bill on the future wool product of the State. To ascertain this fact as nearly as possible I have had prepared by Messrs. Justice, Bateman & Co., of Philadelphia, a table showing the price of the various grades of California raw wool in the market in June of this year; the percentage of shrinkage of the wools in being scoured; the scoured cost or price in Philadelphia or Boston; the scoured cost or price of competing foreign wool outside the custom-house or free of duty; the free-trade price of our wools, and generally the particulars concerning the competing foreign wools. The table is as follows:

Table showing a comparison of the value in the grease and the scoured value of California wools and competing grades of foreign wools on the basis of the scoured value in London in June, 1888.

California wool.	Prices in June, 1888.	Per cent. of shrinkage.	Scoured, cost or price in Philadelphia and Boston, June, 1888.	Scoured, cost or price of competing foreign wool outside of our custom-house.	Free-trade price of California wool, June, 1888.
Spring, Northern, free, A1 choice	22	60	55	34	14
Spring, Northern, S. B.	16	68	50	32½	11
Spring, Southern, free.	16	68	50	32½	11
Spring, Southern, S. B.	13	70	43½	32½	9¾
Fall, Northern, free	15	65	42¾	32½	11½
Fall, Northern, S. B	12	70	40	32½	9¾
Fall, Southern, free	12	70	40	30	9
Fall, Southern, S. B	10	75	40	30	7½

Table showing a comparison of the value in the grease and the scoured value of California wools and competing grades of foreign wools on the basis of the scoured value in London in June, 1888—Continued.

Qualities of foreign wools competing with California wools.*	Value in pence.	Value in cents.	Scoured value in cents.	Address of English merchants furnishing these wools.
Montevideo	7½	15	34	John Bowes & Bro., Liverpool.
Cape of Good Hope	6½	13	32½	Helmuth, Schwartz & Co., London.
Do.	6½	13	32½	Do.
Do.	6½	13	32½	Do.
Do.	6½	13	32½	Do.
Do.	6½	13	32½	Do.
Faulty Cape	4½	9	30	Windeler & Co., London.
Burry Mestiza	4½	9	30	Do.

*Compare California wools with foreign wools in the order given, that is to say Montevideo competes with California spring, Northern, free, A1 choice, and Burry Mestiza with California Fall, Southern, S. B.

This table shows that our wool-growers would have sustained a loss, under the provisions of this bill, on the sale of their wool in June amounting to from 25 to 36 per cent. Can there be any doubt as to the effect of such a reduction on the price of our wools? With our price of labor and the present cost of transportation our people would go out of the business, and they would do so to the injury of the people of the whole country. Our wools are needed in the market, and if they were not here it would be the part of wisdom to so legislate that they might come and add to your supply of material for woolen goods.

THE DEMOCRATIC PLATFORM IN CALIFORNIA ON THE WOOL TARIFF AND OTHER INDUSTRIES.

Why do you gentlemen on the other side prefer to favor Australia and South America to California? Are you influenced by political considerations? I do not know whether there is much of a Democratic party in California now or not, but there was an organization there under that name two years ago, and the party had a platform upon which my colleagues from the First and Second districts were elected. One plank of that platform was as follows:

That the present tariff on wool, prepared by a Republican commission appointed by a Republican President, is an unjust discrimination against a great industry, and we denounce the same, and demand—

Mark the demand—

the restoration of the tariff of 1867.

In the comparative statement of the rates of duty on wools prepared by the Bureau of Statistics, and printed at the end of these remarks, is a column devoted to the tariff act of 1867. I ask my Democratic friends to compare the provisions of that act with the provisions of the Mills bill, and then explain, if they will, why they have abandoned their pretended position in favor of protecting the wool industry of the country. But I have not read the whole of this single plank of our California Democratic platform, and that I may not be accused of reading merely garbled extracts I will read all of it.

That in view of the brilliant future that awaits California in the development of its wine interests we most heartily favor the bills now pending in Congress for the release from taxation of spirits used in the fortification of sweet wines and the protection of our wine industries from the injurious effects of fraud and the unrestricted sale of spurious wines.

That the wool-growers may know that other industries have incurred the displeasure of the Democratic members of this House, I call attention to the fact that when my colleague [Mr. MCKENNA] offered the other day an amendment to the pending bill providing "for the release from taxation of spirits used in the fortification of sweet wines," the Democratic members of the House voted solidly against the amendment.

The concluding sentence in this plank of the Democratic platform is as follows:

And we also favor legislation providing for the protection of the raisin industry.

A reduction of one-half cent per pound in the duty on raisins is the answer the majority of this House makes to the proposition that this new and important industry shall be protected. Some of the gentlemen on the other side have managed to save some of the industries of their districts from the destruction this bill originally proposed. We have sought to understand the policy that guided the majority in granting such favors, but so far no explanation has been made. All we know is that the industries of California are to be sacrificed while the industries of other sections are to be favored.

THE DEMOCRATIC PLATFORM IN OHIO ON THE WOOL TARIFF.

The Democrats in Ohio, like their brethren in California, have vigorously protested against the reduction of the tariff on wool. The gentleman from Ohio [Mr. EZRA B. TAYLOR] has just called attention to the action of a Democratic Legislature of Ohio in adopting resolutions on this subject on the 23d of January, 1884. The resolutions will bear repeating.

Whereas the Forty-seventh Congress reduced the tariff on imported wool, against the protest of every wool-grower of the State of Ohio and the United States; and

Whereas the said reduction of tariff on imported wool discriminates against

the wool-growers of the West, in favor of the manufacturers of the East, thereby compelling the wool-growers of the West to compete with cheap wool of foreign countries, to their very great injury; and

Whereas that tariff was reasonable and not too high before the reduction, and stands now at a rate so low as to injuriously affect that large and respectable class of people who have devoted themselves to wool-growing; and

Whereas an Ohio Congressman has already introduced a bill in the House of Representatives of the Forty-eighth Congress to restore the tariff on wool as it stood prior to the recent reduction, which should be passed at the earliest time possible: Therefore,

Be it resolved by the General Assembly of the State of Ohio, That our Senators in Congress be, and are hereby, instructed and our Representatives requested to use all honorable means and vote for the bill to restore the tariff on wool as it stood prior to the recent reduction, and that the governor be requested to send a copy of this resolution to each of our Senators and Representatives at Washington.

The gentleman from Ohio informs us that these resolutions received the vote of every Democratic member of the Legislature then present. He further informs us that on the 25th day of June, 1884, the Ohio Democractic State convention which selected delegates to the national convention which nominated Grover Cleveland for President adopted unanimously as the third resolution in its platform the following:

That the just demands of the wool-growers of Ohio and the country for an equitable readjustment of the duties on wool (unjustly reduced by a Republican Congress), so that this industry shall be fully and equally favored with other industries, ought to be complied with, and we indorse the action of the Democratic members from Ohio in their efforts to accomplish this result.

THE POLICY OF DEMOCRATIC FREE TRADE.

I asked a moment ago if the majority of the House were influenced by political considerations in placing wool on the free-list. Do you propose to hold the solid South on free trade for Northern industries, abandon all hope of carrying Ohio and the Pacific coast, and fight out this campaign in New York on financial questions? There seems to be enough wisdom in this proposition to justify its adoption as the policy of the Democratic campaign. You may be able to hold the solid South on the issue of free trade. You will not carry Ohio or the Pacific coast, and I am equally confident that you will not carry New York, and the programme will be a failure.

CHEAP WOOL AND THE POOR MAN'S BLANKET.

The friends of this measure have two explanations to make in its defense. One is that free wool makes cheap wool and clothing, and the "poor man's blanket" is to be reduced in cost. This explanation is doubtless intended for the benefit of a class of people who will be influenced by the consideration that cheaper clothing would be a decided advantage. The other explanation is that free wool would create a greater demand for all kinds, under which the price would at once be raised to the present standard. This explanation appears to be intended for the sheep-growing sections of the country. Both explanations can not be true.

The burden of the customs duties has been the favorite theme for the revenue-reform orator throughout this discussion. He has been somewhat embarrassed by the fact that the unfortunate tax-payer can not be located with absolute certainty, so as to determine the amount of his burden and his ability to carry it, but this difficulty has been overcome in a measure by aggregating the duties on imported articles, adding a like sum to the domestic articles, and then, putting the two gross sums together, divide the whole amount by the population of the United States, thereby distributing the whole burden equally between the rich and the poor, the young and the old. In this way we are all made to understand that we are tax-payers and are being crushed by the "robber tariff."

By reference to the table of woolen goods imported for consumption, etc., last year, inserted in a previous page, it will be seen that the greater part of our importations of woolen goods are of the most expensive quality; and if it be true, as claimed by the President and his followers, that the duties are paid by the consumers, then it appears that the burden conveniently and properly falls on the wealthy, who can well afford to buy costly materials and pay the revenues of the Government for the supposed luxury of the foreign-made article. Take, for instance, the item of blankets, about which there has been so much discussion. The quantity imported last year valued not above 60 cents per pound, was only 5,319½ pounds, valued at $1,606.60, and the total duties amounted to only $1,187.10. The average cost of these blankets was only 30 cents per pound, or $1.50 for a 5 pound blanket, and the rate of duty per pound was less than half of that imposed upon the higher priced blanket.

It is evident that no very heavy tax has been laid on the poor man's blanket, and all the plaintive declamation we have heard upon this subject is without the foundation of fact necessary to make the subject interesting. The home market for cheap blankets has been almost entirely supplied by home production; and, as has been explained by the gentleman from Iowa [Mr. GEAR] and the gentleman from Maine [Mr. DINGLEY], the home-made article has been furnished at a price but little in advance of what the same quality of blankets would have cost in England.

In the item of woolen cloths valued not above 80 cents per pound we find the importations amounted to 1,117,564.40 pounds, valued at $713,315.94, and paying duties amounting to $640,808.21, while the importations of the same goods valued above 80 cents per pound amounted to 7,689,699.02 pounds, valued at $9,309,054.73, and paying duties amounting to $6,415,016.73.

The average cost of the cheaper cloth was 64 cents per pound while the average cost of the dearer cloth and the larger importations was $1.21 per pound. Furthermore, the ad valorem duty on the cheaper cloth was 5 per cent. less than on the dearer cloth, showing that the duties are paid at higher rates on the dearer class of goods. And these goods are imported to supply a demand coming from people, many of whom esteem it a privilege to pay high prices for foreign goods. What poor man I would like to know is injured in any way by continuing such protective duties?

Take the item of flannels. The quantity of this class of goods valued not above 60 cents per pound imported last year was only 5,348 pounds, while of the quality valued above 60 cents per pound the importations amounted to 213,986 pounds; the value of the goods of the common quality was only $2,847.72 while the value of the better or fancy quality was $182,355.78. The duties paid on the first class amounted to only $1,926.14 while on the second class they amounted to $127,748.06.

The same significant difference occurs in every item of the schedule where the rate of duty permits a division of the importations into cheap and costly goods. The truth is that the duties are imposed principally upon the more expensive articles, and are collected from the rich, who are able to pay them. It is a false issue to discuss this question upon the assumption that the customs duties on clothing are paid to any considerable extent by poor people. The gentleman from Ohio [Mr. MCKINLEY] has shown by actual demonstration that ordinary clothing is as cheap here as in free-trade England.

The severe criticism of Matthew Arnold on American civilization, which was recently the cause of much discussion, was qualified by the following testimony he gave in favor of the advantages enjoyed by the people in this country who are in receipt of small incomes. One of these advantages he mentions is that of cheap clothing, another is cheap food. He says:

For that immense class of people, the great bulk of the community, the class of people, whose income is less than three or four hundred a year, things in America are favorable. It is easier for them there than in the Old World to rise and to make the r fortune. Even without making their fortune, even with their income below three or four hundred a year, things are favorable to them in America, society seems organized there for their benefit. To begin with, the humble kind of work is better paid in America than with us, the higher kind worse. The official, for instance, gets less, his office-keeper gets more. The public ways are abominably cut up by rails and blocked with horse-cars; but the inconvenience is for those who use private carriages and cabs, the convenience is for the bulk of the community who but for the horse-cars would have to walk. The ordinary railway cars are not delightful, but they are cheap, and they are better furnished and in winter are warmer than third-class carriages in England. Luxuries are, as I have said, very dear—above all, European luxuries; but a working man's clothing is nearly as cheap as in England, and plain food is on the whole cheaper.

So far as the tariff is a tax or operates as a protection in the production of wool or the manufacture of woolen goods it is not a burden upon any one who can justly say that he feels its weight. Has any member of this House received a petition making any such complaint? The petitions we have filed from the laboring classes have all demanded that the revision of the tariff should be in the interest of protection.

DEAR WOOL AND THE WOOL-GROWER.

The claim that free wool would create a greater demand for the article and result in such an increase in price as would cover the present rate of duty is of course inconsistent with the other proposition, that cheap wool is necessary in order to have cheap clothing. The fact is that free wool would certainly increase importations, but such increased importations would destroy the home market for our domestic wool. The price would then be gradually raised, but only as our own production and competition ceased. The wool manufacturer might possibly obtain a temporary advantage in the use of free wool, but the benefit would be of short duration. The next step would be to remove the duties from the manufactured goods, and then our own manufacturers would go to the wall in competition with the cheap labor of Europe. This is the result plainly pointed out by the English press in its active support of the Mills bill.

NO PROTECTION FOR THE WOOL INDUSTRY IN THE MILLS BILL.

It is claimed, however, that this bill retains a rate of duty on manufactured goods sufficient to cover the difference in the rate of wages between this country and Great Britain. But this is not so. The average rate of duty retained by the bill on manufactured woolen goods is 40 per cent., while the difference in the average rate of wages paid to employés in the woolen mills of the United States and Great Britain is not less than 65 per cent. The first effect of this bill, if it should become a law, would therefore be to reduce wages wherever the struggle might be continued against foreign competition. The final result would be the complete destruction of our manufacturing industries.

The labor, enterprise, and patriotism of this country protest against this measure. It is not in the interest of labor. It is not in harmony with our industrial system. It will not encourage enterprise or promote independence. Every consideration having in view the prosperity of the country demands that this bill should be defeated.

In the words which Lord Bacon addressed to the ministers of his Sovereign:

Let us advance the native commodities of our own country and employ our own countrymen before strangers. Let us turn the wools of the land into cloths and stuffs of our own growth. It would set many thousands to work, and thereby one of the materials would, by industry, be multiplied to five, ten, and many times, to twenty-five times more in value, being wrought.

The history of the country and the wisdom of its greatest statesmen admonish us that American independence and prosperity will not be found in the direction of free trade.

Comparative statement of the rates of duty on wools and manufactures of wool under the acts approved March 2, 1867; June 6, 1872; March 3, 1875, and March 3, 1883; the so-called Mills bill, and the schedule agreed on by the Conference of wool-growers, wool-dealers, and wool manufacturers held at Washington, January 11–14, 1888.

Articles.	Act of Mar. 2, 1867.	Act of June 6, 1872, took effect Aug. 1, 1872.	Act of Mar. 3, 1875.	Act of Mar. 3, 1883, took effect July 1, 1883.	Mills bill.	Conference schedule.
All wools, hair of the alpaca, goat (camel, llama *a*), and other like animals, shall be divided, for the purpose of fixing the duties to be charged thereon, into the three following classes:						
Class 1—						
Clothing wools: That is to say, merino, mestiza, metz, or metis wools, or other wools of merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes 2 and 3—						
Value 30 cents or less per pound	.....	.....	.....	10 cts. per lb.....		
Value over 30 cents per pound	.....	.....	.....	12 cts. per lb.....		
Value 32 cents or less per pound	10 cts. per lb.+ 11 per ct.		10 cts. per lb.+ 11 per ct.	.....		10 cts. per lb.+ 11 per ct.
Value over 32 cents per pound	12 cts. per lb.+ 10 per ct.		12 cts. per lb.+ 10 per ct.	.....		12 cts. per lb.+ 10 per ct.
Washed wool—						
Value 30 cents or less per pound	.....		.....	20 cts. per lb.....		
Value over 30 cents per pound	.....		.....	24 cts. per lb.....		
Value 32 cents or less per pound	20 cts. per lb.+ 22 per ct.		20 cts. per lb.+ 22 per ct.	.....		20 cts. per lb.+ 22 per ct.
Value over 32 cents per pound	24 cts. per lb.+ 20 per ct.		24 cts. per lb.+ 20 per ct.	.....		24 cts. per lb.+ 20 per ct.
Scoured wool—						
Value 30 cents or less per pound	.....		.....	30 cts. per lb.....		
Value over 30 cents per pound	.....		.....	36 cts. per lb.....		
Value 32 cents or less per pound	30 cts. per lb.+ 33 per ct.		30 cts. per lb.+ 33 per ct.	.....		30 cts. per lb.+ 33 per ct.
Value over 32 cents per pound	36 cts. per lb.+ 30 per ct.		36 cts. per lb.+ 30 per ct.	.....		36 cts. per lb.+ 30 per ct.
Class 2:						
Combing wools: That is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also all hair of the alpaca, goat (camel, llama *a*), and other like animals—						
Value 30 cents or less per pound	.....		.....	10 cts. per lb.....		
Value over 30 cents per pound	.....		.....	12 cts. per lb.....		
Value 32 cents or less per pound	10 cts. per lb.+ 11 per ct.		10 cts. per lb.+ 11 per ct.	.....	Free of duty..	10 cts. per lb.+ 11 per ct.
Value over 32 cents per pound	12 cts. per lb.+ 10 per ct.		12 cts. per lb.+ 10 per ct.	.....		12 cts. per lb.+ 10 per ct.
Scoured wool—						
Value 30 cents or less per pound	.....		.....	30 cts. per lb.....		
Value over 30 cents per pound	.....		.....	36 cts. per lb.....		
Value 32 cents or less per pound	30 cts. per lb.+ 33 per ct.		30 cts. per lb.+ 33 per ct.	.....		30 cts. per lb.+ 33 per ct.
Value over 32 cents per pound	36 cts. per lb.+ 30 per ct.		36 cts. per lb.+ 30 per ct.	.....		36 cts. per lb.+ 30 per ct.
Class 3:						
Carpet wools and other similar wools: Such as Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere—		90 per cent. of duty imposed by act of Mar. 2, 1867.				
Value 12 cents or less per pound	3 cts. per lb.....		3 cts. per lb.....	2½ cts. per lb.....		3 cts. per lb.
Value over 12 cents per pound	6 cts. per lb.....		6 cts. per lb.....	5 cts. per lb.....		6 cts. per lb.
Scoured wool—

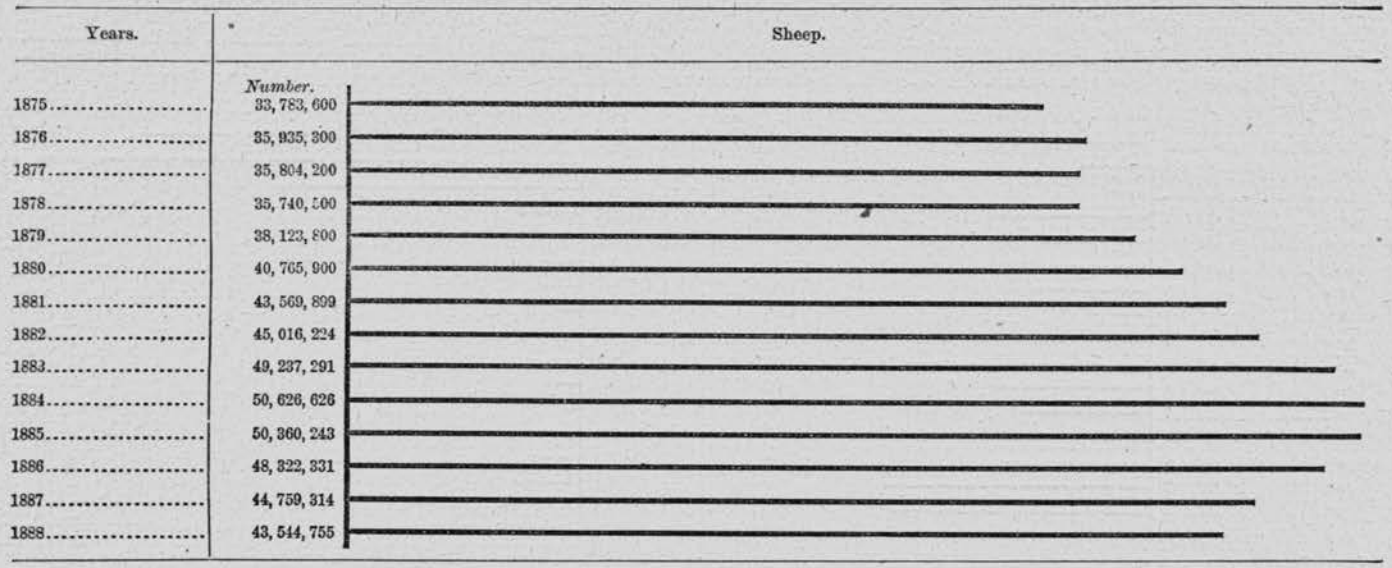
On oil-silk cloth	60 per ct		60 per ct	50 per ct	50 per ct	

a The words "camel llama" are contained only in the Conference schedule.

b The following provision contained in the Conference schedule is contained in substantially the same form in the acts of March 2, 1867, June 6, 1872, March 3, 1875, and March 3, 1883: "The duty upon wool of the sheep or hair of the goat, alpaca (camel, llama), and other like animals which shall be imported in any other than the ordinary condition as now and heretofore practised, or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be twice the duty to which it would be otherwise subject."

c The following provision is contained only in the Conference schedule: "No wool shall be included in Class 3 which shall be imported for any purpose other than for the manufacture of carpets or low grades of blankets, or which shall not strictly be such as are known and recognized as carpet wools."



d The following provision is contained only in the Conference schedule: "All wools and hair which have been advanced from the scoured state, not otherwise provided for, shall be classified as manufactures of wool."

e Linoleum is not enumerated in any of the tariff acts, but Department decision (S. S. 3560) of April 30, 1878, decides that linoleum is properly classified for duty as oil-cloth for floors, stamped, painted, or printed. The rates on such oil-cloth indicated by the decision are therefore inserted under the different tariff acts.

Chinese Immigration.

SPEECH

OF

HON. WILLIAM D. BYNUM,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

August 20, 1888.

The House having under consideration the bill (S. 3304) to prohibit the coming of Chinese laborers into the United States—

Mr. BYNUM said:

Mr. SPEAKER: If the gentleman from California [Mr. MCKENNA] during the delivery of his speech had not appeared so serious and looked so troubled his effort would really have been funny, instead of caustic, as he probably intended. He charges me with having gone back into the dead past to dig up the record of the Republican candidate for President instead of discussing the living issues of the present. Only think of it! a Republican holding up his hands in amazement because of the disclosure of his candidate's record which is still fresh in the memories of the people, and which the prominent men of his own party have been trying to explain away from the time of the adjudgment of the Chicago convention. How cruel it is to harrow up this record of the Republican candidate; how it grates upon the gentleman's ears to hear it. Why, Mr. Speaker, General Harrison is running on the record of his grandfather; he has taken refuge in the log cabin, and now the gentleman from California complains because we propose to drag him from his hiding place and force him to face his own record in the Senate which terminated but little more than a year ago.

Again, it is quite refreshing to hear Republicans protesting against any reference to the past when that party has feasted upon nothing but political carrion for more than twenty years. It has never, during a single campaign, turned its face to the front. It has, upon every occasion, sought to appropriate honors won equally by Democrats as well as Republicans and thus to raise a sectional feeling and divert the attention of the people from its own record of corruption and extravagance until it obtained a new lease of power. It even now seeks to blacken the records of the gallant McClellan and the courageous and magnanimous Hancock in order to preserve its political life and to improve its decayed fortunes, and yet the gentleman from California has, I was about to say, the effrontery to chide me for unfolding the record of his party and his candidate, affecting materially the issues of the campaign.

The gentleman, I infer from the ready manner in which he quotes from my speech and the Bible, must have divided his time about equally in reading them on yesterday. I have no doubt but what he derived much information from the former, and I hope much benefit from the latter.

He says we ought not to reprove General Harrison for his votes upon the Chinese question; that like Saul of Tarsus he was converted. He admits that his candidate was once a great sinner; that he was a bitter enemy to the cause of the wage-workers of California; that he persecuted them with all his might, but that at last a great light shone round him and he was converted. General Harrison insists, however, that he never was an infidel, that he was always opposed to Chinese immigration. The gentleman from California, however, refuses to accept this statement, but assumes the rôle of Barnabas, and informs the country that his candidate's conversion is pure and holy; that he can vouch for it. I can imagine the sceptic constituents of the gentleman inquiring of him who the Ananias was that touched this new convert when the scales fell from his eyes?

I imagine I can hear the gentleman's answer; he was the chairman of the Republican national convention; he it was that conveyed to General Harrison the official news of his nomination at Chicago and delivered to him the new doctrine he was to preach, and Harrison said: "I have read the creed; it meets my hearty approval." What a simile! If the gentleman had searched the writings of all the great infidels from Hume to Ingersoll he could not have found a greater burlesque upon the miracle of Saul's conversion than that which he has perpetrated in his effort to palliate and excuse the record of his candidate. I can hear the response they will make to the gentleman: With one acclaim they will reply, "Oh, no; there was no conversion upon this occasion; this was but the act of a sinner prostrate by disease and fearful of the torments of the future."

> The Devil was sick, the Devil a monk would be;
> The Devil was well, the Devil a monk was he.

[Laughter.]

The gentleman says the Democratic party in Indiana must be in a terrible straight, or I would not have rushed forward to a congenial and invidious service for my party. What a whine? I had no idea that I had punished him so severely. It was probably cruel to disclose to the gentleman's constituents and especially to his partisans the record of their candidate, which is so unpalatable that crow would be a delicate and inviting dish in comparison with it. It is not, I apprehend, the Democracy of Indiana that causes such anxiety upon his part, but the thoughts of the disruption he will find in the ranks of his own party in California when he returns home. He says I sneered at their candidate and that "big men do not sneer, only little men do that." When the gentleman uttered this sentence I could not refrain from wondering when and where and how the gentleman ascertained his dimensions and weight.

> O wad some power the giftie gie us,
> To see ourels as others see us!

The gentleman probably has not weighed himself upon hay scales recently.

But where does the gentleman take final refuge? Like the ostrich upon the desert he sticks his head in the sand, utterly oblivious of the fact that the remainder of his body is only the more conspicuously exposed. Passing over all the bills and resolutions and votes to which I had called attention, he lights upon a bill passed in the Forty-ninth Congress appropriating $147,000 to pay for the property of the Chinese that was destroyed or stolen at Rock Springs, in Washington Territory, by a mob. True, I did not advocate it or oppose it. I believe the gentleman from California is about the only one that did oppose it, and I will not question his motive for doing so. I will only admonish him not to rashly accuse others of playing demagogue lest he invite a closer scrutiny of his own votes and utterances. Let me call his attention to the fact that the strongest advocates in favor of the passage of that bill came from his side of the House. Mr. HITT, in support of it, said:

Is it not most ungracious in us, after the high and hard demands we have made upon China for every bruise or insult an American has suffered, to haggle over this resolution to pay $147,000 for the losses of more than seven hundred people driven from their homes, shot, their dwellings burned, they themselves in some instances murdered, fled, or dragging their wounded limbs and starving to death afterwards upon the sterile mountains?

Mr. RICE, of Massachusetts, said:

I desire to say that the unanimity with which the Committee on Foreign Affairs reported this bill to the House seems to me to be followed by similar unanimity on the part of the House, which seems almost unanimous in its support, and yet, sir, I am unwilling to let it go that we are passing this bill as an act of benevolence or as anything else than an act of international obligation.

The gentleman's own colleague, Mr. MORROW, joined in a favorable report of the bill making this appropriation and advocated its passage.

The House was almost unanimous in supporting this measure. The gentleman stood almost alone in his opposition. His position was something akin to the one juror who discovered that it was impossible for him to convince eleven fools to his way of thinking. There seems to have been about three hundred and twenty-four "little" men in the House, and the gentleman from California was unable to convince them that the appropriation for the payment for the losses sustained by the Chinese at the Rock Springs riot should not be made.

The gentleman, however, was not content to stand upon the record, but had to draw upon his imagination. He says it was rumored that this appropriation was made to smooth the path of the Administration in its efforts to negotiate a new treaty with China. The records of this House do not disclose such rumors, and I heard of them for the first time from the gentleman himself to-day.

While the Democratic party has opposed Chinese immigration, while a great majority of its members upon this floor and in the Senate have voted for the most stringent laws restricting the same, they are not so lost to a sense of right, justice, and humanity as to see the Chinamen who have been lured here under a Republican treaty which guarantied to them protection, driven from their shelter, their homes consigned to the flames, their property stolen or destroyed, while many of them were coolly murdered as they attempted to escape. The gentleman would have refused to do this act of justice and thus have exposed our citizens in China to a similar fate.

The gentleman complains because the Morrow bill was not passed in the Forty-ninth Congress. The gentleman is well aware that the Forty-eighth Congress amended the act of 1882, and that but slight if any improvements upon existing laws were proposed. It was not the laws that were deficient, it was the decisions of the Republican Federal judges in California that rendered their provisions insufficient. The gentleman well knows that the citizens of California, without regard to party, at a public meeting in San Francisco, commended the present Administration for its efforts to restrict and prohibit immigration of Chinese laborers, and condemned the action of the Federal judges of that district and demanded their impeachment at the hands of this House.

The gentleman complains seriously because there was no legislation in the Forty-sixth Congress, which was largely Democratic in both Houses. I will inform him why no bills were considered or passed. The Forty-fourth Congress, the first Democratic House after the war, passed a joint resolution requesting the Administration to negotiate a new treaty with China. This resolution, although notice to the Administration, was smothered in the Senate.

In the Forty-fifth Congress, at the long session, the attention of the Administration was again called to this question and immediate action urged, but no steps were taken. At the short session the Committee on Education and Labor instructed Mr. Willis, of Kentucky, to

report a bill restricting this immigration. The bill was reported and passed by both Houses and vetoed by President Hayes on the 1st of March, 1879, because the law was in contravention of the stipulations of the Burlingame treaty.

The Forty-sixth Congress met in December, 1879. No efforts had yet been made by the Administration to negotiate a new treaty; no legislation could be enacted into law, as it was well known that President Hayes would veto every measure that might be passed. The only thing that could be done was to force the Administration to take action. On the 12th of February, 1880, Mr. Willis, of Kentucky, reported from the Committee on Labor the following preamble and resolution, which was passed:

Whereas on the 25th day of February, 1878, a resolution was unanimously reported to the House of Representatives requesting the President of the United States to open correspondence immediately with the Governments of China and Great Britain, with a view of securing a change or abrogation of all the stipulations in existing treaties which permit the unlimited immigration of the Chinese to the United States: Therefore,

Be it resolved, That the President be requested, if not incompatible with the public interest, to inform this House what steps have been taken in the direction indicated by said resolution, and also to communicate any other information upon this subject as he may deem proper.

The next morning after the adoption of this resolution, Secretary of State Evarts called upon Mr. Willis and asked him not to press the resolutions, that the administration would take action soon. One of the commissioners was shortly appointed, and following the additional ones were selected and the negotiations concluded on the 17th day of November, 1880. The new treaty, however, was not ratified by the Senate until the 5th day of May, 1881, nor did the President issue his proclamation declaring it in force till the 5th day of October, 1881, six months after the Forty-sixth Congress had expired, and still the gentleman asks why no bill was passed by this Congress.

The gentleman from Maine [Mr. DINGLEY] takes great exception to my remarks that the Democratic party desired to give the laboring classes cheap food and cheap clothing. He says we should not talk about cheap food when the Mills bill puts a duty of 100 per cent. on rice and 68 per cent. upon sugar. This way of stating the question is intended to deceive, and only shows how unfair the gentleman from Maine is. One would conclude from the manner in which he expresses the facts that rice and sugar were upon the free-list, and that these enormous rates, the magnitude of which horrifies him, were now placed upon these articles for the first time. What are the facts? Under the present law, made by the Republican party, rice is now taxed 113 per cent., while sugar bears a rate of 82 per cent.

The gentleman, however, insists that we should have made greater reductions in these articles. No doubt we should have made greater reductions on many articles. The conservatism of the Mills bill seems to seriously trouble him. He says that motions were made to reduce the duties on these articles much lower and that this side of the House voted solidly against them. No doubt he was anxious for the adoption of the proposed amendments. He had opposed every reduction which affected his constituents and his section of the country, and would therefore most likely favor large reductions upon the products of other sections, and then howl "Sectionalism!" He was willing to sacrifice the rice-growers and sugar-planters of the South at one swoop to save prohibitory duties for his own section, and yet he is always ready to howl about the sectional character of the Mills bill. The gentleman's patriotism in this line is of a very chameleon-like character. He would retain exorbitant duties for his own section and without warning strike down the duties under which other sections have invested capital and established industries, and when defeated in his mercenary schemes, shout "Sectionalism!" "Sectionalism!"

The reduction on rice is not large, but it is much larger than the reductions made in the iron schedule. The rate upon plate-glass of large dimensions, exclusively a Northern product, of 152 per cent., is untouched by the Mills bill, and yet Republicans ignore these and many like instances that might be cited, and because the entire duties upon rice and sugar were not removed are horrified at the sectional character of the measure.

Rice culture is a very precarious industry, so precarious that I doubt if it will last a great while in this country. When the war terminated the rice fields of the South were destroyed. At great expense the rice planters were encouraged by high rates of duty to reclaim them. The amount expended by them in improvements would to-day purchase an equal quantity of our rich lands in Indiana, Illinois, or Iowa. There is no doubt but that under existing rates many planters have failed and many plantations have been abandoned. I am told by gentlemen from South Carolina that the best plantations in that State can be bought for much less than their owners paid for them a few years ago. The Tariff Commission of 1882, after having fully investigated the matter of rice culture, reported that—

The testimony in regard to retention of the duty on rice was very strong, and it was shown that the cultivation of this cereal gives employment to large numbers of the colored population in three of the Southern States, and that a radical reduction of the rates might result in the abandonment of this industry, which has been resuscitated since the war, and the consequent deprivation of the means of subsistence of thousands of colored laborers in these States. The testimony also brings out the fact that rice-planting rescues the lower lands, by the extensive system of ditching, from an almost valueless condition.

It is a fact well known that the colored laborers that work upon rice plantations can do nothing else; their training has been such that they can not work in the cotton field; they are the most helpless and dependent class of all the race, and yet the gentleman from Maine and in fact all the gentlemen on that side of the House sought to annihilate this industry at a single blow, though it should bankrupt those who under the promise of protection had invested their all in it, and though it should deprive a large number of colored people of the means of earning a living. No, sir; there is nothing sectional in the composition of the gentleman from Maine or his side of the House.

In 1883 the duty on rice was reduced from 2½ to 2¼ cents per pound, and now we have made the same reduction of one-fourth of a cent per pound, the duty on cleaned rice being fixed at 2 cents a pound in the Mills bill. There was nothing sectional about the bill of 1883, and yet we have made the same reduction in 1888, and the cry of favoritism is heard upon all sides.

The gentleman talks about the reductions upon sugars as being too small. The reductions on sugars are more than twice the average reduction made in the bill, and yet the Republicans are not satisfied; they would take all the tax off of sugar and retain them upon the articles which force the taxes into the pockets of the capitalists instead of into the Treasury of the United States. I hope the time will come when we can greatly reduce or abolish the duty on sugar and save to the consumers the tax paid on the same. The tax now paid is about 80 cents per capita, or $4 per family. Of this tax $3.60 goes into the Treasury for revenue. It is much easier, therefore, for the people to contribute through this tax $3.60 to the support of the National Government than through the duties on other articles.

Out of $4 paid only 40 cents is extorted from them to sustain the industry in the United States. But how is it with the tax on clothing and other articles of necessary consumption? Three dollars out of four paid by them go into the pockets of the capitalists. In order to make the same contribution to the support of the Federal Government they would have to pay $16 of tax. In relieving them of the burdens of taxation is it not much better to reduce the heavier burdens which they pay to enrich capitalists and leave the lighter ones they pay to support the Government?

But there is another feature of this question which so good a protectionist as the gentleman from Maine ought not to overlook. The production of beet sugar will unquestionably soon be developed in this country, and the farmers of Indiana, Illinois, Kansas, Nebraska, and other Western States, instead of raising wheat and corn, will be able to diversify their crops, and we will then produce all the sugar we can consume. Mr. Claus Spreckels, in his testimony before the Committee on Manufactures, investigating the sugar trusts, said:

If we were sure that we would have a certain protection there would be no question in my mind that, say, in eight or ten years we would raise all the sugar that America would consume. You can raise beets anywhere. I really do not know whether you can raise them in Louisiana.

The climate is such that the beet will not ripen, in my opinion. I have no knowledge on the subject. But take the West and I am sure it will be a success. Now, I have made a contract with one hundred and sixty-three farmers for raising beets for this factory. The seed is there. I have sent 25 tons of seed and the machinery is on its way. * * * So the following year I will run 70,000 tons of beets which will make 10,000 tons of sugar.

Q. The Agricultural Department of the Government up to within the last year or so had almost despaired of making a success of the production of beet sugar.

A. Yes, sir.

Q. But recently new appliances have been discovered which will lead in the direction of success. Do you understand this to be a fact as to your own experience?

A. Yes, sir; there is a patent called the Steffens process. That patent was purchased by Ull & Co., and I have purchased that patent for the United States.

Q. On land of ordinary fertility, what number of tons of beets is the average yield?

A. It depends entirely upon the soil. In California they raise as much as 42 tons to the acre.

Q. What is the probable average price to the raiser of the beets per ton for the beets?

A. Four dollars.

Q. Then the producer of the beets would receive, if he raised 20 tons per acre, $80?

A. Yes, sir.

Now, Mr. Speaker, we have protected the production of sugar for a great many years but have been unable to increase the production. We are now just entering upon a period when the production of sugar may in a few years be revolutionized. Instead of being exclusively a Southern industry it may be a Northern and Western industry. If this should prove true, and it will take but a very short time to test it, how gladly our Western farmers will surrender a portion of their lands from the production of wheat and corn for which they receive only $20 per acre to the production of beets from which they can receive from $80 to $160 per acre.

The gentleman from Maine, however, is not interested in the production of sugar; he is not interested in the prosperity of the Western farmers; he is looking after the capitalist of the East, and of the East alone, and yet he never suffers an occasion to pass without advertising his broad and liberal views. Sir, I have always noticed that those having the most inferior quality of stock in trade or who carried on the smallest business were the most liberal advertisers.

Again, the gentleman says we favor the admission of the products of the pauper labor of Europe, but oppose the immigration of the laborer. This is not stating the questions fairly. We have reduced duties on

the products of labor but slightly. The duties left, more than compensate for the difference in wages—in fact, the rates of duties still remaining will compensate our manufacturers for the whole labor cost of production. We do not object to a bona fide immigration of our own race. We are willing for those who can and will assimilate with our people, and who from a desire to better their condition and from an admiration of our institutions and love for free government, voluntarily and upon their own resources come to our country, to land upon our shores and become a part of us; but we object to the importation of laborers of any and every class simply for the purposes of crowding out American employés and reducing American wages. The gentleman from Maine favors a prohibitory duty—a duty that will exclude both products and materials from our shores, and thus confine the American laborer strictly to the American market in the sale of his products—but at the same time favors the free importation of labor. With a restricted market for the products of labor and an open market for the importation of cheap labor the standard of American can not be upheld for a day.

The pauper laborers of Europe are much less harmful when out of our country, from whence but a slight portion of their products can reach us, and then only in exchange for the products of our farmers, than when brought here and placed side by side with the American laborer. The testimony being taken by the special investigating committee sent out by this House shows what an affection the men who cry loudest for "protection to American labor" have for wage-workers of the country. They have studiously been violating our statutes prohibiting the importation of labor under contract. They have whenever they could supplanted American employés with foreigners brought over for that purpose. The working men and women of this country have finally discovered the fraud that has been practiced upon them.

The gentleman from Indiana [Mr. OWEN] sought to make some answer to the charges I had made against the Republican party of Indiana in 1880 for having secured the first papers of citizenship for a number of Chinese in the city of Indianapolis and voting them at the election that year. He assumes to answer my statement by reading a telegram from Messrs. Miller and Elam that they never heard of any such thing—as if that amounted to a denial. The gentleman should not, however, be censured too severely for this weak attempt; no doubt it was the best he could do. The following are the names of the Chinamen who made on oath declarations of their intentions to become citizens before the clerk of the Marion circuit court, some of whom were voted by prominent Republicans on election day:

Name.	Date of naturalization.	Arrived in America.
Shang Foy Sung Moy	Feb. 7, 1880	May, 1873
Chang Sing	June 13, 1881	Before 1873
Foo Chang	Nov. 2, 1880	1872
Back Sing Pang	Sept. 6, 1880	August, 1872
Jo Qui Sing	Sept. 6, 1880	April, 1870
Chan Yee	Jan. 22, 1880	June, 1873
Pang Yin	Oct. 12, 1880	April 15, 1875

I have here and will have read the affidavit of Joseph W. Nichol as to the facts that two of these Chinamen voted in the Eleventh ward of the city of Indianapolis:

CITY OF WASHINGTON, *District of Columbia:*

Joseph W. Nichol, a citizen of the city of Indianapolis and State of Indiana, being duly sworn, deposes and says that at one of the elections held in said city and State during the year 1880 (it was at the October or November election of said year) he was present at the polls on Massachusetts avenue, in said city, in the Eleventh ward, and at the engine-house in said ward, as a challenger for the Democratic party, and that at one of said elections two Chinamen were presented at the said polling place by one George Carter, a lawyer and a Republican, with Republican ballots in their hands, which said Carter asked for them, they not being able to speak the English language with facility, that they be allowed to deposit said ballots and vote the Republican ticket; that as the first Chinaman presented his ballot he, affiant, protested against receiving the same on the ground that said Chinaman was not a citizen, and that then and there the said Chinaman and said George Carter produced and exhibited to the election officers a certificate of declaration of intention on the part of said Chinaman to become a citizen of the State of Indiana and of the United States, and thereupon the said election officers or the inspector of said election at said precinct received said vote and deposited it in the ballot-box in presence of said affiant and others, and thereupon the vote of the second Chinaman was presented and received by the inspector and deposited in the ballot-box.

Affiant says that at said election Daniel M. Ransdell, a Republican, was clerk of the superior and circuit courts of the county of Marion, in which said city of Indianapolis is situate, and said certificates were issued by him, said Ransdell, as he, affiant, was informed at the time; that he, affiant, did not critically examine said certificate at the time, but was assured by said election officers that they were correct and in the usual form; and further affiant saith not.

Joseph W. Nichol, above-named affiant, being duly sworn, says the above and foregoing is true as he verily believes.

J. W. NICHOL.

Subscribed and sworn to before me this 20th day of November, 1888.
[SEAL.] THOS. E. ROACH,
Notary Public in and for the District of Columbia.

I also present the following affidavit by Austin H. Brown as to the fact that one of them voted in the Seventeenth ward of said city:

CITY OF WASHINGTON, *District of Columbia, ss:*

Before me, Thomas E. Roach, a notary public in and for said city and District, this day personally came Austin H. Brown, a citizen of the city of Indianapolis and State of Indiana, temporarily residing in the city of Washington, who, being duly sworn according to law, says that prior to the year 1887 he was a continuous resident of the city of Indianapolis for thirty-seven years; that in the year 1880, at an election held in said city, he was selected and did act as the challenger for the Democratic party organization at the precinct of the Seventeenth ward; that the voting place of said precinct was on South street, between Meridian and Pennsylvania streets, in said city; that during the voting hours on said election day there was brought to the election poll aforesaid by the Republican workers a Chinaman, who presented a Republican ticket to the election inspector, Benjamin F. Hetherington, a Republican; that immediately the said Brown, as challenger, challenged the right of said Chinaman to vote, whereupon he took from his pocket and produced an official paper, with the seal of the Marion county court attached and signed by Daniel M. Ransdell, clerk of the court, a Republican, certifying that the said Chinaman had taken the oath of allegiance to this country and had declared his intention of becoming a citizen thereof; that notwithstanding this the said Brown persisted in his challenge, on the ground that no court or court officer had any right to issue such a paper to a native of China. The inspector, however, declared that it was *prima facie* evidence sufficient to permit the holder of the certificate to vote, and he then deposited the ballot in the ballot-box. This same Chinaman was the owner of a laundry in said city, and shortly after this occurrence changed the sign over the entrance to his place of business by adding after his name the word "citizen."

AUSTIN H. BROWN.

Sworn and subscribed to before me this 20th day of August, 1888.
[SEAL.] THOS. E. ROACH, *Notary Public.*

I also understood the gentleman to say that he had in his hands a denial by General Harrison that he ever read a production advocating Chinese immigration and Chinese citizenship before a literary club in the city of Indianapolis. The gentleman did not read the denial, and as his remarks have not yet found their way into the RECORD, I am in the dark as to what kind of a denial the gentleman based his statement upon. I wish, however, to reiterate the statement I made. I not only here reiterate but emphasize it, and I challenge the gentleman from Indiana or any other gentleman upon that side of the House to put a denial, by General Harrison, of this fact on record.

The gentleman from Illinois [Mr. CANNON] rushes to the defense of his brother Benjamin, and it is highly proper that he should do so. There is an appropriateness in their companionship. It is a trite but true saying "that birds of a feather flock together." The gentleman from Illinois is a worthy champion of the record of General Harrison, his own record being akin to that of his candidate for the Presidency. I am of the opinion, however, that it will keep the gentleman busy this campaign to take care of his own record.

In the Forty-sixth Congress, Mr. Goode, a Democrat, of Virginia, on April 21, 1879, offered a joint resolution (H. Res. 9) to provide for the enforcement of the eight-hour law. On the 7th of May a member of the Committee on Education and Labor reported the resolution to the House with a favorable recommendation.

The gentleman from Illinois [Mr. CANNON] opposed the passage of the resolution. In reply to a question whether the last proclamation of President Grant did not declare that there should be no reduction in the wages of workmen employed by the Government of the United States on account of a reduction of the hours of labor he said:

I do not now recollect, but it is not material; the fact is, the law as now executed is this: if they work ten hours they get ten hours' pay, and if they only work eight hours they only get eight hours' pay. In other words, they only get pay for what they earn. That is, the law is now being executed, and, so far as I am concerned, it will go on in that way, proclamation or no proclamation.

On motion of Mr. CANNON, the resolution was laid on the table, yeas 127, noes 90. Among those voting with the gentleman from Illinois are the following distinguished Republicans: BAYNE, of Pennsylvania, BURROWS, of Michigan, HISCOCK, of New York, MCKINLEY, of Ohio, REED, of Maine, and Levi P. Morton, of New York. [Applause on the Democratic side.]

Mr. Speaker, whenever we investigate the record we find the majority of the leading Republicans in opposition to the cause of labor. They enacted the law for the importation of contract labor from Europe. They negotiated the Burlingame treaty under which the Pacific States were flooded with Chinese laborers. They voted against every bill to suspend this immigration until defeated in 1882. They refused to execute the eight-hour law and defeated a resolution favoring its enforcement. They combined in their national convention at Chicago last June, and defeated Judge Gresham, the laboring men's choice for the nomination, because he was unfriendly to corporations and monopolies; and yet they never cease to shout for "protection to American labor." [Great applause on the Democratic side.]

Mr. MORROW. Before the gentleman takes his seat I desire to call his attention to an error into which he has fallen no doubt unintentionally, as to the action of the State Department concerning this treaty. I hold in my hand the correspondence between the Secretary of State and the Chinese minister, which was sent to the Senate of the United States. Referrring to this correspondence, I find that the Secretary of State under date of December 28, 1887, sent the following letter to the Chinese minister:

Mr. Bayard to Mr. Chang Yen Hoon.

DEPARTMENT OF STATE, *Washington, December 28, 1887.*

SIR: I am constrained in the interests of that international comity which we both desire so fully to promote and sustain, to attract your excellency's attention to certain late disclosures in the course of judical proceedings at San Francisco, in which certain Chinese subjects were arraigned for violation of existing laws of the United States relative to the restriction of the immigration of Chinese laborers, passed for the enforcement of the existing treaties with China.

From the published letters of the judges and the public report of the proceed-

ings in these trials the facts seem to be established that a systematic evasion of the restriction upon the immigration of Chinese laborers, imposed by laws passed in pursuance of the treaties, has been and continues to be practiced by Chinese professing to have gone away from the United States and claiming the right to return hither under the provisions of the treaty.

The details of these disclosures are shocking and unnecessary for repetition in this correspondence. Suffice it to say that an extensive traffic in immorality of the grossest nature, by which Chinese women are imported into the United States and brought and sold into infamy by their own countrymen, is clearly proven to have been carried on.

The systematic violation of the treaty of 1880, and of the restrictive act of the United States passed in 1882, was averred by the eminent judge (Hoffman) before whom part of the cases were tried, and were also stated by another judge (Sawyer) in a published letter to the Hon. Mr. MORROW, member of Congress, dated November 21, 1887.

The intelligent vigilance exercised by you over the affairs and interests of your countrymen in the United States will have doubtless prepared you for these statements; and I have no doubt whatever that you have been duly informed of the transactions referred to, and that you feel equally with me a sincere regret therefor, and a desire to prevent their possible recurrence. I need scarcely tell you of the strong feeling that has been aroused in the public mind in this country by the occurrences referred to, and of the sentiment that has been renewed and reinvigorated in favor of more effective measures of restriction and prevention.

In considering the remedy I have great satisfaction in finding a complete accord between the government you so honorably represent and that of the United States in desiring an absolute prohibition of Chinese laborers from coming into the United States from China.

A conventional arrangement to this end has already been proposed, and measurably discussed between us, and a draught of such a treaty placed in your hands. Let me therefore invite your excellency, under the powers already held by you from your Government, to proceed with me at your earliest convenience in framing a just and wise convention, in which China and the United States shall deal with the subject in a manner consistent with their sense of mutual respect and duty and calculated to cement their amicable relations.

With this view I now hand you inclosed herewith a draught of a project upon the basis of which we can hopefully proceed to an agreement.

Accept, sir, etc.,

T. F. BAYARD.

The Chinese minister in his reply, dated January 30, 1888, uses this language:

As to your proposition for a conventional arrangement and the draught of a project inclosed by you, I beg to recall to your attention the fact that this identical project was sent to me with your note of April 11, 1887, and that I had the honer to send you on the 16th of August last a memorandum note containing a detailed reply to your draught of treaty, with a proposition by me for two additional articles which I regarded as essential to acceptance by my Government.

It thus appears that these negotiations took place after the introduction and discussion of my bill in Congress.

Mr. BYNUM. The matter which the gentleman brings up is one I do not care to discuss; I can not see the point he is attempting to make as against any statement or argument I have made, and I will leave it for reply to the gentleman from Kentucky [Mr. MCCREARY], who, as a member of the Committee on Foreign Affairs, is fully posted as to all the different steps that were taken during the Forty-ninth Congress.

The Mills Bill and the Tariff.

SPEECH

OF

HON. BISHOP W. PERKINS,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 17, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and to simplify the laws in relation to the collection of the revenue—

Mr. PERKINS said:

Mr. CHAIRMAN: The gentleman from North Carolina [Mr. COWLES] manifested or expressed much surprise when by the vote that was given on this side of the House on yesterday he learned what every schoolboy who is capable of reading knew for many months theretofore. His close application to the details of the Mills bill may be his excuse for his opaqueness, and for not having learned the fact earlier that the Republican party is not now and never has been a free-whisky party. When the Democratic organization went out of power on the 4th of March, 1861, after an almost uninterrupted domination of nearly fifty years, levying taxes and collecting tithes from the people, it left calico worth 15 cents a yard and whisky 20 cents a gallon. When the Republican party went out of power on the 4th of March, 1885, after a domination of twenty-four years, it left calico worth 5 cents a yard and imposed taxes upon whisky until not a gallon of it could be sold honestly and legitimately at less than $1 a gallon.

Yet, sir, notwithstanding this record, gentlemen on the other side of the House have the temerity to say that the Republican organization is for free whisky and high calico. Mr. Chairman, it is true that in the Republican platform adopted at Chicago that party declares itself to be, under certain circumstances, in favor of striking down the tax now imposed upon alcohol; in other words, it declares itself in favor of the entire repeal of internal-revenue taxes when the conditions existing in the country justify such repeal, but the conditions under which the party favors their total repeal do not exist to-day, and will not exist for years to come.

A MEMBER (on the Democratic side). What are you talking about them for, then?

Mr. PERKINS. It is only when the conditions which are suggested in that platform come to exist that the party declares itself in favor of their total repeal. Now, what are those conditions? Why, sir, when we have a navy that is in keeping with the dignity of our nation and is capable of protecting and defending the property and the rights of the people of America; when we have coast defenses that shall be ample to protect our great commercial cities; when we have a merchant marine capable of carrying the commerce of America in American vessels and extending the business interests and relations of our people; when we have encouraged and promoted internal improvements and have given to the suffering cities of the country public buildings that shall be decent and suitable for the transaction of public business; when we have improved our rivers and harbors and furnished cheap water transportation for the products of our fields; when we have paid our public debt and have done full and ample justice to the boys who wore the blue and defended their country against treason and rebellion; when they are discharged from the poorhouses and almshouses and are pensioned by the Government they so honorably defended and upheld; when all this is secured and these beneficent measures are consummated, then if we have more revenue than is needed for governmental purposes the Republican party is in favor of the total repeal of the internal-revenue taxes, but not until then.

Then, in the language of the Chicago platform:

We favor the entire repeal of internal taxes rather than the surrender of any part of our protective system at the joint behest of the whisky trusts and agents of foreign manufacturers.

Then, when it becomes a question whether the Democratic whisky trusts or the American system of protection shall be sacrificed, the Republican party declares it will stand, as it has stood all the years of its history, against whisky and in favor of protection against the cheap products and pauper labor of the Old World.

That, in brief, is the platform of the Republican party, as is known to every gentleman upon that side of the House, and as is known to the voters of this country. Why, Mr. Chairman, what work has been wrought by the Republican party against the reduction of the cost of the necessaries of life! I shall be glad to have gentlemen upon the other side who make these charges tell us what article is more expensive to-day to the consumer in consequence of the legislation which the Republican party gave to the people of this country when it was in power than in the days of Democracy and free trade.

Mr. RYAN. Whisky. [Laughter.]

Mr. PERKINS. A Democratic necessity perhaps, but with Republicans only a luxury. [Laughter.]

Where and what are the burdens imposed upon the people by this party, which for twenty-four years dominated the country and gave the matchless exhibition of legislation and government which attracted the wonder and admiration of the nations of the world, and gave to our own people an era of material growth and prosperity the like of which had never been seen in the entire circuit of the sun?

We diversified the industries of the country, multiplied our manufacturing and industrial agencies, promoted and encouraged business activities, opened up new avenues for the investment and employment of capital, improved our rivers and harbors, gave employment to labor and paid the best wages ever given in exchange for industrial toil, emancipated a race and drove slavery a fugitive from the land, defended our honor and preserved the Union, advanced our credit and gave to the people a stable and excellent currency, met our obligations and redeemed our promises, encouraged home competition and with competition brought a reduction of prices to the consumers, gave to our own people a market for the products of the fields and to the artisan and manufacturer a market for the labor of the shops, and thus, by a system of legislation and government the wisdom of which can not be questioned, made the people of the United States the richest and most prosperous of all the governments of the world.

Is this evidence of bad legislation? Does this prove that we gave to the people bad administration and should be condemned for the record made? From the first page of history that was ever written to the present time no page shines with so much brilliancy and glory as the one on which is written the doings and accomplishments of the Republican party during the quarter of a century it governed the United States of America and legislated for country and humanity.

But, Mr. Chairman, other days have come, and we find a party in power determined to rewrite the history of that period, and organized to strike down that system of protection which was the good magician that enabled us to accomplish all this. We find a party in power declaring that the taxes we collect from the foreign manufacturer and foreign importer, under our system of protection, is legalized robbery, and that in the name of the American people the system is to be stricken down, and in its stead we are to have "a tariff for revenue only," with ultimate free trade as its hope and aspiration.

But, Mr. Chairman, I am glad to congratulate this House and the country on the rapid growth of the protective sentiment. It argues well for our country and proves the intelligence of our people. That it has grown and is growing in overwhelming power is perhaps as clearly demonstrated here in Washington as at any point in the country. This tariff debate was opened in December last by President Cleveland in his message, in which he denounced the American system of protection as "vicious, inequitable, and illogical," and for five months not a word was spoken in its defense upon the other side of this House, except by the two or three protection Democrats who had the courage of their convictions, and who were not to be driven therefrom by vetoes or threats from the White House, or by King caucus, or the representatives of the free-trade Cobden clubs of Great Britain. With the exceptions thus suggested, not a member upon the Democratic side of this Chamber had a word to say in favor of or defense of our protective system.

For five long months it was denounced as "vicious, inequitable, and illogical." The most violent philippics were hurled against it and the passions and prejudices of the people were appealed to to strike it down. It was denounced as a "combine," as a "trust," as a "giant robber," as a "monster" sapping the life-blood of the people, while the pæans of free trade were sung by a full Democratic chorus, and with a touching melody that demonstrated their sympathy with and devotion to the subject. None of us who sat here during those weary days and listened to the violent denunciation of the American protective system and of the great industries fostered and encouraged thereby could doubt the sincerity of our Democratic friends or suspicion for one moment their honest devotion to the cause of free trade. With more than their usual frankness and eloquence they pleaded the cause of the Cobden Club, and insinuated doubts against the patriotism of the member who was not willing to reduce our customs duties and open our ports to the commerce of every sea and our markets to the products of every clime. Mr. Chairman, I will have published as a part of my remarks extracts from some of the speeches delivered upon this floor, showing the devotion of our Democratic friends to the cause so anxiously watched and prayed for by Great Britain, and some newspaper comments thereon.

But, Mr. Chairman, of late these peans for free trade have ceased. Now it is "only a little reduction in the revenue and a correction of the inequalities in the tariff" that is desired. Now our Democratic friends declare themselves protectionists, and say that they are anxious to retain 84 per cent. of what they have heretofore denominated "giant robbery." Why is this? What explanation is there for this wonderful transformation? Is it for diplomacy? Is it to deceive? Is it because there is a Presidential election pending and because the people are not ready for free trade? Is it because they have read the proceedings of the Chicago convention and have learned of the enthusiastic meetings in all sections of the country indorsing the declaration of principles and ratifying the nominations made? Is it because they have heard the threatenings that come from the wage-earners and the manufacturing centers of the country and have seen the columns forming for the overthrow of this British free-trade Cobden Club Democratic Administration, or why is it?

If not this, will some kind Democratic friend tell me why this change of front? Will he please tell us why President Cleveland, who denounced the protective system as "vicious, inequitable, and illogical" in December, declares himself in favor of it in July? Will he please tell me why the gentleman from Texas, the chairman of the Ways and Means Committee of this House, a pronounced free-trader, and the gentleman from Kentucky, the Speaker of this body, made their pilgrimage to Tammany on the 4th day of July to assure that potential political organization that Democrats are not in favor of striking down the Republican system of protection?

Is it because they have at last learned that upon a free-trade issue all would be lost to this Administration, and that the nominees of the Chicago convention would be triumphantly elected? Is it because they have learned that the people of this country prefer New England to old England and the Republican clubs of America to the Cobden clubs of Great Britain? Is it because they have learned that the people have already decided to put the Stars and Stripes above the red bandana, and to inaugurate on the 4th of March next an American administration, governed by American convictions and anxious to promote and subserve the interests of the common American people?

Mr. Chairman, I have not the time to notice the partisan and sectional features of this bill as I would like, nor have I the time to call the attention of the country to the amendments made to the bill since its first introduction and the circumstances under which those amendments have been made. As is known to all, the Ways and Means Committee, as a committee, refused to give a hearing to the labor organizations, the wage-earners, the manufacturers, the farmers, the wool growers and dealers, and the vast army of American people deeply and vitally concerned in the subject-matter of this proposed legislation. If such hearing had been given, the Republican members could have been present and a full and impartial consideration could have been given to all affected interests. Labor could have spoken, the farmers could have pleaded, the artisans could have represented, and the manufacturers could have demonstrated the iniquitous features of the bill, and publicity would have been given to the proceedings and the country fully advised concerning this important subject.

But this hearing was refused over the united protest and votes of the Republican members of the committee. And yet upon the floor of this House the confession has been reluctantly made that the Democratic members of the committee, as individuals, have been engaged in hearing a favored few concerning their interests. Democratic politicians have been heard, Democratic trusts have been listened to, Democratic manufacturers have been taken into confidence, and Democratic friends have been written to for suggestions and information, and thus the "dark-lantern" methods of the incubation of this bill have continued to the present, only intensified and aggravated. As the result of these secret hearings we have seen amendments made to the bill remarkable in in their character and without a word of explanation upon the floor of this House in their defense.

We have seen the provisions of the bill affecting Democratic districts changed and amended. We saw the duty on glue advanced, an industry largely owned by a member of the committee on resolutions in the late Democratic national convention, and we saw the "sugar trust" provided for, but not until after Mr. Henry Havemeyer, the president of the trust and a liberal contributor to Democratic campaign funds, had visited Washington and conferred personally with Democratic members of the Ways and Means Committee, and not until the most of such Democratic members, together with the Speaker of this House, had been entertained at a dinner at Chamberlin's as the guests of the "Parsee Merchant," a representative of such sugar trust, and a lobbyist for free-trade legislation. But it will be understood, of course, that the influences thus exerted, if any, were of a moral and economic character, the sugar trust, like the whisky trust and other Democratic trusts, being only anxious to promote the best interests of the country.

But, if I mistake not, Mr. Chairman, the voters of this country will desire to know before November why these and other changes were made to the bill and why political and sectional interests governed the majority in framing this proposed important legislation rather than economical business and national considerations. They will desire to know why State lines and the political complexions of Congressional districts determine the importance of affected interests and their right to protection rather than those other great and patriotic considerations that should govern statesmen when legislating for the weal or for the woe of a great nation of more than sixty million of people.

But I desire briefly to call the attention of the House to some of the peculiarities of this tariff debate, and I am done. The gentleman from Texas, the chairman of the committee, in his opening speech, grew warm and eloquent in his denunciation of the protective system and stated as one reason why it should be stricken down that the woolen manufacturers of New England were growing rich and grasping at the expense of their workmen and in consequence of the burdens that were imposed upon the consumers. As a free-trader from Texas, and speaking for the agricultural interests more particularly, he hoped to intensify the opposition to our system of protection by making the consumers believe they were wronged and robbed by the manufacturing interests, and as his most convincing argument he said as follows:

I find in this report one pair of 5-pound blankets. The whole cost as stated by the manufacturer is $2.51. The labor cost he paid for making them is 35 cents. The present tariff is $1.90. Now here is $1.55 in this tariff over and above the entire labor cost of these blankets. Why did not that manufacturer go and give that money to the laborer? He is able to do it. Here is a tariff that gives him $1.90 on that pair of blankets for the benefit of his laborer, but notwithstanding that the tariff was imposed for the benefit of American labor and to preserve high wages, every dollar of that tariff went into the manufacturer's pocket. The poor fellow who made the blankets got 35 cents and the manufacturer kept the $1.90.

Some little time later in the debate Hon. JOHN E. RUSSELL, a free-trader from Massachusetts, speaking upon the same subject and upon the same feature of our protective legislation, but speaking for an Eastern and a manufacturing constituency more particularly, made this statement, which was not contradicted by Mr. MILLS or by any member upon this floor:

I have said over and again that the business—

Wool manufacturing—

was not prosperous, and I may say that many large and small manufacturers have become insolvent in the past ten years—some of them not once, but two or three times.

* * * * * * *

As proof of my statement I will quote Mr. Charles A. Beach, of Connecticut, a manufacturer of wide repute and large experience, who testified before the Committee of Ways and Means in the last Congress that the wool manufactories of the United States—not of Massachusetts, not of New England, but of the United States—would not sell for 25 cents on the dollar of their original cost. I speak, and gentlemen can correct me in their own time if I am wrong; one of the largest woolen corporations in the United States has been sold lately. The plant cost something like two millions, and it brought less than $300,000.

Thus I leave free-trader MILLS answered by free-trader RUSSELL.

The President in his free-trade message says:

I think it may be fairly assumed that a large proportion of the sheep owned by the farmers throughout the country are found in small flocks numbering from twenty-five to fifty. The duty on the grade of imported wool which these sheep yield, is 10 cents each pound if of the value of 30 cents or less, and 12 cents if of the value of more than 30 cents. If the liberal estimate of 6 pounds

be allowed for each fleece, the duty thereon would be 60 or 72 cents, and this may be taken as the utmost enhancement of its price to the farmer by reason of this duty. Eighteen dollars would thus represent the increased price of the wool from twenty-five sheep and $36 that from the wool of fifty sheep; and at present values this addition would amount to about one-third of its price.

Thus he fairly estimates that our present protective legislation adds on an average 66 cents to each fleece of wool grown by the American farmer, and as there are in round numbers, as shown by carefully prepared statistics, 45,000,000 sheep in the United States, we find by computation and by the confession of the President that our farmers get each year for their wool $29,700,000 more than they would get for it if the tariff duty was removed. Notwithstanding this confession the President and his followers would have our farmers believe that they are to be benefited by the repeal of the duty which each year gives them this great sum of money. Many of the arguments they advance to support this proposition are necessarily amusing if not ingenious, and as they have been driven from time to time from their positions by the logic of the facts and compelled to advance new theories by the arguments exploding their old ones, it remains for our distinguished friends DOCKERY, of Missouri, and OUTHWAITE, of Ohio, to argue that this duty had a depressing effect upon our wool-growers and for such reason should be repealed; that it was inducing them to reduce the number of their sheep and to quit the business.

They argued long and laboriously to establish the correctness of their position, and in answer I have only time to inquire if our wool-growers are depressed by this duty which each year adds $30,000,000 to their wool crop what would they think of a duty that would each year add $60,000,000 to it? Would it so "depress" them that they would find the growing of wool profitable, as under the act of 1867, or would they in despair join the Democratic column, drive their sheep from the country, and surrender the field to the flock-masters of Australia and South America? If I read correctly the petitions and resolutions of our American wool-growers they unanimously ask that this "depressing" tariff duty shall be increased rather than decreased, that they may find profit and satisfaction in the business in which they have so much money invested and which gives employment to so many American wage earners.

Again, in season and out of season, the advocates of this bill have favored the reduction of the duty on the articles grown by our Northern farmers or manufactured or produced by our Northern workmen, and when upon this side of the House we have protested against the provisions of the bill as unfair and unjust to our farmers and wage-earners, because of the competition it would force upon them from the cheap products and pauper labor of the Old World, we were heartlessly and at times tauntingly told it would be for their good, and all our efforts to amend the bill were unavailing. But when we reached rice, a product of the Southern field, and an effort was made to simply reduce the exceedingly high duty of 100½ per cent. now imposed upon it, our Democratic friends raised their hands in holy deprecation of the act, and our eloquent friend from South Carolina [Mr. ELLIOTT] said, assuming an air of righteous indignation:

It is a condition we are confronting, not a theory. [Laughter.] The Republican party is to-day proposing to reduce the duty on rice in behalf of the Chinese, to whom they have also given a candidate for the Presidency, and the course of this debate shows they are quite ready to sacrifice the colored laborers of the South for their friends the Chinese by giving to the latter free rice.

Mr. Chairman, with this record and these suggestions, I conclude, with the additional suggestion that when needed appropriations are made and legislation is enacted that will do ample and full justice to those who marched in the ranks of the Union Army and carried the flag of their country from the lakes to the sea, and the idle money now in the Treasury is applied to the payment of the interest-bearing indebtedness of the Government, we will have no surplus with which to frighten members.

APPENDIX.

WHAT DEMOCRACY HAS BEEN AND IS—FOR PROGRESSIVE FREE TRADE BEFORE THE WAR.

The time has come for the people of the United States to declare themselves in favor of free seas and progressive free trade throughout the world, and by solemn manifestations to place their moral influence at the side of their successful example.—*Democratic national platform*, 1856. Readopted by the Douglas and Breckinridge conventions in 1860.

AGAINST THE TARIFF IN 1876.

We denounce the present tariff, levied upon nearly four thousand articles, as a masterpiece of injustice, inequality, and false pretense. It yields a dwindling, not a yearly rising, revenue. It has impoverished many industries to subsidize a few. It prohibits imports that might purchase the products of American labor. It has degraded American commerce from the first to an inferior rank on the high seas. It has cut down the sales of American manufactures at home and abroad, depleted the returns of American agriculture—an industry followed by half our people. It costs the people five times more than it produces to the Treasury, obstructs the processes of production, and wastes the fruits of labor. It promotes fraud, fosters smuggling, enriches dishonest officials, and bankrupts honest merchants. We demand that all custom-house taxation shall be only for revenue.—*Democratic national platform*, 1876.

FOR REVENUE ONLY IN 1880.

A tariff for revenue only.—*Democratic national platform*, 1880.

The Democratic party of the United States in national convention assembled, renews the pledge of its fidelity to the Democratic faith and reaffirms the platform adopted by its representatives in the convention of 1884, and indorses the views expressed by President Cleveland in his last earnest message to Congress as the correct interpretation of that platform upon the question of tariff reduction; and also indorses the efforts of our Democratic Representatives in Congress to secure a reduction of excessive taxation.—*Democratic national platform*, 1888.

THE PLATFORM OF 1888 CLEVELAND'S OWN.

It turned out just as it was planned. The nomination, the platform, everything included; not a single thing miscarried. I brought out that platform myself. Not the crossing of a "t," not the dotting of an "i" was changed. It was adopted just as it was approved by the President.—*William L. Scott*, Democrat, Pennsylvania, after the Democratic national convention of 1888.

THE SECESSIONISTS FREE-TRADERS.

To lay and collect taxes, duties, imposts, and excises for revenue necessary to pay the debts, provide for the common defense, and carry on the government of the Confederate States; but no bounties shall be granted from the Treasury; nor shall any duties or taxes on importations from foreign nations be laid to promote or foster any branch of industry; and all duties, imposts, and excises shall be uniform throughout the Confederate States.—*Powers conferred upon the Confederate congress by the Confederate constitution.*

DEMOCRATIC POLICY IN A NUTSHELL.

If the gentleman means to ask whether I recognize a principle that would impose a duty above the revenue point merely for the purpose of giving what is called protection, my answer is in the negative. If we were called upon now for the first time to declare a principle or inaugurate a policy upon this subject I should not hesitate to announce my adherence to that creed which demands the largest liberty in law—that doctrine which opens the channels of commerce in all parts of the world and invites the producer and consumer to meet on equal terms in a free market for the exchange of their commodities; for I sincerely believe that all commercial restrictions are in the end injurious to the interests of the people.—*Speaker Carlisle.*

Mr. Chairman, we want not only the home market, but all the markets of the world for the varied products of this great country. We want to send our agricultural products, our cotton and our breadstuffs, and our provisions to the naked and hungry manufacturing people of Europe, and our manufactured products to the agricultural peoples of South America, Mexico, and Asia. We can do this when we determine to trade with other people upon fair terms, but we can not do it so long as we protect England and other manufacturing countries in the great markets of the world upon the pretense of protecting ourselves in our own.—*House debate*, May 19, 1888, Speaker Carlisle, Democrat, Kentucky.

PROTECTION SUICIDAL.

We are the first cotton-producing country. We have wool, flax, hemp; our country is full of coal and ores and lumber, and yet with all these advantages over all others we have pursued a suicidal policy of protection which has closed the markets of the world against us: and not content to stop here, we have plundered the great body of our agricultural people out of a large part of their wealth. We must take a new departure. Instead of laying the burdens of taxation upon the necessaries of life, instead of destroying our foreign commerce, we should encourage it as we would encourage our home commerce. We should remove every unnecessary burden. We should lay taxes to obtain revenue, but not restrict importation.—*House debate*, April 17, 1888, Roger Q. Mills, Democrat, "Premier."

FREE TRADE THE TRUE POLICY.

That policy is American which clings most closely to the fundamental idea that underlies our institutions, and upon which the whole superstructure of our Government is erected, and that idea is freedom—freedom secured by the guaranties of government; * * * freedom to sell our products, and freedom to buy the products of others, and freedom to markets for the products of our labor, without which the freedom of labor is restricted and denied; freedom from restraints in working and marketing the products of our toil, except such as may be necessary in the interests of the Government; * * * freedom from all taxation, except that which is levied for the support of the Government; freedom from taxation levied for the purpose of enriching favored classes by the spoliation and plunder of the people; freedom from all systems of taxation that do not fall with equal and exact justice upon all—that do not raise the revenues of the Government in the way that is least burdensome to the people, and with the least possible disturbance to their business. That, sir, is the American policy.—*House debate*, April 17, 1888, Roger Q. Mills, Democrat, "Premier."

THE TARIFF A MASKED ROBBER.

To show how American labor has been pillaged and plundered by this masked robber of protection. * * * We have not only burdened industries and labor in order to increase the production of materials where there is a deficiency in the home product, giving to European manufacturers and European labor cheaper materials to work up, but we have robbed them by placing a higher rate of duty upon that class of materials of which we produce a surplus, thereby giving the American producer a monopoly of the home market which he supplies at the foreign prices with the duty added, and then sells the surplus for exportation at free-trade prices.—*House debate*, April 26, 1888, William D. Bynum, Democrat, Indiana, member Committee Ways and Means.

PROTECTION PROMOTES POVERTY.

You have fastened your system of taxation as a parasite upon that consumption which for the wage-earner means nine-tenths and frequently ten-tenths of his earnings, until you have built up a tariff which is well entitled to say, "Whoever else escapes my exactions, the poor I have always with me."—*House debate*, May, 1888, W. L. Wilson, Democrat, West Virginia, member Committee Ways and Means.

PROTECTION "EATING EACH OTHER UP."

Wherever there has been a possibility to estrange a nation from us, so far as commercial relations were involved, we have succeeded in doing it. It is the only civilized country in the world whose policy has been sedulously to make money by eating each other up—whose highest political economy has been that a people can grow fat upon each other; that by taxation wealth can be accumulated; that the more the Government takes from its citizens the richer the citizens are by the subtraction.—*House debate*, May 18, 1888, W. C. P. Breckinridge, Democrat, Kentucky, member Committee Ways and Means.

PROTECTION UNPATRIOTIC.

The chief mission of protection during the struggle (the war) was to establish itself, not the Union, to feather its own nest, to put money in its purse, and while the brave and patriotic were fighting the battles of the Union protection bound them hand and foot. Protection can not face a competitor, much less an enemy. It shivers at sight of an enemy, and if one appears in our ports it pleads infancy and begs the power to tax its own customers as a defense against invasion. And now to perpetuate its pensions it says to an old soldier, "Give me that flag; get behind me; I saved the Union."—*House debate*, May 10, 1888; Henry G. Turner, Democrat, Georgia member of the Committee on Ways and Means.

Of course any reduction of excessive rates of tariff taxation is in the direction of free trade. I do not seek to conceal my own belief in the wisdom of the greatest possible freedom of trade from all hinderances and restrictions.—*Clifton R. Breckinridge*, Democrat, Arkansas, tariff debate, May 17.

The illustrious Gallatin, for over fifty years a citizen of my own State, the most enlightened financier who has appeared in all American history, third in the great triumvirate—Jefferson, Madison, and Gallatin—Secretary of the Treasury eight years under Jefferson and four years under Madison, in that famous memorial of 1832, containing the ripened fruits of his vast experience and profound reflection, said of the alleged protective system in general: "Let it be recollected that the system is in itself an infraction of an essential part of the liberty of the citizen."—*Mr. Scott*, Democrat, Pennsylvania; tariff debate, May 11.

LEGALIZED ROBBERY.

We of the Northwest have had to submit too long to having our money taken from our pockets by the legalized robbery called the protective tariff to acquiesce cheerfully in the enactment of any measure that does not put an end to it.—*House debate*, May 5, 1888; J. L. Macdonald, Democrat, Minnesota.

DEMOCRACY AGAINST PROTECTION

I appeal to the Democracy here to stand true to their colors. I appeal to them to stand up to the traditions of their party. A tariff for anything else than revenue is outside the traditions and principles of our party and at war with its pledges and history. It is foreign to our platform. We have given to our people the assurances of our intention to do this. Let us prove our faith by our works. Let us engrave upon the imperishable tablets of the law the truth of the doctrines we have proclaimed. If you want the Democratic party to live, give it a principle that will sustain it. If you want it to die, stimulate it with a policy foreign to its nature, which will destroy it just as surely as poison will consume the human frame, though it may for a time impart to it the glow of youth and the flush of health. A man can not at this time upon this floor be a Democrat and be in favor of the continuance of the present system. If he is for protection for protection's sake, then he is against his party upon the principal issues that divide the parties.—*House debate*, April 30, 1888; Isidor Rayner, Democrat, Maryland.

WHAT ANOTHER DEMOCRATIC CONGRESS WOULD DO.

Refuse to reduce and reform the tariff; refuse to lift any part of this burden from the shoulders of the toiling millions of this country; defeat this bill as you have defeated all other measures of relief, and a long-suffering people will rise in majesty and strength of desperation and sweep from the statute-books a system, the abuse of which has wrought such widespread injustice and poverty in a land where honest labor, under just laws, would bring peace and plenty to every home.—*House debate*, May 16, 1888, A. B. Montgomery, Democrat, Kentucky.

PROTECTION THE BABY ACT.

I claim that every dollar of money collected from the people above the needs of the Government is organized robbery. * * * We have to-day a territory stretching from the Great Lakes to the Gulf of Mexico, and from the Atlantic Ocean to the setting sun, a soil as rich as any on God's footstool, a variety of climate that will produce most everything that grows out of the ground; our hills and plains underlaid with rich mines of gold, silver, copper, iron, lead, and coal; our immense forests and unprecedented water powers sufficient to move all the machinery of the world; having passed through great wars with foreign nations and contended with our own kindred, having always as a nation proved our valor on the land and on the sea; having grown to 60,000,000 of people, with our free schools in every part of our fair land. * * *

And yet, with all that Nature has done for us, with all our wealth, our industries, our resources, and our intelligence, we proclaim to the world that we can not live without protection from every other nation of the earth. In other words, we plead to the world the baby act. As an American I deny the assertion. Give us a free and open market with the world, break down the barriers that a false system has built around us. Go back once more to the principles of the Democracy * * * and foreign nations will seek protection from us, the grandest, the freest, and the noblest nation of the earth.—*House debate*, May 3, 1888, Luther F. McKinney, Democrat, New Hampshire.

THE TARIFF A SNEAK-THIEF.

This tariff is a most insidious enemy. It works in silence and under cover, and whilst it pretends to be giving us protection it is really stealing our substance and destroying our lives. It is not the highwayman who boldly gallops up on the public road and demands your money or your life, but the sneak-thief who in an unconscious moment filches your purse, or the burglar who robs you of your possessions in sleep's unconscious hour.—*House debate*, May 2, 1888, Asher G. Caruth, Democrat, Kentucky.

A CANDID FREE-TRADER.

I believe that a tariff for protection is the foundation and principal cause of all the complaints and unrest that have either threatened or actually disturbed the public peace and quiet for years, because it fosters one industry at the expense of another; it transfers the labor and production of one class and gives it to another, thereby building up a small class of great wealth and impoverishing the great body of our people. I am opposed to any tariff whatever for protection simply. I favor a tariff that will bring a sufficient revenue to defray the expenses of the Government; and I favor this because we must collect a tax sufficient to meet the actual wants of the Government and this is the best way to make such collection. If we did not require money to defray the expenses of Government, I would be an absolute and uncompromising free-trader.—*House debate*, May 10, 1888, Silas Hare, Democrat, Texas.

BARBARIC TARIFF LAW.

The protective system is un-American and is a perversion of the laws of nature, of God and man. We find by the laws of nature that some countries produce one article and others give different variety, and we find that the oceans and rivers connect these countries, and, as it were, are highways of commerce, created by nature, from one country to another, and the winds of heaven bring the products of one clime so that they may be exchanged for the products of another and thus bless all mankind. But the barbaric law interferes and prevents the spirit of civilization and retards the tendency of the age in the drawing together of the nations of the earth through the agencies of commerce.—*House debate*, May 10, 1888, Edward Lane, Democrat, Illinois.

A BADGE OF INDUSTRIAL SLAVERY.

A protective tariff that protects all our industries and increases the wages of our laborers in uniform proportions in fact would protect none. Its exact and equal benefits would be its destruction and exemplify its own folly. * * * I do not pretend that the present bill for the reduction of tariff taxes is what I would wish. I would reduce further the manufactures of iron, wool, and cotton. I would give the people to whom these are a necessity cheaper prices. I would make free the farming implements, tools, and machinery with which the tillers of the soil are feeding and clothing the world, Chattel slavery has forever perished in this land; its manacles are stricken off. Now strike down this industrial slavery and then will we be free.—*House debate*, May 5, 1888, L. W. Moore, Democrat, Texas.

BRIGANDAGE AND RECIPROCITY OF ROBBERY.

I have inveighed against this system as mutual brigandage and the reciprocity of robbery. Our tariffs illustrate them in every paragraph. Kentucky wants cheap copper stills for her whisky. She gets even with the Michigan robber by demanding a tariff on hemp. Now, hemp is to be on the free-list, and why not copper? Maine steals on lumber to make up for the Massachusetts roguery on fabrics. Massachusetts howls for cheap coal; Pennsylvania says no; and so Massachusetts goes out with a home-market club and knocks down the West and South to rifle them of half their gains on raw cotton. Tennessee, Virginia, and North Carolina, being fleeced all round in clothing, sugar, and what not, go for goobers at a cent a pound.

California demands a large reprisal for her lumber, because she is fleeced by New York, West Virginia, Ohio, and Michigan. The Gulf States form a band of brigands and march forth with precious little hope for any steal worth the powder; but being reduced to extremities they call on Fra Diavalo, from Louisiana, to lead against the robber gang of cut-throats on cotton-ties and trace-chains. Pennsylvania, the Robert Macaire of the lot, steals boldly on all articles from a plate-glass to a locomotive. * * * Oh, the beauty of reciprocal rascality!—*House debate*, May 11, 1888, S. S. Cox, Democrat, New York.

The father of all sin and lies is the father of the tariff.—*Mr. Cox*, Democrat, New York, tariff debate, May 17.

TEN CENTS A DAY ENOUGH WITH FREE TRADE.

Admitting the fact that in dollars and cents the United States pays higher wages than England; that England pays more than other countries in Europe; and that Europe pays higher than India; yet it is an established fact that the laborer in the United States can not as a general rule save anything from the result of his toil at the end of each year; nor can he do so in England, nor elsewhere in Europe, nor in India. It is equally as well established that in all those countries the laborer does eat and wear clothes adapted to his country and climate. Then what is the difference between earning $1 per day or 10 cents per day, if the result is the same, namely, sufficient to eat to preserve life and sufficient to wear to protect the body?—*House debate*, May 10, Silas Hare, Democrat, Texas.

PROTECTION UNCONSTITUTIONAL.

A protective tariff is an unjust and unfair discrimination by the Government in favor of one class of citizens against another class of citizens. It is an enforced contribution in which one man is made to contribute to the support of another man's business without a resulting benefit and contrary to the spirit and letter of our Constitution.—*House debate*, May 16, Charles W. McClammy, Democrat, North Carolina.

I follow my party upon this great issue, the issue of the hour; and I have no right, sir, to look to any industry in your district, or in my district, or in the district of any other man in this country, when the great fundamental question before the whole country is whether or not the systematized plan of robbery and plunder which has been in existence so long shall be kept up against the rights of the whole American people.—*Mr. Rayner*, Democrat, Maryland, in House tariff debate.

In his message to Congress President Cleveland struck the key-note of future prosperity and sounded the death-knell of a robber protective tariff by which the manufacturer is made richer and the grand army of laboring people reduced year by year to poverty and almost starvation. * * A system of protection which protects the few at the expense of the many is a species of class legislation which is a blot upon the fair name of American liberty. * * * I am opposed to the protection policy of our Government.—*William H. Martin*, Democrat, Texas, tariff debate, May 8.

The first prejudice to be overcome is that so often answered. It is verbal. It relates to the phrase "free trade." "God save us," said an eminent man, "from the evil spirit and from metaphors." It is idle to explain that freedom and trade in themselves, together or separately, are not obnoxious to any one. No one champions slavery and isolation. Free-traders have but one object—to be rid of that state of affairs which forbids nations to exchange with each other their various products untrammeled by hostile and prohibitory tariffs. Free trade would remove hindrances. It would do it while affording proper support by customs dues to the Government. All agree that if free trade were universal it would confer great blessings on mankind. It is, therefore, worth approximating to it, if we can not reach it. Our trade is only free as to exports; on our imports the exactions are laid, and as a consequence their prices are raised.—*Mr. Cox*, Democrat, New York, in Forty-seventh Congress.

THE TARIFF DEBATE CONDENSED.

Mr. McComas (Republican, Maryland). Why in this debate has every friend of the Mills bill lauded the English free trade-tariff system, which only levies duties on articles not produced at home? Has any friend of this bill in this debate uttered one sentence in favor of the American tariff system, which only levies duties not produced at home? Has any friend of this bill in this debate uttered one sentence in favor of the American tariff system, which discriminates in favor of the home producer and laborer? I pause and will yield a half minute to any member on the Democratic side to name the sentence or the member's name who uttered it.

Mr. Hooker (Democrat, Mississippi). No. There was no one, and you will not hear any Democrat utter one.

Mr. McComas. I am glad to hear the gentleman from Mississippi declare for his party that no Democrat has or can utter a word for protection of labor.—*House debate*, May 2, 1888.

THE RIGHT TO BUY ANYWHERE.

As an abstract question of right, who is there who dares to say with his hand upon his heart, looking to God, "I have not the right, the God-given, inalienable right to buy what I may need or require wherever I can buy it most cheaply?" Not one. The taxing provisions of our Constitution and their limitations have all been cited in your hearing by me this day. They are the supreme law. In them is declared "taxes shall be uniform throughout the United States." * * * Millions for defense of Government, if needs be, but not a cent for tribute beyond the revenue line, should be and will be our campaign rallying cry.—*House debate*, May 6, 1888, Charles H. Mansur, Democrat, Missouri.

The tariff for protection may be defined as a tax or duty laid upon all the four thousand articles specified in the statute of such an amount as will prevent the domestic consumer from purchasing in the open markets of the world, and will compel him to buy of the domestic manufacturer at a price equal to the real value of the article with the tax or a large portion of it added on. Or it may be said that it is a system by which the taxing power of the Government is delivered over into the hands of a few men for the purpose of enabling them to lay tribute upon the rest of their fellow-citizens, and under the transparent pretense of saving us from an alleged foreign monopoly subjects the entire population of this country to a galling home monopoly, not only permitted, but knowingly and willfully enacted by statute. * * * It seems to me that human ingenuity can not devise a system of taxation more unjust, unreasonable, unfair, and unrighteous. * * * What we demand is the inalienable right of purchasing in that market where our money will bring the greatest quantity of the necessaries of life.—*House debate*, April 26, 1888, John J. Hemphill, Democrat, South Carolina.

Mr. PERKINS. Our friend from South Carolina [Mr. HEMPHILL] seems to be good natured about submitting to interrogatories.

Mr. HEMPHILL. Yes, sir.

Mr. PERKINS. Then I will ask the gentleman a question. Do you believe in the doctrine that we should be permitted to buy where we can buy cheapest?

Mr. HEMPHILL. Yes, sir.

Mr. PERKINS. Then you believe in the doctrine that we should be permitted to hire where we can hire cheapest?

Mr. HEMPHILL. Who said so?

Mr. PERKINS. Does it not necessarily follow?

Mr. HEMPHILL. Well, I think so.

Mr. PERKINS. If we should be permitted to buy where we can buy cheapest, why should we not be permitted to hire where we can hire cheapest?

Mr. HEMPHILL. Exactly. I think that is right.

Mr. BLAND. It is just the other way. You will not let the people buy where they can buy cheapest; but you hire where you can hire cheapest. You bring in the pauper labor of Europe to compete in our labor market.

Mr. PERKINS. That is what you are contending for, and it is against that that we are fighting here.

* * * * * * *

Mr. PERKINS. Do I understand that the gentleman from South Carolina is in favor of prohibiting the immigration of contract labor?

Mr. HEMPHILL. No, sir; I believe in freedom all around.

COBDEN A FRIEND OF AMERICA.

Cobden was not a nobleman. He was not a hereditary legislator. He was born of the people. He was the son of a yeoman. He was brought up to trade. It was his business training, together with observation abroad, while a partner in a Manchester cotton mill, that made him so cogent in debate and so simple and earnest in his devotion to the cause of the people and to the cheap loaf. I should be derelict as a member of Congress or as a citizen of the United States if I did not, even in this feeble way, vindicate the splendid fame of Cobden. * * * He had a genuine love for America.—*House debate*, May 11, 1888, S. S. Cox, Democrat, New York.

COMMENTS.

Mr. MILLS's speech in opening the tariff debate, as printed in full in the CONGRESSIONAL RECORD, justifies the impression produced by the telegraphic reports. It is a manly, vigorous, and most effective free-trade speech, abounding with telling points that go to the very heart of protection.—*Henry George.*

What the result of study should be the President makes plain. The accusations of his opponents, who declare that any reduction in protective taxation would seriously injure American industries, he treats with contempt, and he points out that the present system benefits certain classes of citizens at the expense of every householder in the land. The Republicans, nevertheless, will do their best to maintain that system, and the coming election will turn mainly on the question of strict protection as opposed to a modified free trade. That Mr. Cleveland will be victorious in the struggle seems to be generally accepted in the United States as almost certain. If he returns to power, it seems more than probable that his term of office will be marked by a revolution in the fiscal system of the United States which may have an important effect on European as well as on American trade.—*London Post*, July 8.

The tariff reform which the President recommends goes as far at least as the abolition or reduction of the duties on raw materials. Should Congress give effect to this proposal its immediate result would be an enormous stimulus to English industry. Iron, though a product of manufacture, is in one sense a raw material, and the removal of the duties on iron would stimulate the iron industry in this country. The abolition of the duty on wool, which the President mentions, would also probably lead to a great export of wool to America and a considerable rise in the price of that commodity. The first effect of the adoption of the President's policy would be a great increase in our trade with the United States.—*People's Journal*, Dundee, Scotland, December 10.

Grover Cleveland has done more to advance the cause of free trade than any prime minister of England has ever done.—*London Spectator.*

To convert the United States is indeed a triumph. The Cobden Club will henceforth set up a special shrine for the worship of President Cleveland, and send him all its publications gratis. Cobden founded free trade; Cleveland saved it. Such is the burden of the song all through England to-day.—*A cablegram from "A member of Parliament" to the New York Herald.*

Exclusion of Chinese.

REPLY

OF

HON. WILLIAM WOODBURN,

OF NEVADA,

TO HON. W. D. BYNUM, OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 18, 1888,

On the Chinese exclusion act.

Mr. WOODBURN said:

Mr. SPEAKER: The State I have the honor to represent is deeply interested in the passage of any measure aiming at the total exclusion of the Mongolian race from American soil. Her people do not suffer as keenly from the effect of Chinese immigration as those of Oregon and California, because they have an unwritten law prohibiting Chinese from competing with American labor in the extraction and reduction of the gold and silver ores which has never been violated during the last twenty years.

The Chinese now in Nevada are principally engaged in the laundry business, or are acting in the capacity of servants. Every one of them displaces a white man or woman, and the sentiment is universal in favor of their immediate extirpation. There are on the Comstock lode two miners' organizations existing by operation of law, the members of which in point of intelligence and manhood have no equals on the habitable globe. There is a similar organization in Silver City, in the neighboring county of Lyon. Every member receives for his daily labor $4 per day. He can work seven days per week if he wishes so to do, and can live more sumptuously for $6 per week than at Willard's Hotel in the city of Washington. Their existence would be ephemeral if they should be brought into competition with cheap, servile, Chinese labor.

I live on the Comstock Lode, and although the value of its silver has been materially reduced by hostile Congressional legislation, it is the only spot on earth where my brethren who wield the pick and shovel receive such wages for their labor through the agency of their protective system. The only measure of relief that will satisfy the people of the Pacific coast is one that will constitute a perfect barrier against their immigration to this country. Experience, observation, the welfare of society, protection to American labor demontrates its necessity and demands it as the culmination of twenty-five years of agitation in Congress that has wrought a most striking change in public sentiment east of the Rocky Mountains upon this solemn question.

This House concedes without a division that a race of people "should be summarily dealt with whose presence on our shores means disease and demoralization, the contamination of society, and the degradation of labor."

No treaty, no act of Congress that will allow Chinese to return to this country upon compliance with the conditions specified in the pending bill will meet the popular and universal demand of the people west of the Rocky Mountains as expressed at the ballot-box.

This bill, intended to enforce a treaty to be ratified hereafter, permits every Chinaman who now resides in this country and who hereafter departs therefrom, to return and land in seven seaports of the United States, provided he makes oath that he possesses any of the qualifications required by section 6. As the eye of no American has ever had the pleasure of gazing on a Chinese laborer who would hesitate to swear to a lie in a court of justice, or before a person empowered to administer an oath, its provisions inspire him with no degree of terror.

If he desires to return, in order to procure a certificate he will testify that he has left behind him a parent, wife, or child, property of the value of a thousand dollars, or a debt due but unascertained of a similar amount. If his oath be false it devolves upon the Government to perform the almost impossible feat of proving a negative.

Without any certificate he can embark at the British port of Hong-Kong and land in British Columbia, Lower California, and Mexico, contiguous territory to the United States, with the same freedom as any other people, step across the line, and invade the Pacific States and Territories. He can come if he wishes to come. Nothing will ever daunt him from making the attempt except an act or treaty of absolute prohibition.

The principal recommendation of this measure is that it will make Chinese perjury less frequent and easier of detection. It may keep out a few who are not entitled to return, and for this reason only am I in favor of its passage.

It ought to have been acted upon a week earlier. It was patent that there was no opposition to it as it came from the Senate. The gentleman from California [Mr. MORROW] asked unanimous consent for its immediate consideration, which was denied by reason of the objection of a Democratic leader of the House, Mr. SPRINGER, of Illinois.

The Democratic Committee on Foreign Relations took arbitrary control of it, put it in a pigeon-hole for a week, and then reported it in its exact original condition, in order to give the Democratic majority an opportunity to play the rôle of the demagogue at the opening of a great political contest.

In order to cover up their free-trade tracks and to divert the public mind away from the damning fact that their leaders have formed an unholy alliance with British manufacturers to strike down American industries and degrade American labor engaged in their prosecution and development, they deemed it necessary to discuss the various provisions of the bill, and in testimony of the sincerity of their approval made a malicious assault upon the Republican candidate for President of the United States by garbling and falsifying his record on the Chinese question in the Senate of the United States. They did more. To show their zeal in the interest of white labor they had the sublime cheek to undertake to make the Chinese question a party one and to prove that their party is now and always was the sole opponent of Chinese immigration.

They selected Mr. BYNUM, of Indiana, to champion the affirmative of these lying declarations. Evidently his speech was intended to gull the laborers of Indiana and the Pacific coast. I dare him to explain to his constituents how he or any of his confrères that voted for the bastard offspring of the President's message, known as the parsee Moore or Mills bill, can consistently vote to-day to exclude Chinese from this country when every one of them a few days ago voted to let in free of duty the product of their cheap labor to displace the product of well-paid American labor.

I challenge him to give to the laborers of Indiana the name of a sin-

gle Democrat that ever until now championed an anti-Chinese restriction measure. He ought to know that the great leaders who led the van and planned the battles in the war against Chinese immigration were Republicans and not Democrats. Such men as Aaron A. Sargent, MITCHELL and Williams of Oregon, JONES and STEWART of Nevada, in the Senate, and Wren of Nevada and H. F. Page of California, in the House, the best Representative that State ever had, inaugurated and kept up the fight, and by the force of their energy and eloquence threw such a flood of light on the Chinese question that to-day enlightened public sentiment demands their absolute exclusion.

How dare the gentleman assert that the Burlingame treaty, which was purely one of amity and commerce, is responsible for the influx of Chinese immigration when prior to its enactment there were 107,000 Chinamen in California, a greater number in proportion to its population than at any time since? I challenge him to name a Democratic newspaper, a Democratic leader, or any other sort of a Democrat that ever uttered a word of denunciation against the negotiation or ratification of the Burlingame treaty.

How does the gentleman's conception of this treaty tally with the statement of the distinguished gentleman from Mississippi, a Democratic leader, Mr. HOOKER, who succeeded him in addressing the House upon this bill, which is in the following language?

> At the time we sent to the Chinese Government Mr. Burlingame and Mr. Stanton for the purpose of breaking down the Chinese wall as it was termed and inducing that Government to enter into a treaty of amity and commerce between the United States and China, it was looked upon almost as a hopeless effort to secure the various provisions which we desired to secure from the Chinese Government.
>
> We were the parties seeking negotiations. We were the parties asking to have treaties of amity and commerce between the two countries. Ours was the Government asking that our commercial men should be allowed to carry to China whatever we had that the Chinese desired to buy, and bring back from China whatever our people wanted from that country. It was considered an almost hopeless task, and these two distinguished gentlemen were selected for the purpose of endeavoring to accomplish these results between China and the United States. And when that grand commission landed at San Francisco on their return, no two men in the United States ever received such an ovation as Mr. Burlingame and Mr. Stanton.
>
> They were congratulated upon their accomplishment of the treaty which is designated in the history of the country as the Burlingame treaty. Not only on the slopes of the Pacific were they received with such demonstrations of regard, but they were taken from the cars at Pittsburgh and a great ovation given them; and that ovation continued all along their line of travel up to the capital. They were welcomed as having consummated a great treaty, and that treaty was ratified by the two governments.

I desire to supplement this declaration by saying that the public banquet given these gentlemen in San Francisco was presided over by H. Haight, the Democratic governor of California, and one of the principal speakers of the occasion was Eugene Casserly, a Democratic Senator of the United States.

This treaty was no more instrumental in inducing Chinese immigration than that of 1845 negotiated under the Democratic administration of Polk and promulgated by him, or that of 1857 negotiated under the administration of James Buchanan.

If any party is to be held responsible for it, it is certainly not the Republican party. Before it was christened there were not less than forty thousand Chinese in California. They began to come under a Democratic administration as early as 1853. The Chinese in San Francisco had their quarters, their joss-houses, their gambling houses, and their houses of prostitution. They were represented in every mining camp in the State. The Democratic party controlled the politics of the State and nation nearly all the time from 1850 to 1861 and never raised a warning voice against the evil of Chinese immigration.

If it be the intention of the gentleman from Indiana to make this a party question he ought not to have lugged into this unnecessary discussion an allusion to the report of the Morton commission. If he ever read it he must know that it was based to a great extent upon the testimony of a small army of Democrats who favored Chinese immigration. The principal witness was Solomon J. Heydenfeldt, a native of Louisiana, a Democratic justice of the supreme court of California, one of the leading lawyers of San Francisco then and now, and who stands high in the councils of his party. He testified that the prosperity of that State absolutely depended upon the Chinese; that they were the superiors of the Irish and Germans; that they were entitled to naturalization and would make good husbands for American women.

The Chinese question never was and is not now a political issue on the Pacific Slope. Men of all classes and conditions are a unit. It is too late for the gentleman to attempt to make it such. He will be astonished to find on the 6th day of November how "stale, flat, and unprofitable" is the Democratic, demagogical yell of "Chinese Harrison" in that section, the industries of which he and his free-trade confederates attempted to destroy by giving partial life to that nondescript abortion known as the Mills bill.

The Golden State will follow the glorious example of Oregon. Nevada, her sister with the silver hair, the banner State for Blaine, will roll up a still larger majority for the soldier, the statesman, the embodiment of the protective policy of his party, on whose public and private character rests no stain, the next President of the United States, BYNUM'S "Chinese Harrison."

The gentleman must know that the delegations of the three Pacific States to the national convention carefully examined General Harrison's Chinese record before casting their ballots. They were men of intelligence, and from personal experience and observation had a greater horror of Chinese immigration than any advocate of Chinese labor who voted for the Mills bill. After concluding their investigation they wisely cast their votes for him, believing that his record was unimpeachable testimony of his fidelity to treaty obligations and to the principles of the Republican party, which is the only friend and protector of free white American labor.

The gentleman could have easier found nearer home a subject for his censure in the person of General HOOKER, from whose speech I have before quoted. In a few minutes his memory became so treacherous that he forgot that the distinguished gentleman declared that when Page, of California, brought up for consideration in the House in 1882 the twenty years' Chinese restriction bill he gave it as his deliberate judgment that it was in conflict with existing treaty; that if it passed the House the President would veto it, and he voted for his conviction. Is not this a vindication? Ay, a Democratic vindication of Harrison. He did like General HOOKER. If the latter is guiltless of a political crime, so is General Harrison. The record shows that he favored and supported the bill that passed the Senate, reported by SHERMAN and introduced by Fair, the passage of which was earnestly demanded by the people of the Pacific Slope.

What became of it in the Democratic House? It came from the Senate in the first days of the Forty-ninth Congress. The House committee reported it and placed it upon the Calendar The Democrats had a majority of 43 and they took good care to keep it on the Calendar until it died an unnatural death by the expiration of that Congress. He also voted for the Edmunds amendment to a bill to restrict the immigration of Chinese laborers when the words "Chinese laborers" were given their ordinary definition.

The most refreshing part of the gentleman's speech is the illusion to the naturalization of seven Chinamen in Indianapolis and the fact of their voting the straight Republican ticket.

I suppose this is true, and if it be it is a striking evidence of the supreme ignorance of the Indiana judge who decreed their naturalization. There never was a judge of a court of record outside of Indiana but what knew that there never was a law permitting the naturalization of Mongolians. It is no wonder that Indiana is a doubtful State.

The gentleman alludes to a statement in my speech in the tariff debate to the effect that the anti-pauper immigration and anti-cooly bills were passed by the Republican party, and says it is not true and that every other statement of mine is shown to be incorrect. Now, if the people of Indianapolis can elect a judge so phenominally ignorant of American naturalization law, it is not surprising that they should select a Congressman who can claim the entire earth, and who does not seem to have the slighest knowledge of the distinction between assertion and conclusion.

If he will consult the record in order to ascertain the truth he will find the anti-pauper-immigration act was passed by the Forty-seventh Congress, when both Houses were Republican. The anti-cooly act became a law on the 9th of February, 1869, and was passed by a Republican Senate and House. On the 2d of March, 1875, the two Republican Houses passed the act forbidding the importation of Chinese prostitutes. The twenty-years and ten-years restriction acts were originated by Republicans and passed by a Republican Congress.

The Democratic party, if it has any gratitude, ought to vote the gentleman a valuable medal in testimony of that incomparable audacity which prompted him to deny for partisan purposes that the acts above cited were passed by a Republican House and by a Republican Senate. His theory is that, because some Democrats of the minority voted for them, the Republicans are not entitled to any credit for their passage or origination.

My friend O'NEILL, chairman of the Committee on Labor, who represents in part that Garden of Eden, St. Louis, Mo., throws him in the shade by claiming that the labor bills passed by this House were Democratic measures, though they received a solid Republican support in both Houses. How could they reach the President for approval without the intervention of a Republican Senate?

There are only two acts of consequence of those enumerated by Mr. O'NEILL. One is the act to prevent convict labor from being used on public works or in any department of the Government. The other is to prevent the employment of aliens on Government works of a public nature, both of which received every Republican vote.

I now propose to prove by the incontestible record the utter insincerity of the Democratic majority who voted for these measures of but limited, and not universal, application. The record of this very session will, and ought to, damn into perpetual obscurity the Democratic party that is forever posing as the friend of labor, and always voting against its interests.

They could afford to vote to exclude aliens and convicts from public works, but why did they not vote for the following amendments that affected every human being in this broad land:

Mr. BUCHANAN, a Republican member from New Jersey, on the 11th day of July of this year, moved to amend the Mills bill by inserting after line 440, page 27, these significant words:

Provided further, That whenever any of the goods, wares, and merchandise

in this section mentioned are the product in whole or in part of convict labor the same shall pay treble the several rates by this section imposed.

The Chair put the question on the amendment, and upon a division it was rejected by a vote of 65 Democrats against 56 Republicans.

Every Republican was for it, every Democrat against it and in favor of letting the fruit of foreign convict labor come here free of duty to compete with the product of free, well-paid, intelligent labor.

Again, on the 16th of July last, the same gentleman moved to amend the bill by inserting on page 35, after line 38, the following, stating that it was the Canadian law:

And provided further, That no goods, wares, and merchandise the product in whole or in any material part of the labor of persons confined in any prison, jail, penitentiary, reformatory, or other penal institution, shall be imported for the purposes of sale or trade.

Fifty-five Republicans voted for it and 65 Democrats against it.

Mr. BUCHANAN, on the 1st day of June last, offered the following amendment to the same bill:

Insert between lines 4 and 5 the following:
"When not manufactured or produced, wholly or in part, by prison labor, or made within, or in connection with, any prison, jail, penitentiary, or other penal or reformatory institution."

One hundred and five Democrats voted against its adoption and 97 Republicans voted for it.

To the workingmen of this nation I present this record for inspection. I ask them in the name of justice and common decency, is the practice of the Democratic Representatives in the lower House of Congress in accordance with their preaching? Will they continue to perpetuate the power of a party, the representatives of which have three times in this session unanimously voted to take the bread from the mouths of their wives and children by letting in free of duty the product of foreign convict labor to come in ruinous competition with their own handiwork? Is it not the inexorable logic of such legislation that the modern, free-trade, cheap-labor Democrats are willing, as far as wages are concerned, to reduce them to the level of the alien convict laborer.

Men of Indianapolis, your free-trade Representative in Congress voted against all of these amendments. I hope you will ask him to explain it.

Do you not know that it was the Republican party that, in the midst of a mighty war, evinced its concern for the laborers of this country by passing the blessed act known as the "homestead bill," which gave each one of them 160 acres of the public domain without a consideration? Ay, they did more. They gave the alien laborer who never declared his intention to become a citizen of this Republic 160 acres, too, if he had risked his life to preserve the nation.

Contrast this glorious piece of legislation with that of the Democratic party under the administration of James Buchanan, Mr. Cleveland's immediate Democratic predecessor, and what is the result? Mr. Buchanan vetoed a bill which gave the laborer gratis 160 acres of land upon the principal and specific ground that to give land to the laborer without payment was calculated to demoralize him and corrupt his morals. A Democratic Senate sustained the veto. The issue is between Republican protection to American industry and American labor, and Democratic British free trade and cheap labor. Choose between them.

As to Mr. BYNUM'S charge of incorrect statement in my tariff speech, I frankly confess I made a mistake in naming one person only as a member of the Cobden Club who is not, and who is an unimportant factor in Democratic politics and will never be heard of after the next election. With this exception every statement in it is based on the authenticated record and current and impartial history. No reply has ever been made to it; it admits of none.

Who has ever denied that CARLISLE, Bayard, Lamar, Morrison, BECK, VANCE, Tucker, COX, Henry George, Hurd, and a number of other Democratic leaders are members in good standing of the anti-American, British Cobden free-trade club that is now bending all its energies to elect Grover Cleveland? No one. COX admits it, but tries to make his constituents overlook his sin of membership by telling stale gags and worn-out anecdotes that only force a derisive grin instead of laughter.

He admits the authorship of that infamous work the "Buckeye Abroad," but pleads the baby act and says he was a boy when he wrote it, though the year after its publication he represented this Government in Peru. He defends Hewitt, eulogizes Cobden and Bright, says he is an Irishman and a free-trader. Some of his Democratic admirers say that for the first time since 1865 he has turned explorer and is hunting up a new Congressional district. They say he ought to locate in BRYCE'S district, where the Irish (who have found him out) are not numerous and will not vote for a free-trader or a know-nothing, even if he is a leading Democrat. They can not afford to vote for him when they know that three times he voted to let into this country free of duty the products of foreign convict labor.

I bid good-by to the gentleman from Indiana with great reluctance. I hate to part company with a man who says a protective-tariff system has nothing to do with the price of wages, which is a serious reflection on the wisdom of Jefferson, Madison, Monroe, and Jackson.

He was put forward to ring the changes on the Chinese question under peculiar circumstances. He did the best he could. No man can be expected to make even a passable effort when all the facts are against him. It was necessary to take a desperate step. His party was startled by the sound of the footfall of an army of Democrats marching to range themselves beneath the banner of the stars and protection.

They made the discovery that free trade, a red bandana, a silver gavel, a union jack, a platform built by Henry Watterson, the oldest and most esteemed of the American noblemen members of the Cobden Club, was creating a stampede in New York, New Jersey, Connecticut, and Indiana. If the Chinese question is their last refuge it is time to have an undertaker.

This is the first campaign for years waged upon a clear, definite issue. No outside question will be allowed to obscure it. It is for the masses to determine whether they indorse the Democratic, English doctrine of free trade and give up to foreigners our American markets, or stand by that of protection, which has placed this young nation on the pinnacle of earthly glory.

Chinese Immigration.

SPEECH

OF

HON. CHARLES N. FELTON,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 18, 1888.

The House having under consideration the bill (S. 3304) to prohibit the coming of Chinese laborers to the United States—

Mr. FELTON said:

Mr. SPEAKER: I desired recognition only for the purpose of discussing the terms of the pending bill. But after listening to the remarks made by gentlemen on the other side of the House, and especially to those so carefully prepared by the gentleman from Indiana [Mr. BYNUM], I can but note their political significance as manifesting a desire on the part of the other side of the House to make of this important question a party one; and can readily conceive the objects sought to be attained by so doing. They have given us very much of the history of Chinese immigration in the United States and of the legislation in Congress in reference to the same, especially the more ancient part of both, carefully eschewing any reference to the recent or last. But, sir, in my opinion, a true statement of the history of their immigration here and of the legislation on this question by the American Congress will show that this is in nowise a party question.

Now what is the history of this question as it concerns us?

It is that the people of the Pacific coast after about twelve years of association with this people, and only then, had learned by experience the "true inwardness" of the Chinese character and methods, and then came to a realizing sense of the great evil of that immigration, and concluded that their admission ought to and should be prevented in all the future; and this sentiment was not confined to any political party, nationality, religious organization, sect, or sentiment, but was universal. And then commenced their strenuous opposition to this immigration and their continuous struggle to procure the needed legislation to prevent it. The principle as embodied in the Burlingame treaty (of July 28, 1868, Article V, from which I quote)—

Cordially recognizing the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects repectively—

was repudiated by them from both an economic and moral standpoint; while we would not deny them all their rights, we denied the inherent and inalienable right of them or any other nationality to interfere with or encroach upon our rights, to corrupt our race morally, or to despoil them of their substance. Then we came to you our fellow-citizens east of the mountains to plead our cause and the necessity for immediate legislation. We knocked and knocked at the doors of Congress without obtaining admittance or any response to our appeals, and why were we so treated? It was because you, the people of the East, did not understand and could not comprehend the evils attendant upon this immigration. You were not educated to the importance of the occasion and question. No public sentiment had been formed. And what was true in this case was equally true in that of the question of contract labor, criminal and pauper immigration, and it is only of late—only now—that Congress is prepared to legislate upon these questions without hesitation. For the first time in the history of this Government and on this floor both parties will vote alike, and I prophesy there will not be a dissenting vote to the passage of this measure; and why? Simply because the people have a knowledge of this question which they never before possessed. We from the Pacific coast had to teach the communities east of the Rocky Mountains that this was a vital question, that it had

not only an economic phase, but was one of civilization. The laboring classes had to be taught that this was a question in which they were directly interested as their interests were in danger. The more fortunate and perhaps intelligent classes had to be taught that the commonly conceived doctrine of the Declaration of Independence, the æsthetic theory of the Fatherhood of God and the brotherhood of nations and man was in conflict with nature's laws and could not apply to the Chinese without a demoralization of our industries, our laboring classes, and of the morals of the people. In short, we had to force upon the attention of all a true appreciation of this question by arguments, which we, however, had learned by sad experience.

This is a Government of, by, and for the people; the will of the people is supreme; public opinion rules, and is always in advance of legislation. Legislation is the result of its crystallization, and we have but just arrived at this stage in this question, and hence our action.

And now a few words more in reply to the gentleman who last spoke [Mr. BYNUM]. I believe it is an accepted axiom of law that if you desire to judge of the character, the ability, the truth, and sincerity of a man or a witness, you will take and consider his last acts and expressions of opinion as the best evidence as to his belief, desires, and the sincerity of his intentions; that you would disregard declarations and expressions of opinion that were older, of previous date, and conviction. And if this principle is correct (and I apprehend this will not be disputed), and applies to the individual, it will with equal force and justice apply to an association of individuals, a party, or a government.

This is within the line of the argument used by the gentleman from Indiana, that is, to judge the Republican party by the acts and expressions of views of its Representatives in Congress, but I fail to see that he brought his statistics down to the more recent time. He seems to have carefully avoided that. But if we are to judge and hold responsible the Democratic party by its recent acts in regard to this question we shall find them wanting. They will have no foundation for the boast that that party has been especially sound upon Chinese immigration and contract-labor immigrations. In the Forty-ninth Congress my colleague [Mr. MORROW] introduced a bill into this House (a copy of which was introduced in the Senate); this bill was very carefully considered, and emanated from a source that had a third of a century's experience with this people and the effects of their immigration; they were conversant with the existing treaties and the restriction law against Chinese; they knew from experience that they were evaded, that thousands of Chinese were yearly entering the country in violation of the law; they had studied the question, and found the remedy. Had that bill passed it would have pierced the very center of the loop-hole in the laws by which they entered, and would have prevented such entrance.

That bill was in this House referred to the Committee on Foreign Relations, composed of a Democratic majority; the bill passed the Senate (a Republican Senate), came to this House, and was referred to the same committee to which the House bill was referred, the Committee on Foreign Relations, where it slept the sleep that knows no waking. Notwithstanding the fact that that committee was monthly, weekly, and sometimes daily importuned by the whole delegation from California to report the bill, to report it in some shape, they were deaf to our pleading. That was a committee formed by Democratic authority with a majority of Democrats on it, selected from a Democratic majority of over forty in the Forty-ninth Congress.

Now, sir, one more fact, and in stating it I feel somewhat embarrassed, as my name is connected with it. I, on the first opportunity in the Forty-ninth Congress, and also in the Fiftieth Congress, introduced bills amendatory of the laws in relation to the incoming of contract-labor paupers and criminals and other objectionable immigrants.

Those bills were referred to a committee of this House, a majority of whom were Democrats selected from a Democratic majority in the House, and were, like the Chinese bill, sequestered, and have never been reported or heard from. Therefore, sir, if we are to judge a party by its last acts and expressions, we must conclude that the Democratic party is opposed to the restriction of Chinese immigration and that of contract labor, criminals, and paupers. And why, sir, did they not report these measures, and at least give an opportunity for the expression of the will of the people through their Representatives upon those kindred subjects? Was it because they were opposed to the passage of the bills from principle, and hence by their action prevented their passage, or was it because they did not fully appreciate the necessity for immediate action and the magnitude of the question?

I believe it is but just to them to concede that the latter was the cause of their delay; that they then had not the knowledge nor were they as conversant with the urgent necessity for legislation on those questions as they to-day are. Nor do I believe it to be just to condemn the acts of Congress or to hold political parties responsible for the individual acts of a portion of its members, or for the acts of its committees, as I know that committees are sometimes formed for the purpose of advancing especial preconceived and concerted measures. I also know that they are sometimes formed with a view for the suppression of some public measures, and thereby deny an expression of either a public or party sentiment. Sir, it took years of earnest endeavor and arguments, and it was only in the light of subsequent experience that many of the people of this country, and among them the most intelligent, were prepared to abandon the idea that America was not only the home and asylum of the down-trodden and oppressed of all nations, of those who came fleeing from despotism, from religious persecution, for principle's sake, as did our forefathers, who came, conquered the natives and the wilderness, and developed this nation, but was also intended to become the home of and to include in its philanthropic embrace the pauper and the criminal, the excrescence of the older nations who have been making their appearance within the last half of this century, daily evading our laws, and interfering with the rights of our citizens and degrading our civilization.

Now, sir, I do not believe that there is a gentleman upon this floor or in the Chamber at the other end of the Capitol who honestly believes that this question is in any sense a political or party one, or that any man in public or civil life, in the light of subsequent events, should be held responsible for opinions formerly entertained or expressed by him, or for his acts upon this or any other question. We should judge the individual as we should desire to be judged, and should only hold him responsible for his present action and opinions as an indication of what his future action would be. What we and the people desire to know is as to his present sentiments in so far as they are of interest to the people as indicating his future course of action.

Mr. McCREARY. Will the gentleman let me make an inquiry there?

Mr. FELTON. Certainly.

Mr. McCREARY. Does not the gentleman know that the treaty of 1880 was in force when the bill he refers to was referred to the Committee on Foreign Affairs, and that the treaty of 1880 simply allows us to suspend the admission of Chinese laborers into the United States? The Committee on Foreign Affairs were informed that a treaty was being considered and was in progress of negotiation absolutely prohibiting Chinese from coming to this country, and it was deemed best for us to hold up any action until we could pass such a bill as we have now in this House, absolutely prohibiting the Chinese from coming into this country.

Mr. FELTON. I will answer the gentleman that to the best of my information I did not so understand it.

Mr. McCREARY. I will say to the gentleman that the statement was true, because the treaty has been negotiated and has been sent to the Senate of the United States and acted upon.

Mr. FELTON. Yes; but we heard nothing from the Forty-ninth Congress except as it came to us whispered by the winds; we had no confidence in it.

Mr. McCREARY. The gentleman was not a member of the Committee on Foreign Affairs and does not know what the Committee on Foreign Affairs did.

Mr. FELTON. Mr. Speaker, I do not desire to be further interrupted, but will say that we heard nothing of this except as I before stated, whispers in the air from unknown sources, and we disregarded them, as did a majority of the Committee on Foreign Relations our importunities to report a bill on this question. True we hear of this in the Fiftieth Congress and a treaty has been brought in. But in the mean time, whether there was to be a treaty negotiated or not, which would consume much time, the measure that we had before that committee was so important that its enactment would have prevented the incoming during the last year alone of eleven thousand of these people.

The passage of that measure at that time would in no wise have interfered with any treaty stipulations, as it was acknowledged by both committees, House and Senate, to be in strict accordance with the treaty stipulations. I know whereof I speak, because I had introduced a bill which in my opinion, and with all due respect to that of others, was worth more than all these bills and the pending treaty. I emphasize this because I do not believe that this treaty or this bill will cure the evil that we desire to have cured. You will get rid of Chinese immigration when you prevent the incoming of all save those attached to the embassy and consular service of that Government, and in no way else, in my opinion, will you be able to do so.

Mr. McCREARY. Let me remind the gentleman that Congress could not have passed at its last session a bill prohibiting Chinese laborers from coming to this country for all time without violating the treaty, which was then in force and which is now in force. For that reason we delayed action, in order to get a treaty that would prohibit the immigration of Chinese entirely.

Mr. FELTON. I think that is a very remarkable statement, coming from a gentleman of the intelligence of the distinguished gentleman from Kentucky. He says that Congress could not have passed any measure for that purpose. If he had said that it would not pass this particular bill in question, that would have been true; but that Congress could not pass any measure without the violation of treaties, I take leave to doubt.

Mr. HOPKINS, of Illinois. The gentleman from Kentucky seems to take substantially the same position that General Harrison took in the Senate. [Laughter.]

Mr. McCREARY. I do not take the same position that General Harrison is charged with taking on this subject. [Laughter.]

Mr. FELTON. Mr. Speaker, observing the adverse criticisms of the

gentleman from Kentucky in charge of this bill [Mr. McCREARY] also that of the eloquent gentleman from Mississippi [Mr. HOOKER] in regard to the Senate amendments to the first and second articles of the pending treaty between this Government and that of the Chinese Empire, I will now but briefly and only with reference to those amendments supplement what my colleague [Mr. MORROW] so very ably and at length presented in his speech this morning, not that I can add aught to what he has said, but simply for the purpose of again calling it to the attention of the House and the country.

Why, sir, were it not for these amendments the pending treaty would not be worth the paper it is written on, as those sections as originally drawn and without amendment would have been so construed as to mean and refer only to Chinese who had never entered the United States. As under the decisions of the United States Supreme Court the prior residents (as we term them) had acquired rights and that those now absent and to become absent before the ratification of this treaty would be entitled to return on the presentation of certificates showing their former residence, or in the absence of which (they in all probability having sold the same), by oral testimony, as is now the case, and through which means thousands have been and are illegally entering; in fact, this is the principal loop-hole with which we have to contend under the existing treaty and desire to close. Chinese oral testimony! What a commentary on justice! To what a depth of infamy, servility, and perjury do they invite us!

[Here the hammer fell.]

Mr. MORROW was recognized, and yielded fifteen minutes of his time to Mr. FELTON.

Mr. FELTON. Mr. Speaker, notwithstanding all that the gentlemen on the other side of the House have said in regard to the great zeal manifested by the Administration to hasten negotiations for this treaty, and for which reason legislation was denied us throughout the Forty-ninth Congress, the official records of that negotiation prove that the first attempt was made April 11, 1887, over three years after the present Administration came into power and after the expiration of the Forty-ninth Congress, fully substantiating my former declaration that it was all in the air.

And now they complain that the action of the Senate has caused a delay which may jeopardize the acceptance of the treaty on the part of the Chinese Government. To this I reply that should their fears prove true and the treaty be rejected by reason of the Senate amendments, as it only could be, the original terms being acceptable to the Chinese Government and the Administration, then it were well it did not become the law. And I here desire to supplement what I have already said in regard to this treaty by giving it as my opinion that even the pending treaty, if accepted as amended, will only defer the time for our obtaining justice at the hands of Congress, and through it a relief from this immigration.

And now I first desire to say, before entering upon an adverse criticism of this bill or parts of it, that it is not my purpose to antagonize or delay its passage by offering any amendment, as I recognize it to be a step in the right direction in the event of the ratification of this treaty, and appreciate the importance of its speedy passage in order that it may go into effect with the adoption of the treaty, and thereby prevent an interregnum of time which this people could and would take advantage of, and thus create vexatious legislation, though, as before stated, the measure will not meet the expectations of its friends nor set this vexed question at rest.

As I understand its provisions, it will, if properly executed, prevent the illegal entrance of Chinese laborers, and them only through the seaports designated in the bill as well as those to be designated by the Secretary of the Treasury as provided for in the bill. And that it prohibits their entrance through any other source whatsoever. It will also relieve the Federal courts of an amount of business which for want of time they have been unable to consider, and relieve them of a class of litigation impossible to intelligently adjudicate under the laws and rules of a civilized judiciary; and thus causing great dissatisfaction and anxiety among those who have for a third of a century suffered from the evil of this immigration and until forbearance has almost ceased to be a virtue.

The clause referring to the immigration of merchants for observation and pleasure will in time cause no small amount of annoyance and litigation; but this is a fault of the pending treaty and not of the bill, which simply re-enacts the treaty, for when once within this country they will be absorbed among the masses of their countrymen already here and immediately lost to sight and detection.

Practically we shall only know of their existence as one of the factors for their not decreasing in numbers.

Now, with all respect to those who negotiated this treaty, I believe that had they possessed that knowledge requisite to the purpose of the negotiation of a treaty with this people (and only to be acquired by an experience with them), they would have hesitated before consenting to this clause in the treaty; as it was, they could not comprehend the inevitable results that were to follow its adoption. The exception made in the second article in favor of those having $1,000 worth of property or debts, a lawful wife, child, or parent within the United States will prove another source of evasion to the convenient consciences of the Chinese immigrant.

But, sir, my chief objection to the pending bill is that it makes no provision for the detection of illegal immigration that is sure to come over our great borders North and South—from the Dominion of Canada on the north and Mexico on the south—for so soon as the fact is ascertained by them that their illegal entrance through our seaports is impossible, then will be created in them the incentive which will cause them to come over the borders, as the cupidity of John is too great not to avail of any loop-hole or unguarded spot to feed upon our flesh-pots, he having tasted them. It is true that under the provisions of the treaty and of this bill no Chinese, whether laborers or otherwise, have the right to enter the United States other than through the designated seaports, therefore any way or mode of their incoming would be illegal, and those who availed of such entrance would be subject to fine and deportation. As illustrative of their evasion of the present law through these avenues of entrance I read from the New York Sun of August 14, 1888:

CHINESE COMING FROM CANADA.

MONTREAL, *August* 14.

A party of twenty-five Chinese arrived at Montreal to-day, having come through from Vancouver on the Canadian Pacific Railroad. They will be forwarded to New York by the Grand Trunk Railroad. They have come direct from Canton.

But we have no provision in this bill to ascertain the facts, and now the question arises, what measure could and should be taken to prevent such entrance and the subsequent discovery of those so entering. Could we keep a cordon of soldiers or detectives throughout the extent of our great borders, it would prevent their illegally entering; but it is manifest that this could not be contemplated, much less adopted, by reason of the great expense it would entail, and the venal element sure to compose a portion of such a force would to some extent prevent the desired end.

But it occurs to me that the object might be reached by a system of registration and identification by or through the United States courts of the thousands of Chinese now within the country, and the Federal power delegated to all peace officers throughout the States and Territories to arrest and cause to be deported those who could not produce such proper certificates and identification as would entitle them to remain. By this method this end could be very largely attained and with slight expense, for so soon as it was a well-known fact that there was not only a sure way to but the possibility of instant detection, the Chinese would not be so eager to illegally enter, because it would be sure to avail them nothing. The fear of instant discovery, fine, and deportation would, to a great extent, prevent the attempt.

The great difficulty of legislation on this subject and with reference to this singular people is that their character is generally unknown and presents obstacles to surmount that do not apply to the citizens of any of the Western nations. The Chinese are of the Eastern type of civilization; they are moral obliquities, knowing no God, having no conscience, utterly disregarding the sanctity of an oath in all the sense that we appreciate it. With them the end always justifies the means.

To wisely legislate on this question it is necessary to have a knowledge and correct appreciation of the character of this people, and for the benefit of those inexperienced we appeal to the truth of history.

From the history of the early civilizations, including that of the Chinese, we learn that they all occurred under similar environments, similar conditions of soil, climate, and food, all necessary to the development of their peoples from barbarism to comparative civilization, and but for the mild conditions of nature and climate wherein they grew their development could not have been possible, as they lacked the intelligence necessary to surmount the more rugged conditions of nature and its more rigorous climates, as such conditions would not have permitted of sufficient leisure for the development of the intellectual man, the struggle for animal existence being too severe and continuous.

The inevitable effect was that the same antecedents produced in all the same ulterior results, the same causes producing like consequences, and the very conditions that permitted of their evolution to a given stage of civilization prevented any advance beyond it, within their several environments. Nature's laws could not be overcome nor ignored; their conditions were favorable to over-population, causing ignorance of the masses, and thus creating an unequal distribution of wealth, and concentrating all political power among the few, resulting in despotic forms of government, under which the masses of the people by ever-recurring misfortunes were reduced to abject ignorance and poverty and consequent submission, their condition being practically that of slavery. Such were the conditions under which the early civilizations of India, Egypt, Peru, Mexico, and China grew.

Their history is written in their monuments, palaces, public highways, and great walls, all of which attest the existence of despotic governments, the absolute submission and hopeless misery of their peoples, to whom individual liberty and natural rights were unknown. Of them all the Chinese alone remain intact as a government and people, and they have existed substantially as they now are for tens of centuries within the same environments, practically undisturbed by mingling

with or by the immigration of other peoples, uninfluenced by their knowledge and example; with the same form of government, and that the earliest form known to civilization, the paternal, extending through all grades of society and government, from the emperor to the father of the family; the same religion, that of ancestor worship—the spirit of the departed influencing for good or evil the destinies of the living kinsman; with the same manners, habits, customs, and inclinations.

During all the centuries in which the Indo-European race were evolving under different and ever-varying conditions, being influenced and improved by collision with its parts (while many of them grew, matured and decayed, leaving nothing but ruins to mark their existence), the Chinese have remained essentially the same; content in and with their surroundings, they have for forty-five centuries continued to exist in one long unbroken and undeviating line. Actuated by the same impulses and hopes, and controlled by the same necessities, they have from generation to generation transmitted their race characteristics, both mental and physical, until they are the most homogeneous and non-assimilative race that ever has existed. While the languages of the early western nations have disappeared, leaving no inscriptions to mark their existence, the Chinese have been writing theirs in eighty-five thousand of those strange characters, monosyllabic, from right to left. While the western nations have developed a desire for individual liberty and a democratic form of government, and struggled to attain it, the Chinese have been and are content with absolute monarchy or despotism, having no word meaning liberty in their language.
